STREET CRIME IN AMERICA

(The Police Response)

MONDAY, APRIL 9, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:15 a.m., in room 311, Cannon House Office Building, Hon. Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Waldie, Brasco, Mann, Murphy, Rangel, Wiggins, Steiger, Winn, Sandman, and Keating.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order.

The first business on the agenda of the committee is to adopt the rules covering the committee in its operation during this Congress. Do I hear any motion relative to that subject?

Mr. MANN. Mr. Chairman?

Chairman PEPPER. The gentleman from South Carolina.

Mr. MANN. It is my judgment that the rules under which we functioned during the previous Congress were adequate and fair. I move the adoption of the same rules effective in the 92d Congress for the 93d Congress.

Mr. MURPHY. I second the motion.

Chairman PEPPER. It has been moved and seconded that we adopt the same rules that prevailed for the committee during the previous Congress. Any further discussion or further motions to be made?

Are you ready for the questions?

Mr. STEIGER. Question.

Chairman PEPPER. All that favor the motion made by Mr. Mann, seconded by Mr. Murphy, say "aye."

[Chorus of "aye."]

Chairman PEPPER. All opposed, "no."

[No response.]

Chairman PEPPER. The rules are unanimously adopted, with seven members of the committee present.

I would like to make a brief opening statement, if I may, before the first of the distinguished witnesses is introduced.

Today the Select Committee on Crime opens its inquiry into street crime in America. In part, this will be a success story, for a fundamental purpose of these hearings is to bring to congressional and public attention those criminal justice programs which have shown promise as crime reduction agents.

During this first week, the theme of our hearings will be "Street Crime—the Street Level Response" and 13 major police departments

will present testimony about a wide variety of police programs and policies which are being used to combat street crime.

Street crime is still a fact of life in America, and its presence is especially ominous in our Nation's urban centers.

If I may do so, without objection, I would like to introduce for the record, to appear in the record at the conclusion of our opening statement, the announcement of the U.S. Department of Justice, Federal Bureau of Investigation, of March 28, 1973, relative to the latest summary of statistics on crime in the United States.

On March 28, 1973, the Department of Justice announced that there had been a decline in serious crime of 3 percent in 1972, "the first actual crime decrease in 17 years." On January 30, 1973, Senator John Stennis was robbed and shot in front of his home here in the District of Columbia; on March 30, 1973, former Congressman and Mrs. Brooks Hays were robbed within a few blocks of the Capitol. Senator Stennis, I am delighted to report, is making a good recovery.

These prominent public figures took their place in a long line of street crime victims. In 1972—according to preliminary data—7,751 robberies were reported in the District of Columbia; 714 persons were victims of rape; 3,897 were victims of aggravated assaults, and 245 more people were murdered.

These crimes—with the exception of rape—occurred less frequently than in 1971, but the incidence is still unacceptably high. Washington, D.C., is by no means alone in this regard. While index crimes—murder, rape, robbery, aggravated assault, burglary, larceny over $50, and auto theft—decreased, it is worth noting that the violent crimes—murder, rape, robbery and aggravated assault—actually increased by 1 percent. In fact, the FBI's preliminary 1972 data indicates that violent crime was up from 2 to 13 percent in suburban and rural areas, and in cities with populations of 500,000 or less.

None of us can take comfort from the fact that violent crime is still increasing. Notwithstanding the fact that overall index crime frequencies are decreasing, people are still falling prey to robbers, muggers, rapists, and murderers. This we cannot accept.

This committee would be remiss in its obligations if it did not review the present nature and extent of street crime. We launch this hearing with the firm hope and expectation that the many police, prosecution, court, and correctional programs which are to be described by expert witnesses during the next several weeks will provide eloquent testimony of imaginative criminal justice efforts which have reduced crime in some of our cities and made them safer places in which to live. We hope these examples will be an inspiration and a challenge to many other law enforcement authorities in our country.

Recent polls indicate that crime remains of overriding national concern. Crime and the fear of crime continue to plague us as a people. We are by no means out of the crime crisis: Brutality and barbarism still rule the streets and sidewalks in urban high-crime areas. Violence and depravity still harm the most those who are the least able to defend themselves.

A young man who runs an elevator here in the Capitol, who is crippled, has been mugged, I believe seven times, in the recent past.

Street crime is by no stretch of the imagination the only kind of crime we need be concerned about. It is, however, the most visible

kind of crime. Its victims end up in hospitals or morgues; those who survive often carry psychic scars. As long as crime of this type preys upon us, we are not a free people. Our fundamental freedom is in jeopardy, and liberty has a hollow ring when people are afraid to walk in their own neighborhoods.

Street crime cannot be eliminated until we can finally summon the resolve to eliminate its contributing causes, among which are poverty, unemployment, ignorance or lack of skills for employment, and that multitude of social ills which afflicts all of our Nation's population centers. We cannot ignore the need to get on with the business of attacking the root causes of crime, as well as crime itself.

While the need to attack the root causes of crime is irrefutable, we also need to pay increasing attention to the short-term task of removing from the streets those offenders who are disrupting the fabric of our society.

It is this latter facet to which we will address ourselves during the next several weeks. Testimony will be taken from those agencies which are now engaged in the tasks of apprehending, prosecuting, adjudicating, and confining those among us who have chosen to follow paths of lawlessness and violence.

We need to arrest, prosecute, try, and—where necessary—confine those offenders who create havoc and fear. We need to do so in an expeditious, zealous manner. For the most part, the programs which we will be examining will show that we can attack—and hopefully defeat—street crime in a lawful way. This goal can be achieved without pity for the criminal act, with a decent respect for the violated rights of victims, and with a zealous regard for the constitutional rights of all concerned, both offenders and victims.

These hearings will demonstrate that many thoughtful and dedicated law enforcement officials are bringing leadership and imagination to bear in their efforts to reduce street crime and its carnage.

We warmly commend all those who have been responsible for the innovative law enforcement programs which will be presented in these hearings, and, as I have said, we hope that they will be an inspiration and challenge to other law enforcement officials in this country. Nevertheless, the purpose of these hearings is to find out what can be done in the future to further reduce crime in this country, and make the streets, homes, work and recreational places of our citizens safer for them.

[A copy of the March 28, 1973, statistics from the Federal Bureau of Investigation, referred to previously, follows:]

UNITED STATES DEPARTMENT OF JUSTICE,
FEDERAL BUREAU OF INVESTIGATION
Washington, D.C., March 28, 1973.

Serious crime in the United States declined 3 percent in 1972, the first actual decrease in crime in 17 years, Attorney General Richard G. Kleindienst announced today.

The downturn in the volume of crime was disclosed in preliminary year-end statistics tabulated by the FBI and released today.

"This is a day that we have been looking forward to for many years," the Attorney General said. "It is an important milestone in the fight to reduce crime and is directly attributable to the strong efforts of law enforcement officers throughout the nation to turn back the wave of crime that rolled upward in the 1960's."

During 1972, 94 major cities reported actual decreases in serious crime, Mr. Kleindienst said, compared with 53 cities in 1971, 22 cities in 1970, and 17 cities in 1969.

Nationally, serious crime declined 8 percent in the final quarter of the year, after registering a 1 percent increase through the first nine months of 1972.

The last measurable decrease in serious crime—2 percent—was recorded in 1955, according to FBI crime records.

The crime spiral peaked in 1968 when serious crime rose 17 percent above the previous year. In 1969 and 1970, serious crime increased 11 percent, while in 1971, the increase was 6 percent.

"We enter this new period with an acute awareness that crime is still unacceptably high," Mr. Kleindienst said. "We pledge to renew our determination and efforts to make our communities safer places in which to live."

The preliminary figures are contained in the FBI's Uniform Crime Reports, a collection of nationwide police statistics supplied voluntarily by local, county, and state law enforcement agencies. The figures were released today by FBI Acting Director L. Patrick Gray, III.

Violent crime increased by 1 percent in 1972, compared with a 9 percent increase the year before. Robberies, however, which make up the largest number of crimes in the violent category, showed a 4 percent decrease in 1972. Murder was up 4 percent in 1972, aggravated assault increased 6 percent, and forcible rape increased 11 percent over the previous year.

Property crime decreased 3 percent, compared with a 6 percent increase in 1971. Auto theft declined 7 percent, larceny $50 and over dropped 3 percent, and burglary was down 2 percent.

Cities over 100,000 population reported an average decrease of 7 percent in the volume of Crime Index offenses. Crime in suburban areas increased 2 percent, compared to an 11 percent increase in 1971, while crime in rural areas went up 4 percent compared to a 6 percent rise in the previous reporting period.

Serious crime in Washington, D.C., continued to decline. The 1972 decrease was 26.9 percent, compared with the 1971 decrease of 13 percent.

The nation's capital registered fewer crimes in every category, except for a 16 percent increase in rape. Auto theft decreased 33 percent, burglary decreased 32 percent, robbery decreased 31 percent, larceny $50 and over decreased 18 percent, murder decreased 11 percent, and aggravated assault decreased 2 percent.

A copy of the preliminary crime figures for 1972 is attached. Final crime figures and crime rates per unit of population will be available in the detailed Uniform Crime Reports scheduled for release this summer.

Also attached is a list of the 94 major cities reporting crime decreases.

Cities With Decrease in Crime Index

JANUARY–DECEMBER

1972 VERSUS 1971

	Index percent (decrease)
Akron, Ohio	9.5

Youngstown, Ohio	11.9

Chairman PEPPER. I feel it would be only proper to express a word of thanks and welcome to the National Public Affairs Center for Television, for the television coverage offered. They will be filming several days of these hearings for inclusion in a documentary on street crimes. It will be entitled "America 1973—Documentary," and it will be aired on 226 education television stations during the week of April 16.

The airing by public television in the District of Columbia will be at 8 p.m. on April 18.

I will now ask my colleague, Mr. Rangel, the distinguished gentleman from New York, to introduce the Honorable Patrick V. Murphy, New York's police commissioner.

Mr. RANGEL. Thank you, Mr. Chairman, and members of this committee. I have the pleasure and honor to introduce one of the most outstanding, dedicated public servants we have in the United States, Commissioner Patrick Murphy, a career policeman who has served as chief of police in the cities of Detroit, the District of Columbia, Syracuse, and now the city of New York.

Commissioner Murphy was appointed by President Johnson as the first Administrator of the Law Enforcement Assistance Administration in the Department of Justice. He holds both B.A. and M.A. degrees and is a graduate of the FBI National Law Enforcement Academy. He served as an officer in the Navy in World War II and is the parent of eight children.

Commissioner Murphy has made a distinguished contribution to the discovery of and attack on corruption within the New York City Police Department. He did this with the type of courage that is unparalleled in the history of law enforcement in the State and city of New York.

It affords me a great pleasure to join with him in presenting to this committee information on present law enforcement efforts in the city of New York.

Thank you, Commissioner.

Chairman PEPPER. Commissioner, I, as chairman, and all of the other members of the committee wish to concur in extending the welcome extended to you by our distinguished member, Mr. Rangel. We are very grateful to you for coming to help us this morning. We all know of the contributions you make in the many parts of the practice of law enforcement and the reduction of crime. We look forward to hearing what you have to say today.

You may proceed with your statement.

PANEL OF NEW YORK CITY POLICE OFFICIALS:

MURPHY, PATRICK V., COMMISSIONER;
CAWLEY, DONALD F., CHIEF OF PATROL SERVICES;
VOELKER, ANTHONY M., DEPUTY CHIEF INSPECTOR;
TUCKER, JULIA, LIEUTENANT, RAPE INVESTIGATION AND ANALYSIS SECTION;
HUBERT, FRANK, LIEUTENANT, AUTO CRIME UNIT;
O'FRIEL, JOHN T., SERGEANT;
GARRITANI, CARL, PATROLMAN; AND
CALLIER, LEROY, PATROLMAN

Statement of Commissioner Murphy

Commissioner MURPHY. Thank you very much, Mr. Chairman, Congressman Rangel, and members of the committee.

I am grateful indeed for the opportunity to appear before this distinguished committee to describe some of the programs developed by the New York City Police Department to reduce crime during my tenure as commissioner.

Mr. Chairman, I would like, with your indulgence, to make just a very few brief remarks in order to give the members of the committee every opportunity to ask questions.

There was a significant decline in major crime in New York City last year of approximately 8 percent. Compared with other large cities, and the country as a whole, we did relatively well. But considering the thousands of victims, it would be a delusion to think that we have achieved a tolerable level of safety on the streets of New York City.

When I was appointed police commissioner 2½ years ago, I found a number of problems facing me. One very serious problem which could not be kept in other than first place on the list of priorities, the one alluded to by Congressman Rangel, was the problem of corruption, which we have attempted to address in a straightforward manner. But when Mayor Lindsay, John B. Lindsay, the distinguished mayor of New York, interviewed me concerning my willingness to accept the position of police commissioner in New York City, we had a lengthy discussion about the proper role for the police commissioner and the kind of independence and freedom he should have.

Politics and law enforcement cannot be mixed if honest, effective law enforcement is to occur. The late J. Edgar Hoover proclaimed that principle many years ago. And although on occasion I disagreed with Mr. Hoover's thinking on some matters, his foresight and determination in this regard, as well as many others, have made a great contribution to American law enforcement.

Mayor Lindsay assured me, before I agreed to accept his appointment, that I would function independently and that the police department during my term under him as mayor would be free from political interference. We have had that independence and that freedom from interference and I think it is a factor which cannot be ignored in discussing the ability of a police department in a great city to address the difficult and complex problem of crime.

Among the problems I identified early in my term was a quality of management that called for upgrading. Among the things we have been able to do in the department, in addition to selecting a new leadership team down through the second and third echelons, was our ability to bring in civilian professionals of a variety of backgrounds—attorneys, engineers, systems managers, personnel directors, training specialists, and others. They all made an important contribution, in my opinion, to improve management in the New York City Police Department.

We identified the problem of low productivity and we have been hard at work on that problem to attempt to make more effective use of our resources. The principal resources of any municipal police department are personnel. We found our personnel not being used as effectively as possible.

One of the major changes accomplished in the past 2 years has been a significant shift of manpower from the hours after midnight, and especially after 1 or 2 a.m., when the calls for police service and the incidents of crime drop dramatically, and a shifting of that manpower to the hours before midnight. Approximately 50 percent of the man-

power on duty during a 24-hour period in New York City today is on duty during the high-crime period of approximately 4 p.m. to midnight.

We also believed that the use of uniformed police officers, though very important to provide the visibility and the presence that is reassuring to the citizens, and which acts as a deterrent to the criminal, was not perhaps the most effective way to use all police officers, even though assigned in the individual precincts. So very early we authorized precinct commanders, under a program of increased authority for commanders at the operating level, to assign up to 5 percent of their manpower in civilian clothes, to work we described as "anticrime street work."

Since that time, each precinct commander has had his authority increased to 10 percent.

Some time thereafter, under the distinguished leadership of the chief of patrol, Donald Cawley, who is with me on my right this morning, we established the citywide anticrime section, which is now headed by Deputy Chief Inspector Anthony M. Voelker, on my left.

Mr. Chairman, I am happy to be able to tell you—you knew him as Inspector Voelker, and last Friday I had the privilege to advance him to the rank of deputy chief, in recognition of his distinguished leadership potential, and the great contribution of his citywide anticrime section to the modest reduction in street crime we experienced in 1972.

This anticrime patrol functions in plain clothes. They are deployed within the individual precincts and throughout the city, in accordance with a very careful day-to-day analysis of the occurrence of street crime by hour of day, by type of crime, and by location.

As you will learn during today's meeting, the officers assigned, both male and female officers, are usually in a disguise of one kind or another. It is the function of the dedicated men and women of the unit to blend into the scenery, so to speak, wherever they are functioning, and you will hear later about some of the successes they have experienced.

We saw a need for greater citizen support and so we hope to have an opportunity later to talk with you about our neighborhood police team concept and how it involves the citizens much more actively in understanding, supporting, and working with and assisting police officers.

We would like to say a little bit during the day about our auxiliary police and the significant increase in enrollment in the auxiliary police program that we have experienced, especially in the minority communities of the city, where, because we do not have enough police officers or enough Hispanic police officers, it is a significant advantage to have more men and women in those communities in the police uniform, as auxiliaries, volunteers, who give some number of hours a week of their time and increase the police presence. They are unarmed, but they are equipped with walkie-talkie radios; they are very familiar with the neighborhoods and, of course, they are providing an increased protection for their own neighborhoods, which I think is significant because police officers in our city do not live in the precincts in which they work. As a matter of fact, for many years it has been a policy of not permitting officers to work in the neighborhoods where they

live, although currently we are experimenting with the concept of resident police officer.

In addition to the auxiliaries, we have established some other programs for citizen volunteers, a block-watcher program, and recently Mayor Lindsay announced a $5 million appropriation from the capital budget to encourage the citizens organized in block clubs and other kinds of neighborhood groups to, with Government support, contribute their own funds to the purchase of security equipment of one kind or another.

Less than 1 percent of the budget of the New York City Police Department since the creation of the Law Enforcement Assistance Administration has come to us through Federal grants. We have been happy to cooperate with the policies of the criminal justice coordinating council of Mayor Lindsay, in seeing to it that the funds have been used where most needed. And in New York City, and I believe in many cities, the greatest need today is in the courts and in corrections.

This may seem a strange position for a police commissioner to take, but because I live day after day with the frustrations of our 30,000 officers, I know of nothing that frustrates them more than the delay in courts, than the dismissals in courts, than the lack of convictions and lack of sentences.

So to be realistic about addressing the problem of crime, I think we must face the fact that an adequate backup system is required for a police department. The prosecuting officers and the courts must be able to do their jobs, they must not be so overwhelmed by workload that they begin to break down in the fulfillment of their function. And certainly this distinguished committee is well aware of the failures of our corrections system in State after State in this country.

In New York State, we experienced the terrible tragedy of Attica. All of us are saddened that such a tragedy had to occur before we, our communities, have begun to understand the great need for improvement, modernization, and upgrading of the corrections systems of the Nation.

Almost invariably, the first reaction of the public when confronted by a law enforcement crisis is to seek to increase the size of the police force which it sees as its first line of defense. It has not been generally recognized that more police activity cannot be truly effective when other parts of the system suffer from lack of resources, manpower, and facilities, or are unable to adequately fulfill their purpose for whatever reason.

To make police work more credible, more resources must be made available to prosecutors, courts, and corrections systems, and our attention must be directed toward improving the whole criminal justice system so that it will function as a system.

I have already introduced Chief Cawley, who is with me, and Chief Voelker. Also, Lt. Frank Hubert of our auto crime unit of the citywide anticrime section is with us; Sgt. John O'Friel of the office of programs and policies, who has responsibility for processing Federal and other grants; and a number of other members of the New York City Police Department will be here through the day and they will be introduced to you at the appropriate time.

Mr. Chairman, we are ready to respond to whatever questions the committee might have for us.

Chairman Pepper. We thank you very much, Commissioner, for the very able statement that you made.

I will now call on our deputy chief counsel, Mr. Lynch.

Mr. Lynch, would you care to address some questions to Commissioner Murphy?

Mr. Lynch. Thank you, Mr. Chairman.

Commissioner, I wonder if you could tell us, to begin with, why the citywide anticrime section was created, how it operates, and what, in your judgment, its success rate has been during the past year or so in which it has been operating?

Commissioner Murphy. With your indulgence, I would like Chief Cawley, who really is the initiator of this program, to respond to that question. And I am sure Chief Voelker will have something to add.

Statement of Donald F. Cawley

Mr. Cawley. In November of 1971, shortly after my assuming the position of chief of patrol, there was a unit working for my office entitled "The Taxi and Truck Surveillance Unit" consisting of approximately 80 men. They were primarily dedicated to dealing with taxi and truck robberies. In looking at the larger issue and the larger problem of street crime, and robbery in particular, I thought the matter through, came to a conclusion, what we really should be thinking about was supplementing the increased anticrime civilian patrolman working at the precinct level to approximately 200 men, and selecting the proper commander, the proper leader, have him pull together a strong team of supervisors and create a unit that would deal exclusively with the street crime problems.

As that lead, I selected Chief Voelker, at that time a captain, and I would suggest that perhaps if Chief Voelker gave the committee a brief presentation, which we have available, it might answer some of your questions.

I would be very happy to respond to the specifics.

Mr. Lynch. Chief Voelker, could you do that for us, please?

Statement of Anthony M. Voelker

Mr. Voelker. Yes, sir. At the time I was given the opportunity to organize the citywide anticrime section, I was given complete and total freedom as to selecting of personnel, laying down the ground rules and guidelines, deciding on what tactics would make the most sense in this kind of a police operation.

Each superior officer was handpicked, as was each man. When we structured the unit, I think we were aware in advance of the necessity of striking a careful balance between policemen who are interested and enthusiastic enough to catch the street criminal in the act of committing a street crime, while at the same time being greatly concerned of the rights of the individual citizen and being concerned not to encroach upon those rights.

For that reason, in order to increase the complement of that unit from 80 to 200, we conducted some 600 interviews of patrolmen who were all highly recommended. They received a full week's training before we felt we were fully operational and then we went about the business of attempting to outwit the street criminal in his own baili-

wick, a task which I think is very difficult. It is very dangerous. It is very challenging, but I, as well as the men, find it probably the most meaningful kind of police work there is.

What we have attempted to do is make the police officer relatively invisible. We gave him the option to modify his appearance in whatever way he would. He uses what might be termed "props." In the past, we have used such things as wheelchairs, canes, crutches, bicycles, women's wigs, workmen's hard hats, toolboxes, surveyor's transit, a tie salesman's cardboard box, a peddler's cart, in order to make our policemen relatively invisible.

We have him focus his efforts and attention on street crime. "Street crimes", by my definition, being crimes of violence that occur on the city streets, crimes which cause concern and inconvenience to users of the city streets. The men are not assigned on a random basis, but are assigned on the basis of a statistical overview of crime.

This is done both at the central unit and at the precinct level. We are interested in where crime is occurring, during what time brackets, what the violation may be, what the modus operandi of the criminal is, and possibly the description of the teams of assailants, if that is available.

The tactics have been devised generally by the officers themselves. I feel we have given them great tactical flexibilities so they can do what they think makes sense, as police officers.

Two of the basic tactics are—the first being what has probably become the most favorite word in our vocabulary—is "blending." The officer attempts to blend into the street scene wherever he may be assigned. If he is in a downtown business district, he will have on a business suit and carry an attaché case and look like one of many others moving along the street.

If he is in another neighborhood, he may be a truckdriver, cabdriver, a hippie, a student, a doctor, a nurse. He can assume any of these roles.

That enters into the other facet of the operation which is the decoys. The anticrime men always blend and sometimes decoy. "Decoy," in my mind, is replacing the victim the street criminal thinks he may find when he strikes out. He intends to find someone who is, as the chairman has said, possibly infirmed. He looks for the aged; he looks for someone who will be a poor witness. He looks for someone who is going to be reluctant to go to court.

What we do is take that person from the location where the crime is most likely to occur and substitute a police officer, a well-trained, physically fit, armed police officer, backed up by several others. That is what the decoy operation is, in my mind.

Mr. Lynch. In that regard, Chief Voelker, this unit and units like it in other cities, do perform decoy operations. Do you have a substantial number of defendants who claim in court, and claim successfully, that they have been victims of entrapment as a result of the decoy operation?

Mr. Voelker. I never heard the question raised, other than academically, when we get into a discussion on decoy. When I give you an example of the effectiveness of the unit, of the robbery arrests made in 1972, of those cases disposed of to date, 90 percent have resulted in conviction. Many of those convictions—excuse me, have resulted in imprisonment. I have not heard any defendant raise the question of entrapment.

Mr. LYNCH. In regard to the success rate, I understand you have some statistics here. Would you be good enough to go over them?

Mr. VOELKER. Yes, I do. I would be happy to.

I think I would first like to show you what the anticrime investment is in the city of New York. Throughout the city's 72 precincts, there are approximately 800 men assigned to anticrime. Added to the 200 men at the central unit, we are speaking of a 1,000-man investment, which in a department the size of New York's represents slightly less than 3⅓ percent.

Mr. RANGEL. Chief, approximately what percentage of that 1,000 total is on duty at any given time?

Mr. VOELKER. Somewhere between 50 and 60 percent during evening hours, because the duty charts are structured to strongly favor the evening hours, the hours of the highest incidence of crime.

Mr. RANGEL. In reference to the 8- or 10- or 12-hour shifts, and vacation and sick time, notwithstanding the fact that you lean toward the hours where you have the highest criminal activity, I was wondering whether or not we should expect a drastic reduction in the 1,000-man figure that you use for the anticrime manpower, as we expect to find when you talk about your general police statistics, on duty at any given time.

Mr. VOELKER. I would say the figure is comparable. I would say between 50 and 55 percent would be on duty.

Mr. RANGEL. You would say between 6 p.m. and 2 a.m., that we should believe 500 anticrime officers are actively on duty?

Mr. VOELKER. As an educated guess, sir. It might be less, but that would be my educated guess.

Mr. RANGEL. We couldn't guess like that if we were talking about the number of people assigned to a precinct. I don't know what the figure is, but it certainly would be nowhere near 50 percent.

Mr. VOELKER. No, the coverage is different. I can give you an example. The men at citywide have 6-day duty charts. The 2 last days being days, also, and the first 3 days being evenings. So half of their duty day is evening. So we subtract some of that for the court time and we might be in the vicinity of 40 percent would be on patrol.

Mr. MURPHY. Chief, may I interrupt? You say 72 precincts. You have 800 men in there and that is a little over 8 a precinct; right?

Mr. VOELKER. It varies, sir. It is quite a spread between what one police precinct considered "quiet" may feel is an anticrime team and what the "high-experienced" precinct might feel.

Commissioner MURPHY. Ten or eleven: 72 into 800.

Mr. MURPHY. How many people would you say comprised a precinct in New York, total population living in the precinct?

Commissioner MURPHY. Population per precinct is 110,000 or 120,000 on the average. But there is a wide range there from as low as 30,000 to close to 200,000.

Mr. VOELKER. I think when we are talking in terms of the size of the investment, that some of the next statistics may shed some light on that. Because we are now talking about officers who do not have the broad range of responsibilities that all policemen have. They don't have to answer the calls for the disorderly boys, or barking dogs, or family disputes, or minor accidents, or injuries. These offi-

cers are involved in what I consider in my mind, pure, distilled, anti-street-crime work.

Mr. CAWLEY. If I may, just for a moment, I am sure we will touch on this later, but the 800 men assigned to the precinct level, consistent with the decentralization of authority concept Mr. Murphy put in when he first came aboard, the precinct commander makes a lot of the judgments as to how he will use his people and when he will use them. So there is a wide variety of ways in which the precinct commander will assign the percentage that he selects to put into this type work.

Mr. VOELKER. I think this chart here [indicating] will give you some indication of what the anticrime forces which are doing only anticrime work are able to do.

In the four crime categories, which I think we would agree are the heart of violent street crime, they have effected the percent of arrest indicated here, this being the percent of all arrest effected by the entire department. It averages in around some 22 percent and they are responsible for 23 percent of all arrests in these four crime categories, as well as 22 percent of all felonies and 16 percent of all arrests effected in the city.

Mr. LYNCH. Chief, you indicated they had a high rate of conviction for felony arrests. Of the 750 robbery arrests made by citywide anticrime patrolmen, how many were in fact sent to court during 1972? Do you have any idea?

Mr. VOELKER. I am sorry, I don't have figures for other than the central unit.

Mr. LYNCH. Could you supply those figures to us later? Could you send those to us?

Mr. VOELKER. Yes, sir. I will make every attempt to.

[The information referred to, had not been received at time of printing.]

Chairman PEPPER. Would your same percentage of arrest apply to murder, rape, and aggravated assault?

Mr. VOELKER. I don't think so, sir. These, I feel, are the crimes that the anticrime has focus upon. These are the stranger-to-stranger crimes. The crime categories you mentioned, sir, I don't believe these are in the category of stranger to stranger, although they well may be.

The next page on the chart is just an indication of what happened to these same crime categories during 1972. Since there were many programs in effect in the department, I make no correlation, other than to show in those crime categories that there was a reduction of crime.

Mr. RANGEL. Chief, arrest statistics are really just one indication of the effectiveness of the squad. You have to agree, every year, less and less people are complaining about crime being committed, for other reasons.

Mr. VOELKER. I don't know. In my own mind, I think the number of complaints is reflective of the total number of crimes, although they may not be the same numerically. I think if you see a decrease in reported crimes, we are talking about a decrease in actual crimes.

Mr. RANGEL. I think if you would check with the members of the police force—and there are a large number that go to the community meetings—you will find more and more people believe it is less and less important to report crimes committed against them. Given this

factor, which really has not been assured, I hate for you to stress the good work of your division based on the number of complaints received.

Mr. VOELKER. No; I don't intend to. I would like to show you some other factors which I consider more important.

Commissioner MURPHY. Congressman, I can't let this go by. I think since we are talking about crime statistics, maybe we ought to put some facts on the table. I believe crime reporting in New York City today is the most honest, accurate, crime reporting New York City has ever had.

I admit that crime reporting is not an exact science. I would not want to talk about crime reporting in other cities, especially Philadelphia. But in New York City——

Mr. RANGEL. Do we understand what we are talking about, Commissioner? I am not claiming that you don't accurately report what you have. I am saying, and you have been to enough community meetings to know this yourself, that more and more people believe it is just not worthwhile to report crimes. They are not reporting. I know that in the house where I live there have been in the last 2 years, a half-dozen burglaries. After each incident I have asked the question, "has a report been made to the precinct," and in each instance the answer has been "no."

So I had to initiate 2 or 3 days later, the report, even though I recognized that had it been made earlier, the police would have had a greater chance to solve the case.

Mr. STEIGER. Would the gentleman yield?

Mr. RANGEL. Yes.

Mr. STEIGER. I think the gentleman has raised a very, very important question, and I know, Commissioner, you recognize it from your service here in Washington. Not only are people not reporting crimes because they don't feel it is worthwhile, but at least in Washington, I know, there is an even greater factor of fear of reprisal by the accused.

As to whether the reluctance to report a crime is on the increase or not, I agree with Mr. Rangel. I don't think any of us question the accuracy of your report. It would seem logical to assume if the complaints are down, probably the overall crime is down.

Whether the percentages conform exactly or not, I don't think is important, but I think the fear of the victim, who is so intimidated that he is reluctant to report the crime, is something we probably ought to address ourselves to.

Commissioner MURPHY. My response to that, Congressman, I couldn't agree with you more. I think the National Crime Commission, in 1967, pointed out that many people don't report crimes for a variety of reasons. They have no hope of the crime being solved.

I am well aware, Congressman, of many people, and tragically many in our district perhaps more so than other parts of the city, have a sense of frustration.

Mr. RANGEL. I would like to add, Commissioner, that because of your attempts to change the image of the precinct and change the image of the policeman to the point of his being regarded as a part of the community and the community is encouraged to become a partner in fighting against crime, progress has been made. I remember when people in my community would not have walked in that precinct for

any reason, because the precinct was always associated in the minds of people with wrongdoing and insensitivity. Because of the things you have done, I hope that perhaps we can encourage people to make complaints, even though it will take some time to change the general cynicism about what is going to happen.

So I am not taking issue with the accuracy of your reports, I am just saying that I don't think it really warrants such attractive displays, because there are more and more people saying, "To hell with it, we just hope things become better."

Commissioner MURPHY. That is what is frustrating. If that is accurate, that the reporting is getting worse each year, and it may be right——

Mr. RANGEL. I am not going to give you an example, but during the break—letters I have written to you, where people, elderly people, have written to me after filing a complaint and I know darned well, God forbid something happens to them again, they are not going to complain. To be victimized by crime is considered now as a way of life.

Commissioner MURPHY. I certainly agree that this has been a problem. Whether it is worsening, I am not sure, but certainly, we ought to have better crime reporting in the United States, not only in New York City, but nationally. We ought to have better crime reporting because the system is subject to error and, tragically, manipulation as well.

I think we should be concerned about having the most acccurate crime reporting possible, so the police will know how to address it. There are many weaknesses in the system. Whether it is getting worse, I am not sure. We are trying awfully hard to make our system as good as we can make it.

Mr. RANGEL. But you do believe this is one of your more successful projects, the undercover?

Commissioner MURPHY. Oh, yes.

Mr. KEATING. Would the gentleman yield for just one observation? I want to congratulate the gentleman from New York for his comments that people do not report crime, not to the police division, not to the law enforcement agencies. Individuals in my district—I don't have anything to back it up—but my impression in communicating with them is their attitude of "What's the use?"

I think it is a very important point Mr. Rangel brings up. I say we now have at least three districts that are very diverse, that are making the same representation, and I think it is an extremely vital part of the total law enforcement problem.

I think with the reverses you have had and some rape conviction cases, I suspect rape may be one of the worst crimes involved in nonreporting at the moment, because of what the girl has to go through, and the very difficulties you have had in securing convictions.

I was a little surprised when the gentleman referred to a stranger-to-stranger crime and didn't include rape. I thought surely that would fit that category.

But I think that is a very serious element that we have. Again, I congratulate Mr. Rangel.

Chairman PEPPER. Will you go ahead, Mr. Voelker.

Mr. VOELKER. Thank you, Mr. Chairman.

I might just comment that I am in total agreement here, because without the basic source document, the crime complainant, there can be no tactical response to those problems. There can be no identifying of high crime trends and high crime patterns.

Rather than stand on these, which was not my intention at all, I would just like to cite the 1972 achievement record of the unit I command, the citywide anticrime section.

With the complement of 200 male police officers and 6 female police officers, this unit effected, in 1972, 3,602 arrests. And I am sure we are all aware, raw arrest statistics can also be misleading. But I think when we further discuss and comment on the fact that of these total arrests, 83 percent were for felonies, I think they now become more meaningful. I am able to tell you of those arrests that approximately 750 were for robbery, for grand larceny from the person, which are the two penal law terms that encompass the citizen term "mugging."

Among those arrests were 540 for guns; and of the arrests disposed of to date in all categories, 73 percent have resulted in conviction. Of the robbery cases disposed of, 90 percent have resulted in conviction. I think this is what I would rather stand upon than the other, which was just shown to indicate there was a decrease in reported crime in the same categories where this emphasis and focus has been placed.

When we look for our anticrime man, we look for a man who is interested, enthusiastic, is mature, has good judgment, and we try to measure in advance that most difficult thing to measure, integrity. These 200 officers in 1972 effected 50 bribery arrests; representing less than 1 percent of the department, they effected 9 percent of the bribery arrests.

I think this is a comment upon the integrity level of the unit.

To talk about anticrime is one thing. I think it is much more clarifying if I would show you two anticrime officers, the way they normally work on the street. I and they will be very pleased to answer any questions you may have.

Mr. LYNCH. Before you do that, Chief, I wonder, certainly the questions raised by the Congressmen are very pertinent. I suppose one way that one increases public confidence about a police department is to be able to advertise, if you will, the number of convictions had.

So, I simply would like to reiterate and stress that if you could supply us with data for our final record, as to the number, as well as the percentage, of those robbery cases for 1972, it would be most helpful.

Mr. VOELKER. Fine, sir.

[The information requested was not received.]

Mr. LYNCH. Before you introduce your patrolmen who are here today, I wonder if you could explain to us how you deploy the citywide anticrime patrolmen around the city. What judgments are made in deploying those men? How do you do it?

Mr. VOELKER. We take a statistical overview of the entire city. Each precinct commander is now responding to his problems. I consider us a civilian-clothes overlay. We look at the total crime picture and see where the areas of high incidence are.

We then meet with the local commander and his staff and he finds for himself, if you will, the information. My staff will say to him, "I see your robberies are up." He will say, "They are." And on Lennox

Avenue, between 52d and 58th on the West Side, between 8 and 11 p.m., and the predominant team is two males and a predominant victim, if he has this information, he will furnish it to us. We then tailor our assignments in response to the identified crime.

Mr. LYNCH. To what extent do you use them as a saturation force? Would you at any one time be sending 100 anticrime unit personnel into a given sector of the city?

Mr. VOELKER. We have attempted saturations, not of that size. A saturation of possibly 20 or 30 men, which is a lot of civilian-clothed police officers in a precinct.

Mr. LYNCH. What are the results of that kind of saturation work then?

Mr. VOELKER. I would have to say, in my mind, it is too early to make a firm assessment, but I see this has the potential for possibly turning crime statistics.

Mr. LYNCH. I wonder if you could introduce your two anticrime unit patrolmen to the panel and ask if they would take a seat.

Mr. VOELKER. Patrolman Leroy Callier, would you step up, and Patrolman Carl Garritani?

Mr. LYNCH. I wonder if you gentlemen would please tell the members of this panel how long you have been assigned to the anticrime unit and tell us what you do in the normal course of your duties?

Statement of Carl Garritani

Mr. GARRITANI. I have been assigned to the citywide anticrime unit for approximately 16 months. My duties consist of daily going into areas to which I am assigned, trying to blend or decoy, depending on the circumstances in that area.

Mr. LYNCH. How long have you been a New York City patrolman?

Mr. GARRITANI. Four years.

Mr. LYNCH. How many arrests have you made since you have been a member of the city anticrime unit?

Mr. GARRITANI. I, personally, have made approximately 20 arrests in the last 16 months and assisted in about 40 other arrests.

Mr. LYNCH. Would that be considered a high arrest rate?

Mr. GARRITANI. It might be slightly above the average.

Mr. LYNCH. How would that compare with the number of arrests a uniformed patrolman might effect in that same period of time?

Mr. GARRITANI. In the same category of crime, I would say it would be higher simply because we have greater opportunity to make the high-degree felony arrest that he does not have. Numberwise, it might not be significantly different than active uniformed men.

Mr. LYNCH. How were you selected as a patrolman for this unit?

Mr. GARRITANI. I was interviewed. I submitted an application to my precinct commander who ruled that I would be eligible, depending on my activity in my particular precinct. He then put in my name to the citywide anticrime section. I was called down and interviewed, thoroughly screened, and subsequently selected.

Mr. LYNCH. What kind of training did you undergo prior to going in the street as an undercover patrolman?

Mr. GARRITANI. There was 1 week of formal training and many many weeks of on-the-job training.

Mr. LYNCH. Would you tell us a little bit about that formal training, sir?

Mr. GARRITANI. Yes. We spent 1 week in the police academy. We were spoken to by members of our department specializing in disguise work, undercover work, plain clothes activity, hand-to-hand combat, and administrative recordkeeping and report taking.

Statement of Leroy Callier

Mr. LYNCH. Patrolman Callier, would you tell us how long you have been a member of the city anticrime unit?

Mr. CALLIER. I have been a member of the city anticrime section for approximately 1½ years. Prior to that, I was in the tactical patrol force for approximately 2 years.

Mr. LYNCH. How many arrests have you made?

Mr. CALLIER. For the entire time I have been a police officer, I have effected 177 arrests.

Mr. LYNCH. How many of those came since you have been a member of the citywide anticrime section?

Mr. CALLIER. 44.

Mr. LYNCH. How many felony?

Mr. CALLIER. Thirty-eight of the forty-four were felony arrests.

Mr. LYNCH. How many of the 38 were for robbery?

Mr. CALLIER. Approximately 20.

Mr. LYNCH. You spent how long as a uniformed patrolman before joining this section?

Mr. CALLIER. 2½ years.

Mr. LYNCH. What is your judgment, as a street-level policeman, as to the effectiveness of this kind of policing?

Mr. CALLIER. Well, we were able to blend in the area more readily and we are able to get right on top of a situation when there might be one that is imminent. Also, in some cases where a complainant might be reluctant to complain, we are right there, which we, in many cases, take the complainant to the precinct, process the papers, et cetera. Also, in many cases, we pick up the complainant and take him to court, which affords more safety for them, and a little confidence.

Mr. LYNCH. Is this kind of policing more dangerous for you, personally, than wearing a regular uniform?

Mr. CALLIER. Well, for any police officer, I feel, out in the streets, it is dangerous. But in many cases, we try and have the crime perpetrated upon ourselves rather than the victim.

Mr. RANGEL. I would like to follow up on that point, because it seems to me that you are being very modest, because you "blend" too well in certain areas.

It just seems to me, you might have a whole lot of explaining to do as you try to effect an arrest, if some of your brother officers are not entirely familiar with your identification. You don't find that any problem at all?

Mr. VOELKER. Could I respond to that?

Mr. RANGEL. Yes.

Mr. VOELKER. We do have a system that provides identification between nonuniformed police officers and uniformed police officers. We found it to be very effective. I really don't think we want it highly publicized. It is known throughout the police community; it is known

throughout the police community within the city. We have a system that we can change on a day-by-day basis, that permits identification between and among the officers.

Mr. RANGEL. My question is a serious one, because of a lot of things that are happening in cities throughout these United States.

Many black officers off duty, especially if they live or work around my community, have to be very careful in how they attempt to effect an arrest, or to show they have a pistol, for fear some brother officers might overreact. That is a problem we have to deal with and it just seems to me in that outfit you might be more subject to well-intentioned attacks by your brother officers.

But certainly, in the middle of the night, between 6 p.m. and 2 a.m., you have to think rather fast to get that code out, if the perpetrator looked better off than you did, and a brother officer was coming, trying to decide which one was apprehending whom.

Mr. CALLIER. Normally, with myself working with a team of three, and one of us usually stays back in case police officers are responding, to let them know that there is a black police officer at the scene and they will usually give them the clothes I have on, the color of the coat, and so forth.

Mr. RANGEL. But you do dress more discretely when you are not on duty?

Mr. CALLIER. Yes.

Mr. LYNCH. Patrolman Callier, in that regard, I wonder if you, or perhaps Chief Voelker, could tell us how many members of this unit have been wounded in line of duty during the past year? Do you have those figures?

Mr. VOELKER. None by gunshot. There has been one man stabbed, although not seriously, this year. There have been many officers who have been punched and struck with various weapons and knocked to the ground and kicked.

As far as the potential for danger, I think there is a considerable potential for danger in this kind of an operation. I think we have addressed it in advance. I think the fact that we do have a system of identification, that we do operate primarily in three-man teams, the men receive extensive training, all indicate an awareness of this danger. It is very dangerous. I think providence must have intervened, because we have not had any serious injuries.

Mr. LYNCH. In other cities—one city in particular—operations similar to this one have met with a good deal of criticism because it appears that a high rate of official violence has occurred.

Commissioner Murphy, I wonder if you could respond and tell us whether, in the course of operating this unit, patrolmen are engaged in more shootouts, more acts of violence, than would be the normal case in police operations?

Commissioner MURPHY. I think, as Chief Voelker points out, the mission of the unit is such that the men are exposed to danger on almost every mission, but their restraint, the use of force by the officers in the citywide anticrime unit has both been commendable, and the use of violence, legal violence, has been extremely limited.

We are proud of that. We really do not have even what I could describe as a pattern of complaints that the unit uses force excessively, and I think Chief Voelker has pointed out what a good record we have had, even for the people in the unit.

So we are very pleased with the restraint, and this is something we constantly stress, to avoid the use of force and especially weapons, if at all possible, even to the extent of retreating or devising a new strategy. Of course, we don't teach the men to lose a criminal who has committed a violent crime, certainly. But restraint is something we stress, day after day, and I think Chief Voelker's outstanding leadership has been a factor in this regard.

Mr. RANGEL. Chief, would your response be the same in connection with the tactical patrol force?

Commissioner MURPHY. Congressman, I am proud of the restraint of the New York City police officers, generally. The work of the tactical patrol force, again, is unique and unlike—incidentally, we have significantly reduced the size of the tactical patrol force and one of the ways in which this unit was formed was to reduce that unit.

They are another unit I am very proud of. They work under very difficult circumstances, especially because they move from precinct to precinct, night after night. We are all concerned. I think all of us at this table understand that that is not the ideal way for the uniformed police officer to function.

The ideal way is for him to go into the precinct, into the community, to introduce himself, to be identified, and to be supported and accepted by the community as a police officer they know.

The mission of the tactical police patrol force, unfortunately, moving about the city to handle crime control and any incident that has the potential for disorder, that mission is such that they are not known and they are stranger policemen to a certain extent, and this results in their using more force, I would say—and I don't have data with me—than the ordinarily uniformed police officer.

Mr. RANGEL. Commissioner, nobody is more unknown to the community than this outstanding outfit we are talking about this morning. How would the mobility of the tactical patrol force allow them to use more restraint or less restraint than other police officers?

Commissioner MURPHY. Because the missions are different. If we have a crowd, if there are demonstrations, or picketing, or serious disaster, or any kind of minor disorder, the tactical patrol force is the unit we send in to deal with crowd control and to deal with tensions of crowds, which is a very different mission, not to take anything away from these officers, and at least one of them has served in the tactical patrol force with distinction.

I think that other mission does put them in a different position. They are also required, the tactical patrol force now, to deal with conditions such as large crowds congregating on street corners for one reason or another. They may have to be used to help move the crowd along. We emphasize community relations and the patient approach, and I think they do an outstanding job in that regard. They do, because of their mission, meet more incidents that may require the use of force.

Mr. RANGEL. But you do believe they are necessary, more so than the local police precinct, where the tensions are building up, where one might know the captain, et cetera?

Commissioner MURPHY. Congressman, my own view of it is I wish we didn't have to have any uniformed police officers, other than those permanently assigned to a precinct. Because I strongly believe in the value of the police officer being known. That is the basic concept of

our neighborhood police team approach, and as you know, we even have new resident police officers.

They are real heroes in my book because they try to police the neighborhood where they live, and that is not an easy mission because of all that is involved, and residents coming to them with their complaints and bothering them 24 hours a day, and so forth.

We have reduced the size of both our tactical patrol force and our special event squad, because Chief Cawley and I both believe strongly in the neighborhood policeman, whether he is on the team or just one of the precinct officers.

But I am not at the point where I feel we can do away with our tactical patrol force yet. I wish the problems of crowd control and the potential for disorder were so low that we felt we didn't need any.

Mr. RANGEL. What is the size of that force now?

Mr. CAWLEY. Approximately 40 in the tactical patrol and about 25 or 35 in the special event squad. A combined total of 75.

Mr. RANGEL. What about the PEP squad? I forgot what the letters stand for.

Commissioner MURPHY. Preventive enforcement patrol.

Mr. RANGEL. Are they still in operation?

Mr. CAWLEY. We have decentralized that down to 28 and 32. I think there are units of 10 in each of those 2 precincts. At one time, as you know, we operated from the moral level. We brought it back into the community where we thought it would be more effective.

Mr. RANGEL. So the total strike force of the PEP is 20?

Mr. CAWLEY. I believe at this time it is 20; 10 in each of the 2 precincts.

I would also like to make this point, if I may. In a recent report from Chief Voelker, he indicated that during 1972 there were approximately, at least an estimated, 10,000 contacts with the citizens of New York City, resulting in a total of 9 complaints about the actions of our police officers in the citywide anticrime section.

Mr. STEIGER. I wanted to ask Mr. Callier, how long are they able to stay in a given area without calling your cover, and how will this exposure affect your future cover work? Either one of you gentlemen who wishes to respond.

Mr. CALLIER. That depends on the type of operation we are having. If I feel that the way I am dressed now is actually blown, I will either switch coats with my partners, or I will carry a wig and put it on.

Mr. STEIGER. From your own experiences, do you find that the people you are anxious to apprehend are aware of the existence of your operation; is that correct?

Mr. CALLIER. No. In many cases, I have been approached by prospective muggers to team with them in order to mug another person.

Mr. STEIGER. Have you had the same experience?

Mr. GARRITANI. I found in some cases they are aware we are somewhere in the area, but they are not quite sure where we are. And if we follow what we feel might be a perpetrator long enough, he does commit the crime. It is a question of frustration he has to commit the crime, and when he knows to do it.

Mr. STEIGER. You are telling us then that staying under cover is not the problem the layman might think it is and you are not supported as greatly, at least, as I would assume.

Mr. VOELKER. I wonder if I might respond to that?

Mr. STEIGER. Certainly.

Mr. VOELKER. I think our two objectives, we have a short-range objective—we are looking to take this relatively invisible policeman and putting him where the crime is most likely to occur. He is going to get closer to the crime scene, hopefully. He will make a better observation, a high-quality arrest, and enhance the chance of conviction.

In the long range, I think we want to sow the seeds of uncertainty in the minds of the street criminal as to just who the police officer may be. He is certainly not only the man in blue; he may be any of those we described before—the taxidriver, the truckdriver, the old woman.

So I don't feel the exposure hurts these officers for that reason and for the reason that, be it notwithstanding, he could be an old woman tomorrow, but he could be anything, a cabdriver, a student. He is liable to be in the north end of Manhattan tonight and the south end of the Bronx tomorrow.

Mr. STEIGER. That was my question. You gentlemen are in the city-wide end of 200. Do you know from talking to your brother undercover officers in the precinct if they have had to move around because they are inclined to be spotted by the criminal element within the precinct?

Mr. CALLIER. Because of the closeness of the contact we have between teams, we are able to, if one team feels they are actually blown, their cover is blown, what we do is get in touch with another team and have them pick up where we left off.

Mr. GARRITANI. We had an incident like that last week, which points it out pretty vividly, and I think we can thank the price of meat for being able to make that arrest.

One of the teams spotted what they thought were several youths breaking into a closed meat market. It had a screen in the front door and apparently they were working on a lock. But they also felt the young fellows may have them made out as police officers. So they called for another unit, and myself and my partner happened to be nearby, and with the benefit of binoculars we stayed a block and a half away and watched the group; and we enabled the other unit to drive away and let the perpetrators see them drive away, and their fears were dispelled and they continued to work on the lock, break in the meat market, and we wound up getting six arrests out of that.

Mr. LYNCH. I wonder if you can tell us what kind of automobiles you use and what kind of communications equipment you carry.

Mr. GARRITANI. We have several makes of late model cars we use, non-police-type automobiles. We have our own van walkie-talkie system for communications. We have step-vans, we have telephone company trucks, Yellow Cabs, Gypsy Cabs, and a great assortment of unmarked police cars, but totally nonrelated police vehicles.

Mr. LYNCH. These then are not the standard kind of unmarked police cars?

Mr. GARRITANI. That is correct. They would be just like any other car on the street.

Mr. VOELKER. If I can elaborate on that. We were very fortunate to receive slightly over one-half million dollars in Federal grants in the latter part of 1971, which was used to purchase, among other

things, 83 sedans, some step-vans, surveillance truck, binoculars, telescopes, cameras, some protective equipment, and some theatrical makeup which, believe it or not, is quite valuable in this kind of an operation, to give the man the opportunity to change his appearance.

But the sedans, as you alluded to, were not the standard, heavy-duty, four-door, dark blue or black that in our minds are known to child and criminal alike. We have Torinos, LeManses, Skylarks, golds, reds, hardtops, whitewalls, chrome trim; and none at all with the look of police vehicles.

Our communications system is UHF system, rather sophisticated, which permits an anticrime man with a hand-held walkie-talkie to talk to an anticrime man anywhere else in the city.

Mr. LYNCH. I believe you have asked for an additional amount of Federal funds for this year; is that correct?

Mr. VOELKER. We have, sir. The amount is $735,000. It has been approved. Among other things, it will be used to purchase 140 vehicles, the vast majority of which will go on to the precinct teams. Among these are sedans, econovans, and yellow medallion taxis, which are highly effective as surveillance vehicles.

Mr. LYNCH. Is that LEAA support?

Mr. VOELKER. Yes, it is.

Mr. LYNCH. Do you use LEAA money for anything other than equipment in this program? In other words, the salaries are regular N.Y.P.D. salaries?

Mr. VOELKER. Yes, sir; that the matching funds for the cities are in salaries. Just for, basically, the equipment I mentioned.

Mr. LYNCH. I would like to address one question to you, Chief Cawley. One of the values, it would seem, of a program like this is to create in the minds of so-called street criminals an apprehension that people other than uniformed people might be policing; and in that regard, does the department have a policy about publicizing this program and, if so, what is the policy?

Mr. CAWLEY. Yes; we have publicized rather extensively the existence of both the citywide anticrime section, as well as the 800 men assigned to the precinct level. There has been considerable newspaper coverage, television coverage, national magazine coverage. We go out of our way to let the wrongdoer, the criminal in New York City, know that if he is on the street and contemplating a mugging, he may be mugging a police officer. I think it has been very successful.

Mr. LYNCH. Is there any way, as police administrators, you can make a judgment, not just on the number of arrests which have been made by a unit such as this, but as to the possible deterrent effect it might have?

Mr. CAWLEY. Measuring deterrent effect is exceedingly difficult. It is something, I guess, we have been chasing for many years. It has proved to be very elusive.

I think the combination, though, of the uniformed patrolman, married, together with the civilian clothes—uniformed patrolmen coupled with the detective investigative capability, all three working together, blending as a team, must have a positive effect, but I can't give an estimate as to what.

Mr. BRASCO. Would counsel yield at that point?

I wanted to welcome you, Commissioner, and your staff, and say that I apologize for being late but my flight this morning was delayed.

In any event, in a city of millions of frustrated people with the disabilities you have to work with, I want to say I believe your department has done a fine job.

Mr. Rangel. I might add, Commissioner, that proves he is not running for mayor; right?

Mr. Brasco. You are right, Charlie. Commenting on the deterrent effect of the undercover operation in a portion of the district I represent, we have a housing development that had a murder in a local recreation center and many acts of violence around the development. As a result, the New York City housing police stationed a similar force in the area, and many arrests were made within the first 2 days of their being in the vicinity.

I can tell you that crime dropped in the area, where heretofore it had been abnormally high.

In that controlled setting of the housing development, the deterrent effect was most effective, and I think it is an excellent way to fight crime; and the psychological effect, beyond that, is important.

Commissioner Murphy. I am delighted to hear you say that, Congressman. I said earlier, Chief Cawley is really the initiator of the citywide program. I think he is modest.

I am completely convinced two factors—shifting manpower from after midnight to the before midnight hour and authorizing precinct commanders to use 10 percent of their personnel in civilian clothes, and the creation of the citywide unit—have had a tremendous effect.

I agree with Chief Crawley that it is very difficult to accomplish this, but I have heard from people in the narcotics treatment side of this total problem of crime that addicts coming in to treatment have indicated that the streets aren't as easy to work as they were. We don't want to take credit and say we are pushing addicts into treatment programs, but it is possible that is having that effect. And I think the more we can do, what you just described, to make a housing project or an area of the city safer, I think we are accomplishing something.

Mr. Brasco. On that same subject matter, during the course of the narcotics hearings which we had in the middle of last year, we had several undercover people from your department who testified before this committee, and I would say that the same thing held true there, where they were able to get into the high schools to effect arrests.

As a result of the overall testimony, it was shown to be a most positive weapon and as a result the Board of Education of the city of New York took some steps in the direction of attempting to provide more safety in the schools by first recognizing there was a problem as you people pointed out.

Mr. Lynch. Mr. Commissioner, I wonder if you could tell us whether or not it would be your judgment that this program has now become institutionalized within your department and, if so, have you made any plans to continue and/or expand its operation?

Commissioner Murphy. Well, I have very strong feelings it has been a most successful program and I think a citywide unit as institutionalized now, and we are in the midst of very active discussion at the moment for enlarging the citywide anticrime program. The dilemma is where to draw the people from, but I am currently inclined very much toward enlargement.

Mr. Rangel. Mr. Counsel, may I inquire?

Chief, there is no question that this section of your force has been widely accepted in the community and generally believed to be successful, and, certainly, your conviction record substantiated that. Counsel asked whether or not you intend to institutionalize it and I thought your answer was going to be based on a consideration of manpower.

Perhaps Chief Cawley could explain once again the problem we in the community have in connection with deploying the men that you have with existing budgetary restrictions. It is hard to determine how much of a deterrent the foot patrolmen are, but we continue to have the same problem—and I assume other cities have it—where the layman and the person in the street say they wants more foot patrolmen. The geographic area has not increased the population has increased and without taking away from the good work being done by these men, they are not, in fact, deterrents because of lack of uniforms.

The answer has been that you can cover more ground with the squad car than the foot patrolman can. Is it still your belief the visibility of the foot patrolman does not outweigh the flexibility of the squad car?

Mr. Cawley. In order to be responsive to the tremendous service needs of the community, Congressman, I think the radio car is the most economical and effective way of providing the highest level of service. If we could afford it, we would certainly like to have more men on foot patrol. We do not have that luxury at the moment.

We have tried to take both sides of the street, though. We have instituted a number of programs and one of which comes to mind is the Park, walk, and talk concept.

We have tried to require officers during particular times of their tour of duty to get out of the car, to walk on the streets of the community, and to meet with the business people.

We have put in a program I call, responsive patrol. That program is designed to deal with what I call "unstructured time." Only about 30 percent of a uniformed patrolmen's time is consumed in mandated services, so he has quite a bit of time that is available to us to direct his energies and suggest where he could better spend that time.

So we have tried, in that part of his time, to get him to leave the radio car, to get out and walk. But right now, we have been through an additional process. We are in the process of hiring more people. Hopefully, in the very near future, we will have additional personnel that we can consider how to best assign them and where to best assign them. But right now, I do believe the most effective way of using the resources that I have is to keep them assigned to radio multipatrol duty.

Mr. Rangel. This sounds like a breakthrough. Meaning, if more money was available and you had more manpower, you would consider more foot patrolmen rather than expansion of the radio car system?

Mr. Cawley. That will depend, of course, upon the analysis of the local needs on the part of the precinct commander. That, again, I go back to our setting in, the commissioner setting in, a concept of decentralization of duty. We have had each precinct commander to continually evaluate his problems, to come up with the best use of resources made available to him.

If the commanding officer of the precinct believes the best way of solving many of his problems would be to run on RMP planning——

Mr. Rangel. What is RMP?

Mr. CAWLEY. Radio motor patrol. And then the balance of those resources that are used in scooter patrol, foot patrol, we would encourage them to think through their own problems and suggest to us how to best use the people assigned to them.

Mr. RANGEL. Wouldn't more foot patrolmen want to be elevated to the squad cars? I don't know. But isn't that something like a better assignment than pounding the beat?

Mr. CAWLEY. No; I don't think it is necessarily viewed as a better assignment. I think, if the best place to use a police officer would be on the scooter or on the foot patrol assignment, that officer would not consider it to be a lesser assignment than one in a car. Cars are kept quite busy, as you know.

Mr. RANGEL. I won't get into that, the way they are kept busy, but it just seems to me you are asking a lot of the command if most of its men would want cars, and, heck, during the cold, bitter winters, it seems to me a car makes a heck of a lot of difference—whether you are in the street or in the car.

But that being what it is, are you saying that now the department is so decentralized that if you were voted more funds that the local precinct commanders would decide whether there would be more foot patrolmen or more radio cars?

Commissioner MURPHY. I would like to respond to that, Congressman. As you know, we have been in the job freeze in the city for about 3 years and that means we have suffered an attrition of well over 2,000 police officers and well over 1,000 civilian employees. So it is a kind of 10-percent attrition over 3 years.

When I was public safety director here in Washington, in 1968, for the first time in, I think 10 years, I brought the department up to quota of 3,100 officers. In Washington, D.C.

Now in Washington, there are 5,100 police officers, the last I heard. Those of us in the policing world, when we meet with the distinguished Chief Wilson in Washington, we say to him, "You are a lucky fellow; you have wall-to-wall cops."

In Washington, Chief Wilson is blessed with 6.5 policemen per 1,000 of population. We have less than four policemen per 1,000 of population in New York City. Congressman, I assure you, if we had five policemen per 1,000, we would have a lot more on foot patrol. If we had 6.5, we would have wall-to-wall cops in your district.

Mr. RANGEL. You deal with the population figure ratio to the police officer, and I assume that is the best way to do it. From a layman's point of view, however, while the population has expanded geographically, New York City has not increased, so that we could have the same number of policemen in any given area as we believe we used to have before the expansion of the squad car.

Commissioner MURPHY. Well, there are a number of other factors, Congressman. As a result of better working conditions, officers have longer vacations, more paid holidays, time for training. We don't really have available the same amount of street time per officer that we had a few years ago.

Another factor is the time lost in court. The number of times an officer must go back when he makes an arrest.

So the truth of the matter is—and I know Chief Cawley and I have both come under fire for shifting more on the basis of crime incidence

and that is what we have been doing, so that also there has been a net loss of manpower in your district, I believe, because we have had this serious loss citywide. The distribution of officers citywide, I believe, has improved for your district.

That is, the percentage of all of those available for precinct work has improved because in Totenville, for example, the merchants feel they don't have sufficient police protection. I think you know where Totenville is. It is true, we reduced the size of the force in Totenville and some other outlying precincts, trying to get a distribution more in accordance with the incidence of crime and the calls for service.

But I am sorry to say, because of the total attrition in the department, there has been a decrease from what you had some years ago.

Mr. RANGEL. I appreciate the scientific input you brought to the police department. No one can successfully argue against the proposition that you have increased the effective utilization of the force. But getting more policemen, really, is a political matter in a sense. I was the sponsor of the so-called fourth platoon bill in the New York State Legislature and I know the argument in State legislative bodies will not be scientific but will, in fact, be political in nature, as each legislator attempts to reflect the feeling of the people he represents.

So my real question is: notwithstanding your technical arguments on the utilization of manpower, to the layman, the foot patrolman represents a large part of the solution of the problem. I am asking you, Chief, what number of men do you need to enable you to reach that point where you have already used as much manpower for the radio squad car as you can, and then you can begin to assign the excess to what the people believe the solutions, from a layman's point of view, of having more visible evidence of police presence.

It seems to me from an emotional point of view, most people believe there is no substitute for the foot patrolman, whether it is for better police-community relations, or as a deterrent to crime. If, politically, we were to ask the State legislature for more money for more police, it would be embarrassing if you came up saying these additional men would be used for more radio cars.

Mr. CAWLEY. Again, I am not trying to avoid the question. I have to come back to the fact that there has been a 2,000-man attrition in the last few years.

Mr. RANGEL. We know what we have suffered and we know the difficulty with the New York City budget to bring you back up to standard manpower. But somewhere along the line, with all of the politicians talking, we have to find out how many men you think would be necessary to effectively patrol the streets of New York, and do everything that you want to do.

Chairman PEPPER. We will have a 10-minute recess.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order.

Gentlemen of the committee, I thought we would like the first presentation made and then we would ask questions.

Mr. LYNCH. I wonder if we could at this time call Lieutenant Hubert of the auto crime squad to explain to the committee what the function of that unit is, and what its success rate has been?

Statement of Frank Hubert

Mr. HUBERT. Good morning.

The auto crime unit is a uniform force. It works in marked and unmarked autos and the main thrust of the unit is the auto larceny problem.

Our command is citywide anticrime section and we are under the command of Chief Voelker. We patrol all areas of the city where the auto larceny problem is high and we respond there on, primarily, statistical analysis, although we will respond upon a request of a local precinct commander.

I was going to utilize the flip chart, but I see it is down. I guess the best way to reflect upon achievements of 1972, we have a complement of 64 field patrolmen. It represents 0.22 percent, or, better yet, one-fifth of 1 percent of the entire department.

It effected 1,758 arrests during the year 1972, of which 1,583 were for felonies. This figure represents 90 percent of the total arrest picture for this unit. It has effected 899 arrests for a grand larceny, auto. This represents 9.4 percent of all grand larceny auto arrests effected in the New York City Police Department.

Of our total arrests, over 1,200 are directly related to auto larcenies. In addition, the auto crime unit has effected 16 arrests for bribery, which reflects 3 percent of all bribery arrests in the city.

An additional function of our unit is that we will respond upon request to any precinct whereupon a precinct patrolman has what he believes to be on auto larceny and he is unable to identify the car or identify the documents involved in the car. We responded during 1972 on 552 occasions, resulting in 337 arrests resulting from the identification of the vehicle in question.

I think our most impressive figure is that we have recovered 2,078 stolen motor vehicles, with an estimated value of $2.6 million. We arrive at this figure by using the retail figure for the recovered vehicles; we deducted any damage on the vehicle; and then I again reduced this figure by 10 percent, to bring it as close as I could to the real value.

Chairman Pepper. Have you any figures on the age groups which are primarily responsible for auto thefts?

Mr. Hubert. It really doesn't lock in. We run the whole gamut. We have the professional thief. We have had one as old as 52 years old. And we moved down to the 40-year-old age bracket; 30-year-old age bracket. I would say, about the only answer I could give you in this particular area, that the joyriding, transportation thief would be the young individual.

As we go into a professional thief, where he is stealing the car for parts, or he is stealing the car for resale, we would go into a middle-age bracket, say, starting at 30 years old.

Chairman Pepper. Thank you.

Mr. Hubert. You are welcome.

Of these recovered vehicles which I just mentioned, 1,084 were recovered in arrest situations; 994 were recovered in nonarrest situations.

I don't contribute this dramatic decrease in grand larceny, auto, which was 21.6 for the year 1972, solely to the efforts of our unit. But I do feel the formation of this unit has filled a long-neglected void that existed between the detective bureau's auto squad, which primarily investigates major auto theft rings, and the uniform force, which lacked the knowledge and expertise to correctly identify an auto.

But it has proven, to me at least, that a limited number of highly motivated and trained men whose efforts are directed to, very specifically, a narrow area of the total crime picture, have caused a decrease in auto larcenies.

Along with the creation of the auto crime hearing in March of 1972, the patrol services bureau decided to further expand its program against auto-connected crimes, and into existence came the auto crime squad. Using as a cadre, men from the auto crime unit, eight patrolmen from each patrol precinct received 2 days of training in the auto crime field.

Upon completion, the patrolmen returned to their commands and were available to assist and train precinct personnel in the various crimes connected with auto theft.

As the value of this course became evident, it was expanded to include lieutenants, sergeants, and specialized units. Over 1,400 members of this department attended this course during 1972.

With a view toward providing a much-needed service to the public, we are currently engaged in developing a program where a specific day of the week—we are thinking of Saturdays, between 10 a.m. and 6 p.m. at this time—we would make our expertise available to the motoring public by having a location where anyone contemplating purchasing a used auto could have it inspected by our personnel to insure it is not a stolen vehicle.

We feel this would reduce the number of incidents where a person unknowingly purchases a stolen vehicle. A side effect of this program, we are hoping, is to curtail the auto thief's market for his goods.

We also had published in two major newspapers a list of warnings for the used-car buyer to follow in purchasing a used auto.

I feel that these combined endeavors, plus the awareness by other members of the department of the availability of willing expertise at their disposal, has made a significant contribution toward the reduction of auto larcenies in the city of New York during the year 1972.

I thank you for your time and attention.

Mr. Brasco. Lieutenant, I don't know whether it is your area of jurisdiction specifically, but one of the things that I find particularly distressing is in the area of stolen automobiles where those who would take them for transportation, joyriders, then leave them some place on the street.

Mr. Hubert. Yes, sir.

Mr. Brasco. If there is an automobile on someone's block for 2 or 3 days, and it hasn't been moved, and no one is familiar with the automobile, then I think the average citizen is aware enough to know that, at that point, it is probably a stolen automobile.

The car is not taken off the street and youngsters in the area start to strip the automobile, and that happens rather quickly. Obviously, two things happen: the fellow's automobile that might be in good shape other than just being taken for the joyride is now stripped beyond repair, many times burned; but particularly distressing is the fact that the youngsters who strip the cars wind up as defendants charged with either petty or grand larceny.

Does your department have the authority to integrate this removal with the department of sanitation, who I understand has some responsibility? Also, I understand that there is a contract given out

by the city through the police department to private tow operators who are suppose to take this automobile off the street.

Commissioner MURPHY. I am just going to say a word about that, Congressman. It is true that the department of sanitation has had a responsibility and the police department has had a responsibility, and private contractors are involved in taking away the junk cars. We don't have a perfect system yet, but I do believe there has been a marked improvement in the past year or two.

The problem is complicated. Some people, as you probably know, abandon cars on the streets. They will frequently take the license plates off. In other words, they won't pay the small fee to have the junkman take it off their hands.

I agree with you that, unfortunately, there have been examples, and too many of them, of a car in relatively good condition not recovered quickly enough, not taken in off the street, and it has been attacked and, in short order, is no longer a good car.

There have been some irregularities as well. I think we are improving, but we don't have the final answer. However, either Chief Cawley or the lieutenant will probably give you more specific information.

Mr. HUBERT. With reference to your question, you imply the youngster, upon taking a mirror from the car would be charged with the grand larceny of the car?

Mr. BRASCO. Not of the car but larceny with respect to taking parts. Obviously, when the owner of the car is found, and it is a stolen automobile, he is the complainant. I am not indicating any defense for the theft of parts from the auto, but it is a great temptation to take something from an abandoned automobile, particularly in poor neighborhoods.

There is just no way you can keep the kids away from that automobile when they know it has been sitting there 4 or 5 days, and it doesn't belong to anybody in the neighborhood. That is my point.

Mr. HUBERT. A lot of times, what happens is they find it cheaper when they wish to get rid of a vehicle to just leave it where it is, remove all of the identification and let the vehicle sit.

Initially, when the police patrolman responds, he checks to see whether logs exist on the particular vehicle. If it is a stolen vehicle, we can move it right away. If it is not stolen, it goes to the sanitation program on removal, which sometimes, unfortunately, takes 2, 3, 4, or more days.

But we have a problem storing the vehicles. In the pounds we have where we store the vehicles, space is at a premium at all times.

Mr. BRASCO. Could I ask one more question, Mr. Chairman?

In the same area, another disturbing situation I found when I was in the district attorney's office in Brooklyn was that when that police officer would apprehend someone in possession of a stolen automobile, he would lodge charges of grand larceny with respect to the stolen automobile, uninsured motor vehicle, unregistered vehicle, several charges with respect to traffic violations.

So that the police officer then is placed in a situation—which never made any sense to me and I communicated with the district attorney's offices about it and I tell you about it as it is in your area of jurisdiction—where that police officer now has got to go, if there is an indictment, to the supreme court with respect to the grand larceny of

the automobile. The misdemeanor charges are left to the criminal court of the city of New York, and then in Brooklyn, he has to go over to the courthouse on Pennsylvania Avenue with respect to the traffic violations.

I found in those cases, once it is tried and there is a conviction or a plea is obtained in the course of conviction, these things are taken into consideration by the judge in the supreme court; except that what is happening is it is costing so much time, effort, and money because the police officer is then running to the criminal courts, and running over to the Pennsylvania Avenue courthouse in Brooklyn. I have seen cases where a man has actually gone to prison and when he is let out, he finds out there is a warrant at the jailhouse waiting for him.

He is picked up and brought back and put into the mill again in the criminal courts to take care of the misdemeanor or other charges, the traffic violation, that arose out of one transaction.

It just seems to me a total waste of manpower and money that would have to be expended to keep that man in the system in three courts.

Mr. Crawley. Mr. Congressman, I would like to respond to that because much of what you said, the department has recognized. And I think one of the things we have done in the last 18 months or so is take a very hard look at the quality of arrests being made in the multiple auto situation as you just described.

We have instituted central booking facilities in the Bureau of Queens, Richmond, and last week in the Bronx, where the quality of arrests and the—well, almost the validity of the arrest, is it a necessary arrest, is very carefuly examined. And if it doesn't meet very high standards, we try to divert it from the system, into some other referral process, or on some occasions, with the concurrence of the district attorney, we will go the 343 route. You know what that is. So we are very concerned with that, recognized to be a problem; and I think we are dealing with it in a very ongoing sense.

Chairman Pepper. Could we move along, Mr. Lynch.

Mr. Lynch. Mr. Commissioner, it is our understanding then, and please correct me if I am wrong, that the auto crime unit functions under the general guidance of the citywide anticrime section and this adds another capability to that section?

Unless there are further questions in that regard, I wonder if you might introduce the young lady at the table and tell us what her assignment is in your department.

Commissioner Murphy. Thank you, Mr. Lynch.

With us is Lt. Julia Tucker, who commands the rape analysis investigation unit, which is a relatively new unit in the New York City Police Department. Lieutenant Tucker is also assisted by female detectives.

This unit has been created for a number of reasons. We were discussing earlier the problem of unreported crime, and those of us in police work have been aware for a number of years that one of the crimes that may be least reported is the crime of rape, for a variety of reasons.

The victim is embarrassed: the victim for a number of reasons may feel that it is a reflection on her in some way, the male police officers frequently have difficulty in obtaining the cooperation of the female

victim because the victim is embarrassed about describing the particular act involved.

Because we want to devote more attention to this very serious crime, we looked into some of the problems that exist in connection with the police department's approach to the problem, and came to the conclusion that it was worth experimenting, at least, with the use of female detectives for taking the reports, interviewing the victims, and doing the kind of analysis that would make us more effective in identifying and apprehending the violators.

Lieutenant Tucker has headed this unit for the past several months. She in one of our outstanding leaders in the department. I am very happy to have her with us today. She will describe some of the work of her unit.

Mr. Brasco. Mr. Chairman, if I might interrupt. At the moment, there is a quorum call going on. I am wondering whether or not we could take a 10-minute recess and then we can all hear the lieutenant?

Chairman Pepper. It is appropriate to take a recess so we can run over to answer the quorum call. We will be right back.

[A brief recess was taken.]

Chairman Pepper. The committee will come to order.

Statement of Julia Tucker

Mr. Lynch. Lieutenant Tucker, I wonder if at this time you could describe to the members of the committee exactly how it is that your unit functions within the department and what changes, if any, have been effected by the presence of your unit?

Miss Tucker. Well, first of all, I am sure many of you are aware of the unique problems involved in investigating rape cases. This is a very personal crime and that woman is very sensitive at the time of interview, and subsequently. She frequently is too embarrassed to even report the crime, and I think this was one of the paramount reasons the commissioner had in establishing the unit. That, coupled with the fact that the number of forceful rapes had gone up significantly and the clearance rate on rape is not, shall we say, as good as we would like it to be.

These were the main reasons for setting up the unit, which is composed solely of female detectives. First of all, we receive copies of all complaints made on forcible rape, forcible sodomy, and their attempts. We review these cases; we have them coded and keypunched into a computer in the hope that patterns will be established where perhaps an individual has raped more than one woman. This has been found to be true.

Most of the time, if a man rapes once, he will rape over and over again.

Now, once we have determined a pattern, my woman will go out and reinterview the victim and hope to obtain additional information which may have been lost by the interview with a male officer. We have been very successful in this regard. Generally, the women will indicate they were too embarrassed to tell a specific detail; and we have been fortunate enough to make several apprehensions based just on this type of information.

We also will take in complaints directly from a female. We have established a special telephone number—577–RAPE, in the hope that

women will remember it and if they have a problem, will call us and give us the details. Since the telephone number has been established, women have called. In fact, women have called from all over the country to demonstrate and to imply to us they were very pleased with the fact a unit such as this was established.

In addition to that, we also will go out whenever a male officer demonstrates or indicates to us that a female officer is needed. Many times during an investigation by a male officer, they will realize that perhaps they are not getting all of the details, and if a woman were present, the woman would feel more relaxed and then come up with something she may have left out.

In connection with the unit, we have also expanded the concept of specialization, and male officers are now selected and screened for their sensitivity and experience in this area, and work exclusively on rape. This and our unit, I think, will really be very effective. In fact, I know it will be effective.

In addition, in the future, with the assistance of the Police Foundation, we are hoping to perhaps find a model for exactly how to handle rape cases. There are many, many problems involved in handling rape. Hospitals, the courts—not the courts, actually, the law, is rather demanding—and certain evidence must be obtained and if proper training is not given to the detectives or the officers, and to the public themselves, much evidence is lost which then handicaps the investigation.

I think that is kind of a total of what we are doing and perhaps if you have any questions——

Mr. LYNCH. Is your unit funded by the Police Foundation?

Miss TUCKER. We have just received Police Foundation funding; yes.

Mr. LYNCH. What are those funds for?

Miss TUCKER. Initially, they will be for a research director and assistant and personnel to help us in the research, in finding the best way of handling rape cases, and also for various equipment.

We had hoped that perhaps, and we will, actually, have photographs of rapists on microfilm and my women will be able to go out into the field with portable viewers and let a woman see all the people that have been arrested for rape. Many times women are too embarrassed to even come down to headquarters to view these photographs, and I am quite sure many cases would be solved if this were possible; and it is now possible.

In addition to that, the women are trained in investigative techniques and when they go out on an interview they will lift fingerprints if there are any available and they will have composites made, using identity kits. Hopefully, with the foundation funding, we will get a new machine. It is called the montage machine—it is quite unique, actually. It is kind of an advance identity kit.

In this machine you will be able to take part of a photograph, perhaps a chin of an individual, or a nose, and put them all together; and you are able to see a clear picture, or at least have a very good picture of who you are looking for.

Much of the money will be going to equipment that will help us in our investigative techniques.

Mr. LYNCH. Since your unit was created, has there been an increase in the number of reported rapes within New York City?

Miss TUCKER. Yes, there has been. I would say approximately a 20-percent increase, which we were hoping for and anticipating. Because, of course, unless we get a clear picture of exactly how many rapes are being committed, we can never really deploy our people the way we should. I am hoping that more and more women will contact us. Because I don't feel it is actually there are more rapists: I think the same number of rapists are just raping more women.

Mr. LYNCH. To what do you attribute the increase in the number of reported rapes? Have you publicized the existence of your unit?

Miss TUCKER. Oh, yes; I have been on television several times, and in the newspapers. We have tried to reach community council meetings and various community groups, women's liberation groups: actually, as many people as I can possibly get hold of, in order to allow women and let women know that we are here to help them.

Mr. LYNCH. Lieutenant Tucker, several weeks ago you told some members of our investigatory staff that one of the functions of this unit would be to serve as a central intelligence data-gathering unit. I wonder if you could explain to the committee what you mean by that?

Miss TUCKER. As I mentioned before, all of the cases are coded. We have set up a special coding system and it goes into the complete physical description of the individual, the modus operandi, and anything else that is unique about the person.

Chairman PEPPER. Excuse me just a minute. We have another vote on the floor. We will have to take a recess so we can run over and vote.

Commissioner, I understand you have to leave at 1 o'clock?

Commissioner MURPHY. Yes, Mr. Chairman. I am sorry, but I must get back; but Chief Cawley will stay here and the other members of the department.

Chairman PEPPER. Will you be able to come back after lunch?

Commissioner MURPHY. I am sorry; I won't be able to.

Chairman PEPPER. Well, I will miss the vote. I want to ask the commissioner about a few things that could be done other than is being done now.

How much Federal aid have you received for the New York City Police Department?

Commissioner MURPHY. We have received approximately $10 million. That is my recollection, Mr. Chairman. We can get a precise figure for the record. Of course, we have a very large budget from city funds.

[The information referred to above was not received.]

Chairman PEPPER. About what percentage is that of the total expenditures that you make for the police department of New York?

Commissioner MURPHY. It would be less than 1 percent.

Chairman PEPPER. Let's just suppose that Congress would make available substantial additional funds and suppose you could get substantial additional funds from the city of New York. How would you employ those funds in order to further reduce crime in the city of New York?

Commissioner MURPHY. If we had large additional funds, Mr. Chairman, we would have many more officers in uniform in our precincts; we would probably increase this unit, which we are thinking of doing now; and we would put officers in any number of other assign-

ments. But we would have greater visible patrol if we had sufficient funding.

Chairman PEPPER. You, in your opening statement referred to the bottleneck, or the obstacle, of the prosecuting attorneys and the courts.

I saw in the Times a statement by District Attorney Monrola of the Bronx that if he didn't do anything but prosecute murder cases in the next year, it would take all of the time that he had. Would you think that might be true?

Commissioner MURPHY. A very small percentage, less than 5 percent of those indicted for felonies in his county, as I recall it, are brought to trial.

Chairman PEPPER. So he said, under the pressure that he bears, that he has to have plea bargaining in order to make any progress at all in the disposition of his court docket.

Commissioner MURPHY. Well, I agree with that; and I would never propose doing away with plea bargaining, Mr. Chairman. But I am not sure that 95 or 96 percent of the cases should be plea bargained.

Chairman PEPPER. If there were additional money, the prosecuting attorney area would also be one which would well be the subject of additional funding?

Commissioner MURPHY. Oh, yes. And, in New York City, we admittedly are permitting a greater share of the funds to go to the courts and prosecutors and corrections, rather than the police department, because that is where the need is greatest, I believe.

Chairman PEPPER. Do police officers feel such a degree of frustration in the disposition of cases because of the delay of the courts in disposing of the cases?

Commissioner MURPHY. Oh, yes. We have been frustrated because the courts are unable to hold enough trials to expedite the handling of serious cases, and they just don't have the capacity, it seems, to deal with the volume of work we take in.

Chairman PEPPER. In thinking about how we can further reduce crime, in addition to the excellent job you have done by these innovative procedures you are revealing here today, a great deal of additional help is needed in the area of the prosecuting attorney's offices and the area of the courts?

Commissioner MURPHY. Yes. I believe that.

Chairman PEPPER. The same thing applies to the area of corrections.

The Chief Justice of the United States, speaking in New York a year or 2 ago, stated that 75 percent of the people who are confined in our correctional institutions are returned within a relatively short time after release for having committed another crime.

Do you regard our correctional system today, with its inadequacies and imperfections, as being a serious contributor to the crime we have today?

Commissioner MURPHY. Yes; I do. I think we are not correcting people or helping them. I wouldn't certainly put all of the blame on the correctional institutions, but they don't have the funding to do many of the things they should be doing; and there are lots of problems about finding work for people when they leave institutions.

Chairman PEPPER. As I recall, when our committee went up to Attica, the Friday of the week in which the tragedy occurred, Governor Rockefeller said, "I know just as well as anybody that we need to improve and modernize the prison system of New York."

But he turned, I believe it was to Senator Dunn who, I believe, was chairman of the legislative committee on crime, and he said, "I believe it would cost $100 million." I believe the senator said perhaps $200 million to modernize completely the correctional system of New York.

You have your Attica, we have our Raiford in Florida, a great State prison, 50 or 100 percent overcrowded, out in the rural area, where there is no opportunity for halfway houses or job employment.

You would put great emphasis on improving the correctional system also. You police, no matter how good a job you do, can't do it all. You have to have the cooperation of these other units in the administration of the justice system.

Commissioner MURPHY. Definitely, Mr. Chairman.

Chairman PEPPER. How adequately would you say the public authority is able to deal with the drug problem in the city of New York? How adequate is the present treatment and rehabilitation program in respect to the drug addiction problem in relation to the crime you have in New York City?

Commissioner MURPHY. Well, during the past year or two we have seen a marked increase in the number of addicts being treated. There are now 53,000 addicts in treatment in New York City, and it may very well be this helps to explain the decrease in crime last year in New York, because addicts who are depending upon crime to support their habits commit a great amount of crime.

Chairman PEPPER. You say about 53,000 addicts are being treated?

Commissioner MURPHY. That is correct. Yes.

Chairman PEPPER. How many addicts do you estimate there are in the city of New York?

Commissioner MURPHY. Estimates range from 100,000 to perhaps 150,000. Some would estimate higher.

Chairman PEPPER. It may well be that no more than half of the drug addicts of New York City are being included in treatment and rehabilitation programs of today?

Commissioner MURPHY. That would be a good estimate, I think.

Chairman PEPPER. And if there were additional treatment and rehabilitation facilities available, do you think that would also tend to reduce crime in the city of New York?

Commissioner MURPHY. I think so. I think we must face the fact that the addict needs treatment; that a jail or a prison is not the place to cure an addict. When he leaves, all the experience seems to tell us he will go back to crime and back to the use of drugs.

Chairman PEPPER. There must be an enormous amount of property stolen in this country every year. That must run into the hundreds of millions, if not into the billions of dollars. I know my wife and I lost several thousand dollars' worth of our property, including a car right in front of our home, and we never heard anything about it. It is going on all the time.

Must not there be a system of fences? Somebody has to dispose of that property. These robbers, these burglars, they want money. If they are drug addicts they want money to buy a drug. They have to dispose of that property rather soon.

What has been your experience as to a system of professional fences that exist in your area and probably exist in the country? Is there such a thing?

Commissioner Murphy. I certainly believe there are fences; and when we are successful in identifying one, it may help us to recover a great deal of stolen property and to solve a great deal of crime. I am sorry to have to say, though, too many thieves are able to sell their stolen merchandise right on the streets of our city. I am also sorry to say, many businesses, thought of as legitimate, will purchase the stolen property.

So I think the fence plays a part, but I don't think he is the whole answer.

Chairman Pepper. In respect to organized crime, do you think that there is more that we can do than we are now doing to reach the top people who deal in the drug business, or who are in the drug traffic?

Commissioner Murphy. Mr. Chairman, I think in New York City we have a motto. In fact, Mr. Ambrose has been kind enough to say that the arrangement we have in New York City of our department working on a day-to-day basis, as a matter of fact the same units and the same officers with the Federal agents, is the ideal arrangement because investigations can then be prosecuted either under the Federal laws or the State laws, and for other reasons as well; exchange of intelligence information being one example. It is highly desirable there be a close working relationship.

I don't think we are doing all we can do, but I think we are improving and I think we are reaching people at higher levels.

For example, in our department last year, Mayor Lindsay approved an appropriation to us of $1.25 million for information and "buy" money for narcotics. Previously, we had only a fraction of that amount, and as a practical matter, to reach the higher level people in the drug traffic, "buy" money is needed in large amounts.

I think we can do much more, but I am not optimistic that we will ever be able to totally stop the illegal drug trade while the profits remain as great as they are. People will take risks.

Chairman Pepper. Would you say the authorities, Federal, State, or local to a relative moral certainty, are aware of who are the top organized crime figures in the drug traffic?

Commissioner Murphy. Well, I think, Mr. Chairman, we have good intelligence and good information about who many of the top-level people are. It is extremely difficult to make strong cases against many of them because the higher they are in the structure the more they seem to operate far removed from the drugs and the money, and they are hard to reach.

Chairman Pepper. I don't know whether you heard of it or not, but we are going to have a witness before this committee who is a professor at a university in this country, who has the theory that I have entertained for some time. The theory is that we might be able to use the injunctive process against some of these figures when we have a moral certainty they are the top figures, or among the top figures, of organized crime in the traffic in drugs, but are not able to convict beyond a reasonable doubt in a criminal case, on the theory that it would be analogous to enjoining the violation of antitrust laws. You can get an injunction against violating some of the antitrust laws, which is a criminal offense.

This professor's theory is all of you people together, the Federal, State, and local people, would have enough evidence to go before a

Federal judge and make a prima facie case that "X" was indeed one of the hierarchy of the traffic in drugs and he would be enjoined by that judge and a prima facie case made by the authorities from participating in such an activity.

Then if he were later on found to be still trafficking, it would be easier to find enough evidence to get the judge to find him guilty of contempt of court than it would be evidence that would convict him beyond a reasonable doubt in the criminal court. If something like that could be worked out, it would give you all a new weapon; would it not?

Commissioner MURPHY. Yes. I think that might have considerable potential, because we need all of the tools that we can get that will work for us.

Chairman PEPPER. Mr. Murphy, if you will just take a minute more, our chief counsel, Mr. Nolde, would like to ask you a question.

Mr. NOLDE. Commissioner Murphy, your citywide anticrime unit is, of course, doing a tremendous job in specializing in the kind of street crime attack that we have heard about today. It has been proposed that the police should be free from having to deal with gambling and prostitution and marihuana possession, so as to permit officers to concentrate on street crime.

What is your response toward that proposal?

Commissioner MURPHY. Well, I think we can't ignore those crimes, as difficult as enforcement of those laws may be; because organized crime figures are involved in those crimes and make enormous profits. I don't think there is any way we can separate street crime from organized crime, because they are very closely related, as a matter of fact; an outstanding example being narcotics. While organized crime people are getting rich in the narcotics traffic, the addict is committing street crime every day.

I certainly am pleased that we have offtrack betting, legalized offtrack betting in New York City, and perhaps some more forms of gambling should be legalized, because the gambling laws are quite unenforceable. But while those things are illegal and the profits are enormous, organized crime will be in those areas of activity.

So we try to strike a balance between what percentage of our resources are applied to organized crime enforcement, and what percentage to the patrol and other functions, and what percentage to anticrime work. But we are aware that there are some who feel little or none of the resources should be applied to organized crime. I disagree with that.

Mr. NOLDE. But if we legalized some of these activities, would it not, in fact, eliminate some of the organized crime problem?

Commissioner MURPHY. Indeed. I think, as a matter of fact, the situation in New York State and New York City for many years has been hypocritical. We continue to have laws on the books that the people do not believe in. Few, it seems to me a minority of New York City residents, for years have thought gambling to be immoral or wrong, and yet the laws were there and it kept the police officer in the middle.

Shortly after becoming police commissioner, I publicly stated we would not enforce the blue laws, the Sabbath laws. There had been corruption, abuses, as part of the enforcement work of the depart-

ment, and we just stopped that. Now, we do enforce the laws when there are complaints and circumstances call for it, but it is another example of the dilemma of the police.

Now, I certainly don't believe in legalized prostitution, but perhaps the criminal law is not the best weapon against prostitution. We may devise some strategies under the civil law. We may begin to understand that the prostitute may be more a victim than a criminal, if you will, and that she needs to be dealt with as a sick person.

And certainly it is my belief that the history of this Nation, in dealing with the narcotics problem, has been a history of hypocrisy in that we have attempted to solve the problem by the use of the criminal law, that the criminal law can never solve.

I am delighted, with in the past couple of years, the Federal Government has finally tipped the balance, in spending more money now in treatment than on enforcement of the narcotics laws. I certainly commend the President for that. I think it is fair to say it is a law and order administration. I am delighted to see enlightenment in the treatment of addicts.

Mr. NOLDE. On that point, what is your reaction to Governor Rockefeller's proposed mandatory life sentence without parole for convicted hard-drug pushers?

Commissioner MURPHY. That proposal is not practical. It wouldn't work. The district attorney would have his hands tied. It would be more difficult to obtain convictions, I believe, and the district attorney would be unable to use what is the standard weapon of the district attorney; that is, to deal, with one person involved in a criminal conspiracy, in order to get convictions against people at higher levels. So I don't think that is a practical matter.

One thing it fails to do is distinguish between the addict pusher and the nonaddict pusher. I think it is impossible to be too severe on the nonaddict drug trafficker who gets rich on human misery and death. But the addict who pushes is another breed, it seems to me, and we must make that distinction. The Governor's proposal, it seems to me, does not make that distinction.

Mr. NOLDE. Thank you Commissioner Murphy, for your very informative testimony here, which is but one more basis for your eminent reputation as this Nation's most professional and progressive police commissioner.

Commissioner MURPHY. Thank you, Mr. Nolde.

Chairman PEPPER. Gentlemen, Mr. Murphy has to go.

Do you have any other questions?

Mr. Brasco?

Mr. BRASCO. Getting back to something, I suppose called the vice squad. Is there still such a concept, Commissioner, or did you change that?

Commissioner MURPHY. No. We never in my memory had a unit called a vice squad. Gambling and prostitution has been dealt with by the plainclothes unit, as we always called them.

Mr. BRASCO. When I was in the DA's office, unless it got that name attached to it without being officially entitled, it was known as the vice squad.

Commissioner MURPHY. I assume they owe that to the headquarters plainclothesmen.

Mr. BRASCO. Right. I always felt the department placed too much emphasis on the gambling and prostitution end of it, and I felt it created more problems than it solved.

Did I understand you to say, in placing deemphasis in this area, you reduced the complement of that squad?

Commissioner MURPHY. What I did say was that I feel that the police department has been in the middle and continues to be in the middle in being expected to enforce gambling laws that citizens don't believe in. We have fewer officers assigned to gambling enforcement now. We are making fewer arrests, but we are striving for higher quality arrests; and we are striving to reach people at higher levels rather than the street runner from the lowest level of bookmaking.

Mr. BRASCO. It has been—I don't know whether it is still the policy—that the activity of a police officer was determined by the number of arrests he made, not the number of convictions he obtained.

Commissioner MURPHY. We have changed that, Congressman. It was commonly known as the sheet, and the sheet is dead, we like to say, and under a new arrangement.

You see, the gambling enforcement previously was under each patrol division and bureau commander. It no longer is; it is now in the organized crime patrol billet under Deputy Commissioner William McCarthy, and I believe he has succeeded in eliminating the quota system and sheet, and people are evaluated on the quality of their work, even if they don't make arrests.

Mr. BRASCO. I am very glad to hear that. I thought you were moving in that direction. I wasn't completely up to date.

Chairman PEPPER. Mr. Rangel.

Mr. RANGEL. Just one question in terms of the investigation to the property clerk matter.

Other cities are having similar type problems in maintaining control over what is confiscated. Who is finally in charge of that investigation? There was some problem between the city office and the State.

Commissioner MURPHY. The special prosecutor, Mr. Nadjari.

Mr. RANGEL. He finally assumed jurisdiction?

Commissioner MURPHY. Yes; he did.

Mr. RANGEL. Again, I want to thank you for coming down here and helping us wrestle with problems other cities are having. We certainly commend you for the wonderful job you have done in restructuring and redirecting the police department in New York.

Commissioner MURPHY. Thank you, Mr. Congressman. I appreciate your support on some of our common interests in narcotic enforcement.

Mr. RANGEL. And our conflict in other areas.

Commissioner MURPHY. It is a pleasure.

Chairman PEPPER. Mr. Lynch, do you have any other questions?

Mr. LYNCH. No further questions, Mr. Chairman.

Chairman PEPPER. Mr. Murphy, I want to extend, on behalf of the committee our very deep obligation for your coming here and helping us so valuably as you have. You are one of the oustanding men in the world, in my opinion, in law enforcement. We are very grateful to have you dedicated to what you have been doing in the New York area as an example for the Nation. We hope you can get some more help to do even more than you have been doing in the past.

Thank you.

Commissioner MURPHY. Thank you, Mr. Chairman. It is always a pleasure to work with you.

Chairman PEPPER. We will take a recess until 2 o'clock.

[Whereupon, at 1:10 p.m., the hearing in the above matter was recessed, to reconvene at 2 p.m. this same day.]

AFTERNOON SESSION

PANEL OF NEW YORK CITY POLICE OFFICIALS—Resumed

CAWLEY, DONALD F., CHIEF OF PATROL SERVICES;
CROWLEY, ROBERT L., SERGEANT, NEIGHBORHOOD PATROL TEAM COMMANDER;
EISDORFER, SIMON, DEPUTY CHIEF INSPECTOR, SPECIAL OPERTIONS;
FREEMAN, ARTHUR A., DEPUTY INSPECTOR;
LUHRS, ROBERT E., DEPUTY INSPECTOR;
ROGAN, JOHN F., DEPUTY INSPECTOR;
SIEGEL, JOSEPH, INSPECTOR, AUXILIARY POLICE; AND
TUCKER, JULIA, LIEUTENANT, RAPE INVESTIGATION AND ANALYSIS SECTION

Chairman PEPPER. The committee will come to order, please.

I believe you wanted Lieutenant Tucker back, Mr. Lynch?

Mr. LYNCH. Yes, Mr. Chairman.

Chairman PEPPER. You may proceed, Mr. Lynch.

Mr. LYNCH. Lieutenant Tucker, just before we broke for lunch, you were describing to the members of the committee the intelligence functions which your new unit will be performing.

I wonder if you could summarize that testimony for us, please.

Miss TUCKER. We take each particular complaint, review that case, and we look for certain information, which we then code and keypunch to have stored in the computer. The type of information we glean from the reports are relevant to the particular perpetrator's description, his complete physical description, his clothing at the time, anything unique or different about his appearance; also, his method of operation, the M.O. Also, various details about the victim.

It is felt, perhaps, if we cannot get a pattern just based on the individual perpetrator's description, or M.O. we might be able to find that he is selecting a certain type victim.

This is the basic type of information we are gathering from the various complaints we have received.

In addition to that, we also map or chart each pattern case on a citywide map, feeling that perhaps we might be able to get some pattern that way, or at least be able to distinguish where he may strike again.

Mr. LYNCH. Do you send intelligence information out to precincts within the city?

Miss TUCKER. Well, at the present this information is available on a need-to-know or call basis. However, in the future, as we grow, I would like to disseminate the information out to the field commands, to the district commands.

Mr. Lynch. Lieutenant, it was your testimony this morning that the crime of rape is a crime that is difficult to get convictions on, for a number of reasons; is that correct?

Miss Tucker. Yes; it is.

Mr. Lynch. So that the intelligence function that your unit does serve, or is attempting to serve—giving minute details about certain things about the perpetrator—would be especially useful in locating, apprehending, and trying rapists; is that correct?

Miss Tucker. It is our hope; yes. I think the more information we can gather, the better our chances will be in getting a conviction.

In addition to that, also we have to learn the type of evidence we must bring to court. There are many situations of things we might not have been knowledgeable about previously that might just be able to be utilized in getting a conviction.

Mr. Lynch. I wonder if you would tell us how many reported rape cases have there been in New York City since the first of this year?

Miss Tucker. Up to date, we handled approximately 1,000 cases.

Mr. Lynch. That is somewhat higher than is normal; is that correct?

Miss Tucker. Yes. It is about 20 percent over last year.

Mr. Lynch. I have no further questions of the witness. Mr. Chairman.

Chairman Pepper. Lieutenant Tucker, what is the penalty for rape in the State of New York?

Miss Tucker. It is a class B felony, and you get up to 25 years.

Chairman Pepper. Ordinarily, how long do they stay in prison before they are paroled?

Miss Tucker. If a conviction is obtained, I would say about 7 years.

Chairman Pepper. About 7 years?

Miss Tucker. That is the length of time I heard that most of them are doing.

Chairman Pepper. Have you heard of there being repeaters among the rapists once they are released from prison?

Miss Tucker. Yes; many times. This crime seems to lend itself to recidivism and generally, if a man is arrested and sent away, when he comes back out he is often again arrested for rape.

Chairman Pepper. If a man is convicted a second time of rape in New York, what sentence will he ordinarily get? Is there a separate statutory offense provided?

Miss Tucker. You mean would he do a longer period of time if he were arrested a second time on this? No.

Chairman Pepper. For a second offense, the punishment wouldn't go up or anything?

Miss Tucker. Nothing of this type.

Chairman Pepper. The same way if he were convicted a third time of rape, the sentence again would be as an ordinary rapist?

Miss Tucker. If he was considered as a three-time offender, a multi-felony offender, then he would get life. But that does not happen too frequently. And as I said before, it is very, very difficult to get a conviction on this type of crime.

Chairman Pepper. Other than some sort of emasculation, is there any treatment for oversexed people, or for a perverted mind? Is there any medical treatment, comparable to the treatment you give a drug addict, that would be of any help?

Miss TUCKER. There appear to be two different types of rapist. One is someone who actually does need some type of medical, or shall we say mental, treatment and the other appears to be a fairly normal individual who perhaps is a little bit more violent than your everyday personality and seems to take out his drive in this way.

But he is apparently not sick; and treatment, I don't think under these circumstances, will really benefit him.

Chairman PEPPER. Have you any other suggestions to make as to how the police departments of the country could better deal with the problem of rape?

Is there anything more you could do if you had more money?

Miss TUCKER. As far as treatment of the rapist?

Chairman PEPPER. Any aspect of the crime of rape or to deter the crime of rape?

Miss TUCKER. What we are going to be doing and, of course, the more money we have the more involved we could become in this, is to actually go through each particular step.

The hospital is an area which definitely needs attention. The treatment should be unified as far as every hospital wherever you would take a rape victim, should be standardized. They should take certain tests from the woman and treat her in a particular manner.

One of the biggest complaints I have had from victims of rape is the treatment they received at the various hospitals, more than even many people indicate, the fact the male officer may be insensitive, have a traumatic reaction to a woman. However, this I have seen very rarely in New York and it has been 3 months I have been working in this field, and I can actually say there has only been one situation where an indication of insensitivity on the part of a male officer was expressed to me.

However, there were many indications that treatment in hospitals was very negative, shall I say.

Mr. CAWLEY. Mr. Chairman, I want to say that it is precisely those questions you have raised that we hope to be able to arrive at answers to, and which led to the development of this very unit. There is a great deal of ignorance and lack of knowledge concerning the crime of rape. We don't have a profile of a rapist; we would certainly hope that part of that Federal project and the funding project we are going through will put us in a better position throughout the Nation, all police agencies, as to how to better deal with the problem of rape.

Chairman PEPPER. Chief, by the way, are all offenders, anyone who commits an offense, perpetrates a felony anywhere in the country, recorded in the FBI computer system so that any police department in the country can check up immediately on whether anybody has an arrest or conviction record and, if so, for what?

Mr. CAWLEY. Any fingerprintable crime would be eventually recorded in the FBI crime statistic sheets, and we would become knowledgeable about it. It may take a day or two in order to get the information, but we would get the information.

Chairman PEPPER. I have heard of instances at home of where a judge would be about to pass sentence on a convicted person and would find out that person was before another court for trial on another charge, or had been convicted in another court or courts of other offenses. I know the probation officers ordinarily are supposed to check

up, but a lot of times they don't seem to know about it by the time they begin the prosecution of the case.

You mean only a felony is fingerprinted? People charged with a felony, are they always fingerprinted when they are arrested.

Mr. CAWLEY. Yes; they are.

Chairman PEPPER. And they go into the FBI files?

Mr. CAWLEY. They go in from New York; yes.

Chairman PEPPER. And you can get those very quickly from the FBI when the case comes up?

Mr. CAWLEY. I am not certain about the amount of time, the turnaround time in getting the information, but it is a reasonably short period of time, Mr. Chairman.

Chairman PEPPER. One other question, Lieutenant Tucker.

Of course serious consequences may derive to the victim of rape: Possibly venereal disease, pregnancy, and the like.

Is there any public assistance available to a rape victim under those circumstances?

Miss TUCKER. The hospital treatment that I mentioned provides this type of service to the woman, where antipregnancy shots and shots against venereal disease are administered to the woman. At least in New York this is part of the hospital treatment, in most of the hospitals. And that is the treatment we are hoping will be administered in every hospital in the city.

Chairman PEPPER. Mr. Wiggins.

Mr. WIGGINS. Lieutenant Tucker, why don't you get convictions?

Miss TUCKER. First of all, the corroboration requirement in New York is such that it becomes very difficult to get a conviction. The law requires that at least some circumstantial evidence be presented to support the woman's allegation that she has been raped.

Frequently, what happens in this type of crime is there is no one around to see the attack take place, and if there is no medical confirmation that a rape took place, there cannot be a conviction on the rape at all without medical corroboration. And this becomes a problem.

Mr. WIGGINS. Well, rape, as you know, is a common law crime involving the nonconsentual act of intercourse. Usually, the difficulties involved are the issue of consent and the issue of penetration.

Would it be easier, in your judgment, if legislative bodies would abandon this common law notion and merely address themselves to a sexual assault and make that the crime, without the difficulty of proving some of the elements of a common law offense of rape?

Miss TUCKER. I think that might be easier and it might direct the problem. Because at present it is very, very difficult to get a conviction because of this corroboration requirement.

It has been brought to my attention by many of the women's groups that they feel perhaps the law should be the same for every crime, that the defendant has ways of protecting his own rights that the law has built in, and that they should be given the same opportunity, and that corroboration should not be required in this type of crime.

Mr. WIGGINS. Well, so long as a consentual act is not an offense—and in most States simple fornication is not a crime—it does take something to negate the defendant's assertion that the young lady consented to his overtures and perhaps some corroboration is in order.

It has always bothered me that we put the victim through the ordeal of testifiyng to the minute details of a sexual assault in order to prove something that comes down to us from the middle ages; namely, that an act of penetration in fact occurred, when that really doesn't go to the gist of society's interest in this matter.

A person has been subjected to a dangerous, humiliating assault that may or may not have involved penetration. That doesn't lessen the offense to my mind one bit. And insofar as you make recommendations to legislative bodies who enact these State laws, I would urge upon you to recommend to them that they consider abandoning this historic burden which we place upon victims and prosecutors; namely, proving penetration.

Miss TUCKER. Yes.

Mr. WIGGINS. Do you think that is a good idea, Chief?

Mr. CAWLEY. Yes; I think anything that would minimize the difficulties that women encounter in trying to describe the details of that crime would certainly be beneficial. Anything that we can do—and that is one of the purposes of instituting the unit itself—to make it very easy for a woman to speak with a woman about a very intimate act and very intimate crime. I think it would be beneficial.

Mr. WIGGINS. I missed the earlier part of your testimony on this subject, but I gather the thrust of it is you want to make it easier for the victim to relate the circumstances and you think it is easier if she speaks directly to a woman about these circumstances.

I think most police calls are made to males and a male police officer may respond in the first instance. Is that the case typically of a rape situation?

Mr. CAWLEY. That is true.

Mr. WIGGINS. Do your policies indicate that the police officer on the scene, when confronted with a possible rape or at least the allegation of one, does nothing at that point and takes the young lady into a secluded place for a woman to iterrogate her?

Mr. CAWLEY. No; we have not gone in that direction, nor do we intend to. If I can just back up for a moment: The creation of the unit was designed to accomplish several different objectives, one of them being the woman could communicate with a woman much more easily. Another, and very important part of it, is the study and the identification of patterns of these crimes and, hopefully, identifying individuals who are multiple offenders.

So quite a bit of the energies currently vested in Lieutenant Tucker's operation is to analyze the patterns of crime and study where they occur, with the hope of identifying the people responsible for it.

The male detective who receives the complaint initially does conduct the investigation. The complaint report is forwarded to Lieutenant Tucker's rape analysis section where they try to pull together pictures, overall pictures, and they do follow up on selected bases at the moment; and hopefully we will have the capability at some point in time of a followup interview in all instances.

Mr. WIGGINS. One of the things about rape that has troubled me is that it is not an offense that one would expect organized crime to be involved in. You would think it would be pretty much a function of population; that is, out of every 100,000 people, there would be so many rapes, and it would be pretty constant around the country.

But it is not. Two and a half times more rape per 100,000 population occurs in my city of Los Angeles than occurs in Cincinnati. How would you account for that?

Mr. Cawley. It is a very difficult problem to get to. I think one of the major problems has been a number of rapes have not been reported. Just why people might be more willing to report a rape that occurred in Los Angeles as opposed to Cincinnati, or any place else, is difficult to answer.

I am not sure whether your first statement might not be correct; it would be reasonable to assume in a given population group there might be x percent of those people who would be involved in that crime.

Mr. Wiggins. If that is true, the difference in statistics is simply a difference in the reporting of crime, not in their actual incidence. That may be the case. It may be your procedures will produce a dramatic increase in the incidence of rape reported to you and, of course, the numerical incidence of rape may, in fact, remain the same.

Mr. Cawley. We expect to receive a substantial increase in the number of rape reports. The preliminary and early indications are that we are getting more complaint reports. A lot of them are coming directly into Lieutenant Tucker's office, which I think is significant, in that that might have been a rape that would not have been reported had we not provided the female with the means of reporting it.

Mr. Wiggins. Thank you, Chief.

Chairman Pepper. Mr. Winn.

Mr. Winn. Thank you, Mr. Chairman.

Lieutenant Tucker, do the reports that you get on rape come from any specific area? In other words, from certain districts where there is known high usage of drugs, high usage of alcohol, et cetera.

Miss Tucker. I would say, generally, it is spread out almost evenly. There are, of course, some areas in the city where I think it is probably more densely populated, but the number of rapes are also higher. However, there does not seem to be any link with narcotics or alcoholism.

Mr. Winn. Would it be more prevalent in the low-income areas, middle-income areas, or high-income areas; or is it pretty well spread?

Miss Tucker. As I said before, it is pretty well spread around. There do seem to be areas where it is higher. Trenchant groups are a little higher than other areas. But then again, it is pretty evenly distributed.

Mr. Winn. Is there a tie between rape and robbery?

Miss Tucker. There are many rapes that are connected with robberies. I wonder at times if perhaps that is also increasing. What might possibly happen is if an individual realizes that he is going to get away with raping a woman and he breaks into her house or is robbing her, he feels he has nothing to lose.

Mr. Winn. Would there be any tie between what may have started out as a rape and ended up in murder?

Miss Tucker. Well, we have homicides that are connected but, you know, not all that many, really.

Mr. Winn. It would be hard to tell, too, probably.

Mr. Cawley, you made a statement a minute ago that I don't quite understand. You said you have these meetings and you pull together with overall pictures.

I don't know what you mean. You mean the vague image of the word "picture" or actual photo-type pictures?

Mr. CAWLEY. I am sorry. I should clarify that. I am talking about the rape analysis unit receiving copies of all of these rape complaints that are received throughout the city. In an effort to identify whether or not there is a concentration of rapes in a particular area, with the view of trying to identify whether one or two people might be responsible for that particular concentration of crime. So when I talk about pictures of crime, I am talking about the concentrated patterns of crime.

Mr. WINN. You are talking about patterns?

Mr. CAWLEY. Rather than pictures.

Mr. WINN. Do you use actual photo-type pictures of those who might be known rapists in those areas, if the pattern develops?

Mr. CAWLEY. Maybe I can ask Lieutenant Tucker to respond to that. She did earlier at the first session.

Mr. WINN. I am sorry. I would like that.

Miss TUCKER. If we see a pattern develop, what I generally will do is have the women go out and reinterview all of the victims of that particular pattern. For instance, if we feel there may be 10 cases that the same perpetrator has committed, one of my women will go out and reinterview all of the women, hoping to gather additional information.

During the course of these interviews they will make composites up there, or they will bring the women down to our latent section and have them view photographs of all known rapists.

They may also even hook them into burglaries and various other crimes that may be connected. If an individual is quite young, the perpetrator, frequently he may have been arrested for auto thefts. The girls are trained investigators so they are familiar with the various other crimes that might be connected with the rape, and therefore try and utilize everything they can to link these cases to a perpetrator.

Mr. WINN. We have read recently, from time to time, about the pros and cons of having women police on the streets, dressed as sexy women, to entice men of this type, or maybe just men in general.

I suppose that is where the controversy comes in—leading a man on the street to believe that that woman is available, either for prostitution or pickup. Are you involved, or are any of your policewomen involved, in this and what is your thinking on whether this is constructive or whether it hurts the image of the police department?

Miss TUCKER. We don't utilize our women in this way.

First of all, I think it would not be too effective. You could have a girl on the street for months and have no one bother her, actually.

Mr. WINN. In New York?

Miss TUCKER. True. In New York, too. I have lived in the city all my life and I have never been attacked.

Mr. WINN. I didn't mean attacked. I mean propositioned; and I suppose it is harder for a man to figure out if it is a prostitute in New York, or a girl that wants to be picked up. But I can't believe a gal can walk the streets of New York very long without an attempt being made, which might result in an assault or a rape.

Miss TUCKER. As I said before, I don't utilize the women in that regard, especially in the rape area. And I am not involved with the other section of having women out relative to the prostitution complaints, et cetera.

Mr. WINN. But the New York Police Department does have a group of women out in that field; like Washington, D.C., did for a while?

Mr. CAWLEY. I would like to respond to that rather than the lieutenant.

On occasion we have used policewomen decoys in the Times Square area to deal with particular problems, but it is not a program that is an ongoing program.

Mr. WINN. Wait a minute. Would you clarify what those particular problems are, and then we would like to find out what your results are.

Mr. CAWLEY. Well, for example, if we had a problem in the Times Square community, as we will on occasion, where we received information that a procurer might be looking to approach a young lady and convert her, if you will, into prostitution we will put out a female detective in that location to see whether or not that is or is not a fact. That is one type of decoy that we might use, and have used.

Another type would be where we want to emphasize the fact that the penal law in the State of New York also has a penal sanction for the patronizer of a prostitute. We will put out, and have on occasion, these women to see whether or not they are solicited and in fact taken to a location for an act of prostitution. We have used that on occasion.

Now, as I said, it is not a long-range program; it is generally instituted on a short-term basis. I am not conversant with the results of the program so I could not give you statistics.

Mr. WINN. I think it is very interesting along the lines that Mr. Wiggins brought up—and I am not defending Watergate, believe me—but we have, according to your remarks that I heard just as I came in—convictions up to maybe 7 years for rape and 4 years for the kidnapping of an admiral's daughter, but 8 years for the tapping of opponent's political headquarters. I think it is kind of interesting. I am not looking for an answer from any of you.

Thank you very much, Mr. Chairman.

Chairman PEPPER. Mr. Rangel.

Mr. RANGEL. Lieutenant, did you give any testimony as to the relationship between convictions and arrests in connection with perpetrators?

Miss TUCKER. No.

Mr. RANGEL. Well, I can see where the assistance that you are giving to the general public, or rather women specifically, would give you more information in order to make more and better arrests; but what happens to the rules of evidence in court on corroboration? Have you been able to effectively deal with that through the district attorney's office?

Miss TUCKER. I have been in connection with the district attorney's office and in contact with them; and as I mentioned before, also with the hospitals.

I think the problem, as far as corroboration, is something that has to be attacked at all angles and a part of the problem is the fact, first of all, that women themselves don't realize the significance of, for instance, running home and taking a shower after an attack which will eliminate any evidence that was there. This has to be something, I think, that is also an educational program, where a woman, if she is attacked, must realize there are certain things she must do, as much as she may want to forget the incident. If we are going to have any suc-

cess at all in convicting a person, we have to have some tools to work with.

I am looking in, as I said, with the D.A.'s office, so they will give us some guidelines as to exactly what is needed for a conviction. There are many odd, or shall I say different, things that may be around that we may be able to utilize. One in particular is a bite file that we are creating. If a woman is bitten you can take a photograph of the bite, and when we apprehend the person involved we can take a cast of his mouth and match that up with the photograph.

It is actually evidence, concrete evidence, that can be used in court.

It is similar to fingerprints. This is just one area that we are finding out about that we are going to be utilizing, and are utilizing. I am sure there are many other things we are going to be able to find out that will help us get convictions.

Mr. Rangel. I suppose you agree a change of the law might be more effective in the work that you have done?

Miss Tucker. Yes. There has been a change in the law in New York and I don't think we can actually at this point evaluate it and say it didn't help at all. I think it was May of last year that the law was changed, and although there are still problems as far as I can see, I would like to see exactly how effective the law is and if we can work with it.

Then after everything we have done, and as tightened up as our investigations have become, if we still are not able to get a conviction then I think the move has to be to try and change the law.

Mr. Rangel. What is your batting average in terms of arrest and convictions?

Miss Tucker. The convictions have been very low, but actually, as far as the new law is concerned we have had few cases come to court under the new law. So I don't think I can evaluate it at this point.

Mr. Rangel. Well, your department is doing a tremendous job in getting public support, but how do you explain if a woman goes through all of these embarrassing things, even with a sensitive investigator, only to find the perpetrator back on the street? I think this is one of the things, from the layman's point of view, that makes you wonder why should you get involved and subject yourself and your family to this so-called embarrassment, if, in fact, you don't have the convictions.

How do you cope with that?

Miss Tucker. First of all, we are looking now to try and get a conviction on the cases and at least today you can get a conviction on an assault if the woman was attacked, whereas last year at the same time you couldn't get a conviction on an assault. If it was connected with the rape, you lost the whole thing.

Chairman Pepper. What is the new law to which you refer?

Miss Tucker. Actually, the old law required an eyewitness, someone standing there and testifying to every step of the way. You had to testify to penetration, the act, everything had to be corroborated by an eyewitness. Today that is not necessary.

But you do need circumstantial evidence to support the evidence.

Chairman Pepper. Corroborating evidence which may be physical?

Miss Tucker. Right.

Chairman Pepper. Mr. Keating?

Mr. KEATING. I would like to ask a couple of questions, and if I am repetitious, I apologize. Say so and I won't recall testimony which took place when I wasn't here.

I have been concerned about this rape law as well. We had a rather celebrated case in Washington at one of the universities here; and as a result, there has been much written about it and much discussed about it, and much discussed about changing the law.

Subsequently, there were some instructions, I gather, to female employees on the Hill, and they told them what to do under certain circumstances. And they said to submit so that you don't sustain any serious physical harm or injury, or maybe even loss of life; but also that if you do, your chances of winning your case in court are very slim.

Now this, I guess, is what we have to get around, to make a law very effective in this area, and I am wondering how you cope with that specific thing, so far as proof in court is concerned.

First of all, do you tell the women to submit so they don't sustain physical injury if you are out talking about this subject anywhere?

Miss TUCKER. No, I don't. I think as far as submitting or not, it has to be up to the woman herself. This is a decision she is going to have to live with. I do explain the pros and cons as to what will happen to the women. I don't think anyone can judge the position a woman is in at a time like that and say, "Gee, I think you should submit," or "No, fight to the death," because a woman may submit and for the rest of her life condemn herself for submitting; whereas, another woman may fight and be seriously injured.

I think it has to be something that at the moment when this happens she, herself, has to make this decision. I don't think it can come from an outside source.

Mr. KEATING. How are we ever going to shore up the laws at all? There is almost a presumption if she does submit that she did so willingly and not under any duress.

Miss TUCKER. This is the problem; but I think there has to be some recognition that a woman may feel she cannot cope with fighting a man, and there is no shame and disgrace in submission in a case like that. But, unfortunately, the laws are such that if there is no physical damage to the person of the victim, it is very, very difficult to prove that she did not go along with it.

Mr. KEATING. And in that event, when you have an incident such as occurred at George Washington University, I think statistics sometimes will show there has been an increase in this kind of a crime after there has been an acquittal in a case that has gotten a great deal of notoriety. I think there is likewise an indication there are a few cases of reporting an incident of rape for a short period of time after such an incident has occurred.

Miss TUCKER. That may be true. Many of the women I have spoken with are disheartened with the law. What we generally do, though, to prepare a woman for the experience she is going to go through in court is go with the woman—I have one of my girls assigned to her—to try, as I said, to prepare her for the experience she is going to have to undergo.

But many cases don't even reach the trial level. They are dismissed, or they take a plea, because they feel the corroboration requirements

have not been met and that the case would not be won if it went to trial. So it is a problem and we are aware of it; and we are trying to do everything we can to tighten up our investigations in the hope that if there is any fault on our part we will see it, and recognize it, and correct it. And if it isn't on our part, and if it is the law that definitely needs correction, then we are going to do everything we can to try and change the law.

Mr. KEATING. Now, I don't know what your procedures are, but I know several instances involving incidents—exposure and also rape cases—where police officers were totally insensitive to the situation to the point where these girls that were involved in the incidents were suggesting to all of their friends that whatever happens don't have anything to do with the police because they are going to give you a very difficult time; they are going to act as if they don't believe you.

Now, really, it is a prelude of what they are going to experience in the courtroom, but is there some way to stop this? This is a very real problem in my community, your community, everywhere else. I think women get together and they talk and they ask "What's the use?"

Miss TUCKER. I have gone out and given many talks to various groups of women in the hope of reaching them and making them understand that we are there and we want them to come forward, and we will be as sympathetic and understanding as possible.

I know all of the women I have working for me, and myself included, cannot listen to a woman who is reporting the crime of rape and not have the hair on the back of their neck stand up. It is such a really heart-rending situation. And it is a situation that will probably stay with that woman for the rest of her life. I think that none of us can lose sight of that and I know as long as I am in charge of the unit it won't be lost sight of.

We are trying to also expand this as I mentioned earlier. We do have specialization in rape, and male detectives are selected and screened for their sensitivity in this area because it is a crime that stays with the victim for years. I have had phone calls from women who were raped 8 to 10 years ago. I spoke to a woman just the other day. I have gotten letters—I have piles of letters—indicating how happy the women are to know we are there and that they have someone to talk to.

Apparently, in a crime like this, it is difficult to even speak to your own family about it. Somehow, even your husband or your mother will say, "Gee, don't talk about it; you forget it." But the woman doesn't want to forget it.

I am hoping that with the establishment of this unit and perhaps other units throughout the country—because other police departments have also written to me expressing their hope they could follow suit and asking how we set up our unit—I think it will make a big difference. Once the women know that they can come forward, I think we are going to be able to apprehend the perpetrators.

Mr. KEATING. I agree with that; and being sympathetic to the woman's position in the matter I have to say that if someone seeks your advice, or my advice, or some member of the panel, whether or not to prosecute, if you get in that area, there must be some reservation in telling people to go ahead and prosecute, knowing what they are

going to go through and knowing the difficulty that they are going to be confronted with.

Miss TUCKER. I don't agree, really. I have experienced this and I have spoken with women, and I said to them, "Look, we may have a problem, but we are all working at this together and if we don't go forward, if you don't come forward to the police and let us know how many crimes are really being committed out there, we are never going to be able to do anything with the problem."

As far as convictions are concerned, that will come. You have to take one step at a time. I think one big issue is getting the women to come forward and report the crime.

Mr. KEATING. Is there any effort being done at your level, and at the prosecutors level, to cope with the problem of corroboration in the courtroom at this time?

You have a new law as you indicated. What does this law require? You told us what the old law requires. Tell us what the new law requires.

Miss TUCKER. The new laws still require some form of corroboration, but it can now be some type of circumstantial evidence. You do have to prove that a rape was actually committed. You also have to prove that the person forced you into the rape. But as I said before, we now don't have to have an eyewitness.

Mr. KEATING. Is pure assault a lesser crime overall? Is pure assault a lesser offense so the judge or the jury determining the innocence or guilt can find them guilty of a lesser offense without retrial?

Miss TUCKER. Yes.

Mr. CAWLEY. Mr. Keating, if I may. This unit was created in the middle of December. That is when the concept really came into the fore. Then the next several months we had been in the process of trying to build it, so that many of the concerns that you have are ours, and we would hope when we get enough of a base to analyze and study we will be in a position to understand the problem somewhat better and, hopefully, come up with some better answers.

Mr. KEATING. What I am saying in questioning here really relates to all offenses and all criminal trials in a sense. It just is more serious in this, because I think it happens more frequently. I think that, No. 1, people have grown to tolerate certain levels of crime over the last 10 years.

Second, I believe that people hesitate to become involved because the judicial system is slow and witnesses have to come back repeatedly to the courtroom, and they lose wages each time, and it is very difficult for the poor person who is a wage earner, an hourly wage earner, to keep coming back. I think there are a lot of things like this that keep people from wanting to report crimes. The victim, for example, feels he is going to lose more from his place of employment.

Now you, myself, and the courts, have to make it more convenient for the people to get involved in the prosecuting of these crimes so they will be willing to come forward. We have to make it easier for people, and we have to encourage it. We don't have to make it a penalty they must pay, either in wages or adverse publicity, et cetera, to get these convictions.

Mr. CAWLEY. I agree with that.

Mr. KEATING. I just think it is an attitudinal thing we have to overcome. A lot of people don't want to serve on juries because they are

treated like cattle. There are just a lot of things in the very human treatment of individuals that can help overcome this crime problem.

Mr. Cawley. I agree.

Mr. Keating. It really rests with you and myself as a legislator, and the judges, to really start doing what is necessary to get this job done.

I didn't mean to get carried away, but I want to thank you very much for your testimony.

Chairman Pepper. Mr. Wiggins.

Mr. Wiggins. As you all know, the penalty for the crime of rape has been in a state of transition in this country a long preiod of years. It wasn't too many years ago that the death penalty was a common penalty for the crime of rape. It was one of several categories of capital offenses, and still exists, if it is authorized at all, in some States. It does not exist in the State of New York.

Do any of you have any observations about changes in the penalty for rape, in terms of (*a*) getting convictions, and (*b*) the increase or decrease in the incidence of rape?

Mr. Cawley. Would you repeat the last part of that?

Mr. Wiggins. Yes.

One of the notions that we cherish is that the stiffer the penalty the more deterrent the impact will be upon possible violators. The penalties for rape have diminished in your State. Have you noticed a greater or lesser incidence of rape as a result of that changed penalty?

Mr. Cawley. There has been an increase in the number of reported rapes in New York State. I can't, however, relate that increase directly to the severity of the penalty. I am not able to say if because we no longer have a death penalty, or the death penalty is not one of the punishments that will be given to a convicted rapist, that the number of rapists has increased because of that. But there has been an increase in numbers of reported rapes. It is a matter of statistical fact.

Mr. Wiggins. Then let me pose a speculative question this way: If your State legislature, in a fit of passion, were to reimpose the death penalty, to the extent it is constitutional to do so, for the crime of rape, do you think it would have any impact upon the instance of rape in your State?

Mr. Cawley. That is a very difficult question to answer directly. I think one impact upon the crime of rape and upon crime in general, the most serious crime, would be if more of the people that were convicted of the serious crimes, rape included, were imprisoned, if that were possible. I think Commissioner Murphy, before he left, indicated that somewhere in the neighborhood of 95 percent of the crimes resulted in plea bargaining, and in many instances convicted felons are not confined to prison at all.

So I think in that sense that if we had a greater assurance of imprisonment for crime, particularly very serious crime, that might have an impact on it.

Mr. Wiggins. Certainly muggings, wouldn't you say?

Mr. Cawley. That is correct.

Chairman Pepper. Lieutenant Tucker, out of your experience have you formed any opinion as to what type of weapon a woman might use, or what would be the best way for her to protect and defend herself, in case she is attacked?

Miss TUCKER. I don't think a weapon is the answer, because a man can easily turn a weapon against the woman herself and it can then be more serious than before. However, I think if most women were knowledgeable about street fighting and knew the areas where to kick—if somebody tried to gash out someone's eyes, or kick them in the shins, or groin area—I think things of this nature for all women to know would be probably a lot better for the woman herself.

Chairman PEPPER. Referring to corroboration: A lot of the cases I read about is where the man used a knife or threatened to cut the woman's throat if she didn't yield.

Miss TUCKER. Yes; but what happens is if he is not arrested immediately with the knife there is no evidence that this actually occurred. It is her word against his unless she was cut and there was physical damage to the woman. This many times happens.

Chairman PEPPER. That is what I said: There isn't any physical damage on the body if she yields against having her throat cut.

Mr. Rangel?

Mr. RANGEL. I just wanted to find out whether or not you know how many members of the New York City Police Department reside within the city of New York.

Mr. CAWLEY. I would take an off-the-top estimate of about 60 percent.

Mr. RANGEL. Now, it is still the law, I believe, that a New York City policeman is really on duty 24 hours a day?

Mr. CAWLEY. That is the written regulation; yes.

Mr. RANGEL. If New York City was able to get more members of the police department to be residents of the city of New York would not that improve the efficiency of the police department?

Mr. CAWLEY. Yes; I would say yes.

Mr. RANGEL. Well, have we ever tried to do anything to encourage or to give incentive for more residents to become policemen?

Mr. CAWLEY. As you know, Mr. Rangel, the civil service examinations are given by the civil service commission, and by current law people living in some five or six neighboring communities within New York State can compete for those positions. So that people living in Nassau, Suffolk, Westchester, Brooklyn, to name a few, can live in those communities and still be hired as New York City police officers.

Mr. RANGEL. I know since the Lyons laws was disposed of, we do have this; but I was just wondering from the chief of police point of view whether or not your office would be supportive of any type of legislation which to me would create almost an automatic increase in the number of policemen that would be available for any political subdivision.

Mr. CAWLEY. I am in favor of working out some type of arrangement where we can increase the number of New York City police officers coming from within the confines of New York City. There are a lot of options that might be available there. We have tried, absent their being able to change the law at the moment a lot of different tactics—the Community Service Order being one—with a long-range view of perhaps having that as a preliminary step toward a man achieving the rank of patrolman.

Of course, that is not a career ladder at the moment; although it is something we seriously thought about. We are anxious to increase the

number of employees that live in New York City and work in New York City, but we do have the problem of dealing with the existing law, which is always a difficult one.

Mr. RANGEL. Do you have the problem in terms of your own regulations and your upward mobility of those policemen that not only work then for the police department, but have elected to live in the city of New York? Would you not be in a position to promote these men at a different rate of speed than perhaps those who lived in New Jersey and outside the New York City area?

Mr. CAWLEY. You are talking about positions above the level of civil service rank of captain?

Mr. RANGEL. No. I thought the police commissioner had made it very clear that those officers that, for example, were involved in successfully bringing about bribery convictions, the promotions would be handled a little differently than those officers that were not actively involved. Is that not so?

Mr. CAWLEY. If the commissioner said that, he was talking about promotion opportunities that exist outside of civil service promotional opportunities. They would be men promoted to the rank of detective who would have their career path accelerated because they participated in a particular program.

Mr. RANGEL. Don't you have preferential assignments where you could help out a patrolman a little better that lived in the city than one who didn't?

Mr. CAWLEY. Any preference that we show toward any of these assignments would be based primarily upon whether he had the skills and talent for the position.

Mr. RANGEL. Say the 6 to 2 shift; don't they get a little something extra for volunteering for the so-called force platoon? Don't they get more than the fellows that just take the normal flack?

Mr. CAWLEY. They have the night differential pay but anyone working between the hours of 4 p.m. and 8 a.m. receive that. Again, the assignment to any specialized unit would be primarily dictated upon what the skills were as opposed to where he lived.

Mr. RANGEL. If I were a policeman and lived at 132d Street and Lenox Avenue, I know I would be on duty 24 hours a day; and I am receiving the same pay as someone that leaves the community and gives that new community outside the city of New York the benefit of all of his expertise and training.

Could you support the fact that I will get preferential pay because I am exposed to my law enforcement responsibility more than someone that lives outside the city of New York?

Mr. CAWLEY. You mean extra compensation for living within the city?

Mr. RANGEL. Yes, sir.

Mr. CAWLEY. It is something I had not seriously considered, but I certainly will think about this as a possibility.

Mr. RANGEL. You agree the police that do live in the city are expected to give a little more to the city than those that live outside of the city?

Mr. CAWLEY. I would agree a man who lives in the city 24 hours a day, 7 days a week, is certainly much more responsive to take a police action than a man who comes in 40 hours a week.

Mr. Rangel. And that would help the police department service the people in New York City, would it not?

Mr. Cawley. I would agree with that.

Mr. Brasco. Chief, I am under the impression that most of the patrolmen start out on the job living in the city of New York, and then move out. And based on that, isn't there something that can be done to hold them in the city? Or is the reverse true, the majority of policemen being recruited now are being recruited from outside the confines of New York City?

Mr. Cawley. Very frankly, in answer to that question, it would be strictly a guess at this point. I am not sure whether we are hiring more people who live in the city and subsequently move out, or vice versa.

Mr. Brasco. Chief, Congressman Rangel asked whether or not you would support a change in the law, if that is what is necessary, so that, by statute, preferential treatment, all other things being equal, can be given to patrolmen who remain in the city?

Would you be in favor of that kind of approach?

Mr. Cawley. I would certainly be in favor of the new employees that we are bringing aboard, and we are hiring quite a few this year, if there was one way of having them live within the city and stay within the city, that would be preferable to the system that we now have, where they work within the city but can live outside of the city.

Mr. Brasco. I am not suggesting we ask those already living outside the city to sell their homes and come back. Obviously, I am not talking about that kind of chaos that would be created in one's personal life. I am talking about new employees, specifically.

Mr. Cawley. Ideally, we would like to have city employees employed by the city and live within the city. There are a number of problems, as you know, including housing conditions and a lot of other factors that would have to be carefully studied by a number of people before change could be made in the existing law.

Chairman Pepper. Miss Tucker, I believe that finishes your inquiry. Thank you very much. We commend you for your great work.

Mr. Lynch, would you go ahead?

Mr. Lynch. Yes, sir.

Seated next to Chief Cawley at the witness table is Deputy Chief Inspector Simon Eisdorfer. Under his command is the New York Police Department Robbery Stakeout Squad.

I wonder, Chief, if you could describe to the members of this committee what the robbery stakeout squad is, how it operates, and what has been its rate of success over the past 5 years it has been operating?

Statement of Simon Eisdorfer

Mr. Eisdorfer. Yes.

This stakeout unit, as it is called, was formulated in 1968.

Due to the increase in robberies, due to the increase in homicides onto business people, due to the increase in the availability of handguns, and also because of community pressures, we formed this unit in 1968, consisting of 40 patrolmen with adequate superiors.

These patrolmen were selected as volunteers. They were given psychological testing as to their stability; they were trained in marks-

manship; in the laws of arrest, evidence. They were trained specifically to work inside, to cope with this robbery problem.

Although we have only 40 men, and we are now down to 32 men because of attrition, we feel that these 32 men do have some public impact to allay the fears of the community. We select the location upon the complainant's application to his local precinct commander. Usually these business people have been held up more than once. Usually the perpetrators that appear on the scene have been the same on more than one occasion.

We select our location, keeping in mind the safety of the public, the safety of the people using the business premise, the safety of the officer and, of course, the safety of the owner of the business involved.

We use different types of weapons. We use either rifles or shotguns, whichever the location that we select to secrete the patrolman suits us best.

We usually stay in one location for a minimum of about 30 days. With 32 men we can only cover, roughly, about 15 locations at any one time. If we feel that the robbery potential has diminished because of our presence there, or because it is known that we are there, we don't stay there longer than 30 days.

If we feel that we may have some impact we do stay there beyond the 30 days, although we may not have any contact with any criminal.

The men are adequately suited. We use bulletproof vests. Most of the time we have no contact with the criminal. About 25 percent of the time we do have contact, and usually when we do have contact, we are successful in either apprehending or injuring the criminal.

Last year, 1972, we covered predominantly 24 locations. We had seven contacts, and out of those seven contacts we had nine arrests and five injuries. This year so far, on a 3-month period, we covered six locations; we had two contacts with the criminals for a total of five arrests.

We tried to keep the officers in this unit for a minimum period of 2 years, and then we try to rotate them to give to them different duties. We don't like to keep them in here beyond the 2-year limit.

We can't pinpoint our effect exactly. On a transient area, an area like Times Square, an area where we have many, many people, I doubt whether we have any impact at all. But on a local business area, a local shopping area, we have considerable impact and, usually, if we do have one contact within that premise, within that store, and it doesn't reoccur, then it does have.

Mr. LYNCH. Chief, it is my understanding that in the past 5 years of operation you have had approximately 200 stakeouts——

Mr. EISDORFER. Yes, sir.

Mr. LYNCH [continuing]. And in approximately 53 of the stakeouts there was a confrontation with armed robbers, and that in 25 of these confrontations armed robbers were killed by stakeout squad officers.

Are those figures substantially correct?

Mr. EISDORFER. Yes, sir.

Mr. LYNCH. You indicated there were five injuries in 1972. Were those injuries fatal?

Mr. EISDORFER. Five fatal; yes, sir.

Mr. LYNCH. To the robbers?

Mr. EISDORFER. Yes, sir.

Mr. LYNCH. How many businessmen have you lost since you operated this unit?

Mr. EISDORFER. We haven't lost any. We had two patrolmen injured—shot. I recall having one shot in the fall of last year—shot in the stomach. He lived.

Mr. LYNCH. Chief, the FBI crime data shows that in 1968 you had a rate of robbery of approximately 485 per 100,000. In 1971, that rate had risen to 790. In our earlier dicussions with you when we were up to see you with our investigators, you indicated it was difficult on a citywide basis to judge the effectiveness of this kind of operation. But you also indicated that in certain sections of the city, it was the department's view—and it certainly was your view—that a stakeout would, for a given period of time after a confrontation, reduce the number of robberies in that locale.

Do you have any data that could substantiate that judgment?

Mr. EISDORFER. No; I don't have any data on that score. But as a rule that does happen. We do remain in after we do have a confrontation.

The people already know we are there—the business pople know we are there, the local community knows we are there—and I think that in itself has a positive settling effect on the crime rate within that immediate locale.

Mr. LYNCH. Can we infer then that armed bandits come from the locality in which they commit robberies? How do they learn about your operation?

Mr. EISDORFER. It looks like they do come from that immediate locality. As a rule they do. We find they do come from a close vicinity to the premise which they hold up.

Mr. LYNCH. Are your operations publicized in any manner?

Mr. EISDORFER. As a rule, when we do have any shootings it is publicized. It does come out in the newspapers and people learn about it; yes.

Mr. LYNCH. I realize you don't advertise the fact you are staking out the XYZ candy store, for instance; however, does the department publicize the availability of this service, and does it publicize as a departmental policy the existence of this special antirobbery squad?

Mr. EISDORFER. I don't think we publicize it as a rule, but I know all of the business people know of its availability.

Mr. LYNCH. Chief, of the 25 armed robbers who have been killed in confrontations with your men, have you had occasion to check the criminal records of those armed robbers, and if you have, could you tell us how many of them were recidivists? How many of them in particular had prior armed robbery arrests and/or convictions?

Mr. EISDORFER. I don't have the figures for it, but I will tell you the majority of the people are recidivists; they do have prior armed robbery arrests.

Mr. LYNCH. Would that information be available from your department?

Mr. EISDORFER. Yes.

Mr. LYNCH. Could you send that to us?

Mr. EISDORFER. Yes, sir.

Mr. LYNCH. We would appreciate that.

[The information requested was not received.]

Mr. EISDORFER. I would like to point out, Mr. Lynch, that in the last contact we did have with five people that held up a grocery store, four out of the five had prior convictions of armed robbery—five arrests.

Mr. LYNCH. I do have one further question, Chief. Let me preface it by saying that Commissioner Murphy this morning in his testimony indicated the citywide anticrime section had not generated any adverse publicity, nor was there any unusual level of violence connected with it in the discharge of police functions. Obviously, in this robbery stakeout operation, there is.

There are a lot of people who are being killed. They, of course, were people who were in the act of committing felonies. Nonetheless, what effect does this have on the department's image in the city? Have you been criticized for this unit? Have newspapers or magazines criticized the existence of this unit?

Mr. EISDORFER. I would say when it was originally instituted we did have criticism. I would say in the past year that the people are asking for this service. We are not getting criticism for the past year.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Chairman PEPPER. Tell us, Chief Eisdorfer, how are your men deployed in a given store, say?

Mr. EISDORFER. They are deployed according to where the money is kept, where the exits are, where the entrances are, and where the customers pay their bills. In other words, at a supermarket the cash registers are usually at the end of a line at which the people line up at the checkout counters. We have to be very careful in any location like that.

Chairman PEPPER. The officer is hidden under the counter?

Mr. EISDORFER. No; we usually have various methods. We put up various installations which we get behind.

Chairman PEPPER. I see.

Mr. EISDORFER. It blends in with the local decor.

Mr. BRASCO. Mr. Chairman?

Chairman PEPPER. Mr. Brasco?

Mr. BRASCO. In connection with some of your comments, Chief, again I contend from an experience in my own district that you do have an impact. As a matter of fact, one of those shootings in which a policeman was injured occurred last year in an A. & P. on Lincoln Boulevard, around Van Sicklen Avenue, that was in my district.

The police officers on the stakeout team were shot at. However, I do know, as a result of your confrontation and activity, the string of stores that were constantly being robbed in that area did decrease.

I do find it particularly disturbing that there are only 32 men on your squad, with respect to availability; and that is one thing I find disturbing throughout that we haven't been able to develop the size of the force in the city that is required to meet the increase of crime.

I suppose it is not really your problem. It is a problem of getting funds, either from the city, State, or Federal Government to enlarge your capabilities.

With respect to the criticism that might be leveled, I think that that kind of a squad has a specific mission and it is kind of a difficult mission to perform when people are already in a shop with their guns drawn, and apparently becoming more and more like cowboys in the

city, which leads me to the question of capital punishment with respect to certain types of felons.

And—do stop me if I am wrong—but it has been my own experience, again drawing from what I was used to in the D.A.'s office, we get a number of cases in which people can be prosecuted with robbery, but if they went in with unloaded weapons or "dummy up starter pistols," there was at least, in my opinion, from that experience a very distinct feeling on the part of the would-be perpetrator that he didn't want to get involved in any shooting because he knew there was an ultimate penalty to pay if he did shoot somebody and killed him.

I am wondering whether or not, in your experience as a policeman, you have been able to get the same kind of feeling. Today there are more guys with loaded guns and shooting up the town, like the wild west, and whether or not that dovetails with capital punishment with respect to, in this case, felony murder.

Mr. Cawley. I don't have any statistics that would indicate whether or not more simulated guns are being used as opposed to real loaded guns. However, my sensing is there are many more loaded weapons being carried, rather than simulated weapons.

I would also like to just backtrack for a moment and speak about the 32 men currently assigned to this unit. This unit was instituted 5 years ago, as Chief Eisdorfer indicated. A year ago, at the beginning of this year, January 1 of 1972, the detective bureau was reorganized on a specialized crime basis. As a result of that reorganization there are detective district squads in each area of the city whose sole responsibility is to deal with the problem of robbery.

In many instances, over and above the service provided by stakeout unit operations, the detective bureau engages in the same type of plant activity, based upon locations that have experienced large numbers of robberies.

So we are not addressing the problem; we are centralizing it to any greater extent we are in the current commitment, but we have a large number of detective investigators that deal with the robbery problem.

Mr. Brasco. So you are saying your complement stakeout is much larger than 32?

Mr. Cawley. I am saying the stakeout unit per se, and by its form of operation, is a relatively small one, but the detective operation which has the bigger responsibility for dealing with the robbery problem in its district does employ and plant stakeout activities as part of its operational activity.

Mr. Brasco. Would there be any figure as to how much the combined units would be?

Mr. Cawley. I wouldn't have any statistics available as to how many stakeouts or plants the detective bureau undertakes.

Mr. Rangel. Do they work together with the central stakeout?

Mr. Cawley. There would be very few instances, unless I am wrong about this. The detective bureau would be instituting, by virtue of its analysis of the robbery problem in its district, its own stakeout for plant operation rather than stakeout. It doesn't stay in there on a stakeout for 30 days.

If it runs into a liquor store problem, for example, it identifies and makes the prediction perhaps the next robbery that will occur in a liquor store in this district will be one, two, or three, and they will

put the detective personnel in those liquor stores anticipating this might be where the next crime occurs.

Mr. Brasco. Do either of you gentlemen want to comment on capital punishment, with respect to select classes of homicide?

In this particular case, commission of armed robbery?

Mr. Cawley. We have capital punishment in New York on a very selective basis, as you know. The killing of a police officer, and one or two others. Many, many studies have been done over many, many years as to whether or not capital punishment in and of itself is a strong deterrent. There has never been any firm conclusion drawn, to my knowledge.

Mr. Brasco. I agree. I was asking from your experience as a police officer. Obviously, we are not going to get answers to questionnaires from guys who said, "I changed my mind because the law was too tough in that area."

I was trying to get it from your own experience. As I said mine was, formerly, there were many more starter pistols and unloaded weapons used in holdups. It seems to me today everybody is carrying a loaded gun.

Mr. Cawley. In answer to that, I think I mentioned to Mr. Wiggins, in my own view, it is the certainty of the punishment, the fact it will be administered, that is a much more eloquent factor in itself.

Mr. Wiggins. Chief Eisdorfer, wouldn't you agree most robberies are reported?

Mr. Eisdorfer. Yes.

Mr. Wiggins. It turns out that New York City has the highest rate of reported robberies of any city in this country. How do you account for that?

Mr. Eisdorfer. I think, populationwise, we have the greatest population.

Mr. Wiggins. I am talking about rate per 100,000 population.

Mr. Eisdorfer. Possibly it could be because we are close; we have a seaport. We are traders, possibly people obtain the weapons easier to do these crimes and can get them easier within the city of New York.

Mr. Wiggins. What is the weapon of choice for robbery?

Mr. Eisdorfer. Usually a handgun.

Mr. Wiggins. The opponents of handgun legislation are always pointing to the New York Sullivan law as an example of a strong but ineffective gun law. I am not sure I know the provisions of the Sullivan law, but I gather it requires a signature to obtain or possess a weapon at all.

Mr. Cawley. That is true.

Mr. Wiggins. Do you have an observation as to whether it is working, and if not—I think the answer is no—why not?

Mr. Eisdorfer. I think the ease with which these hand weapons are obtainable is the main reason why the Sullivan law isn't working.

Mr. Wiggins. Where do they get them?

Mr. Eisdorfer. The weapons come in from other States which have gun laws permitting the carrying of guns. They may come in from other areas which permit the manufacture, or the assembling of these weapons.

Also, I believe they may come in on the harbor, on boats, railroads, airplanes. There may be burglaries in this respect. That is how they get into this market.

Mr. Wiggins. Well, I suppose that the importation of handguns is a subject that Congress could address itself to, but do you really think that is going to have any impact on robberies in your city?

Mr. Eisdorfer. If it would be countrywide. If it would affect the whole country, I think it would have considerable impact throughout the United States.

Mr. Wiggins. I don't know for a fact that it is easy to possess handguns in Texas, but if one would believe their reputation at least, everybody packs a six-shooter down there. I notice the robberies in the city of Dallas are at the rate per hundred thousand of 195.3, whereas in the city of New York, as of the year 1971, the rate was 790. That is a dramatic difference, and I suspect that the obtaining of a weapon in Dallas is a relatively easy matter. I assume that.

Do you have any observations?

Mr. Eisdorfer. No.

Mr. Cawley. I would like to at least make a comment, Mr. Wiggins.

Mr. Wiggins. Yes.

Mr. Cawley. The statistical process of gathering nationwide crime sense is one way of truing to measure the crime problem and you can compare it with other jurisdictions. I don't think the system is completely flawless by any means. I am sure you are not suggesting that.

Mr. Wiggins. That is why I asked the question whether or not robberies are reported. I kind of think robberies, like homicide, are reported, and we start with a fairly common statistical base. That is my assumption. You can challenge it, of course.

Mr. Cawley. I would like to bring up a point. I don't care to challenge it. The statistics are done on resident population, unless I am mistaken. I would like to just interject the thought here that in addition to having 8 million residents in the city of New York, that during the course of the business day somewhere between another 2 and 3 million people probably come into the city.

I think that might be one reason why crimes are committed on a greater number of people, in terms of the base structure, and then when the number is arrived at, it is divided into a smaller base.

Mr. Wiggins. That is not, in fact, the case here. It could be, but it is not. For example, the population base of New York, for purposes of these statistics, is 11.6 million, which doubtless includes the greater New York area and not just the Manhattan area.

Let's take another city with which we are familiar. Washington, D.C., has a population within the confines of the District of Columbia of 800,000 or 900,000, but the statistical base upon which these percentages are computed is 2.9 million. I think that includes surrounding counties as well. What I am saying, Chief, is that if there is an imperfect base it is imperfect for the rest of the country as well, and they suffer as you do.

The difference is so dramatic in New York City with respect to robberies over other major areas that I am curious, and I welcome any explanation for it. Especially, given the reported strength of your gun law.

Mr. Cawley. Well, the gun law is strong. We do have, and we have spoken about it frequently, the problem of Saturday night specials and the availability of weapons on much too broad a base for anyone who cares to really pick one up for $20, or some of them retail

at $18. The totally inacceptable availability of handguns is one problem.

We do have a narcotic problem in New York City; there is no question about that. We have a large number of addicts that would probably give us a bigger potential pool of people that are ready to commit crime.

There are entirely too many robberies; there is no question about it. We are aware of it. We are making progress in that area. I can't really tell you why, but there are six times more robberies in New York than there might be elsewhere.

Mr. Wiggins. Can you tell me why the rate of robberies has almost doubled in New York in the last 4 years?

Mr. Cawley. Well, we are having a lot of difficulty with the total criminal justice system in New York. We pointed this out before. Our courts are clogged. A lot of the people we arrest go into the system and return to the system. We do have almost a breakdown at points in the criminal justice system that have to be addressed. I think it is a critical problem in New York and we have been trying to deal with it.

Mr. Wiggins. One would think there might be some rough correlation between homicide and robberies. At least you have a dangerous weapon involved in both cases. The homicide rate in New York is not out of line with the rest of the country. It has not doubled, for example, in the last 4 years, whereas, robberies have. Although I don't have an answer, apparently you don't, either.

Mr. Lynch. Mr. Wiggins, if I may, it is interesting to note that there was an incredible jump in 1965–66 in the New York robbery status, and I do recall—I believe you had a commissioner who came in in 1965, but I may be wrong on that—distinctly because that was the time when the National Crime Commission and the D.C. Crime Commission were looking at this problem, and that the New York Police Commissioner announced a new policy on reporting robberies and in a 1-year period it more than doubled.

Can you address that?

Mr. Cawley. I believe it was 1965, and it pertained to all reports of crime. I think at the time Commissioner Leary was appointed. He was very much concerned with the accuracy of the crime-reporting system and insisted that the system function properly and that all crime reports be recorded. And there was a substantial increase.

Mr. Lynch. It went from 83.9 in 1 year up to 213.5 the next, which is a remarkable increase. This would lead one to believe that a very substantial number of robberies prior thereto were going unreported.

Was there, in fact, a change not only in policy regarding reporting, but a change in the criteria for a robbery?

Mr. Cawley. Well, clearly, there was a policy statement, as I recall it—it has been some while ago—to the effect all crimes had to be reported and reported precisely as described by the victim.

There was also the hairline that existed in whether it was legally existent at that time, between the grand larceny classification and robbery.

Mr. Brasco (presiding). Why don't we take a 5-minute break?

[A brief recess was taken.]

Chairman Pepper. The committee will come to order.

Mr. Lynch, will you proceed?

Mr. Lynch. Mr. Chairman, are there further questions on the robbery stakeout squad. If not, we would like to move along. We have three other programs to discuss.

Chairman Pepper. Go right ahead.

Mr. Lynch. Chief Cawley. I wonder if you could call to the witness table the representatives from the neighborhood police team, from the auxiliary police, and from the crime prevention squad.

Chairman Pepper. As I understand it, you have three programs. We will defer the questions until Mr. Lynch presents the three programs and then we will open for questions.

Mr. Lynch. Chief Cawley. I wonder if you could ask Sergeant Crowley to give us a brief presentation describing the nature of operation of the new neighborhood police team concept.

Mr. Cawley. Fine. I have Sgt. Robert Crowley from the sixth precinct. He is a neighborhood police chief. Let me give a brief background of the program.

When Commissioner Murphy became police commissioner of New York City he instituted a neighborhood police team concept in the 77th precinct. That was the first. Since that time we have added appreciably to the number of neighborhood police teams throughout the city. We now have 70 operating in some 40 precincts. Basically, the concept has the twofold objective of crime control and improved police/community relations.

I have asked Sergeant Crowley, based on his firsthand knowledge and information, to acquaint you with that.

Sergeant Crowley.

Statement of Robert Crowley

Mr. Crowley. Basically, the idea behind the neighborhood police team is to take one first-line supervisor—in the case of our department that would be a sergeant—and assign him proportionately that percentage of the available precinct manpower in connection with the same percentage of crime in a given area.

As in my case, they have chosen two sectors—in that area there was 26 percent of the crime of the precinct. Therefore, I was assigned 26 percent of the available manpower in the precinct. My duties were to devise new methods of patrol, to attempt to reduce the crime through the community by involving the community in our efforts, to try and initiate their interest in their own problem and see what we could do as far as directing their efforts into reducing the crime problem.

I was allotted 40 men at the original inception of the precinct. Since then, I have been allotted an additional 4 units, so that I now have 44 patrol officers under my command.

We had, as I said, instituted different programs through community block associations. We have developed new techniques in patrol between the community and ourselves. We have been successful in reducing crime in that given area by approximately 50 percent over the past 22 months.

Mr. Lynch. Chief, in order to move along and expedite our proceedings here, I wonder if we could now have Inspector Rogan discuss briefly the crime prevention unit.

Mr. CAWLEY. Deputy Inspector Rogan is on my right. He is the commanding officer of the crime prevention squad.

In addition to having a crime prevention squad that operates, and is assigned orally to my office, there is a crime prevention patrolman assigned to each of the 72 patroled precincts throughout the city.

I will ask Inspector Rogan to give you some understanding of what the purposes are and what our programs are.

Statement of Joseph Rogan

Mr. ROGAN. With the thought in mind of the ability of the city to place a uniformed patrolman on the street—the cost is increasing year after year after year—I think it was felt that we must find a way to utilize every means of physical security. By that I mean hardware, alarm systems, all of those things that can in some way help to reduce the crime rate without actually committing more men.

In that regard, we do have 40 men located in our central office and 70-odd men in the various precincts of the city who have gained a certain level of expertise in use of alarm systems, locks, closed-circuit TV, and other methods of reducing crime which depend mainly on the hardware itself, other than the personal service.

In the past year we have conducted over 15,000 surveys in private businesses, and in 85 percent of those cases we found that their security was inadequate. In over 60 percent of the cases where we made recommendations, we had compliance from the owner of the business.

We also maintained a speaker's unit where we can send out a detective, converse him with a particular crime situation, be it robbery, burglary, rape, cargo theft, whatever it may be, and speak to a group whose interest is mainly in that area.

We also conduct at our police academy a security management course three times a year. This is intended for the civilian security director of a corporation or firm, in order to take the expertise that has been gathered on a nationwide level and keep all of these people up to date in the recent innovations of crime prevention.

Then we recently have been assigned to administer the city's block security program. That is a new program that is just in the developing stage.

We also encourage the precinct crime commission patrolmen with the help of the people in the neighborhood that organize programs that have a specific meaning to that neighborhood themselves. Sometimes centrally directed programs for the city at large may fail to meet local needs where those needs are particular.

One precinct may have, for instance, a very large incidence of auto larceny where another has a very high incidence of robbery. Through the methods of the use of the time penachrome we try to find the single crime in the precinct that is causing the most public concern and address that on the local area.

Mr. LYNCH. Chief, I wish you now would call on Auxiliary Police Inspector Siegel and Deputy Inspector Luhrs to describe this very sizable auxiliary police force and how it operates within the context of your overall department operation.

Mr. CAWLEY. I have Deputy Inspector Luhrs, commanding officer of the auxiliary police services section, and with him is Inspector Joseph Siegel, who is a member of the auxiliary police and has been for over 20 years. I will ask Inspector Luhrs to give you an understanding of the extent of the program, and then Inspector Siegel might tell you how he sees it from being a member of the auxiliary police.

Statement of Robert E. Luhrs

Mr. LUHRS. Mr. Chairman, gentlemen: What you heard today here deals with what the police departments themselves are doing to attack the crime problems. What I would like to address myself to is what the system is doing.

I think in New York you will find the largest and I believe the most successful auxiliary police force in the entire country. We are not new. The auxiliary police program has been with us since 1951. It is there for every city to have by Federal mandate. But in our city we have generated the force which has increased over twice in the last year and a half to a size now numbering 5,300 men and women.

There are over 600 women involved; there are over 450 young men between the ages of 17 and 21 involved. Our purpose is to be dressed in a uniform and qualify to participate in this program. And by uniformed patrol have the physical crime deterrent effect that a member of the force might have.

I might add that we are not policemen, that the auxiliary will never be a policeman. Our purpose is to serve in a nonenforcement situation.

Chairman PEPPER. Excuse me. Are they armed?

Mr. LUHRS. They are not armed, sir. Some are armed because they are licensed to carry a weapon for a purpose other than being an auxiliary policeman. They carry a night stick and they carry a walkie-talkie, which is tuned to the same frequency as our police communications system. But we have a group of men and women who are responding to community needs. We do not accept everyone. A person must enroll, must be fingerprinted, must take a 10-week course, must be qualified, and the fact he has a previous criminal record does not necessarily disqualify him. But then he must purchase a uniform which is identical to the police uniform I wear.

With some exceptions, the patch that he would wear shows the word "Auxiliary" and the shield is a seven-pointed star rather than our identifying shield.

He then is directed to patrol an area he knows is in his own community. He is responsible directly to the precinct commander. And I wouldn't care how many we had, unless the police department was fully in back of the program, and Police Commissioner Murphy is. And Chief Cawley is. And Chief Kahn is; and every high-ranking officer, down to the police commander, is directly responsible for generating this valuable community resource that he has and must use. There is no better crime prevention program than an individual citizen who performs voluntarily in an area he knows, among people he knows.

No one gets paid and we want no one to get paid. Because then we know they come to us for one purpose and one purpose only. It is an excellent program. We have 15 fully equipped emergency vehicles

responding to the needs of the community and serving as an adjunct to our emergency service division.

We are now in mounted patrol, using police department horses, which would normally not be used. We have a harbor patrol because our area is composed of extensive waterways and people patrol their own vessels in and out of the waterways as auxiliary policemen and policewomen.

Last month, gentlemen, our auxiliary gave 56.884 hours to the city of New York, receiving not one penny in return. This is a purely voluntary organization that has far-reaching effects. Anyone can do it; any city can do it. We will be willing to help any organization, anyone who wants to find out more about our program. I would be most happy to help them develop this force, which can really make an effect in the community.

I would like to add one thing more: We talk about the blacks being apathetic or the Spanish being apathetic, but 22 percent of our force is black. Whatever the ethnic composition of the precinct, that is the ethnic composition of the auxiliary force. About 15 percent are Hispanic and we give courses in Spanish to those who would better learn in their language. We have 100 Chinese who perform in uniform in the areas that they have knowledge of.

We have an excellent organization, a successful organization. We will not have a paper army. If you cannot give us the minimum number of hours we don't want you. And I think this is why we are successful. We are a disciplined, uniformed organization that performs in all enforcement functions.

Mr. Winn. What is the minimum number of hours you referred to?

Mr. Luhrs. They are required to perform 4 hours a week and they are permitted to perform a minimum of 20 hours a quarter if because of illness or job situations they cannot get to us.

But we know they do perform an average of 12 to 14 hours each month.

Mr. Cawley. Inspector Siegel will now give you the benefit of having been a member of an auxiliary for 20 years.

Statement of John Siegel

Mr. Siegel. I am glad to have the opportunity to come before this body after serving 20 years as a volunteer. I am speaking for the volunteers, not for myself.

For a good many years it was a thankless sort of job, where people were not paid and they had to buy their own uniforms, pay for their own transportation, and lay out moneys of their own to go out in uniform to patrol the city of New York.

It is only in the past 2½–3 years, that we received what we call the proper recognition for our efforts.

We are glad that Commissioner Murphy, and the mayor of the city of New York, and Chief Kahn and Chief Cawley have actually got behind this program.

I think we can best emphasize first the importance of the auxiliary police to the city of New York by a release that was made by Police Commissioner Murphy. This was as recently as November 1971. He announced an expansion of the department's use of civilian volunteers

in the fight against crime. The commissioner indicated that he felt the present auxiliary police program was not being used to its fullest potential, and stated that it is his intention to mesh the volunteer services of the auxiliaries into a regular operation of the department so they function as a new adjunct of the services rendered by the uniformed force.

Further, Commissioner Murphy said that it was incumbent upon the local field commanders—that is, the captains—to use the auxiliary police in imaginative and innovative ways. Commanding officers shall not take lightly their obligation to incorporate their valuable resource into the department's efforts to curb crime in the street.

This is a statement by the police commission, Commissioner Murphy. The auxiliary police are always available for that special service they could render as a volunteer. The volunteer, as you know, gentleman, is nothing new. We had voluntary firemen through the history of our country. Voluntary deputy chiefs where the police department can afford a well-paid police department. And the auxiliary police, by their uniforms being similar to those of the police department, create a great deterrent to crime on the streets by merely patroling in pairs with a club and uniform.

The fact they are not armed is not visible to the average person because they wear their jackets and coats and one doesn't know they haven't got a gun.

The community relationship that exists with the auxiliary police, and the public, and the police department is a tremendous factor for the police department and for the public because they meet in the police station, the stationhouses throughout the city, the auxiliary places in 70-odd precincts. They are well received, thanks to police department leaders.

The captain down to the lieutenant and sergeants and patrolman welcome the auxiliary police. They cooperate to the fullest extent and we have been the last couple of years issued walkie-talkies, which are actually a very important arm for the auxiliary policeman, because he presses the button and has the assistance which he needs in an emergency.

Incidentally, each year we have participated in several hundred arrests or aided in arrests in various parts of the city, and we have prevented unknown amounts of crime by our presence.

We have been issued the use of the police horses in recent months because the men who are patrolling in the parks, mounted, paid for their horses and they felt they should contribute the police horses instead of the men paying out of their own moneys. We have these men trained at the police remountable stable and are using the police horses on a regular patrol basis now.

The park units have been issued patrol cars as a pilot program, to have auxiliary police actually in the patrol cars that may not be used by the regular police or when not used by the regular police. So they are out in the field where they can be seen by the public.

I said in the beginning that I am glad of this opportunity to bring out the fact that for over 20 years we have had men besides myself serving that long, others 15 years, 12 years, without any obvious recognition of their service to the community. I think it is a grand thing that you have this committee asking to hear about the auxiliary police, the first time we are able to voice this out of this sort of basis.

I wish to thank the gentleman.

Mr. Cawley. If I may, I would like to give you a specific instance where we recently expanded the type of duties that auxiliary police officers can perform, and then show you how much savings you can realize from it.

We always police the St. Patrick's Day Parade. It is generally a large commitment because of the number of marchers and observers and the celebration that usually comes after. Somewhere in the neighborhood of 1,400 police officers. This past year, this past parade, we were able to invest just approximately 800 uniformed officers and used 400 auxiliary police officers, meaning that the 400 that we had previously committed on a good 8- to 10-hour tour on a parade situation were able to remain on patrol in the communities they were assigned to.

Chairman Pepper. Very good.

Anything further, Mr. Lynch?

Mr. Lynch. Sergeant Crowley, as a neighborhood police team sergeant I take it that in your neighborhood you have a considerable amount of authority; that in essence you act as a chief of police for that neighborhood; is that correct?

Mr. Crowley. That is correct.

Mr. Lynch. And you indicated to the committee that in your neighborhood you had 44 patrolmen, and in the past 22 months you had reduced the crime rate in that neighborhood by 50 percent.

Mr. Crowley. Yes, sir.

Mr. Lynch. How do you account for that? What did you do that a precinct commander would not have done?

Mr. Crowley. Well, you must understand, I still serve under the precinct commander. I consider myself a source of referral for his problems.

Mr. Lynch. How large is your area?

Mr. Crowley. It is 18 square blocks.

What we did in the first instance was to change all of the posts, after analyzing the crime situation, where we normally wouldn't have had this authority. This is the difference this program gives you. The first-line supervisor has the authority whereby the rules and procedures of our department are automatically suspended in that given area and I, therefore, had the authority to move on my own volition when I see the need to move in certain areas.

No. 1, we created all new posts after realizing I had a very high burglary rate. Cars were being broken into and property removed was extremely high.

Based on the simple fact that geographically you could park more cars on the side streets than on the main avenues, I moved into side-street patrol. That had an immediate effect on crime. At one time we had approximately 800 cars a year in that small area being broken into; the following year, we were down to 180.

We are still yet to hit a hundred in the past 10 months.

We have developed our own intelligence system within the team whereby every criminal complaint is registered within that area. I have one specific individual who will contact the complainant if the complainant has seen the perpetrator, and we will go into an in-depth consultation with that individual as to the modus operandi of the criminal.

What we are looking for is a repeater in the area. We have developed our own photo system. We felt the patrol force, as the uniform force and the first line needed to more to expand from within to help, and what we have done in this instance was develop our own photo system which the community, over a year, paid for the film and what not, whereby we could take an individual who had robbed and immediately bring him into our office at that time and question him, show him photos, where again he will receive the service by the investigator later on.

It is just based on the intimacy of a given neighborhood.

We tried to develop a causation factor in every major crime. I like to use in this case an instance where we had a very high crime rate in a given area. On assessing the area we found out there was a social service building that was forcing the individuals who were waiting to get into the building to stand on the street for 6- and 8-hour periods.

We felt this caused an awful lot of problems. We contacted the social services agency; we asked them to provide for a waiting room, which they did; and immediately the crime rate dropped down.

There are certain types of patrols we developed. Let us say we had a large transient hotel where you could get a room for $6, and in the immediate area of that hotel and within the hotel we had a very high crime rate. We developed a patrol to go right in the hotel four times a day where in that instance you might not catch many people in the act of crime, but you establish a police presence immediately, again, would show a reduction.

We had a problem with shoplifting and pickpockets within stores. We were able to develop through the State penal law an interpretation on the felony or burglary whereby someone reentered that building, that store, a second time; rather than charge him with the minor crime of petty larceny we were now legally able to charge him with burglary. The store cooperated by formulating a little card that they paid for, having the individual sign it, and we used that as corroboration in court to sustain the felony conviction.

We also have gone into a perpetrator trial, whereby, to eliminate the footman, the time he must spend within a precinct should he bring in a suspect, or in the arrest case, and he feels this individual might have committed other crimes, we have an individual file which we developed and can immediately tell if this man is wanted, based on his physical description.

Mr. Lynch. Are your men mostly on foot patrol or in patrol cars?

Mr. Crowley. In my instance, I utilize footmen. The team is really supposed to be flexible, according to the area it is assigned to patrol.

Mr. Lynch. You have 44 men in an 18-square-block area. Is that a higher proportion than a regular precinct captain would have in a similar area? Do you have more men, in other words?

Mr. Crowley. Yes. These men are taken directly from the precinct. It is a reapportionment.

Mr. Lynch. I understand that. But would a typical precinct commander in New York City—perhaps Chief Cawley could answer that better—be able to deploy 44 men in a given 18-square-block area? Is that high, normal, or low?

Mr. Cawley. The number of men that were assigned to the neighborhood police team by the precinct commander is dictated by the workload that existed within that particular area.

Mr. LYNCH. So there wouldn't necessarily be a higher saturation than had been the case in the past?

Mr. CAWLEY. It should be the same percentage assignment. That 44 men represented 5 or 6 percent of the total complement in that 18-block area that was the percentage of the problem there, to try to match up the number of people with the percentage of the problem.

Mr. BRASCO. Would counsel yield at that point?

It would seem to me then, Chief Cawley, that basically we are agreeing with the premise set forth by Congressman Rangel earlier this morning about the effectiveness of the foot patrolman; and it just seems to me no matter how you work it out statistically, that in this neighborhood police team concept you have in that 18-square-block area, particularly the area that Sergeant Crowley is talking about, more men than you ever had before in the institution of that patrol. Isn't that correct?

Mr. CAWLEY. Let me ask Sergeant Crowley to respond to that. He is closer to it. Is that a fact?

Mr. CROWLEY. At one time there were only 16 men covering those 2 sectors. That 18-block-square area represented 2 radio-car sectors. At one time there would have been 16 men assigned to those 2 cars.

Mr. BRASCO. Now you have 40?

Mr. CROWLEY. Possibly a few footmen.

Mr. BRASCO. Now you have 40?

Mr. CROWLEY. Yes. You have to understand, again it is based proportionately, 100 percent on the ratio of crime to men assigned. We did put in more men.

Mr. BRASCO. I understand that, but I think it speaks for the equation where you do have a high-crime area, if you are able to give it the special attention you are obviously giving this particular 18-square-block area with foot patrolmen in combination with auto patrol, that the crime significantly drops in the area. I think that is what we were talking about this morning. I am not quarreling on how you statistically base it, how many men go into the area; but it seems to me what you carve out of what is a high-crime area, or you go to work in terms of doing the job you just described, we get results.

Again, it is unfortunate we don't have enough of these teams operating; and I suppose it is because we just don't have enough policemen to go around.

Mr. RANGEL. But the chief said this morning that the most inefficient way to use a policeman is as a foot patrolman, and the sergeant is now talking about the dramatic decrease in crime as a result of his utilization of the foot patrol. Where is the conflict, Chief?

Mr. CAWLEY. Let me for a moment ask Sergeant Crowley.

How many cars are presently covering that particular area?

Mr. CROWLEY. Two, sir.

Mr. CAWLEY. And you now have how many more men than you had previously?

Mr. CROWLEY. Presently 28.

Mr. CAWLEY. And yet, I have to apologize for not being thoroughly conversant as to the percentage of men assigned to the sixth, and how many are in here. My understanding of the concept and the way we put it in, was that out of the total number of men assigned to the precinct, the precinct commander would determine where the neighborhood police team would be most effectively used, and then based upon

the existing workload in that area he would take that percentage of his resources and assign it within the particular area. That was the basic concept.

I think, while I am hard-pressed to try and explain whether the 30 more men that were assigned in there over and above what it would have been, I find it difficult to equate what was to be done with what was done.

Somehow, I figure it is not quite that bold, Mr. Congressman. There were 28 more than had been previously in there. If he is using more foot patrolmen because he has increased capability and he is driving down the crime, then that certainly proves the point that if you saturate an area with a number of foot patrolmen, coupled in with the use of radio and motor patrol cars, you will have a greater impact. That was the point you brought up this morning.

I am not sure—while Sergeant Crowley is talking about a 50-percent reduction in his neighborhood police team area—what the total reduction of crime might have been within the total precinct, and whether the other adjoining sectors might have suffered a little bit. I have to look at the overall statistics.

Mr. Rangel. That may be so. I don't even know the area Sergeant Crowley is involved in, but I am willing to take a gamble that there is a much closer relationship between the community within Sergeant Crowley's command as a result of these foot patrolmen than there could possibly be with that radio squad car, which I have to believe would attribute any decrease in crime, or certainly as it relates to conviction, since no matter how effective the policeman is you need the community support, especially witnesses, in order to be successful.

Mr. Cawley. There are, Mr. Congressman, disadvantages to motorized patrol. One is there is a definite lack of contact between the people and the men in the car. There is a better contact between the foot patrolman who is on the same post day after day. There is much to be said for that. There is a halfway position with the use of scooters. I think the point I was trying to make this morning was that I have a percentage of resources that I have to spend, if you will, and the most economic, practical, and efficient way that I have to spend that total number, covering the entire city at the moment, is to assign them for the most part to radio motor patrol.

Mr. Rangel. I just don't understand why Sergeant Crowley, who is a miniprecinct commander, has not made the same determination since he has redirected 40 men to put them in 40 squad cars.

Mr. Cawley. Well, there would be no need to put them in 40 squad cars, Mr. Congressman. What we try to do is on a total citywide basis, and I am sure the reason why there are only two radio cars working in that particular area is there are certain responses we must make to service calls and crime calls.

We must maintain certain manning levels so we are responding to the calls throughout the precinct.

I know one of the problems we had throughout the city with the neighborhood precinct concept: Because of the lack of service calls that come in the central communications facility we wind up oftentimes with something like 50 percent of our cars being outside of the neighborhood police team community they are working in. We are trying to work on that.

Mr. RANGEL. What kind of service calls? Are these really police service calls or those that can be handled by other than police personnel?

Mr. CAWLEY. They are calls that come into the 911 number and get processed out over the years. Calls coming from the citizen of the local precinct that get out for service, reports of past crimes, reports of aided cases. The wide range of service the public expects of his police.

Mr. LYNCH. Chief Cawley, let me clarify one thing. Sergeant Crowley has 44 patrolmen. I take it that is 24 hours a day?

Mr. CROWLEY. That is right.

Mr. LYNCH. You have approximating, a third except in the high-crime period of the day, basically on foot patrol. It would seem to me that in any other 18-square-block area in the city you might have one or two patrol cars patroling at any given time. Is that basically correct?

Chief CAWLEY. That would be basically correct, but I don't think Sergeant Crowley is saying he has 44 men working in that particular area at the same time throughout the entire tour.

Mr. LYNCH. I understand that.

Sergeant, from late afternoon up until midnight how many men might you have on the beat in that 18-square-block area, maximum?

Mr. CROWLEY. The maximum number I would have would be eight.

Mr. LYNCH. Approximately, how many people live in that area?

Mr. CROWLEY. Approximate 50,000.

Mr. LYNCH. Chief, I have one other question on this program that perhaps you could respond to.

I had the impression from Sargeant Crowley's testimony that he was at least on the verge of saying that he has a good deal more latitude in cutting bureaucratic corners than a precinct commander might ordinarily have. Is that the case? Have minichiefs of police, if you will, neighborhood police team sergeants, been freed of some departmental bureaucracies?

Mr. CAWLEY. Yes. The neighborhood police team has, or the team chief has, and so has the precinct commander. Consistent with the program I have mentioned earlier of policy change on the part of Commissioner Murphy, decentralizing the authority down to that precinct commander. We expect the precinct commander to make hard judgments and good evaluations and assessments of his problem and to respond to them, not to come up to the bureaucratic change, waiting for somebody at the top to say, "OK; you can do that."

But to do it and advise, this is what has been done.

Mr. LYNCH. Are you getting any kind of special funding for this program?

Mr. CAWLEY. The neighborhood police team?

Mr. LYNCH. Yes.

Mr. CAWLEY. I think perhaps at the outset we might have had some funding, but there is no current funding to my knowledge.

Mr. LYNCH. How will you go about evaluating its effectiveness, or lack of effectiveness?

Mr. CAWLEY. There has been a study conducted, and I think it is in the final stages of being drafted, by the Urban Institute. It was a 1-year study comparing some of the NPT programs and precincts in which the concept was activated, as compared with controlled bases.

Mr. LYNCH. When will that be completed; do you know?

Mr. Cawley. Frankly, I don't; but I had a conversation with Mr. Peter Block from the Urban Institute just within the past 2 weeks. I think it is in its final stages and could be available shortly.

Mr. Lynch. Could that be made available to us? It will be very helpful in preparing our final report.

Mr. Cawley. I see no reason why it should not be.

[The information requested was not received.]

Mr. Lynch. Mr. Rogan, in talking about the crime prevention squad, I had the impression that what you are really talking about is providing technical services to businesses, citizens, on a citywide basis: advising them, for instance, on burglar alarm systems and the like. Do you provide any kind of specialized crime prevention services to precinct commanders? Do you organize programs for them or give them technical advice and assistance to particular problems?

Mr. Rogan. The crime prevention patrolman is assigned to each patrol precinct and is under direct command of his precinct commander. I only exercise a staff supervision over him. These crime prevention patrolmen are trained: we have an 8-day session once a month, except for the summer months, 10 months a year. As a matter of fact, I say on balance, that the precinct crime prevention patrolmen have come up with more innovations than has the central squad.

Many of these programs have been done under the guidance of the precinct commanders. For instance, in one section of Queens one crime patrolman enlisted the aid of private taxicab companies that work in his area. He got a bank to install a direct line between the four private cab company dispatchers and the stationhouse. These cabdrivers now are actively calling in suspicious people or reports of crime. They are very active in finding lost children.

This happens to be what you call an amusement-type area. This would probably not work in midtown Manhattan, but in the area where this patrolman is involved it does work.

In another situation we had the rooftop marking program, where you had the situation of helicopters more and more coming into use, and they find that the communication between them and ground units leave a lot to be desired because of the difficulty in transmitting locations. The patrolmen started the rooftop marking program. They have come up with a number of innovations and most are under the guidance of their precinct commander.

Mr. Lynch. How do you judge how effective a given program is? What, to date, have been the results of the number of surveys? I believe you said 15,000 surveys of private businesses. When you do a survey, I assume the purpose of it is to advise the store proprietor he needs better security equipment, et cetera.

Mr. Rogan. Yes.

Mr. Lynch. Do those people take your advice, and do you do any kind of followup?

Mr. Rogan. We have found, as I stated before, that in 80 to 85 percent of the surveys we do there is a glaring lack of security in the premises involved. We resurvey 25 percent of the cases and do find a rate of about 70 percent compliance with the recommendations.

As this program has not yet finished a complete year, it is very difficult at this point to give a precise figure. In one of the operations, Operation Identification, we initially enlisted 1,800—and I know that

is an infinitesimal small figure when you take the city as a whole—households in the operation identification program. Most of these people had previously been subject to burglaries.

To date, the last figures I have, of the 1,800 participants only 3 had a recurring burglary and in 2 of these cases it was a family situation where the husband left and came back and stole something. Actually, out of 1,800 cases we had one actual matter-of-fact burglary. I realize the base is so small that we can't really count too much on this statistic.

Mr. LYNCH. The base is small but I take it that would be a much lower repeat rate than would normally be the case?

Mr. ROGAN. Yes. And I have great hopes for the program and hope to extend it citywide very, very soon.

Mr. LYNCH. Inspector Luhrs, you gave us some facts about the size of the auxiliary police force operating within the department. Could you tell us to what extent auxiliary manpower, in fact, free sworn officer manpower for street-level enforcement duties? In other words, Mr. Siegel indicated that last month some 56,884 hours' service were donated by the auxiliary policemen. Does that mean 56,884 NYPD patrolman hours were saved for more pertinent enforcement functions?

Mr. LUHRS. I don't think that would be the right analogy. Whatever number of policemen are in the precinct are performing services as you heard today. They are still there performing the services, but there are many areas which are uncovered or would need to be covered and I think our auxiliary forces serve in that capacity as an adjunct. We do not replace policemen and I don't think we should measure what the auxiliary does in saving the police department from hiring a policeman.

I think our way of looking at it is that the need is great, the community needs are there, and now we must generate the individual community member to respond to the community needs which the police department is not going to solve. There are many situations within each community that will always be there. I think, rather than the individual coming out and complaining the police are not doing their task or doing their job, we offer them an opportunity to come in and help the police do the task.

Mr. LYNCH. Is there a particular kind of activity which an auxiliary policeman ought to perform?

Mr. LUHRS. He does perform foot patrol now in pairs. We have vertical patrols involved in going through buildings with a member of the force; foot patrols, unused radio cars driven to location by regular men and manned by an auxiliary, and other auxiliary police going out in other situations. Horizontal and vertical patrols. They are out there for 4 hours. They are out there to give the individual the feeling of the presence of the policeman. They are out there to assist the community.

They are going to reduce tensions and fears. I think we will continue to grow and grow and grow until the level of acceptance is reached where an individual feels that he is then comfortable in the area in which he is living.

Mr. BRASCO. Would counsel yield?

Mr. Cawley, the testimony that all of you have given to us today, as far as I am concerned, is particularly exciting. I think they are

steps in the right direction. I have, again, personal experience with the neighborhood police team. I don't think there is much disagreement here in the community with the initial steps you have taken, but being a native New Yorker I know the rank-and-file patrolman talk about the low morale on the job and how he is upset and deeply concerned about what I and my colleagues might consider new innovations to fight crime.

Has there been any lack of expansion of these particular programs described here today by virtue of the rank-and-file patrolmen and their associations not cooperating with what one might call the institution of new ideas with respect to crime fighting?

Mr. CAWLEY. Mr. Congressman, change is never easily accepted by anyone. You can always anticipate whenever you go with new programs and new approaches that they are not going to be accepted by everyone. I am happy to say I firmly believe the bulk of the police officers in New York City accept the programs that have been put in. We have been very successful, for example, with anticrime at the precinct level. That is done on a volunteer basis, a selective volunteer. We found more volunteers than we used because we are very careful who we put into those assignments. We have men volunteering for crime prevention work.

We have men volunteering for neighborhood police team sort of duties. We have men volunteering for resident agents' work, which is extremely difficult.

Dealing with the problem of morale is extremely difficult. What is good morale? I measure a man's performance by what he accomplishes. I can't give you the absolute statistics, but I will give you the general trend because it is an accurate one: Last year the number of arrests made by the members of the uniformed service was well above what it had been the year before. They participated to a much greater extent in the traffic enforcement program. The number of parking violations summons were higher. The number of moving violations were higher. They have been asked to participate in the execution of outstanding warrants from the court.

Mr. BRASCO. I am not quarreling with that. I recall from speaking to members of the department and, indeed, the colloquy in the New York newspapers that each and every one of these programs that were instituted met with resistance, that members of the P.B.A. got on TV and in the press talking about the quota system, talking about the deterioration of the morale in the department with respect to particular programs where change was instituted.

I suppose you answered the question when you said that change is not easily accepted. It seems to me the basic criticism of the commissioner, who I think is doing a good job, is by virtue of the fact he is attempting to change systems in the department that have not been effective in the past.

Mr. CAWLEY. There has been some criticism of programs when they were instituted, both in the press and by the P.B.A. leadership, by some of the men. Our efforts have been geared toward getting and receiving greater productivity, if you will, from those people we do employ.

I regret to tell you that in some studies that were done there were cases where an officer might be employed for a 2-year period and

never issue a summons nor make an arrest. When a man is working in a very busy community and men working alongside of him are making arrests, they are serving summonses. I think it is a perfectly legitimate mandated responsibility on the part of management to ask some hard questions about whether the officer is earning his day's pay.

To the extent we began asking some hard questions about—how are you earning a day's pay—there was some reaction to it. But, again, I think it was a very small percentage, in spite of the fact it might have been reported otherwise. I think the performance we have achieved in the past years, every year, indicates the men were perfectly willing and did participate in most of our programs.

Chairman PEPPER. Anything further?

Mr. LYNCH. No further questions, Mr. Chairman.

Chairman PEPPER. Any questions by the members?

Mr. WINN. I don't have any questions, but I would like to compliment you, Mr. Siegel, on your 20 years' experience. I have a lot of questions on that but I think you have given a good explanation. I don't understand what legal authority this auxiliary has because we have civil rights groups these days that challenge everything a policeman does anyway.

How are you protected by the contribution of your time and energies?

Mr. SIEGEL. Inspector Luhrs would like me to pass.

Mr. LUHRS. May I respond to that, sir?

The auxiliary has a legal basis by a Federal mandate in 1951, and the New York State Emergency Act of 1946, I believe it is. The auxiliary, itself, is protected by workmen's compensation, which requires this department to have workmen's compensation for each such auxiliary and that is part of our local law. The auxiliary is protected for medical coverage, for loss of income, just as all workmen's compensation cases might be. So we do have that coverage.

Mr. WINN. And you have the right to arrest?

Mr. LUHRS. You have the citizen's right to arrest. But what we also do is tell the auxiliary not to make an arrest. He is to back off and not have confrontation but call for a professional man and let him make the arrest.

Mr. WINN. That answers my question.

Mr. SIEGEL. May I read this paragraph?

The auxiliary police corps was created under the New York State Defense Emergency Act of 1951 to help the regular police department in case of a C.D. emergency that would be brought on by an enemy attack. Related laws passed between 1951 and 1959, enabled them to be used in other emergencies and placed them under the police department for training and supervision.

Mr. WINN. Mr. Rogan, does your group work as public relations with the community? Other than education, I am talking about, the installations of these burglary systems?

Mr. ROGAN. Not directly. Naturally, there is a community relationship.

Mr. WINN. Which one of the groups, then, would be involved, because I would imagine it would fall somewhere in this to educate the people that the police are there to help them rather than the reputation that seems to be brought down that has lasted for years. How does that develop?

Mr. Rogan. The department does have certain specialists in community relations and is really decentralized all the way down to the precinct level where the person primarily responsible for community relations is the patrolman on the street.

Mr. Winn. That is right; but what I am asking is how do you all of a sudden take the man who has been on the street 25 years, or 15 years, or 10 years, and say, all of a sudden, he is not the bad guy, he is a good guy? He wants to help you.

Mr. Rogan. Most of the patrolmen on the street that length of time have a firm belief that to the people who live on their beat he is a good guy, and all. I don't see any problem there.

Mr. Cawley. If I may. We have a deputy commissioner who is specifically charged with community affairs. He is involved in an ongoing basis with the development of programs that promote this relationship between the community and the police service. It is his personnel. They are decentralized, they work for the precinct commander, but he structures the central programs. And our community relations personnel attend the community council meetings, business groups; Inspector Rogan's personnel always address business groups, community groups—continually.

Mr. Winn. He said that. That is why I thought maybe it fell under his jurisdiction.

Mr. Cawley. It is kind of a twofold approach, this community affairs. This is very much a crime prevention program. It is tailored to do that.

Mr. Winn. His?

Mr. Cawley. Yes, Inspector Rogan's.

Mr. Winn. His neighborhood crime prevention?

Mr. Cawley. Through the educational process and through doing surveys and showing people how to improve their ability to protect their own property.

Mr. Winn. As you mentioned, this has worked real well because the statistics you gave are very impressive. Somebody, I think, said something about the number of women.

Mr. Luhrs. Yes, sir.

Mr. Winn. One hundred?

Mr. Luhrs. Over 600. Women are permitted to patrol.

Mr. Winn. They are permitted to patrol?

Mr. Luhrs. Yes, sir.

Mr. Winn. You mean street patrol? Not school safety patrol?

Mr. Luhrs. No, sir. They patrol the streets with two other uniformed auxiliaries.

Mr. Winn. They have the power to arrest, but usually call for help?

Mr. Luhrs. But many of their talents are used indoors in clerical responsibilities.

Mr. Winn. I see.

I thank you, Mr. Chairman.

Mr. Brasco. Mr. Chairman, one last question of the chief. Why do we need three separate police departments in the city of New York?

Mr. Cawley. I didn't know we had three.

Mr. Brasco. Transit and housing and your department. It seems to me it would be more efficient as an operation if it was all consolidated under one.

Mr. Cawley. That is a subject I know has been carefully studied over a period of years. Quite frankly, I haven't seriously given it any great amount of thought. The transit authority, of course, is kind of a quasi-State organization under the NTA, but the housing authority is part of the city administration. I don't know their numbers at the present time; 1,500 is a figure that comes to my mind, or thereabouts.

Mr. Brasco. Combined?

Mr. Cawley. About 1,500 in housing. Transit is much larger, though I don't have that number; and the housing authority is specifically assigned to patrol within those project areas. Now, whether or not there is substantial benefit to be realized from a merger of the two agencies is something that would have to be given careful thought as to the pluses and minuses.

Mr. Brasco. But you don't have any opinion as to whether or not it would be good?

Mr. Cawley. I could probably sit and come up with some pluses and minuses, but I would have to give it some careful thought as to whether that would be the best approach to dealing with the problems of the housing.

Mr. Brasco. As I understood it, the bulk of those organizations would like to merge. I may be wrong.

Mr. Cawley. I am not sure whether that is a fact or not.

Mr. Brasco. The PBA hasn't thought too kindly of the merger.

Mr. Cawley. You might find it interesting dichotomy that where the patrolman level might want to merge, whereas the upper levels may not be, because of a number of practical reasons. But I think it is something that would have to be given a lot of study before I could give a response.

Mr. Brasco. In closing, I suggest we ought to do that. I have a personal thought that if we had jurisdiction under one head—I don't mean the administration's superagency series in total—but if we had these crime units combined, I think they might be more effective.

Thank you.

Chairman Pepper. Chief, before this part of your presentation is concluded, give me a view of the compensation paid to the members of the police force of New York City, the scale and level of pay, from a new man and up.

Mr. Cawley. They recently concluded a retroactive contract negotiation, so I don't think I can give you the precise figure. But I believe the starting salary probably comes in somewhere around $13,000 at this point.

Chairman Pepper. That is the starting?

Mr. Cawley. Yes.

Chairman Pepper. Of a patrolman?

Mr. Cawley. I know the top salary at the end of 3 years is in the neighborhood of $16,000. That may include some longevity, 5-year increments.

Chairman Pepper. The patrolman?

Mr. Cawley. Patrolman is near $16,000.

Chairman Pepper. What is the next level of authority over him?

Mr. Cawley. The next level would be sergeant.

Chairman Pepper. What does that pay?

Mr. CAWLEY. Probably in the range of near $20,000. A lieutenant would be the next layer, getting somewhere around $23,000 to $24,000. The captain is the next layer and I give you the figure rather than the increments: A captain by virtue of a conclusion of contract less than 6 weeks ago, is $30,000 a year. It is a high-priced executive.

The deputy inspector is probably about $32,000; the inspector is in the range of $33,000; and the deputy chief would be $34,500. The next rank level, if I may, is assistant chief. That salary has not been established as yet. The rank level above that is mine. There are four three-star chiefs in our department and I am one of them. That salary has not been established. And there is one four-star chief, who is the chief inspector in charge of the uniformed services in total. But the last established salary of the deputy chief is $34,500.

Chairman PEPPER. How does that scale rank with the other major cities of the country?

Mr. CAWLEY. I have not compared it recently, but I think it wouldn't come off second best, Mr. Chairman.

Chairman PEPPER. I was thinking, that is pretty good.

Mr. BRASCO. Where do you take those examinations?

Mr. CAWLEY. I think it is too late, Congressman. You waited too long.

Chairman PEPPER. I am delighted to hear the salary schedules you have recited here today. I wish it were possible for some program to permit police officers, generally, over the country to get something like that because I think they are entitled to it.

I had a bill pending that a police officer would get an income tax exemption on the first $5,000 of his income, a way by which the Federal Government, without any direct administrative expense, could add to the compensation of the policeman and fireman both. I think they ought to get more compensation.

Thank you very much, gentlemen. You have all been very helpful and we commend you on the initiative and innovative imagination that you have displayed in these programs. We hope you are going to keep on pushing forward, trying better programs, and will be able to greatly reduce the crime we now have.

We will take a 5-minute recess for convenience of the reporter.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Mr. LYNCH. Chief Cawley, the last item the committee would like to discuss with you in regard to the New York City Police Department is the so-called Williamsburg hostage incident. I wonder if you, Chief Eisdorfer, or Inspector Freeman could briefly describe for us how that incident took place, when it happened, what the initial confrontation was, and how the police department reacted to it.

Mr. CAWLEY. I would like to ask Chief Eisdorfer to give you the chronology of that incident from the beginning point to conclusion, and then any questions that you might have with respect to it we would be happy to respond.

Mr. EISDORFER. The initial incident started on a rainy Friday evening at about 5:30 on a cold January night; January 19, at 5:30 a call was received at police headquarters in our communications system that a robbery was in progress on Broadway.

The exact address, I believe, was 927 Broadway in Brooklyn. This area is part of Bedford-Stuy. It is a heavily populated area. Broadway

is a business location, comprised of stores, with side streets containing tenements, four- five-, and six-story tenements.

The initial call said a robbery was in progress. The premise was called John and Al Sporting Goods Store, selling rifles, ammunition, Coleman stoves, winter clothing, hunting gear, fishing gear, boats, and outdoor garments.

At this time there were approximately 12 customers in the store. There were two owners in the store. The arriving patrolman, first radio car on the scene, found the front door closed. The premise was lighted up. They motioned to the owner through the glass door and the owner motioned them away, saying that the premise was closed. They thought it was very odd. They saw a man standing close to the owner with a rifle in his hand. The rifle was not pointed at anybody, but they felt since the alarm was transmitted, something was wrong. They retreated to the outside.

This store had one entrance and one exit. The exit was on a side street. It was a corner store. Just at about this time, the sergeant also responded to the scene with another radio car. So we now had three cars close to the scene with approximately six men.

At this time, a man with his hands up exited from the side exit. Behind him appeared men with rifles. The officers confronted these men from across the street. The men with the rifles from the store started to shoot at the officers. The officers returned the fire. The man that was holding his hands up dropped to the floor and crawled away.

The sergeant sent an officer after him and it appears that he was one of the owners of the store. The criminals then retreated into the store and shut the door behind them. The door appeared to be a steel door.

So what confronted us at this time was a store comprised of three stories, a building, actually, containing sporting goods. Incidentally, we retrieved the owner unharmed. At this first initial contact we believe we even injured and shot one of the perpetrators. The owner told us there were four perpetrators.

At this time, the sergeant called for the emergency service division. The emergency service is a unit which has been trained with assault teams to contain an area. This division, besides consisting of the emergency service division, also has the special events squad which is a group of men working at daytime in high-crime areas for special events, plus tactical patrol force working in the evening from 6 at night on toward the morning. Also, working in high-crime areas.

The sergeant sized up the situation as a hostage situation and called the emergency service division, which had been trained to handle these situations. The first emergency service lieutenant and truck arrived at the scene at about 5:45. The lieutenant that responded to the scene, who also sized up the situation and called for additional help, verified it was a hostage situation, that there were 12 hostages, approximately 4 criminals inside holding them hostage, and he asked for help.

At this time, I was in Manhattan. Inspector Freeman was also in Manhattan, at different locations, and we all responded to the scene.

Mr. WINN. How did they arrive at the fact there were 12 hostages?

Mr. EISDORFER. It appears the criminals herded all of the hostages down to the main floor after this. Prior to trying to attempt to escape they tied them all together on the main floor.

Mr. CAWLEY. If I might interrupt for just a moment, because at this point I think it is important for Chief Eisdorfer to give you some information about the hostage training program that we have instituted in the department, as a result of an earlier hostage situation that occurred in a bank.

We learned several lessons from that that might give you some insight as to why the sergeant sized it up to be a hostage situation, where he then called for the special operations division personnel.

Chairman PEPPER. How many people do you have in that group?

Mr. EISDORFER. We have approximately 350 men in this specially trained group. Of course, not all are working at the same time. But we contained this condition with much less specially trained groups.

In September of last year we had experienced a hostage situation involving a bank, plus what we felt was happening throughout the world in political and terrorist hostage situations, and we decided to set up guidelines. We felt that whether it was an aborted crime or whether it was a political hostage situation, fundamentally we felt it was a police problem and as such we had enough to go on to set up guidelines to contain this action; and, hopefully, through to a successful conclusion.

Of course we knew that a terrorist situation would involve some political considerations, but nevertheless, until that situation arrives we felt as policemen we should be there and contain it and should be in control. This situation fell into exactly our plans with reference to an aborted crime.

Also to implement our guidelines and implement our plans we did set up a hostage training school. This school was set up in an abandoned area, Floyd Bennett Field, where due to the good graces of the Navy we were permitted to use their abandoned buildings in which we set up a situation in which we had a hostage situation, and which the hostages moved in transit to another location, and in which we had a third location where we had the same similar situation as the first location.

In our guidelines we broke down our planning into three phases: phase I, the original location; phase II, the transit; phase III, to the new location.

We coordinated all of the units. We have trained detective negotiators so that they would be trained to negotiate. We made use of our department psychologist and our department surgeon to set up a profile for us on the type of person who would hold hostages so we would know the type of people we are dealing with and how to handle them.

We gave this course to 500 members of the force of the rank of captain and above, covering the period of about 3 months. In fact, we had just completed this course 2 weeks before this hostage situation occurred.

The situation, as I said, was a moving actual situation, in which the officers, 20 officers at a time, were seated on a bus which had communication with the scene, in which we were able to observe the actual situation, hear what was happening on a system of communications and, also, at the same time move with the play role situation to any new location.

This training scene was stopped at critical points and the superiors were asked to evaluate the situation as to what they would do and what action they would take.

Chairman PEPPER. Did you communicate with the hostages on the inside?

Mr. EISDORFER. At the actual situation we communicated with the hostages on the inside. We set up some system of communication. On the actual situation in Brooklyn we had the bullhorns through which we could communicate. We also moved in walkie-talkies, so they could use a walkie-talkie on a special wavelength, and finally we moved in a direct-line telephone in which one of the hostages, one of the people on the scene, a doctor who was used to treat one of the injured hostages, brought in with their permission a telephone, just two telephone systems, just among ourselves. A closed-line system. That is how we did that.

Mr. BRASCO. That was an injured perpetrator, wasn't it? Not a hostage?

Mr. EISDORFER. Yes.

Mr. CAWLEY. I think the overview of the training school was to teach all of the responding commanders to any type situation of this nature that the critical issue was one of control, organize your resources in a controlled setting, to control response and to maintain rigid command decision over firepower. I think that is essentially what we tried to get to each of the commanders.

Chairman PEPPER. Who was the highest officer in charge of that operation, for the police? What was his title, his rank?

Mr. CAWLEY. I spent quite a bit of time there. It was decided on—we can come back to the details and I would like to include them for you—somewhere around 10 o'clock Friday night the decision was made because I was present as the chief of patrol, the chief inspector, most of the ranking commanders had responded to the scene of the headquarters that was located some 75 feet away from the sporting goods store, that it was essential that we divide the responsibility into 12-hour time frames, so we would have rested commanders calling those decisions.

As a result of that, I went home somewhere around 12:30, I guess it was, Saturday morning and returned at 7 o'clock that Saturday morning again, and then did a 12-hour tour, 12 to 7 a.m., to 7 p.m., at which time Chief Card, the chief inspector, came in, and Kidwell and I returned for 12.

We divided the number of commanders that we thought were needed, we created teams and worked together as a 12-hour team. Those commanders that were not felt to be necessary, we sent them back. We did not permit people to remain on the scene we didn't feel we had an absolute need for.

Chairman PEPPER. How long did this operation last?

Mr. CAWLEY. From the time of the holdup attempt to the time the four gunmen emerged from the store was 47 hours.

Chairman PEPPER. How did you eventually work it out?

Mr. CAWLEY. Well, to back up for a moment, then, after the aborted stickup of the sporting goods store—incidentally, the information that came back later was they were not there to stick the store up for

the money, but rather to procure arms—the four gunmen turned out to be of the Muslem sect, Hanifi, which was having some difficulty apparently with the orthodox sect, and they felt the need to arm themselves.

In the first exchange of gunfire that Chief Eisdorfer described to you, when the owner came out the side door, one of our patrolmen was wounded. Then the gunfire continued from the front of the store, after some of the emergency service personnel arrived, and that is when Patrolman Stephen Gilroy was shot and killed.

We also had Patrolman Frank Carpentia, who attempted to move a radio vehicle in front of the body of Patrolman Gilroy. He was shot in the knee. Through the grace of God and good medical attention and 20 transfusions of blood, I believe, he survived and is home recuperating.

From that point on I think it is important to know once we organized and placed the control of the field operation in either Chief Eisdorfer—he had direct control, but I then later, as the field commander, and the chief inspector, consulting with the field commanders and Inspector Freeman, who was on the street making strategic adjustments of personnel, there were some 40-odd shots from inside the sporting goods store at the rescue vehicle that we employed and at windows and radios on cars on the outside.

But after the initial exchange until the time of surrender, there was not one shot fired by a New York City police officer.

I think that was achieved by virtue of making—going back to the hostage training and thinking through how to deal with that type of problem, the decision was made that the immediate vicinity of the sporting goods store would be policed and covered and sniper posts at points established by Chief Eisdorfer or Inspector Freeman, manned by the emergency service division personnel.

Mr. LYNCH. Chief, you did receive requests from patrolmen, did you not, during this incident, asking they be allowed to fire at targets within the sports store? Senior commanders were asked that, were they not?

Mr. CAWLEY. The men who were pinned down, waiting to be rescued, we had some six of them in front of the store, did not, to my knowledge—well, ask Chief Eisdorfer to respond to that. He is probably more conversant in it—did not request authorization to fire into the store.

Mr. LYNCH. That wasn't the point of the question. I guess my question wasn't too clear. It was my understanding that on several occasions officers had requested permission to shoot when they saw one or more of the perpetrators in the store. They were denied that permission on the premise that such action would be permitted if, and only if, all perpetrators were present at the same time.

Mr. EISDORFER. Yes. This happened early Friday evening when we received word from one of the assault teams placed across the street in one of the adjacent restaurants inquiring to ask whether they could fire. We advised them; we directed that they not fire unless we could get all at the same time. Since that was an impossibility we did not fire. In other words, there was no firing at individual targets, at targets of opportunity. We refused to go along with that; and it appears as if—that is the way we originally set up our plan.

Mr. LYNCH. How many policemen were on the scene surrounding that sports store, roughly?

Mr. Eisdorfer. Roughly, at the most, we only had 10 teams of 2 men, 20 patrolmen holding down that whole area, surrounding that sports store. Of course, around the parameter, I would say an area of five blocks away, we formed a circle and had a perimeter around this to keep people out and the transportation out, and so forth. We had approximately 130 to 140 holding this down all the time. So, actually, we admittedly, by holding the perimeter down and holding the assault teams down, containing this action, we enabled the city and the rest of the police department to function normally.

In other words, our service throughout the city was normal except for my division's containment within this area. That was our original plan.

Mr. Lynch. How many senior commanders would have been on the scene at any given time?

Mr. Cawley. Before I respond to that, may I, and I apologize for not introducing Deputy Inspector Arthur Freeman on my left, who was very much a part of the Williamsburg scene and made a large number of critical decisions. He was a commander that rotated every 12 hours with Chief Eisdorfer and was very instrumental in establishing the assault positions and the sniper control position covering that store.

I would like him, if it is agreeable to you, to briefly describe how the posts were selected and the policies that we established in terms of manning those posts. I think it would be helpful and I would be happy to have him respond to that.

Statement of Arthur A. Freeman

Mr. Freeman. We have spoken to many police officers from various cities throughout the country for the past year and a half on our exchange program, and we find this particular problem of confrontation with barricaded situations, holding hostages, is a fairly new ball game.

We respond to barricades and snipers and utilize the men first on the scene. Now, we find with the seizure of the hostages, whether terrorist groups, fanatical groups, or aborted robbery, we find now that we have a situation that so-called bogs down. They seize hostages and the initial response by the patrol in the precinct area now is involved in a little more of a unique or new type of situation.

What we did last September when we formulated these guidelines, we wanted to spell out the particular duties of each unit that would respond to these confrontations. And speaking to these people from around the country, they had the same particular problem. Our problem is not to get many people to the scene; it is to get the people to the scene to control, contain, and evacuate the unit parameter with as few men as possible.

In our guidelines we spelled out the particular duties of the patrol force, emergency service of New York City, detectives, communications; each unit would have a play in this particular operation. The patrolmen that responded initially would size up the situation and they would contain the perpetrator. If he was holding a hostage, we would take no overt act that would endanger the hostage's life.

We find from experience the perpetrator that does seize a hostage, he doesn't kill one of them if he is holding several at the outset.

Chances are he won't take their lives, chances are. We find out that sets on our side.

The first unit to get there, we spell their duties out in the guidelines, to keep him within a parameter, control that particular area and evacuate the people that are in danger. When we say "control," we mean the superior present at that stage controls every shot that may be fired. The officers will report what they see, but the immediate superior at that stage will direct the operation.

He must control every position. Then we go further and say that the detective that would respond have a function. Then the emergency service that responds, they have a function. And it is spelled out. The emergency service being a unit that has the firepower, protective gear, bulletproof vest, and so on, we say that when they get to the scene they will relieve the initial response of the patrolman at the particular scene, lock this perpetrator in, contain him, play for time, don't do anything that may cause damage or harm to a hostage.

Now, these teams put around the parameter are only teams of two men—the superior. And the complete reason for this is to lock them in and have control of that in the parameter. To have control of the firepower. No independent action. We call them containing teams. They are properly suited and armed and have radios with one frequency, radio band, we can talk within a parameter, direct, person to person. We control them; we contain them. We evacuate.

We have a team that we refer to as an assault team. This is containing team, two men, superior, properly armed, suited. We spell out everything that may happen in this particular stage. The perpetrator may come out of the store, building, or office with a hostage. No one takes any action unless an assault team is directing.

All possibilities that may take place are decided upon; preplans for every contingency, and it is spelled out. We have a detective assigned to a particular incident and their job is the same. It is spelled out as drivers, particular cars if cars are needed to move in a particular operation in that location, negotiators.

Mr. Brasco. Inspector, being a resident of Brooklyn, and in communication with the news media, TV, I think I understand and appreciate your dilemma. As I understand it, there was some pressure from the rank-and-file members of the department, and maybe on up, to return fire, particularly after the hostages were taken out of the building, I think, notwithstanding those pressures and the ultimate outcome of the situation, that the department did a fine job.

I contract this situation with the kind of shooting match that took place in New Orleans at approximately the same time. There we could have had a real slaughter situation.

My question is: Aside from that particular action in terms of restraint and, of course, final outcome, I am wondering if we could just reverse it so that I could get, and the committee could get, some insights for the record, as to the plans you intended to employ, if you are at liberty to talk about them.

Suppose the hostages were not able to get out of the building, as they did, through a side door or an entrance on the roof that one of the owners knew about, what would have been the plan at that time?

Mr. Cawley. I would like to respond to that, if I may.

There were a number of contingency plans developed attempting to deal with any eventuality, hoping at all times, of course, we could pursue the course we decided upon very early; that is, we would practice a policy of firm restraint and, hopefully, continue to negotiate and eventually talk them out of the building. In the event that failed the plans were based upon the safety of the hostages.

I can appreciate your wanting to reverse it, but perhaps if we went the other way you might understand why we were pretty confident we might be able to talk them out. There were a number of early indications that we might be successful if we just practiced a great deal of patience and restraint.

We were ready to deal with the other. It would have been a very unfortunate course of action if we were forced to do it. The building was almost a fortress. The side door was made with a steel plate. The interior of the building was structured in such a way—there was a balcony overlooked the front door—in that there was no way of police officers coming through the front without being fired upon from that balcony.

We developed other contingency plans should the occasion arise where they might have killed a hostage and thrown one out and said, "That is the first and there will be another one in a half hour." If that came to pass, then, obviously, there would have to be a very quick strategy and policy decision and determination of how quickly you go in and how best you go in. You could not very well sit back and have that occur.

As to what we had in mind in the long run: One of the factors that really encouraged the escape attempt was the preliminary expiration of one of those contingency plans. We began to test the structure of the building trying to see where we might put in, if you will, and get a vantage point that would look down on the gunmen who were looking down on us. As we started to probe, I think for the first time, some 43 hours later, they lost their cool, if you will, and made their first major mistake. They ran together, the three of them, and left the hostages alone. The hostages having banded at that point is where Mr. Riccio, knowing there was a false door, rushed them up to the rooftop, which gave us several anxious moments at the top there, as one, Mr. Riccio I think it was, emerged with a gun, not knowing whether it was a hostage or gunman.

We had a captain sitting on the top of that position who practiced the restraint and cool we were looking for. He quickly assessed the situation, determined it was the nine hostages, dropped the ladder, and we took them off the roof. And once the hostages were out the gunmen fired several shots up through the ceiling in their frustration, but we had the hostages.

In any event, the new ballgame occurs when the nine hostages are no longer being held, and there is no immediate need at this point to risk the lives of police officers attempting to enter the building, as long as we were confident in making some progression in the negotiations. And we were very confident we were doing that.

I would like to go back to Friday night to clarify a point. It all sounds like it is very smooth, and I would like to think it was, but, of course, at the beginning point of an incident of this nature in which police officers are shot and robberies are in progress, a lot of radio

calls are responding, there is quite a bit of confusion, as you can well appreciate. As Chief Eisdorfer described it, it was a busy business street. There was an elevator overhead that further complicated it with the rumblings of the plane.

There was an air of general confusion, as there always is initially. The sergeant came on the scene and began to pull it back very quickly. Notifications were made to the proper offices and people responded to that scene. I would say it took us some 3 hours before we were able to put all of our patrol precinct personnel back into their assignments and then start to look at the control of that particular incident with the specialized units.

Chairman PEPPER. What was the conclusion of it? How did you get them out?

Mr. CAWLEY. One of the indications that negotiations might prove successful was when they released their first hostage. We then found out one of the gunmen had been wounded. They made two basic requests. One was for food and the other was for a doctor.

Accompanying that hostage was a message from one of the gunmen who had drafted a letter, and part of it—I don't have it with us, I am sure—but, in essence, he said everybody was prepared to die and go to paradise. There was a basic inconsistency with wanting to go there. The fellow who was possibly halfway there, they didn't want to hurry him in there. So we were kind of optimistic, perhaps they would listen to reason.

We used this rescue vehicle. We attempted to put them under psychological pressure by continually calling for them to surrender and to turn the hostages loose so they wouldn't have a very comfortable moment. They would always have to live with concern for what we were going to do next. We kept up that pressure for several hours.

During the early morning hours—and I am just giving you the overview—we used that rescue vehicle as a means of having a minister go in, roll up near the front of the sporting goods store and attempt to reason with them and ask them to come out.

Incidentally, I think it is accurate to say that every time the vehicle was used it was greeted by gunfire.

Mr. BRASCO. A bulletproof vehicle?

Mr. CAWLEY. Yes.

Also, during the early morning hours of Saturday, we had several muslem priests come and volunteer their services, to go in and speak with them. Two, in fact, went into the vehicle. They agreed to have one meet with them. The meeting lasted some 5 minutes and was unsuccessful.

Chairman PEPPER. Describe the rescue vehicle.

Mr. CAWLEY. We have a specially prepared vehicle that is an armored vehicle that we put together, I guess, some 5 years ago. Maybe I ought to pass this to Chief Eisdorfer and he might be able to give you some kind of a better idea of the description of what it looks like.

Mr. EISDORFER. It is a 21-ton vehicle, tracked, armored proof, and it is able to hold approximately 12 to 15 men inside. It opens up through the middle, in the rear, in between the tracks, and if it goes over somebody—using part of the vehicle as a front—we could take these people into the vehicle and extricate them safely from the scene.

That is what it was used for. We had six policemen pinned down, plus a few civilians, before we could get them out. Once we did get

them out, we moved the vehicle, right to the front of the store. It does have a loudspeaker system and we were able to get our ideas across.

Chairman PEPPER. It is bulletproof?

Mr. EISDORFER. It is bulletproof. We didn't have any armor on, in other words, to shoot or anything like that; no. It is a very effective weapon. Psychologically, it did scare them, it did unnerve them, and I think that played an important role in our final decision.

Mr. LYNCH. Chief, I wonder if you could tell us to what extent you and Inspector Freeman, who were both on the scene along with Chief Cawley, attribute the fortunate outcome to the hostage training which you had, I believe, in September of 1972. Did that training play an important part in this incident?

Mr. EISDORFER. I would say it played a very important part in the incident. I think it played practically a complete role. We weren't prepared for this type of incident. Our men weren't trained. Time was on our side and we felt sooner or later the criminals must make an error. They must make a mistake. They made that mistake. We were there and we were ready to take every opportunity that we would have.

Mr. LYNCH. And the training you had, the training you described, you weren't talking about classroom lectures you were talking about "war game" type situations.

Mr. EISDORFER. Field problem; right.

Mr. BRASCO. Counsel, if I may.

Getting back, if I might, to the point where the hostages were released, I suspect that was probably the time when the most restraint on the part of the department in understanding the situation had to come into play.

Again, I feel the department acquitted itself very well under the circumstances, because in the final analysis you had to play it by ear and, as Inspector Eisdorfer indicated, you have to look for the breaks when they come and if they come, and apparently they did.

But to be specific, these men ultimately came out as a result of your negotiation team, the doctor, and assurances that they wouldn't be mistreated on their way out; and they weren't. But how long, now absent the hostages being in that building, was the department prepared to stay outside? Was there, again, the possibility that action had to be taken to forcibly extricate the defendants from the sporting goods shop?

Mr. CAWLEY. Once the hostages escaped, Congressman?

Mr. BRASCO. Yes.

Mr. CAWLEY. Once the hostages escaped, I, certainly—and I am sure I am speaking for the police commissioner as well as the other responsible people—felt no obligation to go in there at the risk of police lives. How long would I have sat there? It is very difficult to say. But I am a very patient man and I would not have sent police officers into what I knew to be an impossible situation, where, in my judgment and in discussing it with staff at the time, I might have lost 8 to 10 police officers.

Mr. BRASCO. I am very pleased you made that statement and that judgment. I think that was the correct determination to make. I was just wondering if there was any cutoff plan as a result of the training that might be implemented under those circumstances where you have no hostages, but people on the inside who refuse to come out.

Mr. CAWLEY. There are no plans that you can formulate that would say in any given situation, be willing to stay 24 hours in one situation and in another, 48. It would very much depend upon the circumstances, the progress being made with any other efforts underway.

At the time the hostages escaped from the building we had the mother, brother, and uncle of the man we thought to be the leader of the four gunmen inside, at which time we put her—she volunteered—into the rescue vehicle. She went on the public address system and told her son she was there and wanted to talk to him.

She then got on the telephone and there were very meaningful discussions between the mother, son, brother, and the uncle, and the longer those discussions were kept going the more optimistic we became. And, thank God, within 4 hours they did emerge.

Chairman PEPPER. Did you have to make any commitment to them that they would not be prosecuted?

Mr. CAWLEY. No; we did not make any commitment to them. Mr. Chairman. Earlier, on Saturday, when prospects were dim and there was very little progress being made and very little place to go, we had Dr. Tom Mathew, who eventually did come down and enter the sporting goods store, we had two attorneys, Mr. Katz and Mr. Leftcort, both of whom had represented Black Panthers in the past. They came down and volunteered to attempt to communicate with the four gunmen and see if they could convince them to come out, and they would have the best of legal representation.

They did talk to one of the gunmen on the inside via walkie-talkie, but at no point in their discussion was there any agreement or understanding we would not prosecute them according to the laws of our State.

Chairman PEPPER. So they came out. The only promise being you wouldn't shoot them as they came out. You would take them in custody.

Mr. CAWLEY. We promised them the man who was injured would receive medical treatment. They would be treated professionally. We would bring them to the precinct station and they would be interrogated.

The district attorney from Kings County was present, as was several members of the staff. They assured them of that as well, and that was it. There were no other basic commitments made to them.

Chairman PEPPER. Have they been tried so far?

Mr. CAWLEY. They have been indicted. They have not been tried as yet.

One of the other interesting innovations which was put in during the course of this scene, and I think is well worth making part of the record, was the creation of a "think tank" on the part of the police commissioner that consisted of the various capabilities by our ranking commanders and deputy commissioners, who met on the 24-hour basis on 12-hour periods as we were working. They were available to me in the field, as well as Chief Cod when he came in behind me, if I had any problems I wanted to toss in there for kicking around and possible developments.

For example, when we were thinking about the contingency plans, someone that would be able to make a contact with the department of buildings, which is tough to do on Saturday and Sunday, would be able to give us an engineer, deputy commissioner of administration. And that team concept, thinking through the problem in the station-

house, which is about a mile and a half from the scene itself, without having to do the thinking underneath the sounds of gunfire, and able to think things through perhaps in, like, other than a field setting, I think, was a very important contribution.

I think it is important you know we put that concept in.

Chairman PEPPER. Excellent. I think it was excellent cooperation.

Mr. CAWLEY. Thank you.

Mr. LYNCH. Chief Cawley, you had communications capability with any one of the 10 2-man teams surrounding the sports store; is that correct?

Mr. CAWLEY. Not completely. Let me attempt to explain the organization that we put in.

I was designated, during my 12-hour segment, as field commander. Chief Eisdorfer was on-the-seat commander, if you will. It was he that was in continual touch with the assault positions and sniper's post. I had an assistant chief inspector from the uniformed service present as my immediate contact man with Chief Eisdorfer, so there was the continual conferring, so there was some idea of how to handle that.

Mr. LYNCH. But a senior commander did have communication capability with all of the various teams around the store?

Mr. CAWLEY. Yes. Continually and periodically whenever the gunfire came out of the building and on occasion came out for no apparent reason, other than I guess to keep us alert. The command would buzz over the radio from Inspector Freeman or Chief Eisdorfer to hold your fire and just try to create a climate, as difficult as it might be, in that kind of a setting of trying to keep it calm and poised and just wait—have some respect for our judgment, where the commanders will make the good judgments for you, we will tell you when you should and shouldn't use that weapon.

Mr. LYNCH. Has the New York Police Department provided hostage training, similar to that which it has given to its own men, to any other department, or have you been requested to provide that kind of training?

Mr. FREEMAN. We have continually throughout the year. The emergency service men go to a school for 5 days, Monday through Friday. It is an 8-hour day in classroom. Since September and October of last year we have made Monday barricade, sniper, hostage, consultations. That is the entire day.

Because of this incident in Brooklyn, publicity, many departments have requested to attend or send some of their planning officers to our school. We have been doing that on a small scale. We have been sending two men from different departments each Monday. One day for the hostage situation. During our course in September and October of last year we did have representatives from about 12 major cities attend our course with our captains. They sat in.

It appears the cities are scrambling to get an overall operation that can coordinate a major task force of dissimilar units. We tell them, you don't have to have 30,000 people in the department to do this, you only need 4, 5, 6, or even 3 containing teams. We say you control the immediate parameter with as few men as possible, with radio communication, under one field commander with subcommanders working under his direction, coordinating the different units that do respond.

Very basically, that is it. That is a hostage operation. Each one knows what they are doing. Each unit knows their job—which unit will be the containing, affirmative, assault team, and so on.

Mr. LYNCH. I have only one final question, Chief Cawley. You mentioned the commissioner had established a so-called think tank composed of senior people in the department which operated away from the scene and away from the gunfire. Did the think tank provide you with any valuable advice during this incident?

Mr. CAWLEY. They did. Saturday evening, at the end of, I think it was 6 o'clock, I attended a briefing sessions in the 90th precinct in which the police commissioner was present and all of the members who were going to participate as think tank members, if you will. It was their job to be receptive to our problems in the field.

I would telephone the men and ask them to give it some thought, that when they had some suggestion I might consider as being useful, that I would very much appreciate getting that call back. That meeting lasted some hour and a half. It was an updating, a briefing session, in addition to the beginning of the think tank.

Friday evening on the telephones, the police commissioner and top members were communicating regularly with the command post. When I returned at 7 o'clock on Sunday morning I attended a briefing session with the think tank members. I think it was from 9 to 11, at which time a lot of different suggestions were put in, such as, without getting too involved, putting in beeper systems into cars that might be necessary if there was a decision made that we would move the gunmen, if that were one of the alternatives we would be faced with. Those beepers were tied into helicopters if we had to take them out on the highways.

Decisions made about closing up schools, should we have to make a move for Monday and stay still another night. Coordinating the notification with the transit authority, the municipal agencies that were involved.

All in all, the people who fit in that environment and are not dealing with the pressure of the moment that occurs in the field setting, are capable of giving a great deal more thought to what might be tried. Clearly, certainly clearly understood from the outset, the ultimate decision would rest with the field commander, based on all of the inputs.

It is a by ear operation. There comes a time when decisions must be made very quickly, and it has to be done based upon as much information as you have, which is what the "think tank" was useful in doing: Giving you more alternatives to take into account before that decision had to be made.

Mr. LYNCH. I have no further questions.

Mr. NOLDE. Chief Cawley, do you have a policy regarding interviewing the media in situations like this, particularly television?

Mr. CAWLEY. We have a deputy commissioner of public information. It is a special post. And there is an office of press information, known as public information. The deputy commissioner of public information was on the scene starting Friday night. We respect his judgments. He makes the assessment as to how to best deal with the press.

We discuss with him what the press should be told and what it should not be told in the interest of operation efficiency.

We also appreciate the need for the press and the news media to report the operations of the police service in dealing with the problem.

Mr. Nolde. In other words, you attempt to establish what the facts are and get it out to the media in a way that is objective as opposed to rumors flying?

Mr. Cawley. Right, Mr. Nolde. It is very much a controlled situation. We establish liaison with the press, we establish a press area, and that area is selected considering both their need for being close enough to have some feel for that situation so they can report on it. On the other side of that, so we are comfortable with knowing we are not putting them into a position of jeopardy.

Certainly, in a possible shootout situation, they were removed to a place we felt comfortable with.

Mr. Nolde. So in this particular situation the media didn't pose any problems to add to the incendiary nature of the situation?

Mr. Cawley. No. We had them placed some 2 blocks away from the location, with somebody that kept them updated in terms of what was going on. The only thing we ever ask of the press in a situation of that nature is that they be responsible. There were certain pieces of information we would rather not have released at the particular moment because of tactical advantages we might have.

I think, in all honesty, we had one little problem concerning one of the storekeepers that was trapped in across the street. I think some enterprising and very energetic member of the media did manage to find out the phone number in there and was talking to him directly. But it did not pose any major problem to us.

Once we heard the radio station interviewing this fellow live, we quickly found out, obviously, which station, and had a pretty good idea which door, and appealed to the station to discontinue it.

Chairman Pepper. Gentleman, just this. Your testimony about this magnificent training program you have and about the splendid coordination of all of the personnel that were engaged in dealing with this problem, and about this special vehicle, brings back to my mind the Attica situation. Several of the members of our committee went up to Attica on Friday of the tragic week and we stayed there 2 days. Later on officials from Attica testified, as did inmates and other people, before our committee.

I am no military authority, but it occurred to me at that time that if there had been a gunship, say, like the Marines have, with two or three or four trained men in that armored gunship, instead of the helicopter that came over and pumped the gas and had the ship been manned maybe by military personnel or competent and well-trained police personnel, law-enforcement personnel, and if they had suddenly appeared over that scene in that courtyard and called out to them over a loud speaker, "We have got you covered. We can see where the hostages are and if any hostage is shot, we will shoot every man around the hostage who was shot, or who is cut with a knife."

I believe it would have so surprised all of those inmates if they had seen those guns sticking out of that gunship and had heard it up there and heard those competent men in uniform.

I think it is entirely possible that those men would have been intimidated and they could have held them under guns until the people came in from the outside with weapons and covered them from

the ground. I didn't disparage or discredit in any way the dedication and the diligence and best manner in which the people in charge up there conducted the operation, but I spoke to a Marine general not long ago about such an operation as that. Would it have been feasible? He said, "Yes, it would have been feasible." I don't know whether it would have worked or not, but it would have been feasible under that particular circumstance.

Do you care to make any comment about that sort of thing?

Mr. CAWLEY. We have used the vehicle not as an offensive machine, but rather as we used it in Williamsburg, as a rescue vehicle. It enabled us to take out six police officers pinned down. It also enabled us to take out of the stores a number of customers as well as owners on both sides of the street.

It did give us a substantial psychological edge, I believe.

Chairman PEPPER. It looked like a tank to the men on the inside?

Mr. CAWLEY. It resembles it; but it is not what it looks like, but how you use it. We did use it strictly on a rescue operation. It was not used offensively. It is very difficult to comment on anybody's action in a given situation of this sort because there are so many considerations that come into play. I think one must make the decision on the instant events as they unfold.

Chairman PEPPER. Gentlemen, again we want to thank you in the warmest way for what you have given us here today; for helping us to make a record which we hope will be helpful to other police departments in the country. Some others who have had similar problems are going to be testifying here and we will be interested to see what sort of training programs they have and how they coordinated there activities, and the like.

Thank you again. We are very proud you are on the police force of one of our great cities.

Mr. CAWLEY. Mr. Chairman, I want to thank you for the opportunity of informing you about the new innovations we put into effect in New York and the opportunity of reading into the record what I consider to be an outstanding example of police professionalism as displayed in Williamsburg.

Thank you very much.

Chairman PEPPER. Thank you very much.

The committee will adjourn until 10 o'clock tomorrow morning, when we will meet in this room.

(Whereupon, at 6 p.m., the committee adjourned, to reconvene at 10 a.m., on Tuesday, April 10, 1973.)

STREET CRIME IN AMERICA
(The Police Response)

TUESDAY, APRIL 10, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice at 10:25 a.m., in room 311, Cannon House Office Building, the Honorable Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Brasco, Mann, Rangel, Wiggins, Winn, Sandman, and Keating.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; and Leroy Bedell, hearing officer.

Chairman PEPPER. The committee will come to order, please.

During the morning we will hear from the New Orleans Police Department regarding the Howard Johnson-Essex incident. During the afternoon we will have testimony from Indianapolis regarding its fleet plan and its civilian-oriented police program. Also, we will hear from Cincinnati regarding its community sector police program.

The first presentation this morning will be by the police department of the city of New Orleans.

Mr. Lynch, will you proceed.

Mr. LYNCH. Yes, Mr. Chairman.

I am happy to introduce to you, Mr. Chairman, and to the members of this committee, Mr. Giarrusso, superintendent of police of the New Orleans Police Department. As you know, that is a major police agency with a complement of some 2,000 people. Superintendent Giarrusso is a veteran of 23 years of police service and holds an LL. B. degree from Loyola University.

Superintendent Giarrusso, I wonder if you could at this time introduce the members of your department who are here to testify with you this morning.

PANEL OF NEW ORLEANS (LA.) POLICE DEPARTMENT OFFICIALS:
GIARRUSSO, CLARENCE B., SUPERINTENDENT;
KASTNER, JOHN H., DETECTIVE;
MARTIN, RINAL L., SERGEANT;
POISSENOT, LLOYD J., MAJOR; AND
WOODFORK, WARREN G., SERGEANT;
ACCOMPANIED BY WILLIAM D. WALKER, REPORTER, WWL–TV

Mr. GIARRUSSO. Yes, sir. Mr. Pepper, members of the committee, I would like to introduce Maj. Lloyd J. Poissenot, the commanding officer of the patrol division of the New Orleans Police Department.

John H. Kastner, a patrolman, who conducted the investigation from the very beginning of the Howard Johnson incident. Sgt. Rinal L. Martin, who commands what we call the urban squad in New Orleans. We believe this was an innovative response to a great need that existed at that particular time. Sgt. Warren G. Woodfork, who commands what we call the felony action squad in New Orleans.

Chairman PEPPER. Superintendent Giarrusso, we are very pleased to have you and your associates here today.

Mr. GIARRUSSO. Thank you, sir.

Mr. LYNCH. Superintendent Giarrusso, as you know, we are very interested in hearing testimony from you regarding the New Orleans Howard Johnson, so-called Essex incident. From the viewpoint of this committee it seems that this would be an examination of, in essence, a new kind of crime. We have had crimes of terror before, going back to the Starkweather episode, the episode in Illinois where the young man, Richard Speck, murdered seven or eight nurses. But within the past several years we have seen crimes that involve some political overtones, crimes of terror, involving people from radical groups. That appears to be the case in the incident in your city.

I wonder if at this time you could briefly describe to this committee the events surrounding that incident, the police department's response to it, and how it ended.

Mr. GIARRUSSO. Yes, sir; I will be happy to. I have a report from which I have deleted those things I consider extraneous for this meeting and if you don't mind, I would like to read it.

Chairman PEPPER. You may proceed.

Mr. GIARRUSSO. This report deals with the Howard Johnson incident.

An investigation by the New Orleans Police Department, which began December 31, 1972, developed evidence which proved conclusively that a rifle used on December 31, 1972, and January 7, 1973, the instrument used to kill nine persons and wound nine others, was one registered in the name and recovered beside the body of Mark J. Essex. While the evidence collected was persuasive that all rounds of ammunition fired from the rifle on these two dates were fired by Essex, it was not definitely determined if Essex did or did not have one or more accomplices or coconspirators in the criminal acts committed on those two dates.

A reconstruction of the events in the period December 31, 1972, and January 7, 1973, in which Essex was known to be involved, based on the evidence collected during the investigation and, further, on certain assumptions, indicates that on or about December 31, 1972, Essex, either alone or with accomplice(s), under cover of darkness, took up a position in vacant lots adjacent to Perdido Street and to the rear of New Orleans Police Department central lockup, which is actual headquarters, and at approximately 10:55 p.m., fired seven rounds of .44 caliber magnum ammunition into the sallyport of central lockup, killing Police Cadet Alfred Harrell and wounding Lt. Horace Perez.

Following the firings, Essex took a route from the lots, across the I–10 expressway, to a building housing the Burkart Manufacturing Co. plant.

In gaining entrance to the Burkart Manufacturing Co., Essex set off an ADT alarm system. Either when entering the plant through a window, or within the plant, Essex inflicted a superficial wound on his person.

Patrolmen Edwin Hosli and Harold Blappert responded to the alarm. As Patrolman Hosli prepared to release a K–9 dog, at approximately 11:15 p.m., he was shot from behind and seriously wounded with a .44 caliber magnum bullet. Hosli succumbed on March 5, 1973.

Following the shooting of Patrolman Hosli, Essex fled the Burkart Building to a church located on South Lopez Street.

On January 2, at approximately 6 p.m., Essex purchased a razor and blades at Joe's Grocery, located in the 4200 block of Erato Street.

Essex's whereabouts or actions from the evening of January 3 to January 7 at approximately 10 a.m., were not known.

On January 7, 1973, at approximately 10:15 a.m., Essex entered Joe's Grocery, ordered the grocer, "You come here," and shot him in the chest with a .44-caliber magnum bullet.

Essex, evidently having no prearranged escape plan, ran from the store to 1506 South White Street, where he observed a car owned and occupied by Marvin Albert, with the engine idling. He ordered Albert from the car, at rifle point, got into the car and proceeded in the direction of Melpomene and Broad Streets.

At approximately 10:40 a.m., the stolen car driven by Essex was involved in a hit-and-run accident at the intersection of Washington Avenue and Dupre Street. The victim copied the license number of the car.

Essex, in the stolen vehicle, was next observed by a witness entering, at a high rate of speed, the parking garage of the downtown Howard Johnson. Next he was observed in the vicinity of the fourth floor of the garage by other persons as he abandoned the car, and entered the south or Gravier Street stairwell of the motel.

Essex asked two employees on the eighth floor to let him in the room accommodations part of the motel. They refused his request and observed him running up the stairs. He was next observed in the stairwell on the ninth floor, where he asked an employee on duty to let him in, and again his request was refused. Essex then proceeded to the 18th floor and gained entrance to the room accommodations section.

Upon gaining entrance to the 18th-floor level, it was assumed Essex attempted to start a fire and that Dr. Robert Stegall, a guest of the motel, observed Essex's arson attempt and intervened. A struggle between Essex and Dr. Stegall followed and Essex shot Dr. Stegall through the heart with a .44 magnum bullet. Elizabeth Stegall, wife of Robert Stegall, while cradling her fatally wounded husband, was executed by Essex when he placed the barrel of the rifle near the back of her head and fired. The autopsy report conclusively shows that Elizabeth and Robert Stegall were individually killed. Essex either lost or intentionally left a red, green, and black flag near the bodies of the Stegalls.

Essex was next reported on the 11th floor. He gained entrance by blasting the lock off the door leading to that level and attempted to set fires on that level.

Frank Schneider, assistant manager of the motel, who had gone to the 11th floor to investigate reports that a man with a gun was on that level, was shot in the back of the head by Essex with a .44-caliber magnum bullet.

Essex then proceeded to the 10th floor and was met by Walter Collins, manager of the motel, who also had gone to investigate reports of a man with a gun. Collins was shot by Essex with a .44 caliber

magnum bullet and succumbed from this inflicted wound on January 26, 1973.

Essex then went onto the roof of the eighth floor meeting room and then to the eighth floor patio area. Here he shot Robert Beamish with a .44 caliber magnum bullet and set fires to rooms on that floor level. From this level, he shot and wounded Fire Lieut. Tim Ursin, Patrolman Charles Arnold, Patrolman Kenneth Solis, Sgt. Emanuel Palmisano, and fatally wounded Patrolman Phil Coleman.

In an attempt to escape from the motel, Essex returned to the fourth floor parking garage level, where he had abandoned the stolen vehicle. Police officers were in the area of the vehicle. Essex fired one shot through the glass section of the fourth street level door and went back up the stairwell.

Essex was next observed on the 16th floor level of the motel. From this level, he shot and killed Patrolman Paul Persigo and wounded Joe Anderson and Chris Caton. He also set fires on this level.

Essex was next observed on the 17th floor level where he continued to systematically set fires in guestrooms and the corridor. He entered the Perdido Street stairwell and attempted to reach the roof level. Deputy Superintendent Louis Sirgo, leading a search party for the sniper, or snipers, and attempting to rescue two policemen who were trapped in an elevator on the 18th floor level, was shot in the back and killed in the stairwell between the 15th and 16th floors.

Essex went onto the roof of the motel at approximately 1 p.m.

Patrolman Lawrence Arthur, suspecting that a sniper was on the roof, opened the door on the Perdido Street side entrance and was shot by Essex.

Essex subsequently positioned himself in a cubicle on the Gravier Street side of the motel adjacent to the doorway entrance. In this sheltered and protected position, he could not readily be seen from any of the observation positions police officers had gained on high buildings in the area. Periodically shooting and shouting, Essex remained at this location.

Due to the frenzied activities of Essex, in starting fires and shooting from various levels, and information provided by witnesses, it was not definitely known if there were one or more persons committing those criminal acts. At one point, witnesses reported that guests and/or employees of the motel were being held as hostages.

The decision was made to systematically secure each floor of the motel. Smoke and fumes from the several fires, and the need for extraordinary caution for both the protection of guests, police officers, and firemen, contributed to make this operation painstakingly slow.

The decision was made to utilize a military helicopter with police riflemen to fly over the room area and provide a more advantageous position for firing at Essex and/or others. Shots were fired from and into the cubicle.

At approximately 8:50 p.m., when the helicopter was on its third flight over the roof, Essex ran from the cubicle, firing at the helicopter and was shot.

Reports from several observation points were to the effect that a second subject could, at times, be seen on the roof. While these reports were not definitely confirmed, they were from acceptably reliable sources and dictated that extreme caution be exercised in and around the motel.

At approximately 2 p.m., Monday, January 8, police officers entered the roof area from both the Perdido and Gravier Street sides and searched the boiler room—the only access to this room was from the roof. No one was found in the boiler room or on the roof area. Systematic searches were made of other areas of the motel and they, too, were negative.

In a room on the 11th floor, four live .44 caliber magnum cartridges were found. A jacket, identified as one belonging to Essex, was found on the eighth floor. The jacket was reversible, dark blue on one side and beige on the other. It contained a razor similar to the one purchased by Essex at Joe's Grocery on January 2.

Interviews with witnesses who had seen Essex at close range in the several situations described collaborated generally on his physical appearance. There were conflicts in the description of his dress, particularly the color of his clothing, some of which may be attributed to the reversible jacket. One victim of the shooting, Robert Beamish, described the gunman who shot him at close range on the eighth floor patio as having a goatee, which Essex did not have.

In each of these above instances Essex was alone. At no time did any witness observe Essex in the company of another person.

The investigation involved the thorough search of areas where it is known that Mark Essex was present, the exchange of information between local and Federal law enforcement officials, other criminal laboratory testing and verification of a number of objects, and interviews with more than 1,000 persons.

Mr. LYNCH. Thank you, Superintendent.

I wonder if you could tell us what emergency plan your department had in effect prior to the Essex incident.

Mr. GIARRUSSO. We had plans to deal with natural disasters, emergency situations, large crowds that do go to the city, and to deal with armed militants; however, I might add at this stage of the game that we did not have any plan at that time to deal with a Howard Johnson affair per se.

Mr. LYNCH. What kind of a hostage or sniper training had your department received? Had any special squads received hostage or sniper training?

Mr. GIARRUSSO. Yes. Prior to that we had a group which did deal with emergency situations, and people who were trained to cope with this type of affair. However, we had never been confronted with a situation dealing with multiple incidents, such as occurred at the Howard Johnson affair.

For example, there were firings from different levels of the motel: there were fires set on different levels of the motel, which led us to believe at that time that there could have been more than one person.

We had to worry about the guests in the motel, as well as civilians around the motel, who were being slain by a sniper.

Mr. LYNCH. Deputy Superintendent Sirgo was the ranking officer on the scene at the time he was killed; is that correct?

Mr. GIARRUSSO. I was the highest ranking officer.

Mr. LYNCH. You were present?

Mr. GIARRUSSO. Yes.

Mr. LYNCH. What time did you arrive at the scene of the incident, Superintendent?

Mr. GIARRUSSO. There is some confusion about the actual time that I arrived. On the other hand, I was one of the first high-ranking officers that did arrive on the scene. I was on my way to the airport. There were other officers, many other officers that preceded me there.

Mr. LYNCH. I wonder if you could tell the committee how many other law enforcement agencies participated in attempting to bring the situation under control. Was it solely the New Orleans Police Department or were other law enforcement agencies present?

Mr. GIARRUSSO. No, sir; there was a response from, I think, at least five or six other jurisdictions that surround New Orleans.

Mr. LYNCH. Their appearance was in response to what? Had you requested their assistance?

Mr. GIARRUSSO. No, I hadn't. The media had announced to the public what was going on at the hotel and many of them voluntarily arrived at the hotel.

Mr. LYNCH. Were these individuals officers, or were they contingents under command of senior officials that arrived from other agencies?

Mr. GIARRUSSO. In some instances it was individual officers and in others they were led by a commanding officer. For example, State police arrived with the superintendent of State police.

Mr. LYNCH. Did those officials report to you or did they proceed to take independent action?

Mr. GIARRUSSO. Unfortunately, in most instances, independent action was taken initially by these people, because there was a lack of communication with these people.

Mr. LYNCH. Why was there a lack of communication? Did you not have the appropriate gear? What was the reason for the lack of communication?

Mr. GIARRUSSO. Quite simply, we didn't have the appropriate gear at that time. We didn't have enough portable radios that were necessary in this type of operation, but we did get those radios that were available, and when we did set up communications with these people I admit they made positive contributions.

Mr. LYNCH. How did you handle that situation? It seems to me that it presented you with an additional problem, having other police personnel in and around the vicinity, not capable of communicating with them individually. What action did you take?

Mr. GIARRUSSO. Actually, they complicated and compounded a very difficult situation initially. We sent men out to tell them to go near police automobiles with New Orleans Police Department radios, so that they could listen to what was being said and the commands that were given, so there would be unified responses to the firings that were emanating from the motel at that time. So, I don't know the time, but after communications were established with these people things did aline, and we did move successfully with them.

Mr. LYNCH. Superintendent, you indicated to one of our investigators that at one time during this incident a number of civilians showed up offering their services, and that some of those civilians were armed. Would you tell the committee how that came about?

Mr. GIARRUSSO. There was an unauthorized and unsolicited announcement by a radio station in the city that the police were in need of marksmen with high-powered scopes to assist them. Of course, needless

to say, this was untrue, and several people did show up at the Howard Johnson Motel so armed. This presented somewhat of a problem to us, because we had to then tell them we didn't need them and ask them to leave what was then a very dangerous area.

Mr. Lynch. Were you able to determine what newsman or what news agency had broadcast that request?

Mr. Giarrusso. We were. On the other hand, when it was investigated, Officer Kastner reported to me that that radio station denied doing it.

Mr. Lynch. Based on that unsolicited call for help, which must have complicated further the command and control situation, what do you as a law enforcement official feel would be appropriate restrictions? Should there be restrictions on civilians and especially on the news media in the area around a situation such as the one that was confronting you?

Mr. Giarrusso. I believe that it is necessary, if there is a repetition of the Howard Johnson affair, to isolate the area to protect civilians that are in that area. On the other hand, I do not believe it is necessary to restrict the media. The media made positive contributions to the community at that time.

For example, as a result of media cooperation we were able to minimize the amount of civilian traffic in the area. In addition to that, the media did neutralize many rumors which were rampant at that time.

Mr. Lynch. What were those rumors, Superintendent?

Mr. Giarrusso. They ran the gamut all the way from multiple snipers in the building to other people, other snipers, attempting to break through the police lines and reinforce the ones that were in the motel.

Mr. Lynch. Did you have policemen on the scene who were in civilian clothes?

Mr. Giarrusso. Yes, we did. Unfortunately, many of our police responded in civilian clothes. They may have created some confusion to outsiders. We know who they were, and will take measures to prevent that in the future.

Mr. Lynch. What measures are those?

Mr. Giarrusso. I would not have anyone but police in uniform in and around such an area again. I want them to be in uniform, and furthermore, I would not permit the large number of police to respond that did respond to that situation. We have a specially trained group of approximately 100 men who would respond to a repetition of that situation or similar situation.

Mr. Lynch. Could you tell us approximately how many police officers were on the scene prior to the time that you were able to establish complete communication with the other law enforcement agencies which were present? Could you give us an estimate?

Mr. Giarrusso. It is only a very rough estimate. I would say approximately 400 at one time, until we began to send men home.

Mr. Lynch. How many men did you send home, sir?

Mr. Giarrusso. I don't know. Major Poissenot was assigned that task, so we could have relief the following day, when we saw the thing may go into the following day.

Mr. LYNCH. You indicate that you have a special force of 100 men. Have those men been specially trained subsequent to this incident?

Mr. GIARRUSSO. Subsequent to the Howard Johnson incident we recognized that the carnival was about 6 weeks away, and we would have a very short period of time to train men should people from other sections of the State and/or the country decide to return to New Orleans and pick up work that had been started there by an extremist. We did develop some special training for these situations.

We developed what we considered to be assault teams and confinement teams, to isolate any area along the parade route that one or more persons may decide to use as a grouping ground.

Mr. LYNCH. Superintendent, you indicated that there were police officers on the scene who were dressed in civilian clothes. Were any of those officers in civilian clothes actually inside the hotel?

Mr. GIARRUSSO. Yes, sir, in the motel.

Mr. LYNCH. I believe that you indicated to one of our investigators, a week or so ago, that at various times people appeared at windows of the motel and that reports were coming down that there were additional snipers. Could those people have been law enforcement officers?

Mr. GIARRUSSO. It is possible; however, I do not believe this was the case. I think what actually occurred was that some of the people who were in the motel, locked in their rooms, would leave their rooms and periodically go to the balcony which faced the street, seeking help or waving cloths or garments of some type trying to attract attention.

This created some confusion among the police at that particular time as well. I don't believe that our officers created any problem. I can remember Sergeant Woodfork being at the command desk when he arrived, and I told him to remain there because one bit of information dealt with the fact that one of the snipers had a goatee, and I certainly didn't want him out there being shot at.

There were situations like this that did require immediate responses, intuitive responses, from the police.

Mr. LYNCH. When did the police commence firing at Essex? Was he fired upon when he was first seen on the roof, or were rounds fired prior to that?

Mr. GIARRUSSO. There were rounds fired prior to his entrance to the roof level, yes, sir. I don't remember exactly. When he was on the patio level, some of the policemen fired shots at him. That is where the swimming pool is located.

Mr. LYNCH. Did individual officers have the authority to fire at will, so to speak, or was the authority to fire reserved to commanders?

Mr. GIARRUSSO. Initially, prior to setting up communications with the men who had assumed positions in and around the building, I believe the men fired at will. When we did establish communications, I can remember talking to some of the people who had talked to some policemen, who had talked to some of the guests who had come down into the lobby of the motel where the command post was.

Mr. LYNCH. I was interested in finding out who had given the policemen authority to fire and when they were firing.

Mr. GIARRUSSO. Yes, sir. At that time they were firing in response to somebody that either had fired at them or after having seen Essex. When communications were established I set up certain priorities,

the first of which was the safety of the guests in the hotel, because we had word at that time that hostages had been taken.

Mr. LYNCH. Where did you get that word from?

Mr. GIARRUSSO. Some of the guests who had trickled down to the main floor. There was a great deal of confusion among the guests.

Mr. LYNCH. Were those people evacuated from the building or did they remain in the building?

Mr. GIARRUSSO. No, sir. They were not evacuated that night for safety reasons. We kept them in the main floor of the motel.

Mr. LYNCH. And upper floors, I assume police officers were located to insulate the civilians from the possibility of Essex coming down?

Mr. GIARRUSSO. When we began a systematic search of the motel we sealed it off, floor by floor and room by room.

Mr. LYNCH. Superintendent, is it a departmental regulation that officers keep track of the number of rounds that they fire, and, if so, can you tell us approximately how many rounds were fired by New Orleans Police Department personnel?

Mr. GIARRUSSO. I would not even guess or attempt to guess the number of rounds that were fired. I am sure there were many rounds that were fired.

Mr. LYNCH. It is our understanding at one time you called in a helicopter equipped with high-powered arms of various kinds. When was that done and what was the purpose behind that?

Mr. GIARRUSSO. The helicopter was called in after the sniper had assumed the position on the roof of the hotel which enabled him to conceal himself from fire from anyone. I would describe it as a bunker. It was a concrete shelter on the roof of the motel from which we could not dislodge him. At that time a decision was made to seek help from the military in terms of acquiring an armored helicopter from them.

Mr. LYNCH. Was that helicopter manned by military personnel or by policemen?

Mr. GIARRUSSO. No, sir. It was piloted by a military man. On the other hand, the police manned the helicopter with police weapons.

Mr. LYNCH. What kind of weapons were those?

Mr. GIARRUSSO. Most of the weapons in the helicopter were AR–15, automatic weapons.

Mr. LYNCH. And that fires a high-caliber projectile, does it not?

Mr. GIARRUSSO. I don't know.

Mr. LYNCH. Is it armor piercing?

Mr. GIARRUSSO. No.

Mr. LYNCH. Was it able to penetrate the concrete bunker, as you call it?

Mr. GIARRUSSO. No, sir. They could not penetrate the bunker. The purpose of asking them to come in with the helicopter was to pour fire into the openings, hoping that one of the bullets would ricochet and injure the fellow or neutralize him.

Mr. LYNCH. Did that in fact happen?

Mr. GIARRUSSO. We don't know whether or not it did.

Mr. LYNCH. To the best of your knowledge, were any New Orleans police officers or any other law enforcement personnel wounded by shots from that helicopter?

Mr. GIARRUSSO. Yes, sir. In addition to the nine killed and the nine wounded, I think that we wounded six of our own as a result of ricochet bullets.

Mr. LYNCH. Were those bullets fired from the helicopter, or don't you know?

Mr. GIARRUSSO. I am confident they were bullets fired from the helicopter.

Mr. LYNCH. These were men on floors beneath the roof?

Mr. GIARRUSSO. They were men in the stairwells leading to the roof. They had sealed off the roof. And as a result of being there, of course, in order to seal off that floor, we were determined not to let him down again. Some of the shots went through the door, ricocheted, and hit several of the men.

Mr. LYNCH. I wonder if you could enumerate for us what kind of weapons your men employed during this incident, in addition to weapons carried on the helicopter?

Mr. GIARRUSSO. Revolvers, carbine rifles, and on one occasion we managed to get some high-powered rifles from sporting good stores in order to penetrate some of the concrete that he was hiding behind. They did make a hole about 1 foot wide in the concrete, in order to then fire into it, hoping ricocheted bullets would strike him or neutralize him.

Mr. LYNCH. Subsequent to the time you were able to shoot and, in fact, to kill Mr. Essex, had you had occasion to look into his background and his criminal record? And, if so, tell us if he did have a record.

Mr. GIARRUSSO. He did not have a criminal record. We did, since the operation, look into his background and his background indicated that he was an average youth who had attended school and, of course, was in the service. Subsequent to that, he returned home and then went to New Orleans where he was employed in one of the Federal programs there.

Mr. LYNCH. Did he have a record of belonging to any militant groups, or was there anything in his background that would indicate he might be a likely person to take part in an incident like this?

Mr. GIARRUSSO. We have no hard evidence linking him with any militant or extremist groups. There is some evidence in New Orleans of people he had talked with or worked with that, I guess, I would consider, as a policeman, some extremists. But as a member of a group, no; we haven't been able to get any rosters of organizations linking his name with that particular group.

Mr. LYNCH. Do you and the New Orleans Police Department maintain any kind of intelligence system to gather information about militant groups in the New Orleans area?

Mr. GIARRUSSO. Yes, sir, we do.

Mr. LYNCH. What kind of information do you develop? How do you use it?

Mr. GIARRUSSO. Well, information is developed through intelligence groups, and there are various ways to gather intelligence on people who are considered extremists or terrorists in our society. One method is to infiltrate the groups, the other is, of course, to purchase information from those who are in it. Another method is surveillance of the people as a result of prior knowledge of them. We engage in all of these methods.

Mr. LYNCH. The reason I asked the question, Superintendent, is that I am wondering if it would be helpful for chiefs of major city police departments such as yours to receive regularly, on a national basis, intelligence data similar to the kind of data the Secret Service maintains on people who may be dangerous to the life of the President. Would there, in your judgment, be value in receiving information on a cooperative basis from other agencies for instance, that people with known violent tendencies are on their way to your city? Do you get that kind of information now from other police agencies?

Mr. GIARRUSSO. To some extent, but the information that we receive, as far as I know, has largely been confined to organized crime. There isn't the amount of information that should be sent to and received from other cities dealing with terrorists and extremists. There is a need for a national depository, a data collecting bank if you will, to gather this information and disseminate it to the departments throughout the country.

Mr. LYNCH. In other words, your judgment would be that you would want to have that kind of information. But if I understand you correctly, even if you had it, it would not have given you anything on Mr. Essex and it would not in any way have been able to prevent this particular incident?

Mr. GIARRUSSO. I don't believe it would have, because we dealt with an individual here as opposed to two or more people. This was the significant difference. On the other hand, if this particular individual had traveled around enough prior to engaging in this incident, intelligence may have been gathered against him for the New Orleans Police Department, or departments throughout the country, who may have had to cope with him.

Actually there should be a psychological profile developed on these people.

Mr. LYNCH. Superintendent, I am sure you have been asked by chiefs of police in various parts of the country about this incident, and I wonder if you could tell us what advice, if any, you have given to other departments based on your experience in the Howard Johnson incident? Have you given advice to other departments as to how they might better handle similar situations?

Mr. GIARRUSSO. I have verbalized advice to other chiefs of police in Louisiana, not to departments throughout the country. We are in the process of putting something together for other police chiefs when I meet with them in May—the major city police chiefs meet in May—some of the do's and don'ts of the situation. It has not been compiled yet for the simple reason the investigation has not been completed. There are many, many administrative do's and don't's that I intend to set down and verbalize to chiefs who are interested, from other sections of the country.

Mr. LYNCH. Could you preview some of those for us?

Mr. GIARRUSSO. Yes. I think if I had to return to a similar situation the first thing I would do is I would have a few secretaries there who would take notes of everything that was said and done. A historian, if you will, that is absolutely essential for the following subsequent investigation.

The next thing, I would not permit people to randomly report to such an area. I would set up a staging area for the surrounding juris-

dictions. There is need for people from surrounding jurisdictions if you are going to isolate an area.

I think it is absolutely essential that communications be established among the policemen who are there. This is an absolute essential, and it was the one stumbling block with which I was faced when I arrived on the scene.

I think there is a great deal of interest administratively by a chief as to where he will set up a command post. Setting up a command post is very important in my opinion; where you are going to operate from, with whom you will operate in that command post.

I would try to get more portable radios so that each man who is participating will know what is going on, so there are unified responses to a command that is given.

There must be trained personnel, specially trained personnel, specially equipped personnel. We have since then trained people especially for this type of operation and they are equipped for this type of operation. The training should not be limited to firepower only. I think there is a great need to deal with the training that touches the other end of the spectrum. For example, there should be men there who are qualified to talk with someone and ask him to come out. We did this, but we didn't do it as professionally as we should have or could do right now, as a result of some of the training.

Mr. LYNCH. Based on your reflections about the incident, and with the understanding that you lost your deputy superintendent, Mr. Sirgo, who was a close personal friend as well, is there any way in your judgment that some of the fatalities that occurred could have been prevented?

Mr. GIARRUSSO. The civilians that were involved were defenseless and unarmed. I don't believe anything could have been done for the civilians, because these people were going about their normal everyday chores of life by either walking or talking in a hotel and certainly not expecting someone to ruthlessly shoot them down—murder them.

Those involved as police, who knows? In retrospect I can say I should have done this and I should have done that, but I do not know whether or not any of the action we have taken since then would have prevented those men who were killed or wounded; there would not have been as many men probably wounded or injured.

In addition to the wounded, we had about 11 men who were injured as a result of smoke inhalation, for example. I think we need that type of equipment and we have that type of equipment to cope. We sent men in there, and lo and behold they should have worn gas masks and oxygen masks to keep the men there. After stationing them on floors, we found they had to move because of the smoke, either up or down. I think we are prepared for a repetition of a situation which would involve both shootings and fires simultaneously.

I think that one other thing that this committee should know is that we have developed what we believe to be, we call it for lack of a better name, an emergency package which we ask the people in the high-rise buildings in the city of New Orleans to have for us during the carnival season at that time, not knowing whether or not there would be a repetition of the incident.

It is very important to have the plans to a high-rise building when you enter there. One of the first things that I asked for when I entered

the motel was "Where are the plans," from the manager of the hotel, and he didn't have them. Fortunately he had several people sit down and draw one floor before me and when he gave it to me he said, "These are the plans, all of the floors are the same." This helped us immensely.

You need the plans. This emergency package should contain the plans of the building.

There should be keys in this emergency package that open all doors. If at all possible, the elevators should be made available for the firemen and police only.

In addition to that, we would like to have a photograph of the roof of the building. This would enable us to take certain measures that we were unable to take last time.

If this package were placed in most high rise buildings we believe it would substantially contribute to a reduction in the number of people who are killed and/or injured, and an effective police operation.

Mr. LYNCH. Have you or other city officials recommended that this be handled by enacting an ordinance or other appropriate law in your jurisdiction?

Mr. GIARRUSSO. No; nothing has been done along those lines. The only thing we have done up to now is make arrangements with the people at city hall to have all plans for high rise buildings available to us should we need them on a moment's notice, with present plans calling for a motorcycleman to pick up the plans for that particular building and deliver them wherever they would be needed at that time.

We intend to ask for compliance by the people who own the high rise buildings, rather than do it by ordinance. Ordinance is a new thought. I hadn't thought of it.

Mr. LYNCH. Have you, in fact, developed within your department new written emergency plans for the handling of this and similar kinds of incidents?

Mr. GIARRUSSO. Yes, sir; we have.

Mr. LYNCH. I wonder if you could make those available to the committee? Could you send us a copy?

Mr. GIARRUSSO. No; we have, in terms of planning, a specially trained group which would respond to this type of situation, if that is what you mean. Do I have plans that are written? No, I don't other than I will show you I have several pages, typewritten pages, of material describing the acts to be taken by certain people. But it isn't formalized to the extent that I would like to say here that I would offer this as a recommendation for all people.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Chairman PEPPER. Superintendent, I want to commend you on the clarity and the directness of your testimony here today. It has been very interesting and very helpful.

Was Essex finally killed by gunfire from your ground officers or from the gunship?

Mr. GIARRUSSO. We are confident he was killed by the gunfire from the helicopter. There were other people stationed in adjoining buildings overlooking the roof, and they did fire. Who fired first, I don't know. I do believe, in retrospect, that it was the men who were in the helicopter.

Chairman PEPPER. That was of particular interest to me because several members of this committee went up to Attica on Friday, the

week following that tragedy, and after talking there for 2 days to officials and inmates, and different ones who had a part in that episode, were told a helicopter came over the area, the walled-in area down below—a courtyard in which the hostages were confined and rebellious prisoners were concentrating—and dropped tear gas. Then the plan was for the snipers to be strategically located around so they could shoot those rebellious inmates who had knives at the throats of some of the hostages, in an effort to save the hostages before they were killed.

I was interested in your use of the armored helicopter in this incident and the value you derived from it.

Mr. GIARRUSSO. We needed the helicopter and, of course, the department doesn't have one so we asked for an armored helicopter and the Marine Corps responded with both a pilot and a helicopter—an armored helicopter. But an armored helicopter consists of armor around the engine of the helicopter and that is all.

The men in the helicopter are exposed to any shots that are fired.

Actually, Essex fired at the copter, and the shot passed near the head of the Marine Corps colonel pilot, who incidentally is a very talented and brave man. He continually exposed himself to fire from that man.

But the armored helicopters aren't armored. Only the engines are armored.

Chairman PEPPER. I thought there was armor around the body of the ship. I want to find out about that. I didn't think they would go into the situation that they had if only the engine were armored. They would be too vulnerable, it seems to me, to groundfire.

Anyway, if there were ships of armor that would protect the men in the ships who were firing, it would be of value, would it not?

Mr. GIARRUSSO. It was the vehicle that enabled us to finally quell the disturbance at Howard Johnsons.

Chairman PEPPER. Thank you.

Mr. Brasco?

Mr. BRASCO. Mr. Giarrusso, yesterday we heard from members of the New York City Police Department who described a similar situation, where 4 people took over a sporting goods shop in Brooklyn and held some 12 hostages. Fortunately, that worked out better and they didn't have the same tragedy, but I appreciate that in New York they had hostage training because of a prior experience with hostages being held during the course of a commission of a bank holdup.

I appreciate that in all of these situations you have to look for the breaks and play it by ear and with established guidelines wait to take advantage of the opportunities as they develop.

But my specific question is this, with respect to this incident: It seemed to me that one of the differences that you were working with in New Orleans that they didn't have in New York is that whatever motivated Essex apparently brought him to the brink of what I, as a layman, might characterize as an insane kind of action. Apparently, he had no intention of escape. He had no concern for his own safety or whether he would live or die.

The situation in New York was different in that the police, because they were asked for a doctor to take care of one wounded accomplice, knew the gunmen were concerned about their lives, thus, they had something to build on.

With that in mind, it would seem to me at some point it might have been evident to somebody in your group that you might be dealing with an insane man. Did that possibility come up at all?

Mr. GIARRUSSO. That possibility exists. There are levels and degrees of sanity, and I don't know how insane he was, if he were at all insane. Some of his acts seemed to be perfectly rational as far as I am concerned, particularly when you look at the casualty toll.

However, we traced him to a room that he occupied prior to going on this affair, and imprinted along the walls were all sorts of revolutionary slogans. There was a great deal of revolutionary and extremist material in the room. So we did have a psychiatrist, a psychologist, and a sociologist go into the room and they are compiling a report based on what they have seen in the room and whatever information we can give to them about it.

This group is on their own; there is no money involved. We contacted Tulane University. These people are employees of Tulane University, with one exception, and he is a man in government. It should prove interesting. I know that initially when they went to the room, which was shortly after the incident, they returned to the office and asked for information on him, which I refused to give because I did not want to color any of the scientific or objective intelligence gathered by them.

They agreed that they would form a skeleton with what they saw there and then try to put meat on the bones of that skeleton with the information that we obtained subsequent to that.

Mr. BRASCO. That is not my question. The reason I really asked the question, Mr. Giarrusso, is apparent. I don't know whether or not you will even prove or disprove this man's sanity or lack thereof, but it just seems to me his actions, as viewed by a layman, could be characterized as insane.

I asked from the point of view, with that in mind, would you again take the position of pressing an individual under those circumstances. In other words, returning his fire, having people in and around the building? Because it was apparent, from reading the testimony and listening to you that as he was pressed he ran from floor to floor shooting anybody and anything that was moving.

With that basic background, were any decisions made as to how these cases might be handled in the future? Would you again press the individual or just secure the area and play a waiting game?

Mr. GIARRUSSO. Mr. Brasco, we did. We did attempt to talk with him once; he was isolated on the roof. A man went up with a bullhorn and asked him to come down and told him, he would be taken prisoner, et cetera. This was completely ignored by him, or unheard by him. But we have reason to believe that he did hear, because we did send a man up there with an electric horn to talk with him.

But not to evade the rest of your question. If there is a madman or a rational person running through a hotel killing people, I think the only responsible response that a police official can make is to neutralize him in any way that is possible. And if it means shooting him, then he gets shot. Why should we expose innocent civilians to continued fire by someone, be he a madman or a genius? The public is entitled to greater protection.

Mr. BRASCO. I don't question that.

Chairman PEPPER. May I interrupt? I think perhaps I was in error. Maybe you contemplated that all of these gentlemen would make their own contribution and we would have the whole picture before us

before we began to inquire. Would the superintendent like to present his associates to give aspects of this matter or are they here for questions?

Mr. Lynch. I believe that Chief Giarrusso would like to have the rest of the gentlemen who are at the table with him, describe certain anticrime programs implemented by his department.

Chairman Pepper. You go right ahead and do that.

Mr. Brasco. I will finish this as quickly as possible.

The reason I ask is not to fix blame or be critical. I understand exactly what your position was. But in your testimony you say Essex did confront some people in the hotel, and unless I misunderstood the testimony, asked them to let him to certain floors. And those people were not shot. I don't know his motivation or reasoning, but it seems to me the shooting began when apparently he first began to feel the pressure of people closing in on him.

I appreciate it is a difficult thing to gage and this was your first such incident. However, I am asking you to be the Monday morning quarterback and estimate whether or not pressure on the man was helpful under the conditions that developed?

That was the only reason I asked the question.

Chairman Pepper. I learn now from our deputy chief counsel that the other gentlemen accompanying the superintendent will tell about different programs they have. They will not talk primarily about this episode.

Mr. Giarrusso. While it is true, although the men were there, all of the men seated at the table were there, they are here because of different programs we consider innovative programs in response to street crimes that we have employed.

Chairman Pepper. But they are not going to talk primarily about this episode?

Mr. Giarrusso. No, sir.

Chairman Pepper. Very well. Let's question about this episode and then go back to these gentlemen.

Mr. Wiggins?

Mr. Wiggins. Mr. Superintendent, would you please describe the red, green, and black flag which was found on the 18th floor?

Mr. Giarrusso. It is a flag that is multicolored—red, green, and black—and the areas occupied by the red, green, and black are equal in space that they occupy. There have been various names attached to it, but I don't care to attach any name to the flag for the simple reason I don't know this man is in any way connected with that group.

Now, there are revolutionary groups and extremist groups to whom this flag symbolizes something. If I described the flag, the only thing I can do is tell you it is a multicolored flag.

Mr. Wiggins. All right. What is the significance of the flag?

Mr. Giarrusso. I don't know what the significance was in terms of his carrying the flag.

Mr. Wiggins. No; the significance of the flag.

Mr. Giarrusso. I have talked and I have been confronted with that flag in New Orleans in terms of some, what I consider, militant students, insisting that the flag be hoisted and flown at a particular school. It is called by some a "black revolutionary flag."

Mr. Wiggins. Was the flag commercially manufactured or handmade?

Mr. GIARRUSSO. I don't know. I really don't know. I would say it was commercially manufactured.

Mr. WIGGINS. Where did Mr. Essex get it?

Mr. GIARRUSSO. I don't know that.

Mr. WIGGINS. Have you investigated that?

Mr. GIARRUSSO. No, sir.

Mr. WIGGINS. I suggest you might inquire into the source of the flag.

You indicated that there were certain revolutionary materials in his apartment. Where did he get those revolutionary materials?

Mr. GIARRUSSO. This, I don't know. It is similar to the underground material with which most big cities are faced. It is there and one doesn't know where it comes from.

Mr. WIGGINS. Have you investigated the source of the material you found in his apartment?

Mr. GIARRUSSO. Yes, sir. That has been done. I believe Officer Kastner can tell you what he did along those lines, as well as the man who was primarily concerned with that, the commander of the intelligence division, who is not here. But source material was checked by the intelligence division.

Mr. WIGGINS. Mr. Kastner, can you answer the question of where Mr. Essex obtained the material?

Mr. KASTNER. There were various publications of revolutionary groups, or so-called revolutionary groups, which were traced to having been purchased in New Orleans, readily available on street corners by persons who advocate these publications, and sell them right on the street corners. We found five inside his apartment which are easily purchased on the streets in New Orleans.

Mr. WIGGINS. That answers my question. Back to you, Mr. Superintendent. What kind of rifle was Mr. Essex carrying?

Mr. GIARRUSSO. A .44 caliber rifle. He had magnum ammunition, which I understand is a little more potent than the ammunition normally used.

Mr. WIGGINS. When you describe the .44 magnum, you are referring to his rifle and not a .44 magnum pistol?

Mr. GIARRUSSO. That is right.

Mr. WIGGINS. He carried one weapon, a rifle?

Mr. GIARRUSSO. He carried but one weapon on January 7. On New Year's Eve night, he did leave a .38 caliber pistol in the vacant lot that adjoined police headquarters.

Mr. WIGGINS. Did the rifle have semiautomatic or automatic fire capability?

Mr. GIARRUSSO. I think someone more qualified can tell you.

Mr. KASTNER. It is a Ruhr rifle, .44 caliber, semiautomatic, holds one round in the chamber and four rounds in the magazine.

Mr. WIGGINS. In other words, you can fire simply upon squeezing the trigger repeatedly?

Mr. KASTNER. Right; yes, sir.

Mr. WIGGINS. Where did he get the rifle?

Mr. KASTNER. Purchased from a store in Emporia; A Montgomery Ward Department Store in Emporia, Kans.

Mr. WIGGINS. It was lawfully purchased.

Mr. KASTNER. Yes, sir.

Mr. WIGGINS. Did your officers wear either bulletproof vests, or flak jackets of any sort during this episode?

Mr. GIARRUSSO. Some of them did. Those who had the vests that we had available for them did wear them. We didn't have enough vests to go around.

Mr. WIGGINS. Are they part of your police inventory?

Mr. GIARRUSSO. Part of them were our inventory and most came from the military.

Mr. WIGGINS. Referring to the AR–15 fired from the helicopter: Is that weapon a part of your inventory?

Mr. GIARRUSSO. Part of our inventory.

Mr. WIGGINS. You did not mention in your testimony that you used gas or attempted to use gas. Did you, and if not, why not?

Mr. GIARRUSSO. We did attempt to use gas. However, he was on the roof of a building which was 19 or 20 stories high. Our first attempt was with gas and the wind blew the gas away. It was very ineffective.

Mr. WIGGINS. Do you have multiple capabilities in terms of your weaponry to deal with persons in a confined location? For example, do you have something like a W.P. grenade or similar type of weapon?

Mr. GIARRUSSO. Yes: we do have grenades and we do have multiple capability. On the other hand, budgetary limitations prevent us from getting the weapons that we would need. It would seem to me, really, to be a waste of taxpayers' dollars because the military and the other organizations in and around there work rather closely with the police and we can get what they have if we need it.

Mr. WIGGINS. How may AR–15's do you have in your inventory?

Mr. GIARRUSSO. I don't know, sir.

Mr. WIGGINS. The Marine helicopter that was furnished, was that furnished pursuant to a prior plan?

Mr. GIARRUSSO. No, sir; it wasn't.

Mr. WIGGINS. How long did it take you to get a response to your request?

Mr. GIARRUSSO. I imagine a few hours.

Mr. WIGGINS. Was the Marine helicopter working on a common radio net with the police?

Mr. GIARRUSSO. No, sir. We put two of our radios in the helicopter. Two, in the event one failed.

Mr. WIGGINS. Did your hand-carried radios operate from the interior of the building? Were you able to receive and send from the inside of the concrete building?

Mr. GIARRUSSO. Fortunately, we are in a transitional phase in that we are getting new equipment, radio equipment, communications equipment, and the equipment we had there had just been up a short period of time and the receiver was on an adjoining building. It was quite near and it enabled us to communicate readily in the building with the limited number of portable radios that we had.

Mr. WIGGINS. Now, do you have a plan with the military units in your vicinity to obtain such equipment as you may need from them?

Mr. GIARRUSSO. No, sir; but I have talked with the people who are in charge of those bases, and they have indicated to me, other than written guarantees, that we would get what we needed if it was within their power to grant to us whatever we needed.

Mr. Wiggins. Do you have any type of armored personnel carriers to get police into the building, for example, if the streets were under fire?

Mr. Giarrusso. Yes, sir. We have an armored personnel carrier which we use extensively out there for the purpose of getting people under cover, and various other chores, other than getting people into the building.

Mr. Wiggins. Is that part of your inventory?

Mr. Giarrusso. Yes, sir; it is.

Mr. Wiggins. I am going to ask you a difficult question, but it is one that Congress may have to cope with. What is an extremist about whom intelligence should be gathered and disseminated, as you indicated would be helpful in your testimony?

Mr. Giarrusso. From the top of my head, I would say an extremist is a person who advocates overthrowing our form of government by force, and one who just doesn't care how many innocent people he would kill, symbolically, along the way.

Mr. Wiggins. Can you name any groups that fall into that category?

Mr. Giarrusso. Not without intelligence records available. And I would hate to compromise what I consider security information at a public hearing.

Mr. Wiggins. I wouldn't want you to. Many of the so-called extremists groups are motivated by political considerations. There has been much discussion here in Washington about the desirability of collecting intelligence data on politically motivated persons, however outrageous their beliefs may be. You would draw the line on those groups which would tend to overthrow our Government by force or other unlawful means. Is that your suggestion?

Mr. Giarrusso. At present, yes; because within the constitutional framework within which we live it is difficult to even move against these people. Unfortunately, we, the police, have to respond after they have engaged in some bloodletting, rather than prior thereto so that we could have prevented it.

I, as a policeman, believe there are ways we can thwart some of those people, and I don't mind telling you I am a firm believer of infiltrating these groups; and we have successfully infiltrated them at home. To do other than that means to live in a city of wall-to-wall police and we can't afford that, and I don't believe our society is ready for this type of operation.

Some people who are supersensitive about this say it shouldn't be done, that we are invading the rights of privacy of these people, which places police and society in the position of only responding to those violent acts in which they engage. We can't do those things that are necessary to prevent them from injuring people and actually destroying our society.

Mr. Wiggins. Do your police officers have available, as part of your inventory, steel helmets?

Mr. Giarrusso. Yes, sir; we have some available. You are talking about the tin hats?

Mr. Wiggins. Military type.

Mr. Giarrusso. Yes, we do have some of those, of World War II vintage; and we do have the regular helmets that are worn by them.

Mr. Wiggins. Crash helmets?

Mr. GIARRUSSO. Yes, sir.

Mr. WIGGINS. Can you give us any suggestions as to any equipment you felt you should have had in your inventory but did not have?

Mr. GIARRUSSO. Yes, sir. Immediately after the Howard Johnson affair, we purchased "second chance" vests. These vests will stop most bullets. It is actually a cloth material that the men can wear under their jackets. If equipped with certain plates placed in the jacket they will stop very high-powered rifles. Certainly, they would have stopped the rifle the men faced out there that day.

Mr. WIGGINS. I don't think the manufacturer would like to have this jacket tested with a .44 magnum rifle, but that is beside the point.

Mr. GIARRUSSO. In addition to the morale building it does for the men.

Mr. WIGGINS. Thank you.

Chairman PEPPER. Mr. Rangel.

Mr. RANGEL. Thank you, Mr. Chairman.

From your testimony, Mr. Superintendent, I gather the intelligence of Essex can only allow you to believe that you were dealing with a very emotionally disturbed individual?

Mr. GIARRUSSO. I don't know the degree of emotional disturbance; I don't believe I am qualified to say that, but I would say in a very general way I would consider it abnormal behavior as opposed to that which we normally engage in during the course of a day.

Mr. RANGEL. I really meant, from a layman's point of view, someone doing these types of acts certainly would be considered to be disturbed.

Mr. GIARRUSSO. Yes, sir.

Mr. RANGEL. Well, to put it another way: Your testimony indicates that there is no evidence of him being a part of some larger conspiracy.

Mr. GIARRUSSO. We have not been able to develop any hard facts which would indicate that. That is correct, sir.

Mr. RANGEL. As a matter of fact, you might say that with Lee Oswald certainly there was more intelligence on him than you were able to find on Essex, in terms of attempting to set up some data banks for these types of people.

Mr. GIARRUSSO. We didn't have the machinery the Federal Government put into motion to investigate Lee Oswald.

Mr. RANGEL. But you do have machinery now to investigate who Essex was and, in reading your testimony, there was no evidence that this would be the type of person where intelligence would have been able to assist you in avoiding this tragedy?

Mr. GIARRUSSO. Only because it was an individual, Mr. Rangel. If it had been a group, it may have been different.

Mr. RANGEL. Any testimony in connection with any revolutionary groups or any intelligence data banks certainly would not be relative to this case involving Essex?

Mr. GIARRUSSO. I would not make that unqualified statement; no, sir.

Mr. RANGEL. But you have not been able to find any evidence to connect him with any group?

Mr. GIARRUSSO. We have not developed what I would consider hard evidentiary facts which would be admissible in a court of law as evidence.

Mr. RANGEL. This flag Congressman Wiggins made inquiry about, have you seen this flag before in the city of New Orleans?

Mr. GIARRUSSO. I have seen similar flags; yes, sir.

Mr. RANGEL. Have you seen decals on automobiles being driven by black people?

Mr. GIARRUSSO. I haven't; but there may be some.

Mr. RANGEL. But there is no reason to associate this red, green, and black flag with any organized revolutionary group?

Mr. GIARRUSSO. No, sir. Well now, you mean in relation to the flag Essex had?

Mr. RANGEL. No, in connection with the flag that was found somewhere near the people allegedly killed by Essex. You never found Essex with a flag, did you?

Mr. GIARRUSSO. No. But one of the people in the hotel, when he entered the hotel, saw this flag, or what appeared to be this flag, attached to the end of the barrel of the rifle.

Mr. RANGEL. My question is—and any of your colleagues can answer—have you ever seen this type of flag or replica of the flag being used or in the possession of responsible citizens?

Mr. GIARRUSSO. I would say "Yes." It depends upon the group that you are talking about. Certainly, to many responsible citizens in our community, this flag symbolizes something for them.

Mr. BRASCO. Would you gentleman yield at that point?

Mr. RANGEL. I am happy to.

Mr. BRASCO. We have been talking about this flag. Is this the red, black, and green flag that we are talking about?

Mr. GIARRUSSO. Yes, sir.

Mr. BRASCO. I don't know that I understand exactly what it is, but I always thought it was one's identification with a mother country. I thought it had something to do with that.

Mr. GIARRUSSO. It does.

Mr. BRASCO. Pretty much like flying an Italian flag in New York. That is why Congressman Rangel is asking about it. Many people have these flags on their cars. I have seen them in red, white, and green, which is the Italian flag, and then the American flag, and what I call the African flag and the American flag. So it has no significance as far as I can see in New York.

Thank you.

Mr. RANGEL. Mr. Superintendent, this committee certainly is in no position to be critical of anything that has been done by the New Orleans Police Department. We are just hoping that out of this we might be able to assist others in avoiding similar-type tragedies.

In connection with the unauthorized marksmen, were you able to ascertain who they were?

Mr. GIARRUSSO. No. At the time we were much too busy to seek their identity. I know I talked with one personally, and I was too busy to bother about his name or identification. He said, "Well, I am here." I wondered how he got into the hotel, to tell you the truth.

Mr. RANGEL. There was a point where you were concerned about the safety of Sergeant Woodfork. I am assuming you were not concerned about his brother officers shooting him because of his beard?

Mr. GIARRUSSO. This possibility exists for the simple reason that at that time we had manned locations surrounding the building and I didn't want him to go out and expose himself. You know, in this cool, calm atmosphere, I can't recreate the tension the men were under at that particular time, particularly when so many had fallen.

That possibility is quite possible that because he had a goatee, and there had been word broadcast one of them had a goatee. I didn't want him injured.

Mr. RANGEL. How could you reach the conclusion regarding the number of people actually wounded and killed by Essex, in view of the fact there were so many unauthorized firearms at the scene?

Mr. GIARRUSSO. There were nine people killed and nine people wounded by his rifle, as a result of (1) Us establishing this through ballistics and of the shell cases that had been extracted, the extractor marks on the cases.

Now, there were six other policemen who were injured that I attributed to ricochet shots from elsewhere and we did not in any way connect this with the gun and/or the sniper that was at the hotel. Those that are there are the ones we can positively connect with the gun.

Mr. RANGEL. By ballistics?

Mr. GIARRUSSO. Ballistics or by the extractor marks on the shell casings.

Mr. RANGEL. But it can be attributed to the gun found on the roof top of Howard Johnson's?

Mr. GIARRUSSO. Yes, sir.

Mr. RANGEL. And is this information confidential, the report of being able to attach the wounded that are charged to Essex and those that were slain. Is that information considered confidential by your department?

Mr. GIARRUSSO. No, sir; not before this group. I am sure I didn't make myself clear. Those people who were actually wounded by, let's say by, police bullets were not counted in the toll of people who were wounded by Essex. It is separate, apart, and distinct from that.

Mr. RANGEL. I understand that. But we have had a tragic experience in New York State where a lot of deaths in Attica were attributed to some prisoners and, in fact, after ballistic investigation, all of the deaths of gunshot were then attributed to law enforcement. And as you describe so many people that you don't know, voluntarily coming there to just shoot and help out, plus so many law enforcement people with a variety of weapons, I assume, that unless you have ballistic data, I don't see how you are able to separate those that were shot by citizens, foreign law enforcement officers, or perhaps, tragically, your own law enforcement personnel.

It just seems to us who saw it over television to be a rather confused situation, and we certainly don't know what should have been done and perhaps everything that should have been done was done. But I just don't see how we can be so accurate in determining who killed whom, or who shot whom, when everybody was shooting.

Mr. GIARRUSSO. I will be happy to sit down with you when you have a great deal of time and go into detail with you about each killing, each wounding, and show you how those that we enumerated here, nine and nine, are connected with the rifle that was found by the body of Mark Essex.

Mr. RANGEL. If it is not confidential, I would appreciate if you could send the ballistic information to the committee, so that we would know what the factual situation is.

Mr. GIARRUSSO. All right. I am not certain I understand exactly what you want.

Mr. RANGEL. Your report indicates that you are not even certain that there was one or more people on that roof involved with Essex; that you don't have information to prove conclusively that he was alone.

Mr. GIARRUSSO. Yes, sir.

Mr. RANGEL. So I don't know how it is done from a law enforcement point of view, but I assume, if somebody is shot or killed you do try to determine the firearm which fired the fatal bullet.

Mr. GIARRUSSO. Yes, sir.

Mr. RANGEL. And I assume from your testimony that you have been successful in doing just that.

Mr. GIARRUSSO. Well, let's take the couple that were killed on the 18th floor, and I believe they were killed first, Dr. and Mrs. Stegall. I believe we have ballistics from Dr. Stegall which show he was killed by the rifle that was carried by Essex. Concerning the wife, the bullet went through her brain and out her eye.

We were unable to find that bullet because of debris, et cetera, there. I think it is fair to deduce that he killed both Dr. and Mrs. Stegall because there were other witnesses on the floor who said that they heard the woman shout, "Please don't kill my husband." There was another witness who saw the husband actually engaged in a struggle with him.

There was no one else up there that we knew of. When the police did arrive on the 18th floor, this woman was lying on her husband.

Now, there is no other way we can connect her death with the rifle, other than the facts surrounding it. Whether or not he could have been charged in court and the evidence would have been admissible under the rigid evidentiary rules of criminal evidence, I don't know, but I think it is a fair deduction that he killed both of them, while we had ballistics from one only.

Mr. RANGEL. Based on what you have testified, I am certain that no one in or out of law enforcement would disagree with you there. It just bothers me when some parts of the testimony describe an assailant as having a beard, and it seems so easy to attribute, since only one body of a perpetrator was found, all of the deaths to that person and that gun, with the exception of ballistic evidence which, of course, may not have been made available.

Mr. GIARRUSSO. Do I understand you correctly, Mr. Rangel, that you don't understand how we can prove or believe that there is only one person? Is that what you are saying, sir?

Mr. RANGEL. Mr. Superintendent, I am not trying to try this case ex post facto. It just seems to me that you are attributing all of the wounded and all of the slaying, with the exception of six police officers, to a particular weapon that was found next to the body of Essex.

Mr. GIARRUSSO. Essentially; yes, sir.

Mr. RANGEL. So we can just discount anybody else shooting but Essex?

Mr. GIARRUSSO. I think we can discount the shooting of the nine killed and the nine injured. I think we can discount it if we say anyone else did it. We can connect Essex with those nine deaths and with the nine injured, ballistically.

Mr. RANGEL. So we haven't completely disregarded the testimony of that individual that described someone with a gun having a beard?

Mr. GIARRUSSO. No, sir. Mr. Beamish, the man who was shot, did identify him as having had a beard. On the other hand, there were witnesses on that floor who gave an accurate description, other than the one that was given by the victim of the shooting, and none described the perpetrator as having a beard at that particular time.

Now, if you read through this, the back part of the report, I will tell you I sincerely believe that Mr. Beamish, the victim, was honest and he really believed that man had a goatee. If you want to attribute it to hallucination or what have you, I really don't know. We did not recover the pellet that injured Mr. Beamish.

We did not find any other shells, .44 magnum shells, on the patio where Beamish was shot.

Mr. RANGEL. This weapon Essex purchased, to your knowledge were any other people carrying a similar type weapon in the area during this tragic event?

Mr. GIARRUSSO. It is quite possible. It is quite possible because there were multiple-type weapons there. I am sure there was a .44 caliber rifle.

Mr. RANGEL. But your investigation proved conclusively that the number of people that were killed, nine killed and nine shot, it is attributed to the Essex weapon as opposed to other similar-type weapons?

Mr. GIARRUSSO. Yes, sir.

Mr. RANGEL. This news agency that contributed to the chaos, have you been able to identify what radio station that was?

Mr. GIARRUSSO. We narrowed it to a radio station and Officer Kastner told me they denied doing it.

Mr. RANGEL. In the course of the investigation, were you able to determine whether or not they were telling the truth?

Mr. GIARRUSSO. We don't believe they were telling the truth because we had witnesses who said they heard it on the radio and went there in response to a radio plea for marksmen with scopes.

Mr. RANGEL. You don't believe this type of broadcast would be criminal in nature?

Mr. GIARRUSSO. I don't know whether it would be criminal in nature, or whether we had an overly zealous radio announcer. I do know in the future we would work more closely with the media so there wouldn't be a repetition of this.

Mr. RANGEL. But many of the reports issued by this station in connection with multiple snipers, certainly that information was released by the police department; was it not?

Mr. GIARRUSSO. About multiple snipers? Yes, I assumed—I told the men we would assume there was more than one person.

Mr. RANGEL. Would that not be included among inaccurate reporting, as relates to more than one sniper?

Mr. GIARRUSSO. That assumption was made long after these people arrived with the rifles, though. It is one I publicly announced over our radio systems, that we would assume there was more than one. This was subsequent to the announcement over the radio. I don't know why it was done. I am not excited about it. It is over with and it didn't cause anyone to get injured. It did cause some concern for the safety of the people who did arrive, and those that we had to escort out of there. But that was the limit of it.

Mr. RANGEL. Well, an adventure like this, isn't it just luck that these people, experienced or inexperienced, did not kill or wound somebody, since you had no way of identifying who they were?

Mr. GIARRUSSO. You are correct, sir. We can speculate anything we want, but I don't know.

Mr. RANGEL. But if another event were to occur and other radio stations would say "police officers are in trouble and we need marksmen," it appears if it was in New York City or any other city that this indeed would be a very dangerous thing to do, especially when the law-enforcement officers could not identify who they were in view of the fact many local police officers were responding to a legitimate call from your department.

Mr. GIARRUSSO. I concur with you, sir.

Mr. RANGEL. In conclusion, Mr. Superintendent, your testimony as relates to a data bank, or infiltration of revolutionary groups, or compiling data on individuals to make it available to law enforcement's agencies, all of these worthwhile things, if you support that idea, certainly do not relate to some one like Essex. Is that true?

Mr. GIARRUSSO. It would apply to Essex were Essex working in concert with one or more people. I think we should tackle the problem of an individual doing the things that that man did. I think to this extent, we can parallel it with what has been done with the airlines. They have developed psychological profiles of the people who do engage in hijacking. Since this is true, I think that we can do the same thing, which would enable us to predetermine some of the people who are going to engage in isolated cases, individualized cases, involving mass murders.

Mr. RANGEL. I couldn't agree with you more, but there has been absolutely no evidence, based on your subsequent examination of the life and trials and the tribulations of Essex, that would allow you as a law-enforcement officer to believe any type of file on him would have been of any assistance to you?

Mr. GIARRUSSO. As I said earlier—that isn't true, because now it isn't accurate.

Mr. RANGEL. Let me word it another way, Mr. Superintendent. If you knew earlier everything that you know about Essex now, could your police force have done anything to have prevented this tragedy?

Mr. GIARRUSSO. I don't know about the one that occurred New Year's Eve, but we may have been able to take some preventive measures which did affect the one that occurred on January 7 if we had the information we had reference to. We may have.

Mr. BRASCO. Would my colleague yield?

Mr. RANGEL. I yield.

Mr. BRASCO. Not to second guess you, but if you had seen, say, his room——

Mr. GIARRUSSO. That is what I had in the back of my mind.

Mr. BRASCO. I think that is what you are talking about. If you had seen his room prior to this incident you might have had opportunity and reason to monitor his activities in your city.

Mr. GIARRUSSO. Yes, sir.

Mr. WIGGINS. Would you yield to me?

Mr. BRASCO. Certainly.

Mr. WIGGINS. What would you have done?

Mr. GIARRUSSO. I think, initially, I would have set up some surveillances around his building to watch the man more closely.

Mr. WIGGINS. Are you telling me that if you come into possession of information that a given individual likes revolutionary slogans, likes to read revolutionary literature, you would maintain that person under surveillance?

Mr. GIARRUSSO. No, I don't believe that we could do that; no, sir. We need better evidence than that.

Mr. BRASCO. Would the gentleman yield?

Mr. WIGGINS. Yes.

Mr. BRASCO. I think, Mr. Wiggins was talking about a national situation. I don't know that we need any national authority for local police authorities like yourself to investigate reasonably and would indeed be unhappy as a citizen if I thought the police chief in my community had available information that might have been disclosed by viewing this man's room and that he didn't do something about it. At least to make an effort to find out who the guy is and what he is all about.

Mr. WIGGINS. Is that what you would intend to do?

Mr. GIARRUSSO. No. If we deal with it hypothetically, Mr. Wiggins, I think I will give a general answer to the hypothetical you pose. If we talk about this case in retrospect——

Mr. WIGGINS. I don't want to talk about this case. Hypothetically, we are talking about before the fact; we are talking simply about information in your possession which might call you to be suspicious of an individual. I am asking you what your department would do about it.

Mr. GIARRUSSO. I am not going to say what the department would do. It would have to do what I would say. I am trying to tell you I am going to answer what I would do about it. I think that data should be gathered which then should be evaluated. Evaluated, and then certain movements made.

If I may deal with an actual situation by way of example, there is a person at home who—for 6 or 8 months—said that he was going to kill several policemen, since the Howard Johnson incident. This person has filed notice. We have had phone calls. He has told other people that he intends to do it. I can tell you what I have ordered done since learning that and, incidentally, he is a psychiatric patient.

I can't have someone follow him around every day. We have notified the policeman he intends to kill, "You have got to be careful."

In addition to that, each time we received a threat, I have it documented, and then his mother is notified and his attorney is notified that this threat was received this date, and the sources of the threat. And he is the source of the threat.

I can't follow him and I don't know what else we can do, other than put the policeman on notice.

Mr. WIGGINS. If we had a system of disseminating intelligence information to you about suspected types of individuals, I doubt it would be efficacious in preventing incidents. It would perhaps be helpful in investigation after the incident, if you did not apprehend the suspect at that time. You would have a list of potential suspects for further investigation. It is of value to the police, I understand that. But I

think it is holding up a false promise if you think it is going to stop some psychotic from shooting police officers.

Mr. GIARRUSSO. I concur with that. In other words, let me tell you how a cop would intuitively respond to that situation. If we take *x* and he has propensities along the lines we described, and I had that information, and it is the intervening acts which enable a cop to respond in that, if someone had been seen with a rifle fitting this description it certainly would put us on notice that certain action should be put into effect to do whatever is possible, either neutralize him or thwart him in his attempt to kill or maim anyone.

It is what happens in between. I don't believe anyone can predict with any degree of accuracy he would do A, B, C, and D. I couldn't; I am not talking for other people. I don't believe I can, and I have been a policeman long enough to know there are certain things you do. You respond. Some of these are intuitive responses; some are responses after making an evaluation of the situation as you see it.

I don't believe anyone would more closely guard the rights of the individuals in our society and do those things that are constitutionally protected. I would fight for those rights. I do recognize there are terrorist groups in our society and I don't believe we should stand by and wring our hands and say, "What are we going to do?"

I think certain positive steps should be taken. If they are wrong, we find out if they are wrong and change them, but we should not just sit there.

Mr. WIGGINS. Under our system it is going to be very difficult to do anything about those terrorist groups until they, in fact, commit an act of terror. Simply because they have a propensity or likelihood to do so, we are, under our system, almost powerless to deal with them.

Mr. BRASCO. Mr. Chairman, a quorum call.

Chairman PEPPER. We will take a brief recess while we answer the quorum call and then we will return.

Do you consider now it would have been desirable to call the National Guard or the military guard to come to the aid of this?

Mr. GIARRUSSO. No, sir. I don't believe that this was a situation which required the National Guard or the military, other than to give us hardware that was needed and/or to complement some of the acts we were taking as a result of our inability to cope with that situation.

Chairman PEPPER. Thank you, Superintendent. We will be back in just a few minutes.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order.

Mr. LYNCH. Detective Kastner indicated to me he had some photographs that would be of interest to the committee.

I wonder if you would bring the photographs up to the bench.

Those photographs, Mr. Chairman, are principally photographs of Mr. Essex's room, which the police department discovered after the incident. They are germane in that they respond principally to questions asked by Mr. Wiggins earlier this morning.

[See material received for the record at the end of Mr. Giarrusso's testimony.]

Mr. LYNCH. Chief, you indicated that the local television station performed a certain service, as it were, in quelling some of the rumors which cropped up during the course of this incident. I wonder if you could elaborate on that, please.

Mr. GIARRUSSO. I think the media made a positive contribution to the incident, in that, for one thing, they did keep the traffic out of the area, both pedestrian as well as automobile. In addition to that, they did serve to neutralize rumors that were running rampant at the time, and, third, they did keep the public informed; and the public has the right to know what is going on when something like this occurs.

They were currently abreast of the affairs. I know they made quite a contribution, although at the time I did not know the magnitude of the coverage by the media.

Mr. LYNCH. There is a representative from WWL–TV of New Orleans here today, Mr. Dave Walker. Did you work with him during the course of this incident, Superintendent?

Mr. GIARRUSSO. No, sir. On the contrary, I would say Mr. Dave Walker and I worked at opposite ends of the pole for the simple reason that subsequent to the affair, Mr. Walker made several reports, which I believe he received from the policemen, and I thought it was hindering the investigation at that time.

But in deference to him, I think he is a very good reporter and he did the job that he had to do, as objectively as he is capable of doing it.

I don't have any misgivings about Mr. Walker's coverage. But we didn't work together; no, sir.

Mr. LYNCH. And Mr. Walker did, in fact, conduct—or his station conducted—an independent investigation of this incident; is that correct?

Mr. GIARRUSSO. Yes, sir. It is my understanding that he did.

Mr. LYNCH. Mr. Chairman, I think it would be useful at this time if we called Mr. Walker of WWL–TV to very briefly describe what his station did during this incident.

Mr. Walker, I wonder if you could describe your activities surrounding the incident and also would you advise the committee as to the communication which your station received from Mark Essex.

Statement of William D. Walker

Mr. WALKER. The coverage began by myself sometime between 11:30 and 12 noon on Sunday, the 7th. It extended to a period of about 10 o'clock as far as live coverage. This is a position where we had television cameras located directly across and to the front of the Howard Johnson's in the Warwick Hotel. And another camera stationed above the Howard Johnson's on the back of the New Orleans Building.

Both cameras were live for some 14 hours, one of the cameras in the Warwick Hotel, which provided live coverage of the incident itself, from about 2 o'clock in the afternoon on Sunday, the 7th.

Subsequent to the coverage itself and provided with certain information I did conduct what I hope was an independent investigation of the incident, particularly as it concerned the number of people involved, because it was suspected, I think by all of us, during the period of the confrontation in Howard Johnson's that there was more than one individual involved.

I believe there is sufficient information available at this point to indicate otherwise; that there was only one man who actually fired shots from Howard Johnson's.

Mr. LYNCH. I believe you told me, Mr. Walker, that you had received, or your television station had received, a letter or a written communication of some form from Mark Essex. Would you describe that?

Mr. WALKER. Yes. This envelope was postdated January 2, 1973. The letter itself began with a salutation of "Africa Greets You."

"On January 1, 1973, the downtown New Orleans Police Department will be attacked. Reason—many. But the death of two innocent brothers will be avenged."

It ended, "MATA."

As I said, the envelope to the letter was postdated January 2, indicating to us, and I believe also to the police department, if I am correct, that the letter could have been mailed as late or as early as sometime Friday night, December 30, prior to the incident at police headquarters.

We had a holiday; there was no mail pickup. We have some situations in the city where the mail is not picked up in the boxes until on a Monday or Sunday night following a weekend. The letter was turned over to the New Orleans Police Department, obviously after the incident occurred, and in fact after the Howard Johnson's incident itself.

The letter was addressed simply to "WWL Television" rather than to "News Department" or any individual. Those letters, as a matter of course, generally are disregarded.

There has been a lot of concern on the part of people as to whether or not had that letter been delivered either before the New Year's Eve incident or, in fact, before the Howard Johnson's incident, whether or not it might have aided the police department.

I think it is the general consensus of most people involved that it probably would not have.

Mr. LYNCH. When did you make it available to the police department?

Mr. WALKER. It was made available, I believe, on the 12th. It was made available on the 12th, following the incident at Howard Johnson's on the 7th.

Mr. LYNCH. Do you know how the police department—I guess we could ask Superintendent Giarrusso to answer this—was able to identify that as being from Mark Essex?

Mr. WALKER. It was my understanding it has been. They can verify that. The reason the letter was turned over, I saw it sometime on the 11th, the morning of the 12th, and the reason it was turned over, I suspect, was because of the way the letter was signed, "MATA." I had visited the apartment where Mark Essex lived.

Chairman PEPPER. How was that?

Mr. WALKER. It is signed "MATA."

Mr. LYNCH. "M-A-T-A."

Mr. WALKER. I am not sure, I think this is a Spanish word meaning to kill. There is also, according to the source that we had, it might possibly be a derivation of Swahili, indicating an instrument to kill.

I had seen that same word on the wall of the apartment of Mark Essex, and that is the reason it was turned over to the New Orleans Police Department.

Mr. LYNCH. I have no questions of the witness, Mr. Chairman.

Chairman PEPPER. Mr. Walker, I suspect you would agree it is desirable in an emergency like this for close cooperation and coordination to be maintained between the police authorities and the media?

Mr. WALKER. Yes, sir. I think there has to be a liaison. We should, I say, probably feel pretty good about our situation in New Orleans, simply because of the access. I say we have 90 percent access to police operations and information. That remaining 10 percent, we are always trying to get, but it is generally of an intelligence nature and sometimes hard to acquire. But that level of cooperation, I think, if nothing else, during this period of time I think people were at home watching the incident on television as opposed to being on the streets in the downtown area interfering with police operations.

Chairman PEPPER. This letter, of course, didn't give the address of the sender?

Mr. WALKER. No, sir; it did not. I learned the address on the 8th, following an anonymous telephone call to our office from a female, who asked if we wanted to know the present and last address of Mark Essex. Of course, we did. We checked it out. That information was turned over to the police department.

Chairman PEPPER. Did the letter reveal any fingerprints?

Mr. WALKER. That is something I suspect the police department would have to answer. I believe I am privy to that, but I think the answer would be better to come from them.

Chairman PEPPER. Can you state whether it did or not, Chief?

Mr. GIARRUSSO. It was checked but there were no prints. No prints identifiable as such.

Chairman PEPPER. So that if it had been turned over to you from Mr. Walker's television station, it would have been difficult for you to identify and locate the sender within a reasonable time; would it not?

Mr. GIARRUSSO. Unquestionably; yes.

Chairman PEPPER. But at least it would have advised you there was such a person in the neighborhood who was a potentially dangerous person.

Mr. GIARRUSSO. Yes, sir.

Chairman PEPPER. Thank you very much.

Mr. LYNCH. Mr. Chairman, at this time Chief Giarrusso would like to introduce several members of his panel to describe to the committee the history of the urban squad in New Orleans and also to describe the new felony action squad.

Superintendent.

Mr. GIARRUSSO. Mr. Chairman, Sgt. Warren Woodfork, to my immediate right, is the commanding officer of the felony action squad. The felony action squad is a concept that was developed and conceived by him approximately 9 months ago. Its purpose, its primary purpose, is to deal with the crime in the street.

Subsequent to its announcement there was a great deal of controversy in New Orleans because there were groups of people who said that its intention was to kill blacks only, and certainly it wasn't intended to kill anyone; it was intended to surpress crime in the streets.

I think Sergeant Woodfork is very capable of taking it from there.

Chairman PEPPER. Very good. We are pleased to have you, Sergeant Woodfork. You may make your statement.

Statement of Warren Woodfork

Mr. WOODFORK. As the superintendent has said, the felony action squad is a group of volunteer police officers selected by the superintendent. They are plainclothes officers. I explain that by saying a little different from the traditional plainclothes officers.

These officers attire in contemporary clothing and they utilize nontraditional-type police vehicles. It is principally designed to attack what we define as street crimes, such as armed robberies, purse snatchings, rapes, illegal carrying of weapons, auto thefts, or any other offense that relies on public streets or sidewalks for successful perpetration.

I guess, basically, you could say that psychological warfare is the principal weapon in the felony action squad. We believe that perpetrators of crime, or the criminal elements, develop reluctance to commit crimes when they can't easily identify the law enforcement agencies, which makes an apprehension inevitable. It is requisite to commit a crime.

Basically, I say initially, we could measure our success through the number of apprehensions that we make. Most of the arrests that the felony action squad makes involve arresting people during the commission of a crime or immediately thereafter. All of this is to eventually create an atmosphere whereby anyone who perpetrates a crime feels it is just too risky not being able to readily identify the law enforcement agency where we would have an atmosphere of little or no crime.

Chairman PEPPER. Have you found that unit to be effective, to be helpful, in suppressing the street crime?

Mr. WOODFORK. Yes, sir, very much so. We have been in operation approximately 6 months. I think after a year we will be able to show some more concrete evidence. But I would say by the number of apprehensions, it has met with a great deal of success. Contrary to some of the beliefs that they would meet with a lot of resistance in making arrests, that people would be killed, and what-have-you, in a brief 6-month period only one fatality has resulted and that involved a man immediately involved in an armed robbery, whereby he was robbing another person with a gun and he ended up being fatally wounded.

Other than that, I don't think we have had any more problems than the guys in uniform have in effecting an arrest.

Chairman PEPPER. Very good. Thank you.

Mr. LYNCH. Superintendent, I wonder if you could now have one of the members of your panel describe the urban squad and what it is that squad does.

Mr. GIARRUSSO. Yes, sir.

Mr. Chairman, the urban squad in the city of New Orleans was developed by Sgt. Rinal Martin. His purpose was to deal with sensitive areas where there had been a great deal of distrust and fear, that existed both between the residents of a certain area of the city of New Orleans and the police themselves.

I think there was a mutual fear that existed at that time. It was after there had been a confrontation with a group known as "the

Panthers" in the city of New Orleans that this squad was formed. It was formed to fill the vacuum that began to divide the community at that time. Its concept is that the police actually render services to the public.

I believe that what has been done is the genesis of a new type of police work that we will be looking at over the next 10 or 15 years, in that police, volunteer police, have gone into an area where they were disliked and distrusted and they have actually made friends and have efficiently served the public, so much so now that there is a demand for similar types of squads to service other sections of the city.

The area in which they went was, I would consider, the only true ghetto in the city of New Orleans. They operated very effectively there.

Sergeant Martin can take it from there, sir.

Statement of Rinal Martin

Mr. MARTIN. Mr. Chairman, the urban squad was started approximately 2 years ago. It was organized on February 1, 1971. We took responsibility for the Desiree project area on February 27, after two confrontations, as the superintendent said.

Before going into this area these officers were specially trained. We had what we called stress training. Also, they were volunteer officers. Their records were analyzed for attitudes, performance, and awareness of social problems.

We met with community leaders and had civil meetings, and prior to going into that area we had a whole day of rap sessions with residents of the area to explain what we were going to do when we moved into the area with more police.

We were moving into this area as a service rather than an oppressive force, which happens a lot of times when you increase police service in an area. If the residents don't know what you are doing they misinterpret your goals or your motives.

As a result of this and getting to know the people, and regaining confidence and getting cooperation with the people and the leaders, we have been able to effectively reduce crime in this area, and the people have services.

When we first started in this area the people were so fearful that they wouldn't turn off their lights at night. The lights in the home stayed on all night. And as a contrast, the lights in the streets and courtyards were constantly being shot out or broken by bricks and bottles.

Two years later, in the same area, we have just the opposite. We have effective lighting in the streets, in the courts that are able to stay lit, and the lights in the homes are now put out. People can go to sleep without their lights.

That is about the genesis of the squad.

Chairman PEPPER. Very good. Proceed with the next witness.

Mr. LYNCH. Mr. Giarrusso, do the other two officers here this morning have some testimony to give relative to programs in which they are participating?

Mr. GIARRUSSO. Only Major Poissenot. Mr. Kastner is my strong right arm for reference on the Howard Johnson affair. Major Poissenot is the commanding officer of the patrol division of the police department in the city of New Orleans. As such, he has innovated on many occasions, and redeployed personnel so that we have successfully reduced crime over the past 2 years.

To mention a few of the things he has done: He has been actively participating with citizens, with organizations such as Women Against Crime. There are times when he must go to extremes, and he has in the past removed all motorcycle men from the streets and put them in areas to combat burglaries and armed robberies. In 30 or 40 seconds he can explain these things to you.

Statement of Lloyd Poissenot

Mr. POISSENOT. Mr. Chairman, the patrol division, comprises the eight police precincts, the urban squad, the felony action squad, communication centers, emergency division, and armored division, approximately 700 people.

We have been working somewhat at a deficit. We don't have full manpower.

Chairman PEPPER. Excuse me just a minute. How many police do you have per thousand population in the city of New Orleans?

Mr. GIARRUSSO. We have 1,500 commissioned personnel and approximately 500 civilian personnel.

Mr. LYNCH. I think the chairman would like to know how many you have per capita.

Mr. GIARRUSSO. I believe it is 2.1 per thousand, but I would have to sit down and compute it for you. The last time I looked at it, it was about 2.1 per thousand.

Chairman PEPPER. What is it, Mr. Lynch, here in the District?

Mr. LYNCH. I believe the indication yesterday, Mr. Chairman, was approximately 6.6.

Chairman PEPPER. Approximately 6.6 per thousand in the District of Columbia. Of course, no doubt that has had something to do with the reduction in crime. You would be pleased to have that large a percentage, wouldn't you?

Mr. GIARRUSSO. Yes, sir.

Chairman PEPPER. If you had the Federal Government behind you, maybe you could get a little bit more money.

Mr. POISSENOT. Because we have a shortage of personnel at the time, we had been able to get some overtime and the overtime has been provided in the forms of task force cars. These are cars that are either marked cars or unmarked cars, that are manned in both combinations, uniformed police officers in the marked cars, occasionally uniformed men in the unmarked cars.

Also, we have the unmarked car with the plainclothes officer doing followup work.

These have been very efficient, and we have gotten a lot of success from them.

We are constantly trying to change and alter our beat coverage. Foot-beat coverage, for example, is a very high luxury, so we work combinations of foot beats and riding beats, so the men can do both a little more effectively.

By being able to put these people by statistical reference where the crime is occurring, or where we think it is occurring, we have been able in many cases to do a pretty good job.

We do need and do hope we could get some additional funding. We would, of course, be very happy to have the increase in manpower that would take our forces up to what its expected coverage should be. But in the meantime, I think by innovative process we are beginning to see some light; we are doing an effective job in trying to reduce the on-the-street type of crime.

Chairman Pepper. We are very pleased to hear of these imaginative procedures and innovations you have inaugurated, Superintendent, in your great city of New Orleans. What this committee is concerned about is what can be done further to reduce crime in this country, to restore a greater degree of safety to our people than they now have.

I would like to ask you a question or two. Do you in the police department have any sense of frustration or disappointment on account of the inability of the prosecuting attorney's offices and the courts to handle cases as rapidly as you feel they should be handled?

Mr. Giarrusso. I believe this is the facet of the problem with which police departments are confronted throughout the Nation, but I can talk with a little more authority about the city of New Orleans.

Yes, we are confronted with this problem; in that the criminal justice system as such is fragmented and has little coordination among the forces of criminal justice; namely, the police, the district attorney, the judges, the probation and parole officers, and the jails. There is a different approach, each is a separate entity, and as such we are working at cross purposes on occasions.

Unrelated to that, when we talk about problems, in my opinion, is something that is very important to our city. It is the number of youths that are committing crimes of violence. I don't have any ready answers for it, but I think that pointing out the problem as it exists among the juveniles, in the city of New Orleans anyhow, is one that we are concerned about, one where legal limitations prevent us from taking effective action to protect the public.

We have ideas that cretainly are inconsistent with some of the constitutional rights that people have. We would like to see some changes made in the criminal justice system, in that people would be tried much faster rather than getting out on bond, knowing that a case is made against them and several other crimes are committed, because they know they are going to go up ultimately on one of the cases, but they will not be tried on all of them. This is fairly common knowledge among the criminal element in the community.

Chairman Pepper. What about the correctional institutions, the penal institutions? Do you have a high rate of recidivism in those institutions?

Mr. Giarrusso. Our figures show something like 85 percent of those in the parish or county jail, as it is more commonly known, runs about 85 percent. The rate of recidivism runs about 85 percent. I don't believe in an iron glove approach to that. I do sincerely believe a large percentage of these people are rehabilitative.

On the other hand, I believe there is a marginal group in our society that medical science and other disciplines don't have an answer for yet, and they should be separated from society for the sake of society.

Chairman PEPPER. Do you have a large State penal institution such as we have in Raiford, Fla., which is your main State penal institution?

Mr. GIARRUSSO. Yes; we do have a State penitentiary.

Chairman PEPPER. Where is that located?

Mr. GIARRUSSO. At Angola, La. It is a large penal farm.

Chairman PEPPER. It is in a rural area?

Mr. GIARRUSSO. Yes, sir; it is.

Chairman PEPPER. And the population of it is 2,000 or 3,000?

Mr. GIARRUSSO. Something in the neighborhood thereof; yes, sir.

Chairman PEPPER. That seems to have been the pattern in the building of these institutions around the country. Personally, I know about Attica, which is a little town, small village, in New York; Raiford, Fla., is a small town. You are telling me yours is located in a rural area.

The idea seems to have been, years ago, to put them out in those rural areas. And now the trend seems to be the other way, put them in the city, make them very much smaller, 200 or 300 population, and make available halfway houses and employment for those who are eligible for that, and the like.

Do you have any institutions like that in Louisiana; any modern-type penal institutions?

Mr. GIARRUSSO. We have no such modern-type institution. However, the one jail that we do have in our city is one that is currently housing about 1,100 people. The capacity of that jail is about 700. With Federal funds they are now building another jail, a new jail, a modern institution, which will house, I believe, a total of 480 people, which seems inconsistent with the amount of crime that is being committed.

I don't know what they are going to do with the remainder of the citizens when they move them. We are under Federal court order to cease and desist using that jail in 1975, which is 2 years hence.

Chairman PEPPER. Is that all, Mr. Lynch?

Mr. LYNCH. Yes.

Chairman PEPPER. Do you have any questions, Mr. Nolde?

Mr. NOLDE. No, thank you, Mr. Chairman.

Chairman PEPPER. Superintendent, we want to thank you and your associates for coming here today and giving us this very valuable and helpful information. We are very grateful to you.

Thank you very much.

Mr. GIARRUSSO. Mr. Chairman, thank you.

Chairman PEPPER. Chief, is it agreeable if we incorporate into the record at this hearing the photographs of the walls of the room where Mark Essex was living, the participant in the Howard Johnson incident?

Mr. GIARRUSSO. Whatever is the desire of this committee.

Chairman PEPPER. I think it will be very interesting to have them in the record, because what you see in these pictures is very revealing as to what was in the mind of this man.

Thank you again.

Mr. GIARRUSSO. Thank you very much.

Chairman PEPPER. We will take a recess until 2 o'clock.

[Whereupon, at 1:35 p.m., the committee recessed, to reconvene at 2 p.m., this same day.]

AFTERNOON SESSION

Mr. RANGEL (presiding). The Select Committee on Crime will come to order.

We have as witnesses, Chief Winston Churchill of the Indianapolis Police Department and Capt. W. R. Greene, commander, homicide and robbery branch of the Indianapolis Police Department.

On behalf of the chairman and the committee I thank you for taking time off from your busy schedules to help us to determine what the Congress can do in order to make our streets more safe.

If you have statements, you may enter them in whole or in part in the record, and if you have testimony that deals with it, you can give it either by reading your prepared statement or by testifying to anything you would like to testify to.

STATEMENT OF WINSTON L. CHURCHILL, CHIEF, INDIANAPOLIS (IND.) POLICE DEPARTMENT, ACCOMPANIED BY WILLIAM ROBERT GREENE, CAPTAIN, HOMICIDE AND ROBBERY DIVISION

Mr. RANGEL. Chief Churchill, do you have a prepared statement?

Mr. CHURCHILL. Not a prepared written statement, sir, but I am prepared to speak to the committee.

Mr. RANGEL. Thank you.

Mr. CHURCHILL. We consider it a very definite honor to be asked to come to testify before this committee. We feel that Indianapolis has made great progress in our effort to reduce crime in our community. We feel that there are some specific reasons why this progress has been made.

We feel that in the final analysis, the police department does not control crime in the community. In truth, the citizens themselves control crime. I feel there would no longer be prostitutes walking the streets in any city if it were not for those who hire them. By the same token, there cannot be a gambling establishment that could continue to operate if it were not for those who go in there to gamble.

A burglar and thief would not be able to exist if it weren't for those who eagerly keep at his heels to buy what he has stolen. Therefore, it is mandatory on the part of the police department that we establish a very close liaison and working relationship with the community so that by this effort the community might know they control crime.

By the same token, we must work hand in hand to make the community understand that by their efforts and their cooperation with the police department, will this success be achieved. The communities themselves are the key.

The police department has tried many innovative procedures and plans, some of which have failed; but one important one has succeeded in bringing the policeman and the community closer together. Prior to 1967, the Indianapolis Police Department, like most police departments in the country, purchased an automobile as a patrol car, which at that time was required to operate 24 hours a day.

In the wintertime the engine was seldom shut off. We devised a plan whereby every patrol officer could have his own assigned car. This required increasing the size of our fleet by four times, thus putting more police cars on the streets of our city than we had ever known before. I am satisfied that the people of our community like the plan and they feel a degree of comfort in seeing these vehicles on the streets.

By the same token, I am satisfied that the criminal element in Indianapolis feels very uncomfortable with this vast number of vehicles on the street.

The police department has prepared considerable literature to be distributed to various cities. A copy of that literature has been given to each of you on this committee. But that primarily deals with what the police department has done in making a patrol car available to every individual officer. He not only uses that vehicle during his tour of duty but he takes it home with him and keeps it for the remainder of the day. He is allowed to drive the vehicle to the store, to church, wherever he might see fit to take it during his off-duty hours.

It may even sound amusing, but if an officer is not married, we allow him to date in that vehicle. So there is a high visibility of police in the city of Indianapolis.

More importantly, we should tell you how we did this, because I would stress that at the very start of this explanation that not 1 cent of Federal money was used to put this plan in operation. Each year in the police department's budget we allotted funds for a certain number of vehicles. Our whole premise was based on the idea we wanted to save time in the police department, that time was important, and often we would realize on the day shift alone vehicles had to be taken out of service to be gassed, to be washed, to be serviced, and all of this time a police officer was standing idly by while that piece of equipment was being worked on.

Two, we were forced to be aware that a vehicle working in the northern part of the city would well have to check out of service 30 minutes early so the officer might have time to drive to headquarters, exchange the equipment and driver, and the new police officer drive 30 minutes back to his district before reporting for service. So we realized that we were losing a minimum of 1 hour per shift, per car, per day, because of the vehicle shortage.

We took the money that we had allotted in our budget for automobiles and asked the city council to grant us an advance of $650,000 so that we could purchase in one lump sum a new patrol fleet. Now, this was not easily done. But we prepared figures which are available in our handouts to show that we were in a position, having gone through many tests, to show that it was a sound program.

Mr. RANGEL. How many vehicles are we talking about?

Mr. CHURCHILL. We are talking about a total patrol fleet of 455 vehicles, totally equipped.

But we realized when we saved 8 man-hours that we received in return a police officer, already trained and uniformed and ready to go on the street. The time we saved with these vehicles amounted to the salaries of 70 new police officers for our department. The spinoffs

of this program have been so broad, many that we did not even envision.

The national standards now for robbery will tell us that the average robbery in the United States amounts to $94; the average burglary amounts to $136; the average larceny in the country, $71; and the average vehicle theft, $1,100. Since putting these cars into service in our city we have had a reduction in 1 year of 329 robberies. That 329 multiplied by the $94 national average saved the city, our citizens, $30,926.

We have reduced burglary by 1,105 cases; again multiplying by the national average, we saved our community $150,280.

Our larcenies were reduced by 1,851 cases and, by the national average amounted to savings to our community of $131,421. Our vehicle thefts were reduced by 2,438, thus meaning a savings to our community of $2,706,180.

Now, all told, for the $650,000 advance given to us by the council we show a reduction in crime, when figured on a dollar-and-cents basis, in excess of $3 million.

But there is more for the car plan. We began immediately to realize the reduction in the number of traffic fatalities because our police vehicles were visible all over the city. We reduced our fatality rate in Indianapolis by 31 persons in 1 year. We reduced our personal injury accidents by 1,136, and our property damage accidents by 2,244.

The National Safety Council tells us that each traffic fatality averages out to an amount of $38,700. Each personal injury accident averages $2,300. Each property damage accident, $360. When we multiply those figures by the amount of reduction in our city, it comes to a staggering total in automobile accidents alone of a savings of $4,620,000.

When we then show the reduction of crime related to dollars and cents, when we show the reduction of automobile accidents and fatalities in dollars and cents and then just give the car program 20 percent of the credit, that shows a return of recurring value for the $650,000 investment of $2,122,000 for our car fleet.

This program has been studied carefully. It has excellent control, and we are operating our vehicle fleet in the Indianapolis Police Department now for 6.5 cents a mile. I don't know of any taxicab fleet or any other organization operating a fleet that cheaply.

We have found that the cars are receiving much better care. In fact, many of the officers are now washing their own vehicles. The cars are much cleaner. Consequently, when we trade in a third of our fleet at the end of each year, the resale value of those automobiles is way up over what we used to receive for a completely wornout vehicle.

So the automobile program in Indianapolis is a good one. I am proud that we have been a leader in this field and that many other cities are now considering the possibility of using the Indianapolis fleet plan.

We feel it has a great future and we have no intention at all of abandoning this program which has proven to be such a great value to our community.

Now, there are other things that Indianapolis has done to assist in the relationship between police and community. Some of them are unique and unusual. We openly invite the people of our com-

munity to come and ride in our police cars during the officer's tour of duty, and in the year or 14 months this program has been in effect we have transported no less than 6,000 community people in our automobiles.

We ask only that they sign a liability release so they would not sue the city should they be injured while they are in that car. But we openly invite them to come and ride in the police car, see what it is like, and share this experience with the police officer. Once this is done, the police department realizes that we have many new friends and a close liaison has been established between the department and the people of our community.

We also openly invite people to purchase police radios and listen to them, that the codes and signals that we use are not meant to be clandestine or secretive, but rather to save broadcast time. Recently, we changed our codes and signals to more closely conform with national standards. We openly told the people that this change was coming and that if they would like, if they would send us a self-addressed, stamped envelope, we would be happy to send them a copy of our codes and signals.

To date, we have sent out nearly 20,000 of those. People now often write to us, telling us that our dispatchers are even radio broadcast personalities.

So the community is aware of what the police department is doing and they want to help.

The important thing is that hand in hand we combat crime by the individual citizen knowing that he must accept the responsibility to obey the law willingly, not because we are forced to but because the people of our community clearly see it is to their advantage to obey the law.

I have brought with me and placed here on the corner of the table—and I believe they are going to plug it in for us now—a police radio receiver. I have asked the Regency Electronic Co. in Indianapolis to make this available to me, because there is a question in my mind as to whether or not the gentlemen who are serving on this committee, this very important Committee on Crime, have ever in fact taken the time to listen to a radio broadcast of the police department in Washington, D.C., to see what is happening in this community.

Captain, would you turn on the radio? You will note this is a scanner-type radio and that it moves very quickly from one frequency to another, seeking out the call that might be made.

Mr. GREENE. Very briefly, this radio is on call to a scanner put out by Radio Electronics in Indianapolis. This particular radio has been set up with four frequencies of the Washington, D.C., Police Department. As the chief explained to you, it continually scans, as the dispatcher or control officer in the car will come in and talk.

Mr. WINN. You are picking up D.C. calls now?

Mr. GREENE. Yes, sir.

Mr. CHURCHILL. I was a little bit surprised. I set this radio up in my hotel room last night and listened for some time. I don't believe they are quite as busy here as we are in Indianapolis.

Mr. GREENE. As you can see, this also picks up car-to-car transmissions.

Mr. CHURCHILL. Many times the Indianapolis Police Department has been fortunate to receive telephone calls from citizens who are

aware that they have just been pursuing a stolen car and the perpetrator of that crime had leaped from that car and ran, and the citizen quickly explains they have heard that broadcast and have just witnessed that the individual ran into the back yard next door and is hiding in the shrubbery, thus assisting in the apprehension of the individual.

Mr. RANGEL. This doesn't assist the perpetrator in any way?

Mr. CHURCHILL. I am sure to some degree it does, but they have always monitored our radio. And I see absolutely no reason, while we realize the bad guy is listening, I certainly don't want to deprive the good guys from listening and from helping us. We feel it has strong advantage when the citizen knows what the police department is doing.

Further, I am satisfied that no police department or other agency of government has any fear from the community when they know the truth about what you are doing and what you are endeavoring to do. The community will quickly fall in line and respond favorably to the police agency when they hear, constantly, of the effort that you are putting forth to protect them.

We have three chaplains in our department and we urge those chaplains to invite all of the new ministers of our city at least once a year to come to police headquarters and go out in our police cars and ride with the individual officers.

I will share privately with you that I know very well that on the day when a young officer has someone riding with him that he stretches just a little more on that occasion to do a good job.

One of the most difficult areas of relationship between the community and the police department lies in the area of narcotics and dangerous drugs. Much misinformation, I think, has been given in this field. So we strove to reach some medium whereby we could convince the public that the information we wanted to give them about this problem was true and accurate and correct.

The best way we found to do this was when the police department was going to have an inservice training program, to train our own officers in the latest techniques and laws and rules relative to narcotics and dangerous drugs, that we extend open invitations to all of these student presidents, the student councils of all of the high schools, the presidents of the PTA, neighborhood organizations, to come to police headquarters, sit with us in our retraining sessions with our police, and hear it at the same time we are informing the officers.

We have found this has met with tremendous response. And in our last inservice training program for police, we likewise at the same time, gave narcotics and dangerous drugs information to over 1,400 citizens of our community. This we will continue to do.

At the same time, the police department prints numerous pamphlets and publications for the citizens to learn how to better protect themselves, protect their property, and for women to protect themselves. Copies of all of that literature is in the packet we have given to you.

[See material received for the record at the end of Mr. Churchill's testimony.]

We are satisfied that in 2 calendar years, the reduction of 26 percent in crime in Indianapolis has been largely the result of the lines of cooperation and communication which have been established be-

tween the community and our department. And when that type of a cooperative line is established, I believe it almost mandates that our crime will continue to recede and that the public and the citizens of Indianapolis, knowing their police department is eagerly endeavoring to help them, will continue to cooperate.

With that, I would say, Congressman Pepper, as chief of police of the city of Indianapolis and as a representative of the officers of that department, and speaking, too, for the Regency Electronic Co., I would be most pleased if you would accept this police radio with our compliments, in the hopes that being chairman of this committee you will find time to listen to it and be more knowledgeable about the crime and activities of the Washington Police.

Chairman PEPPER. Thank you very much. That is very generous of you, Mr. Churchill. I accept it with a great deal of pleasure.

Mr. CHURCHILL. Thank you, sir.

Chairman PEPPER. I am sorry I was delayed over in the Capitol and didn't get to hear the earlier part of your statement, which I will carefully note. We were looking forward to your coming here because of the novelty of your program in establishing such close accord and working relationship with the people of Indianapolis. I can tell from your statement that you have done a very fine job.

We are very pleased that you could come and tell us about it.

Mr. CHURCHILL. I thank you, sir. We honor the invitation.

Chairman PEPPER. Any more questions, Mr. Lynch?

Mr. LYNCH. I have several questions, Mr. Chairman.

Chief Churchill, you indicated that it was your judgment, based on the December 1972 evaluation of the fleet plan, that that program and the spinoffs from that program had saved your department and the taxpayers of the city some $3 million. Is that correct?

Mr. CHURCHILL. That is true. And that $3 million figure, sir, is based on the idea of giving the car program only 20 percent of the credit.

Mr. LYNCH. Could you tell the committee what your annual police department budget is in the city of Indianapolis?

Mr. CHURCHILL. The annual police department budget at this time is $17 million.

Mr. LYNCH. So that saving would approximate 20 percent of your total budget?

Mr. CHURCHILL. That is true. And I find that while the public is greatly concerned about the assaults appearing on the citizens, and so on, when you talk to the councilmen and so forth to get money to relate to these programs, that when you turn and relate the savings in dollars and cents, it seems to be much more meaningful.

I am sure the citizens also appreciate the fact that they can see in a very real way that the car program is a valuable one, not only to the department, but to them as individual citizens.

Mr. LYNCH. Chief, how much do you pay a starting patrolman in Indianapolis?

Mr. CHURCHILL. We pay a starting patrolman $7,200. That is not a great deal of money, but I am proud to tell you the Indianapolis Police Department not only has a full complement of officers, but a waiting list of over 400 applicants.

Mr. LYNCH. Does the fact that you provide what amounts to a personal vehicle for those patrolmen help you as a recruiting device?

Mr. CHURCHILL. I feel that may be one of the advantages. One spin-off that is very important, and perhaps I should mention to you here, is that we provide these vehicles on a take-home basis only to the patrol officers. When I became the chief of police I was surprised to find that the average tenure of the uniformed officer on the street was about 2.4 years.

Now, that is a great deal of responsibility to place upon an individual with no more experience than that. So I wanted the car program to be an incentive to that officer to remain a uniformed patrol officer and not to be so eager to transfer away from that division.

We have found now that has expanded. The average tenure of each officer is almost 5 years.

We have even had some detectives who have indicated they would like to transfer back to uniform so they might have the advantage of a vehicle.

Mr. LYNCH. Are you able to make a judgment as to how many hours those vehicles are operated on a nonduty basis during a week by an average patrolman?

Mr. CHURCHILL. No, sir; we have not been able to evaluate that. We have realized a vast number of felony and misdemeanor arrests, which have been made by off-duty officers.

Mr. LYNCH. Do you have any figures about that, Chief?

Mr. CHURCHILL. In the first year we had the car program in effect, 84 felony arrests, including arrest for bank robbery, were made.

Mr. LYNCH. Out of the total of how many made by your department, roughly?

Mr. CHURCHILL. Out of a total of 33,604 total arrests; that is, both felony and misdemeanor. But we recorded, that we know of, 84 felony arrests we would not have made otherwise.

Mr. LYNCH. Chief, I wonder if you could show the committee some of the materials which you publish and distribute in the community?

Mr. CHURCHILL. There are many. You have copies of each of them in your folders. But we try to help our shops and stores by putting out pamphlets and having seminars on how best to stop shoplifting.

For the traffic safety, a real, down-to-earth pamphlet, "How Fast Can You Die?" And this one has been most meaningful, "Teenagers Want To Know What Is the Law for a Teenager."

We have in effect in Indianapolis in the narcotics area, a joint enforcement team made up of local officers, county officers, and State officers. The purpose of the joint team is to direct their efforts toward the narcotics and dangerous drug pushers around the schools. This booklet has been most helpful to use, and in the last calendar year, the joint enforcement team effected 384 arrests of pushers in the areas of our schools.

We publish and distribute literature on how to properly describe a suspect on the premise that a citizen looks, but he really does not see, and perhaps we can give him some literature he can follow and if he does follow it, then what he does look at, he sees and remembers what he has looked at.

Publications on women and how to protect themselves, and many speeches, are given every year to women's organizations.

"How To Protect the Businessman." For the homeowner, "Are You Inviting a Burglar Into Your Home?" And on and on goes the list.

Mr. LYNCH. How do you distribute those? This pamphlet on teenagers which I just glanced through, saying, "What Is the Law"—how many copies did you distribute and how do you distribute them?

Mr. CHURCHILL. We have distributed already with that program over 100,000 copies and I am sure there will be more. The police department also has a rather large display of vehicles, motorcycles, guns, narcotics, this sort of thing, and we go from one shopping center to another, setting up our equipment, and urgently asking people, "Come visit with us. Look at the equipment you are purchasing for your police department," and at the same time we hand out hundreds and hundreds of copies of the literature, so that we might best try to reach the people of our community.

I think you will also find in that pamphlet, of which we are very happy and very proud, that one of the Indianapolis businesses recently saw fit to have a full page advertisement in the Indianapolis newspapers:

Indianapolis is a safer place to live because of our police department. We like your action. Your perfect record of 100 percent clearance on homicide cases in 1972 is a first in modern-city history. Over the same period, the Indianapolis crime rate was down 26 percent. It marked the fourth consecutive year of crime reduction in Indianapolis. Your admirable record is a taxpayer's delight. It was achieved without increase in manpower. Your efficiency has been supplemented by well-planned and administered community action programs, the kind that create public awareness for the need to cooperate with police against crime.

We are very proud of the relationship that exists between our department and the community.

I have with me here today, Capt. Robert Greene, who is the commanding officer of the homicide and robbery branch of our department. He is here because he and his men have achieved a record that I know of nowhere in the country that has been equaled, and that is a total 100-percent clearance solving of every homicide which occurred in Indianapolis in our last calendar year.

Captain Greene.

Statement of William Robert Greene

Mr. GREENE. Thank you very much, Chief.

Chairman Pepper and distinguished members of this committee, it is a pleasure also for me to be here and quite an honor, truthfully. I would like to talk to you just briefly about our homicide and robbery branch of the Indianapolis Police Department.

I can't really say we probably do much more than what other homicide branches have done, but we put together a program that we found very beneficial to us and we finished with 100 percent clearance last year, a record of which I, personally, am very proud. And for my men, I am extremely proud.

Our branch is a relatively small branch of the police department. It consists of 40 members. It is divided primarily into homicide and robbery branches, because they run together so often. The functions of this branch and squads are a little bit unique in that we investigate all crimes of violence against human beings.

Our function and our main responsibility, of course, is with the investigations of murder. Along with that we do investigate all robberies, shootings, cuttings, stabbings, rape, incest, sodomy, exposing

and molesting; any kind of violence from one human being against another.

When I took over this branch, and Chief Churchill appointed me to it a year ago last March, we had just experienced a time where we had seven unsolved murders in the city of Indianapolis. At the time that the chief appointed me to this job I was in charge of police community relations, an area which I feel helped quite a bit in stepping into this job of homicide and robbery.

It was really like coming back home to me after I had spent 6½ years previously there as an investigator.

We made several changes, really not big changes, but we tried to become more professional in our approach to investigating crime. And I suppose probably the small insignificant thing that really added up for us in the long run was we had operated under the theory that we could get by with one homicide car on the streets of the city of Indianapolis, which I didn't feel we could, and we added an additional one, where we now have two cars on the street, 24 hours a day, 365 days a year.

Our primary idea and concept behind this, in my personal feeling, is that our success came because we were able to get to the scene and be right at the initial scene of the crime and start from there and follow it completely through. Immediate response was a big help to us in solving these crimes, which is what we do now. Every time one of our patrol cars is sent on a homicide or a suicide or a police shooting, we immediately dispatch one of our homicide cars at the same time.

Now, the initial homicide officer who arrives at that scene is automatically charged with that investigation. He picks it up from the time that he receives the radio run, and stays with the case until the man is sentenced in court and the case is closed. It is all assigned to one man.

Now, we, of course, divide our section into different parts, and most all of our robbery personnel are people who have worked homicide at one time. Another change we made is when we have a homicide where—say, there was a white perpetrator—we automatically assign one of our white robbery teams as a backup investigative unit. This comes about quite often because many of our homicides are the result of robberies.

We do the same if we have a black perpetrator. We assign a black robbery team as a backup unit. We have found this has been very helpful to us, not only because of adding more men to the assignments, but the fact these men are able to better communicate, a lot of times, with people of their own race than they are with opposite races.

Robbery investigations are handled the same way. We have black officers investigating black robberies; white officers investigating white robberies. The logic behind this concept is that investigators can develop more contacts and informants among their own race, and we have found it has been very beneficial to us.

We are also very interested in, and we work quite extensively on, all firearms investigations. These are handled also by our office. One man is primarily responsible for conducting comprehensive investigations into each case. And along with that, we try to get him to develop a history of each firearm that we come in contact with.

Now, the primary thrust of our investigative technique in homicide last year was to immediately saturate the area where we had a homicide. Again, when we have one—say, late at night or during the day—all homicide and robbery personnel automatically suspend their investigations for that period, go right to the scene of the homicide, and assist the first officer who arrives on the scene, and who acts as the coordinator.

The first detective who arrives on the scene as I said, is directly responsible for the investigation, and it is not uncommon at all for him to be a patrolman detective assigned to this car. When he arrives on the scene, regardless of what ranking officer of the Indianapolis Police Department is on that scene, the homicide investigator is in complete charge of the complete investigation.

We have felt that it works much better this way since if this man is the one who has the ultimate responsibility of handling this case and is attempting to see that justice is brought about swiftly, then he should handle the investigation from start to finish.

Now, in all of our investigations, we made an effort to develop a very strong prosecution case. Quite often, and very truthfully, we work harder today to base these cases on physical evidence rather than eyewitness accounts. We have found that through legal maneuvering and court delays and prolonging of trials and change of venue out of county, that eyewitnesses sometimes do not do as well as we feel that they could or can do and quite often over a period of time their memory has a tendency to slip occasionally.

As the chief told you, we are deeply involved in public information and education in our police department, and as you notice, some of the pamphlets the chief just showed to you my men use quite often when they go out and give talks to different civic organizations, block clubs, and church groups.

We have had a very high morale factor in this particular branch and I think we operate each month—we knew we were on our way—it is kind of like, I would liken it to a pitcher pitching a "no hit/no run" game. We saw it coming, yet nobody wanted to talk about it. So I think as each case came in, the esprit de corps picked up a little bit more and the men put forth a tremendous effort to get it solved.

We have found the use of informants is especially helpful in our solving of homicides, and we use them quite extensively in Indianapolis. But our informants are not just the type you would think about when you use the word "informant." As we talk about our public awareness of what goes on in the police department, quite often—and I can think of three cases in particular last year, where we had come up against a stone wall and were unable to solve the case, where we called our police artist in and, through witnesses, made composite sketches of the men we felt were responsible for these homicides.

I am very happy to say these were published by the news media and the papers and TV, and all three of those cases were solved by people and citizens in the city of Indianapolis, making anonymous calls, giving us the people to check out: and all three of them panned out and we were able to solve the crime.

Chairman Pepper. Excuse me, Mr. Greene. You touched on the question of rewards when you spoke about the informants that you get. It generally is considered here, I think, in Washington, that the break

in the case where Senator Stennis was shot in front of his home came from the rewards that were offered.

I believe the State of Mississippi offered $50,000 reward. I don't know whether there was more or not. It occurred to me, whether or not the Federal Government might with propriety perhaps join States in making reward money available to the police department. Would that be feasible and helpful?

Mr. GREENE. I am sure it would be. We have operated in Indianapolis over the past years without a reward fund. But we were able to operate. Our city council has seen fit just recently to consider setting up a $50,000-a-year fund to be used for rewards. We feel that, yes, this would be a big assist to us in solving some homicides.

Chairman PEPPER. Thank you. Go right ahead.

Mr. GREENE. I tried to outline briefly to you just what we do and how we operate, and as I say, I am extremely proud of this unit because of the fact that the average age of our investigators is only 32 years old, and with a year and a half experience as homicide investigators I feel that they have done an outstanding job. Along with that, I think this record was due to, not only dedication on the part of the investigators, but also the increased cooperation that we had between our police branches, individual branches within the police department.

We utilize our laboratory technicians quite a bit. We have a mobile crime lab that we call to most all homicide scenes. Along with that, we have a man designated as nothing but an evidence technician. We have two chemists assigned to our laboratory who we utilize quite a bit.

In one particular case that we had last year we used the mobile crime lab, the chemist, the evidence technician, and fingerprint technicians at the crime scene. It was actually beautiful to just sit back and watch these men, who are highly skilled and trained, do their functions. Thirteen different fingerprints were picked up in a house at the scene of one brutal murder we had in Indianapolis.

When you have this cooperation—and I would probably be remiss if I didn't add that just a little bit of plain luck went along with it, too. A lot of dedicated time, a lot of enthusiasm by the officers, and a tremendous amount of support by the public and by the other police agencies within our department and additional departments, all of these were what helped us to account for a 100-percent clearance.

Chairman PEPPER. I think I might add that competent people often appear to have luck on their side, perhaps more than the incompetent people.

Mr. CHURCHILL. Thank you.

Chairman PEPPER. Anything else?

Mr. LYNCH. I would like to ask Captain Greene whether the mobile evidence lab is sent to the scene of other index crimes, or is that reserved for homicide cases?

Mr. GREENE. No; it isn't. It is used quite extensively at serious burglaries. In fact, the day we left, it was called to the scene of a hit-and-run traffic fatality.

Mr. LYNCH. In 1971, the Indianapolis standard metropolitan statistical area reported some 31,000 index offenses. What proportion of those were in the confines of your city I don't happen to know offhand.

To how many of those crime scenes would you dispatch the mobile crime lab and its technicians? Have you any idea?

Mr. GREENE. No, I don't. I might add that our new mobile crime lab just went into operation in the latter part, second half, of the year 1972. Prior to that a lot of this work was done by our homicide investigators and our evidence technician, which was one man.

Another unique thing I think we should mention is our officers who are given the responsibility of investigating homicides and police shootings are only 12 in number. And these 12 men, as I stated, put forth a tremendous effort last year, and I like to think they are all just about as topnotch as any police officers as we have.

Mr. LYNCH. Would it materially assist the clearance rate if you could send crime lab technicians to the scene of all index offenses?

Mr. GREENE. I definitely think it would. In fact, it is our plan to use the unit as often as we can get it out there.

Mr. LYNCH. How many of those would you have to have in order to do that? You couldn't do it with one, could you?

Mr. GREENE. We are right now. Of course, I would like to see more than one.

Mr. LYNCH. You are doing what right now?

Mr. GREENE. We are operating with one mobile crime lab now.

Mr. LYNCH. I understand that. How many would you need?

Mr. CHURCHILL. I would respond, a minimum of four.

Mr. LYNCH. What is the cost of that mobile crime lab and the technicians who man it?

Mr. GREENE. I think it was $17,000.

Mr. CHURCHILL. About $17,000. The technician's salary to run it a year would probably be $10,000 to $11,000.

You are talking totally about $30,000 a unit per year.

Mr. LYNCH. Chief, you have approximately 1,100 sworn police officers in your department; is that correct?

Mr. CHURCHILL. Yes, sir.

Mr. LYNCH. Of those 1,100, how many of them might be on the street in patrol functions at any given time; or during the high-crime period of the day, for instance?

Mr. CHURCHILL. On street patrol in uniform, cars, talking about uniform officers, 140 at a time. That does not include traffic personnel. That is strictly district patrol officers.

Mr. LYNCH. About 140 who would be manning patrol vehicles?

Mr. CHURCHILL. That is true, sir.

Mr. LYNCH. Two-man cars?

Mr. CHURCHILL. We use all one-man car operations in Indianapolis, in all areas. We have no two-man cars.

Mr. LYNCH. Do you have foot patrol?

Mr. CHURCHILL. We have only two officers on foot patrol, at the downtown bus station.

Mr. LYNCH. Why do you use only one-man cars?

Mr. CHURCHILL. It is a matter of economics, really. We know that, unfortunately, law enforcement agencies today are involved in a great many activities for the community which are not crime related. Many of those activities do not require two policemen. A search for a lost child, often assisting an invalid, a dog bite report, many things of this nature do not require two officers. And thus it is a matter of economics, and the saving of time and money.

Mr. LYNCH. How much money in LEAA funds, if you can answer, Chief, did your department receive last year?

Mr. CHURCHILL. Approximately $3 million.

Mr. LYNCH. What did you use that for?

Mr. CHURCHILL. We have several programs underway, one rather extensive program in the juvenile branch area. We have a considerable number of funds in our computer program.

Mr. LYNCH. What is your computer program, sir?

Mr. CHURCHILL. It is a very interesting thing. We are one of the first cities. I am sure, in the country to use what we call a direct-case-entry system. That is how we know our statistical picture is accurate and true, because when the uniformed officer makes an investigation and makes a report, that report goes directly to the computer.

The information is then broken down by the computer and put out in various parts of the department for use. But when we need a statistic, then we need only program the computer in such a way it gives it back to us. Our FBI report each month comes directly from the computer and the computer is giving us that report from direct case histories by the officers who originally made those investigations.

I think the computer, more and more, is going to be a valuable tool to law enforcement agencies. But it is one field where there is a tremendous shortage of technicians and skilled people to program and operate those computers. We know the officer in our department, for example, who is very skilled, has been offered time and again jobs from industry that we cannot compete with in the salary field. So we have to rely on the dedication of that individual officer to stay with us.

Mr. LYNCH. Chief, it appears that the two highlights of your testimony are the conspicuous presence of the policemen in 140 cars, and, in a city the size of Indianapolis, that strikes me as a fairly good proportion? You also touched on the effort your department spends in citizen-oriented programs.

You have approximately 1.7 policemen per 1,000 population. We learned here yesterday that in the District of Columbia we have some 6.6 or more policemen per 1,000. Do you regard the size of your police force, its present complement of sworn personnel, as adequate to do the job you are asked to do in the city of Indianapolis?

Mr. CHURCHILL. Yes; I would respond to you that it is. I don't know any police chief or commander who would not like to have more people. But I believe that it is mandatory in police administrators to endeavor to operate that police department on the same basis any good business manager would run his business, and that we do not have a great number of personnel and dollars to pay for those personnel, so it is a very fluid approach to continually evaluate your own operation and the use of that personnel to get the best out of it you can.

The whole premise behind the car program was to save time. We are wasting time and we are wasting policemen. And we need to look at ourselves very critically before we can very quickly run into the council and say, "I need more men."

Mr. LYNCH. Your judgment is that you can live with the number of men you have; is that correct?

Mr. CHURCHILL. Yes, sir; that is true.

Mr. LYNCH. That is very interesting, because of the 13 cities which will be testifying before this committee, you have the lowest rate of police per capita.

Mr. CHURCHILL. And I might tell you, sir, we in the police department in Indianapolis have not asked our council for an increase in our number of personnel in the last 6 years.

Mr. LYNCH. Thank you, Chief.

I have no further questions, Mr. Chairman.

Chairman PEPPER. Chief, there are two or three questions. What impresses me is that you were determined you were going to reduce crime in Indianapolis; and you have done it in the 5 years you have been chief of police, have you not?

Mr. CHURCHILL. Yes, sir.

Chairman PEPPER. What we are concerned with is what can still be done in the future to reduce crime in this country. You made a fine record. Many of the cities have made commendable records, but we still have a lot of violent and serious crime.

Now, what can you do to reduce still further the amount of violent and serious crime in Indianapolis?

Mr. CHURCHILL. Sir, I am going to work very hard with the relationship that I have with the community to see if we can get the community interested in the system of justice as a whole, as opposed to just the police department.

Now, I will make my following statements, realizing very well that two of the honored gentlemen of this committee are former prosecutors and, indeed, one is a former judge. But I liken the judicial system to a three-legged milk stool: One leg of that stool is the police; the second is the prosecutor; the third is the courts. And I would submit to this committee that I believe our system has one leg that has dry rot, and rather seriously.

Chairman PEPPER. I take it you are not referring to the police department?

Mr. CHURCHILL. I am not, sir. I am speaking primarily about our courts.

Chairman PEPPER. Yes, I know. I was going to ask you about the prosecuting attorneys and the courts.

Mr. CHURCHILL. I frankly feel that in the area of the prosecution, there is far too much plea bargaining. I have been a policeman for awhile and let me hasten to tell you I am not opposed to trading a pound of bacon for ham. I am very opposed to trading a ham for a pound of bacon. And that when an individual commits a serious crime and we find it has been prebargained away for no other purpose than to serve the expediency of the court, then we are making an error.

I have a 9-year-old daughter and I love her with all of my heart. But on occasion I find that my daughter will lie to me. And I have talked with her and promised her that that is a "spankable" offense, and that if she does it again, the lying will be punished and she will be given a hard spanking. Surely, you can understand, as I do, that in raising that child, if I catch her in another lie and I give her a suspended sentence, and a third time she lies, I put her on probation, and the fourth time she lies I say that, well, we didn't get her middle initial right in the charges that were placed against her, then I would have absolutely no reason to believe my child would not indeed grow up to be a liar.

I think it is the same principle that must appear in our judicial system today, that if we promise an individual 2 to 5 years for second-degree burglary, sir, he should receive 2 to 5 years for second-degree burglary, not 6 months for simple trespassing.

These are the things that we desperately need to look at.

Chairman PEPPER. How long is the elapse in Indianapolis between the time that a charge is made against a defendant and that defendant is brought to trial?

Mr. CHURCHILL. Some, sir, go on as long as 2 years. And that individual is often out on bond while that time is passing.

Now, I would like to submit a suggestion to you for possible solution to this problem. My police department and all others in the country are required to report monthly the crime statistical picture in Indianapolis. We report that to the justice department, who puts it out in a published book. And that book merely tells us what crime is occurring. But I would ask that this committee give some consideration to looking at the system as a whole.

And if the police department, as merely one leg of that stool, is required to report accurately the crime which occurs in Indianapolis, I see nothing wrong with the prosecutor who tries those cases likewise being required to report to the Justice Department the number of cases tried, the original charges, the charge on which the individual was actually tried, and how many times he was found guilty and how many times released.

I would further like to see the courts of our country be required to report to the Justice Department how many cases they tried and how old was each case. What I am saying to you is I believe, honestly, if the citizens are aware—again, I have no fear of the citizens if they are aware and know the truth—then, we can accurately look at what is the police department doing about our judicial system, accurately look at what are the prosecutors doing about our judicial system, and what are the courts doing, and put it in a published book.

Chairman PEPPER. Would you add to that stool another leg and call it "Correctional Institutions," or "Penal Institutions"?

Mr. CHURCHILL. That would make the book complete, sir.

Then I believe an accurate picture of the crime problems in our country could be evaluated and many of the huge sums of money made available by the Government to help correct some of these problems could accurately be placed in the proper area of our system to help make it work.

It seems hardly proper to me that every month when my crime stats come out to have the news media to come running to me and say, "Chief, tell us about crime in this community today."

We are only one part of the system. And I think that as thoroughly as the public is allowed to view the efforts and the activities of law enforcement agencies, that by all means they should have the opportunity to examine and review the activities of the other parts of that same system.

Chairman PEPPER. Mr. Justice Clark used a figure you might find of interest. He said that the courts might be likened to a system of water mains through which water was moved from a reservoir into a city distribution system. No matter how much water you have in the tank, the reservoir, or the sewer, it can only get to the consumers in relation to the capacity of the pipes to convey that water.

So no matter how much of a backlog you police pile up of charged individuals, the courts, of course, are the pipelines through which their convictions occur and which progresses the disposition of the case. So the courts have to be able to handle the cases that you bring in or you have a stagnation of the sewers, haven't you?

Mr. CHURCHILL. That is very true, sir. And I would say to you that every police officer in the country, when he takes his job, raises his right hand and takes an oath of office, and he swears to uphold the laws of the United States, the State, the community that he serves. I know that each judge who takes the bench takes that same oath. I am sorry, I don't believe that too many of them are truly upholding those laws.

Chairman PEPPER. This first week of hearings is devoted to the police departments of the country, to give them an opportunity for the presentation of the most innovative, imaginative, and effective programs being carried.

Now, we will follow that with probation and prosecution and the courts, trial and appellate, and juvenile delinquency, and correctional institutions. So we are going into all of those facets, all of those legs, as you might say, of the stool, during these hearings to see what each part is doing to improve its performance.

Mr. Mann, any questions?

Mr. MANN. No questions. Thank you, Mr. Chairman.

Chairman PEPPER. Mr. Winn?

Mr. WINN. Chief, how do you think your "car ride" program would work in a city like New York or Los Angeles?

Mr. CHURCHILL. I see no reason why it wouldn't work in any community. It has become so popular—please understand, no advance appointment need be made—a citizen can walk in off the street, go to the desk captain, say he wants to ride, sign the release, and we immediately call in a car and let that individual ride.

Mr. WINN. Do they furnish these rides in the outskirts or suburban areas of town, or downtown?

Mr. CHURCHILL. No, sir. All through the city, any part of it.

Mr. WINN. You mentioned morale. How do you judge morale in a police department?

Mr. CHURCHILL. Morale is a very fluid thing, and I believe each administrator must acquire a skill for a feel for morale. I have often said that if the men of my department quit complaining totally, I would be very worried about what is happening. But a feedback, a line of communication that exists, both from the top to the man on the street, and from the man on the street up, is vitally important, and you do have a feel for when morale is good. It reflects itself in not only the quality but the quantity of work the individual officers will do.

Mr. WINN. You don't have any outside commission or committees or anything to come in in any way to try to judge it or interview?

Mr. CHURCHILL. No, sir.

Mr. WINN. You don't have any interviews by the press or coordination with the chief?

Mr. CHURCHILL. We constantly have interviews with the press because our department has a very open policy with the media. All disciplinary hearings are open to the public and to the media. We have taken the idea that perhaps in years past the law enforcement

agencies would shove a 55-gallon drum under a 9 x 12 rug and try to convince the public there was nothing there.

In our department, we don't shove a pea under the rug and say there is nothing there. We are very open with the public and media, and they have access to our reports and activities and are perfectly free to interview any of our officers at any time.

Mr. WINN. It was my understanding, Mr. Lynch, there were going to be some newspapermen up here with Chief Churchill.

Mr. LYNCH. They were unable to appear.

Mr. WINN. They are not here?

Mr. LYNCH. No, sir.

Chairman PEPPER. We invited them. We are sorry, we understand they had a large part in encouraging you in the program you have carried forward. We invited them to appear and they said they would if they could. We are sorry they can't be here.

Mr. WINN. I am sorry they couldn't be here, too, because it is my opinion that in too many cities we have the newspaper people of that city, that should support the police department, spend most of their time trying to ridicule them and find internal problems and discuss morale as far as the press is concerned.

Mr. CHURCHILL. As early as 1962, the Indianapolis Star engaged in a program called Crime Alert.

Mr. WINN. Sponsored by the newspaper?

Mr. CHURCHILL. Yes, sir; sponsored by the paper. And that has been a very valued thing in our community, asking people to be alert and report crime in our community. That program is still very much in effect today and still on the front page of that paper every day. It gives the Crime Alert number and urges the citizens to call.

Our second Indianapolis paper, the Indianapolis News, has been very forceful in helping to form in Indianapolis a Women's Crime Crusade, which now numbers some 50,000 women. And that is a tremendous force.

Mr. WINN. What do they do?

Mr. CHURCHILL. Those women have crime committees where two ladies at a time will go in and watch an entire court procedure for a month at a time, filling out reports of the activities of the court and what is happening, and they brought about much change.

For example, prior to the Women's Crime Crusade, a municipal court was not a court of record. It is now. Prior to the Women's Crime Crusade a municipal court judge never wore a robe. He does now. Prior to that time, a municipal court seldom started on time, but that was one of the simple little things the Women's Crime Crusade was watching for. And you may rest assured, even in the municipal court in Indianapolis, if the court is to start at 9 o'clock, it starts at 9 o'clock.

Mr. WINN. Maybe we ought to have them come to Congress and start our committees on time.

Captain Greene, you wanted to say something?

Mr. GREENE. You mentioned morale and how do we judge it. I wish there really were a way you could judge morale. I just wanted to relate to you a little incident that happened in our particular unit. We had an elderly couple in one of our murder cases here, 78 and 79 years old, who returned home and surprised house burglars in their house. The woman was shot and killed and her husband was seriously wounded. Along with this same idea, a lot of or police officers have radios such

as these at home. I judge morale of my unit a little bit like this: That particular night, I had six men working. When I arrived at the scene of that murder, 23 of my 40 personnel showed up at that scene on their own time to work.

Mr. WINN. Came out on their own?

Mr. GREENE. Yes, sir.

Mr. WINN. Two more questions that really don't have too much to do with what you discussed, but we are trying to put all of this together from the police department standpoint: How do your police deal with the problems that you probably have with the fantastic numbers of people that go to Indianapolis for the Speedway race?

Mr. CHURCHILL. Sir, a few years back, when we were to have a State basketball tournament, or something of that nature, we were always putting in the paper the amount of vast manpower that we were going to use and the very strict enforcement rules that we were going to enforce, and that, if the people didn't follow those rules, certainly they would be arrested, and so on.

We found, I believe, some truth to exist in the idea that maybe we were arousing their competitive spirit. So, rather, before an event of that type, we would put in the paper it was going to be a great event for our city, that it was going to be a gala occasion, and that the police would be on hand to assist the public in any way that we possibly could.

The mere change in attitude and tact of what we advertised, so to speak, in the papers prior to that event made a tremendous difference. Soon in Indianapolis, we will be having the 500-mile race. Just prior to that race, we will have a parade in downtown Indianapolis which will bring into our city's streets over 250,000 people.

One of the last things I do is to walk the parade route for at least 10 blocks prior to that parade, and I look into the faces of the people who have assembled themselves for that parade. The last 3 years that parade has gone without incident. And each time I have walked that route I have looked into smiling faces, people who came there with the idea that they were going to enjoy themselves.

Mr. WINN. You kind of missed my point. What do you do about the people that flock in from out of town? You draw over 100,000 people to that race, don't you?

Mr. CHURCHILL. Oh, yes, sir; about 350,000.

Mr. WINN. You have a bunch of people who have never been in Indianapolis before, they have no pride in Indianapolis or the honest faces, and most of them are there for racing, but there is a certain percentage that follows the crowd because they want to assault people. They want to rob them; they want to trick them. The prostitutes, I suppose, come into town by outside numbers, whatever it is.

How do you deal with a situation like that when you are bringing large numbers in, in a 2- or 3-day period?

Mr. CHURCHILL. To the honest citizen, we endeavor to be a good host. There is a line beyond which we will not retreat. If it means putting an individual in jail for misconduct, in jail he will go. The prostitutes, pickpockets, and so on, we become very active as much as 10 days prior to the race, to get the prostitutes corraled, get them in jail. We are constantly on the lookout for new faces in our community, knowing they will be lurable for the Kentucky Derby and soon thereafter come to Indianapolis for the race.

Mr. WINN. You have a communications system between Louisville and Indianapolis?

Mr. CHURCHILL. Indeed, we do; and we work very closely between the prosecutors and the courts that those individuals who come to our community at that time, by being travelers and not local residents, generally find they have relatively high bond placed on them, and in all probability their case will have a continuance to sometime following the race.

Mr. WINN. And to follow up on testimony yesterday, do you have a special rape division?

Mr. CHURCHILL. No, sir; we do not.

Mr. WINN. Are you contemplating one?

Mr. CHURCHILL. No. We have some officers that work specifically on rape cases.

Mr. WINN. Do you have women in that division?

Mr. CHURCHILL. Yes, sir; we have women in that group. But I personally do not feel that law enforcement today is treating the rape problem correctly and I envision the day must come when we must, in a cooperative way with the police agencies, prosecutors, courts, and mental health people, begin to attack the problem of rape much earlier.

Many law enforcement agencies feel that rape is a nonpreventable crime. I do not agree with that. I believe when in any community in your city you have a repeater or a prowler, I think this is one red flag that goes up and says look out.

Second, if in that neighborhood you develop a Peeping Tom, these runs are normally treated by law enforcement agencies as nuisance runs. They often will tell the lady, "look, if you keep your blind pulled down, they guy won't look." Then you find developed in that neighborhood a larceny problem, where an individual steals women's laundry off the clothesline.

Often, the law enforcement agencies treat that as a simple larceny—how much did the clothing cost—when in truth that should be the third red flag waving, "hey, look out." Then the guy moves on to exposing himself to young children, something of this nature. And we never really become aggressive when it comes to a prowler, a Peeping Tom, of having a concerted effort on the part of the police department to attack the problem at that level, with a special prosecutor who is well versed in prosecuting sex cases, with mental health people who will know very well this problem is developing; but get it now, not after the serious offense of rape has been committed and then try to work with the problem.

Mr. WINN. We are doing a lousy job of convicting rapists after we catch them.

Mr. CHURCHILL. Indeed we do, sir; and most of them are found to be mentally incompetent and they are sent to a mental hospital and the mental hospital often has an open-door policy where they can walk out on the street any time.

Mr. WINN. You think our laws are extremely off base as far as rape is concerned?

Mr. CHURCHILL. I think they need very careful examination. But I would believe, too, that we need to build into the judicial system some mental health people who will accept the idea that an individual must have assistance in the courts, and I believe the judge should have

the latitude to send the person to some mental health organization who can help him.

Mr. WINN. Do you have a psychiatrist on your staff?

Mr. CHURCHILL. No, sir; I do not.

Mr. WINN. You don't?

Mr. CHURCHILL. No. I might tell you, a year ago I applied to LEAA for a grant, just along the very lines I am talking about now, to combat the problem of rape, and they were not interested because the incidence figure of rape was not high enough to warrant a grant. But, in my opinion, the problem of rape is one that is increasing all over the country.

It is my opinion that rape is a preventable crime, but that we are attacking it far too late in the picture. We should be getting after it much sooner.

Mr. WINN. In Washington, D.C., for instance, rape is about on page 26 of the local newspapers, because the first 2 or 3 are all filled with the Watergate.

Thank you.

Mr. RANGEL. Chief, I have been extremely interested in your testimony today. Can you briefly tell the committee what you were involved in prior to becoming chief of police?

Mr. CHURCHILL. I joined the police department in May of 1957, after having successfully operated my own business for a number of years. I didn't come to the police department until I was 32 years old. I was a patrolman, out on the street, for 5 years. Then I transferred to the detective division, where I worked burglary and larceny cases.

Contrary to what the captain says about robbery and homicide, I think burglary is the toughest case you can investigate anywhere.

My background is in education, in secondary education. I had some feeling of wanting to be a teacher. After I had the privilege to attend the National FBI Academy, I went back to my department as a lieutenant in the training division. Indianapolis law makes it possible for any individual in the department who holds the permanent rank of lieutenant to be considered for the position of chief.

And in 1967, Mr. Richard Lugar was elected our mayor and in February of 1968 he selected me as his chief and I have been there since.

Mr. RANGEL. Thank you very much.

Chairman PEPPER. Mr. Keating?

Mr. KEATING. Thank you, Mr. Chairman.

Do you have countywide jurisdiction?

Mr. CHURCHILL. No, sir; I do not.

Mr. KEATING. Even though the city extends out into a metropolitan area?

Mr. CHURCHILL. Yes, sir. We are involved in what is known across the country as Unigov, where the council is a joint city/county council, and the mayor of Indianapolis is indeed the mayor of all Marion County. But that law provides that the new Municipal Police Department of Indianapolis will ultimately become the enforcement body for all of the county and that the sheriff's department will have specific assignments of operating the jail, process serving, things of that nature.

But the law provides that this cannot come about until the individual councilmen are satisfied that the municipal police department is both

adequately prepared and able to assume new portions of jurisdiction. Then, and only then, will the people who live in that jurisdiction be placed on the tax rolls for it.

So I think the law provides a very equitable way for our department to expand and to meet its obligations. At the same time, it is equitable and orderly as far as the citizenry is concerned, because they are not paying for a service until they receive it.

Mr. KEATING. How many more men will you need for that total county patrol? You have 1,100 now. How many additional men would you need?

Mr. CHURCHILL. It is difficult to say because we have not been able to accurately assess the crime problem throughout the rest of the county, plus the fact the suburbs and county area are the areas of greatest increase in population. But I feel that, as you see, one area is put on the tax rolls, then new revenue is made available to us so we can in a step-by-step orderly progression assume our obligations and have proper command.

Mr. KEATING. I think it takes time to train a police officer and if you need 300 men, and it takes a couple of years or 3 years, or whatever, to about that much increment in the force—how many police officers do you have per thousand population now?

Mr. CHURCHILL. The rate per 1,000 population is 1.7.

Mr. KEATING. That is pretty low, isn't it?

Mr. CHURCHILL. Yes, sir.

Mr. KEATING. I think someone mentioned that here in Washington we have 6.5 per thousand.

Mr. CHURCHILL. If I had that many police in Indianapolis, I would consider myself overly fortunate.

Mr. KEATING. The involvement that you talked about in public affairs by police and participation by listening in on the radio, participation in riding in the cars and all of that, helps to make more people willing to testify, more people willing to contact you about suspicious persons. Do you find that it is a helpful involvement, or do you find sometimes you get a lot of nuisance calls?

Mr. CHURCHILL. No. Surprisingly, we have very few nuisance calls. Most of the information we receive is indeed very helpful. A recent experience where we had a shooting on the east side of the city, the uniformed officer put out a partial description of the vehicle and the direction it was traveling. And just within a few minutes a man owning a filling station called us and said he had heard the broadcast and ran out on his lot to watch and get us the full license number, the make and model of the car, and which direction it turned, which made possible an apprehension of the individual within a few minutes.

I might tell you that I plan very soon now on opening our classrooms in the school in the police department to any civic organization or group which wants to hold meetings. Our classrooms are not used in the evenings and I want to make those meeting spaces available to different civic organizations within our city, if they will but come, let us take them on a tour of the building prior to their meeting, because we are anxious they come to see us and we are anxious for them to see what our department is doing.

Mr. KEATING. Captain, I think you said you solved every homicide that has occurred within your jurisdiction within the last year. Is that correct?

Mr. GREENE. Yes, sir. Knock on wood—we are now riding into 15 months.

Mr. KEATING. Have you found that one of the principal elements in helping in the solution of these crimes has been involvement and assistance of your citizens, of your lay people?

Mr. GREENE. Very definitely.

Mr. KEATING. So that the work that the chief has done in this regard in involving the citizenry has been of assistance to you in developing a successful investigation?

Mr. GREENE. It certainly has. And as you briefly mentioned, I think it has brought people forward now to where they know that the police cannot be a one-way street. It has to be two ways. And I found that people now are coming forward more and are willing to testify more than what they have in the past.

I think this is directly responsible for the citizens involvement in Indianapolis.

Mr. KEATING. Chief, I would like to make a suggestion and I don't know how valid it really is. But I like your idea of the compilation of the statistics in order to let the public know what is happening, whether persons have been convicted of the crime for which they have been charged, whether it was valid to charge them from the beginning or whether it should have been a lesser charge, or whatever the situation is, but I have a little concern about one aspect of it and I think you may run into it.

You seem to indicate you wanted the courts to report to the Justice Department. I am not sure that will be valid. I think they should have some input into the compilation of statistics, but I would not like to see courts required to report to the prosecutor, in effect. I think I would like to see them operate through their own system of reporting and having some agency coordinating all of these.

I like the goal, but I am not sure I would want to place the judiciary in the position of having to report to Justice. I think it is an independent function of our Government. I think I would like to keep it separate. I understand what you are trying to do and I agree with that objective, but I would like the means to it. I don't have any constructive suggestion to you but the thought occurred to me at the time.

Mr. CHURCHILL. I can well envision, to get the courts to report this kind of thing would be extremely difficult.

Mr. KEATING. But I think the reporting should be done now.

Mr. CHURCHILL. I do, too.

Mr. KEATING. And I do think all of this should be in some computer center so that you can press a button and get the results pretty quickly and not get bound up in paperwork. But that is for some genius in that area to figure out.

One part of the equation that you talk about that I have always felt contributed to the difficulties the law enforcement officer has, and I think the public has as a result, is the prosecutor's role in that equation, whether or not they have adequate training, whether they have enough time to prepare their case at all levels, whether they have had time, even in the misdemeanors, to have enough advance information to do the job necessary to present a case for conviction. I have been concerned about that aspect of the equation very much through the years. Do you have any comments on that?

Mr. CHURCHILL. Yes. There is adequate reason for concern, because I am satisfied that that is one of the underlying causes for so much of the plea bargaining. That and the cases dragging on for so long, the loss of witnesses, et cetera, puts a young prosecutor who perhaps has to prepare for as many as 12 trials a day, and I can see an extreme hardship in his being able to properly prosecute a case and thus the case is plea-bargained away.

It sounds a little bit harsh, but I see, too, the problem arising in the plea bargaining for the expediency of the court, cases that should be open and shut, of a burglar apprehended right inside of a place, and so on, but just to make it quick to get through the courts we reduce it from second degree to third degree and give him 6 months out on the farm, which, you see, is really not 6 months, it is 4 months and 17 days.

I think the public should know the thing went from 2-to-5 years to 6 months. I think the public should know that 6 months is not 6 months, it is 4 months and 17 days.

We should be honest with the public. They should know that life is not life. That 20 years is not 20 years. We need to level with them and let them know. Because, once they know, then they are more able to understand and appreciate the problems the judicial system is experiencing today.

Mr. LYNCH. Chief, you said you were required to report uniform crime data. Is that the case or not the case, that most police agencies report that to the FBI on a voluntary basis?

Mr. CHURCHILL. I am sure it is a voluntary basis. I am sure my city would be looked at with some displeasure if we did not do it.

Mr. LYNCH. In several weeks we will be hearing testimony from a county judicial prosecutorial system located not far from Washington. They have devised a computer system which enables them to tell exactly how cases are being processed, and what judges are doing what with cases. That information has routinely been turned over to newspapers. I would think the committee would be delighted to send you a letter informing you about it.

It may be something you folks in Indianapolis would like to look into. They think this has had marvelous results and it has helped change the system and the attitudes of some people working in the system.

Mr. CHURCHILL. I appreciate that information.

Mr. KEATING. Chief, I have always felt that delay in trial and punishment is one of the greatest contributions to proliferation of crime, or, rather, to put it a different way, it is not the deterrent that it could be. I think the primary responsibility in seeing the cases are tried rests with the court.

I am sure that the defense counsel, as you know, has a lot of cases in other courtrooms and doesn't get to that one, and the prosecutor, by the same token, has a number of cases or you can't get a jury on a given day. But the primary responsibility rests with the court because the court is the one that has the oversight.

Now, it seems to me that if we could get every criminal—and there will be an exception because of injury or something—tried and acquitted or convicted within 60 days of the offense, and the punishment flows quickly thereafter, that this would be more meaningful not only to the offender, but to the victims, to the public, and to the law enforcement arm generally; that this then would be a greater deter-

rent to our crime problem in the country today. Do you agree with that concept?

Mr. CHURCHILL. Mr. Keating, if you were my Congressman, you would get my vote, 100 percent. I think this committee should be aware, however, that much of the delay in the trial of prisoners is not because of the police, not because of the court; it is because of the defendant himself, who continues to take advantage of all of the delay.

Mr. KEATING. I think experience shows that there are limited defense counsels and they don't want to let any cases go to any other attorney and they are required to be in a number of different courtrooms and sometimes in different systems, the federal system or some other system. So they ask for many continuances.

Mr. WINN. Would the gentleman yield?

Mr. KEATING. Yes.

Mr. WINN. Doesn't history also show the longer you drag the case out, the better, easier verdict you get in behalf of the defendant?

Mr. KEATING. I think the difficulty is, what happens is that the witnesses, having lost their wages three or four or five or six times, are disinclined to come back. And if they ever witness a crime again, they won't come back; they won't tell anybody about it. You also find it runs up the cost of operating the police department, whether you give policemen court time, or compensatory time, or whether you give them wages, you are running the cost of the law enforcement arm up. I don't want to cast dispersion, but he may be a little hesitant the next time.

But the victim of the crime has suffered already and if he has got to keep coming back and losing more time, he is not going to want to come back.

In this manner, of course, your recall of facts and events becomes more dim with time. So it becomes more difficult to prosecute a case thereafter.

Mr. CHURCHILL. I appreciate your giving some time and thought and concern to the victim. Far too long it has been with the perpetrator. What you say is so vitally true because in my judgment it causes the victim to lose faith in the system. He just totally loses faith. The system must protect him. That is our first obligation: To protect the lives and property of the people. And we can't do it if the people as a whole lose faith in the system.

Mr. KEATING. Speedy trials have a way of lessening the importance of bail, as it gets involved in so many other things, but it is only part of it because the appeal process, the appellate process, is so long and drawn out that it, too, must be attacked. And the time between arrest and trial has to be shortened to give finality to the case. There are several approaches to that.

Mr. CHURCHILL. Yes; but, Mr. Keating, you see while this sounds—as we discussed here, it sounds—to be a complicated thing, it is not really because most of what you are discussing here can be accomplished by a simple rule of court, if the judges would do it.

Mr. KEATING. That is why I said the primary responsibility rests with the court, because it is a matter of controlling unit behavior of those elements coming before him to fill out this equation.

I would love to get into the subject of rape and the difficulties I see in that, but I think the committee chairman wants to get on.

Thank you very much, Chief.

Mr. CHURCHILL. Thank you.

Chairman PEPPER. Chief Churchill, Captain Greene, the committee wishes in the warmest way to thank you both for the valuable contribution you made to our efforts here. I am especially grateful to you for this police radio. I shall listen with interest, if not pleasure, to the crime I hear in the District.

Mr. CHURCHILL. Thank you.

Mr. WINN. I would like to point out one thing. Several members of the committee have ridden police cars from time to time, just to find out what really is going on.

Mr. RANGEL. You mean as defendants?

Mr. KEATING. I would suggest if the chairman would hear of any of us being picked up on that radio, he might come and bail us out.

Chairman PEPPER. Without objection, a part of the folder presented by Chief Churchill from Indianapolis will be inserted in the record.

[Mr. Churchill's prepared testimony, plus numerous pieces of literature available from the Indianapolis Police Department, follows:]

TESTIMONY OF INDIANAPOLIS POLICE DEPARTMENT, SUBMITTED BY WINSTON L. CHURCHILL, CHIEF

BACKGROUND INFORMATION ON INDIANAPOLIS PHILOSOPHY, AND THE PEOPLE WHO GUIDE HER

If Indianapolis has had any national reputation at all, it was one of association with the internationally known 500 Mile Race. Indianapolis has been traditionally a conservative city. Little in the way of agressive new thinking was taking place. The city was becoming segregated. Segregated in that not only were Blacks and Whites moving toward segregation, but Indianapolis itself was in the process of segregating itself from the other major cities of America.

As is true of such situations, many detrimental things began to happen. The more affluent moved out of the decaying inner-city to the suburbs, just outside the city Corporate Limits. The most precious resource on any community was becoming depleted as the youth began to leave for cities offering more promising futures. Cities which had reputations for forward thinking, opportunity, and glamour.

As the suburban area began to increase in population and retail merchandising outlets, services to the suburban areas had to be increased. County and Township Government became overburdened, and their services began to overlap. Duplication of services left many without any at all. The tax base of the inner-city was slowly becoming depleted. A cancer of inner-city decay began to grow as homes and places of business were abandoned. Services to the inner-city merchants and residents began to suffer. Streets were becoming riddled with chuckholes, and garbage and trash was not being regularly removed. Police and Fire Services started to suffer. Aging equipment wasn't being replaced, and it was an open secret that promotions within the Police and Fire Departments could be bought!

The citizens of Indianapolis lost confidence in their government, and in their Police Department.

This was the situation in the mid 1960's.

In November of 1967 the people of Indianapolis changed the Party in power in city government.

A young businessman with a reputation for aggressive and innovative thinking was elected Mayor of the City of Indianapolis.

In January of 1968, Richard Green Lugar, (pronounced like the gun), the new Mayor moved into the gleaming 25th floor offices of the Mayor high atop the City-County Building—the only large new structure to be erected in Indianapolis in many a year. From this vantage point he could observe a city in decay.

Lugar was true to his word, change was indeed in the wind. Out went traditional thinking which had held Indianapolis back for so many years, and the public-be-damned attitude of the civil servants. Lugar came into office with a

plan of action which he proceeded to place into effect. He set his government up along the lines of a corporation structure, with himself as President and Chairman of the Board. And why not? If it would work well in the business community, it ought to work well in government.

Lugar set up his services to the community under appointed Department Heads who, could and would, be fired if they did not produce.

When it came to the Police Department, Lugar let it be known that no advance deals had been made with respect to who would be the next Chief of Police. In itself a departure from politics as usual. He invited those who were interested in the job to apply—but first they must meet his criteria. No outsiders were interviewed. Lugar wanted a man who had been on the Department, and had proven himself capable of leadership, both within the Department and in the community. Many were interviewed. All were asked to put into writing the Department as they saw it, what they would change, and their recommendations for the future of the Department.

Lugar was, and is, a man of advocacy. He surrounded himself with like minded men—each an advocate. His new Chief of Police was to be no exception.

Lugar's choice was Winston Churchill. Churchill was a man who had risen rapidly through the ranks to the rank of Lieutenant . . . and had come by it honestly through hard work. He was a nimble thinker, a man of experience, it would be hard to pull the Departmental wool over his eyes. Lugar liked the recommendations of his new Chief, and told him to move ahead—but to remain in close contact with the Mayor.

Churchill was acutely aware of the alienation of the community from the Police. If he was to succeed and survive as Chief he would have to recapture the confidence of the people in their Police Department.

How do you reverse years of distrust and outright hostility?

You begin by letting it be known that each policeman was now on his own merits. If he got into trouble it would no longer be swept under the rug. He would face a disciplinary hearing before his Chief, and that hearing was going to be open to the public and the news media. Supervisory officers, were also to be held similarly responsible for the performance of the officers under their command. And woe be to the man who was surly or disrespectful to a citizen.

Churchill hand picked his Deputy Chiefs. Each was carefully chosen for ability and command leadership. Churchill's philosophy closely paralleled the Lugar concept that if you don't produce, you were fired.

In the early months the new chief and his deputy chiefs set out to reverse the trend. Something that couldn't happen overnight.

Churchill proved a most able public speaker—quick on his feet. He began accepting speaking engagements whenever possible. He took his story to the community. Even today, almost five years later, he seldom has a day without some sort of public speaking engagement. Realizing the value of this approach, Churchill encouraged his Deputy Chiefs and Branch Commanders to do likewise . . . and gradually the story of change in the Indianapolis Police Department began to be told.

New police began to evolve, with the Mayor and his Chief in close communication. Ever so slowly the community began to react in a positive way toward their police. A women's organization was formed to assist in carrying the message. The Women's Crusade Against Crime was born. The women got into the spirit . . . they rode in patrol cars . . . got to see first hand the life and problems of the policeman. They raised funds to enable the Department to publish helpful booklets on a wide range of subjects. Everything from how to protect yourself and your home to how to describe a subject in police terminology. Citizens were openly encouraged to listen to the local police radio broadcasts. If they didn't understand the police codes, Churchill mailed out code cards to help them understand. (To date some 20,000 code cards have been mailed out and or given out since the first of the year).

The local news media perceived the changes in the Department and made editorial comment in favor of the changes. No longer was it the thing to do to deride the police. Now they were boosting the projects, and the programs of the Department. Encouraged by this the Chief and the Mayor began plans for groundbreaking the pathfinding in Law Enforcement.

Some of the successful programs to come from this new thinking have been:

The Indianapolis Take Home Patrol Car Plan. Under the plan the men of the Operations Division and the Traffic Division were each assigned a car which was to be in their care alone. They were to use it on and off duty. Take care of it, and be on call even when off duty. This Plan has saved the taxpayers of Indian-

apolis some $500,000 a year. Crime has gone down and the people are seeing more police cars on the street 24 hours a day, every day of the year.

The Citizen Observer Program. Under this program, citizens of legal age are invited to ride with a patrolman for a few hours of his duty time. To date since this was begun in 1968 some 5,500+ citizens have ridden in Patrol Cars. Young people are frequently the most changed following such an experience. They begin openly hostile to the patrolman, and almost without exception end the evening as a friend. The most frequent comment from all riders is something like . . . "I wouldn't have your job for a million dollars!"

A public affairs section was formed to work with P.T.A.'s and P.T.O.'s Scouting, Neighborhood Organizations and School Principals. The Officer Friendly Program was begun to involve the policeman in the kindergarten and lower grades of all Indianapolis Schools. Eventually funding was provided by the Sears Foundation.

The Indianapolis Police Department now makes as many public speaking engagements as possible. This year in the continuing effort to take the story to the public, they designed and produced an exhibit covering police work, history, narcotics and dangerous drugs, a working patrol car, two motorcycles, and many many items of a curious nature too numerous to mention here. Four officers from the Department travel with this exhibit, one a policewoman, to answer questions, and to promote the police community relations situation. To date the exhibit has made two public appearances, and has been enjoyed by well over 20,000 of the citizens of the city.

The response of the average citizen has been most heartening. The image of the policeman in Indianapolis has improved, and with it the policeman's self esteem. Children once again look upon him as a friend and no longer fear him. Citizen cooperation with police is reaching an all time high. Never before has the Department so enjoyed the relationship with the people it now has.

The situation of the 1960's has been reversed. Crime has gone Down! The people have helped us do it.

Indianapolis has enjoyed 26 straight months of crime reduction. A total reduction of 26% over the past two years. The Homicide Branch cleared 100% of the murders and killings assigned to it this past year . . . a record not achieved by any large city in recent memory.

The street crime and home burglary situation is on the decline. Streets in Indianapolis are getting safer at night with each passing week. Nightlife is returning!

Note. During the period from 1970 to 1972 we have had a reduction of 9,788 crimes or a 26-percent crime decrease comparing 1970 to 1972.

CRIME ALERT

Indianapolis Crime Alert was organized February 17, 1967, to give citizens an opportunity to work with the police in stopping crime.

The Indianapolis Police Department and the Indianapolis Star cooperated in organizing the program which enables citizens to call an emergency telephone number, 633–2811, to report crimes in progress or suspicious activities.

The emergency number is published each day on the front page of the Indianapolis Star and the Indianapolis News.

As soon as a police dispatcher receives a crime alert call and is given the emergency information, he dispatches police cars to the scene.

Many times in the six years of the program's existence arrests at the scene of a crime have been attributed directly to Crime Alert calls by alert citizens.

When the program was unveiled at a meeting of business, civic and law enforcement leaders, hundred thousand copies of Crime Alert pamphlets supplied by the Indianapolis Star were distributed.

Pamphlets and billfold size cards gave information on "How to Describe a Suspect".

Requests for the information flooded the Indianapolis Police Department and The Indianapolis Star from individuals, businesses, civic organizations, schools and churches.

Millions of cards and pamphlets since have been distributed by the Police Department.

Hundreds of two-way radio-equipped vehicles operated by utilities joined in 24-hour Crime Alert participation.

Also, a special Crime Alert post office box was set up in 1967 so persons with detailed information on crime that did not require immediate police action could write it down and mail it to the police.

Tips by mail to Crime Alert have resulted in solution of many crimes.

Response to Crime Alert was termed "unbelievable" by a policewoman who is one of several police personnel who have manned telephones since Crime Alert began.

"I believe Crime Alert has drawn the public and police into a closer relationship," she observed of the program.

She noted that a majority of persons "take Crime Alert very seriously . . . only a few crank calls".

Inquiries have been received from many cities and newspapers of the technique of Crime Alert.

As a result, similar programs have been inaugurated throughout the Nation.

J. Edgar Hoover lauded the program soon after it was launched and offered suggestions to increase its effectiveness.

A feature of the program is that tipsters are not required to identify themselves.

HOW TO DESCRIBE A SUSPECT

You as a law abiding person desire to live in a community that is safe for yourself and your loved ones. You want your property protected...If you know of Criminal activity let us know.

Certain information may best be communicated by addressing a letter to...

Teen-agers want to know . . .

WHAT IS THE LAW?

Published by the Youth Division of
The Anti-Crime Crusade

sponsored by

The Indianapolis News
307 North Pennsylvania Street
Indianapolis, Indiana 46206

Telephone: 633-9060

Why This Booklet?

This booklet has been edited by teen-agers, in cooperation with Indianapolis and Marion County law enforcement officials.

The purpose of the book is to provide better understanding of the laws which affect young people and to emphasize the importance of law enforcement and civic responsibility.

Again and again, youths in the court room tell the judge, "But I didn't know I was breaking a law."

"I didn't know it was an offense to be truant . . .

"I didn't know it was an offense to run away . . .

"I didn't know it was an offense to swear . . .

This booklet points out that there are laws—not "bad" laws and "good" laws, but laws. Personal responsibility and respect for the law are necessary in order that millions of people can live together harmoniously.

Many young people have asked for the information in this booklet. Judges, the Marion County Prosecutor, the Indianapolis Police Department, the Marion County Sheriff's Office, and the National Citizens Council on Crime and Delinquency have endorsed the publication.

We believe the booklet will be valuable to young people and to their parents.

The Youth Division of the Anti-Crime Crusade

The Youth Division is one of 14 areas of work in the Indianapolis Anti-Crime Crusade. Thirty women launched the Crusade in March, 1962. There are now more than 50,000 volunteers who tackle the widest possible field of crime prevention. They have been able to get more than 2,000 dropouts back in school without tax funds. They are aware that crime costs as much as national defense; they are concerned with the effect it has on people—the fear of a dark street, the unwillingness to trust a stranger, the dread of a knock at the door.

The Youth Division is open to high school and junior high school youths throughout Indianapolis and Marion County. Last year teen-agers in the Crusade edited a booklet called, "Directory for Teen-Age Volunteers."

Copies of this and the following booklets are available by writing to the address on the preceding page: self-protection, how to get dropouts back in school, how to light up a city, court watching, church volunteer service.

Who Is A Juvenile?

Under Indiana law, a juvenile is any boy or girl under the full age of 18 years. If you are arrested, you will be charged with being a delinquent child by virtue of . . . and then the crime with which you are charged will be spelled out.

As a juvenile, you are subject to all Indiana laws defining crime, and any act that would be a crime for an adult is also a crime for you. You will normally be tried in juvenile court, unless you commit a crime for which the penalty is death or life imprisonment. Crimes in this hideous category are treason, murder, and being an habitual criminal. You may, however, be tried in an adult court for traffic offenses and for any violation of the law which is so serious that the juvenile court judge decides you deserve to be tried as an adult.

Let's Define "Habitual"

Now, before we begin the recitation of the law, let us understand one word that will be used again and again. "Habitually" as used in Indiana law and interpreted by Indiana courts means three times. For example, it is a crime for a child to be habitually disobedient, to be ungovernable or incorrigible, to be habitually beyond the control of his parents or guardian. Sometime when your mother says, "If you do that one more time, I'll call the police," you might remember that she can, and some parents do simply turn their children over to juvenile court to be handled as the court sees fit.

Truancy, Running Away from Home

Being habitually truant (remember, three times) is a crime. When the school attendance officer or your home room teacher or the principal calls home to find out if you're really sick, she's not being nosy; she's enforcing the law.

It is a crime to run away from home—habitually, that is. The law says you may not leave home without just cause and without the consent of your parents, guardian, or other custodian. Juvenile courts have had cases of frighteningly young children who run away. Don't. Home's a pretty good place to be able to come back to.

Employment Restrictions

There are occupations, too, which are in violation of the law for juveniles. Your school guidance counselor will be able to help you with this one. There are limitations on the hours you can work, the kind of machinery you can operate, the places you can work.

Choose Associates Carefully

Associating with immoral or vicious persons is also against Indiana law. That Halloween stunt you watched your friend pull off may land you in jail for associating with the wrong kind of person. You are free to choose the persons with whom you spend your time. Choose carefully; they may change your life.

What's Off Limits

Places whose existence is forbidden by law are off-limits to juveniles as well as adults. There's a special section in the juvenile law that says you can't go into after-hours taverns and the like. You may think it sounds like fun; but what about that permanent record you'll have to carry?

Begging, receiving or gathering alms is officially frowned upon. No reputable organization needs to have children on street corners pleading with passersby for gifts or donations.

Two companion parts of the juvenile law are mostly for your safety. They make it illegal for you to be found about railroad tracks or yards, to jump on or off trains, or to enter a car or engine without lawful authority. The companion section for trucks forbids you to be found in or about truck terminals, including the freight docks and garages, or to enter a truck or trailer without lawful authority.

Well Chosen Friends—Important to Youths

Vile Language, Liquor

Using intoxicating liquor as a beverage or using narcotics without the direction of a doctor should have been so thoroughly discussed by now that you'd never consider doing either. Harmful habits, they are; death traps they frequently become.

Associating with persons you know to be thieves or maliciously vicious can also cost you a trip to the police station. America's legal system has always held the associates of a criminal to be equally responsible for the criminal's acts. You cannot run around with a person who wilfully violates the law without eventually violating the law yourself. Again, you are free to choose the the people with whom you spend your time.

The other side of the coin makes you responsible if you wilfully, deliberately harm someone else; the statute refers to this as wilfully endangering the morals of himself or others. If you encourage someone to commit a crime, help him do it, even suggest that it can be done—you may be on your way to jail.

Listening,
Learning

Indecent? Immoral?

The catch-all part of juvenile law says you may be judged to be a delinquent child if you are guilty of indecent or immoral conduct. What is indecent or immoral conduct? Acting in any way that goes against what most of the people in your community think is right and proper. The sole decider of this section is the juvenile court judge, elected by your parents, and therefore reflecting the thinking of the majority of the community.

There's a Curfew Law

One law always good for an argument is curfew. Once again, remember it is not up to you or the polieman to decide whether a law is fair. If you don't like the law as it is now, tell your legislators who can change it. Curfew says you're supposed to be home between 11 p.m. and 5 a.m. unless you're just coming home after attending a religious or educational meeting or a school function sponsored by a church or school. There is very little you can do after 11 o'clock that you can't do just as well before if you put your mind to it.

Theft, Shoplifting

In 1963, Indiana's General Assembly put into one law, the Offenses Against Property Act, all the varieties of theft from grand larceny through vehicle theft and embezzlement. One category of theft of which you should be particularly aware is shoplifting. Stealing something from a store may sound like an exciting dare, but remember the maximum penalty for stealing that sweater could be five years in prison; it would take less time to earn the money and buy the sweater. A concentrated drive on shoplifting in Marion County has caught many juveniles; are you next?

Don't Hitchhike!

If you hitchhike, you are violating a city ordinance and can be picked up by police. Youths who hitchhike are endangering themselves and motorists by darting into the street to seek rides. Another aspect concerns protection of juveniles; it is unwise to get into a car with a stranger. Therefore, the ordinance: Don't hitchhike! It is unlawful for a person to stand in a roadway for the purpose of asking for a ride.

Think! Don't Crash a Party

If you crash a party, you are subject to arrest for disorderly conduct, refusal to leave or creating a disturbance. You also may be charged with trespassing.

Alcohol, Cigarettes

It is unlawful for any person to sell or give any alcoholic beverage to a juvenile, or for a minor (anyone under the age of 21) to buy or possess any alcoholic beverages. It is a crime for a minor to misrepresent his age in order to buy liquor.

It is unlawful for a minor to buy cigarettes.

Ever Hear of Stolen Car?

If you "borrow a car to go for a ride," you can be charged with the crime of theft in that you knowingly, unlawfully and feloniously obtained and exerted unauthorized control over a certain vehicle.

Carrying Concealed Weapon a Crime

It is a crime to carry a concealed weapon – a springback knife, a firearm of any kind, a spring or air gun designed to shoot BB shots or any other missile, ammunition of any kind, whether containing an explosive or not, for use in any of the weapons mentioned above.

95-158 O—73—pt. 1——13

If You Are Arrested

If you are arrested by the Indianapolis police, you will be taken to the Juvenile Branch, Indianapolis Police Department. Your parents will be notified at once. If your parents are not at home, or if a qualified adult (guardian) cannot be located, you will be taken to the Marion County Juvenile Center to await appearance of your parents. You may be released to your parents, with guidance on conduct, or you may be released to them pending your appearance in juvenile court. An information sheet is sent to Juvenile Court and a time is set for your appearance there before the Marion County Juvenile Judge or a referee (attorney named by the Juvenile Judge). Release to parents is not possible if you are charged with a crime of violence. For this charge you will be taken to the Juvenile Center, or if you are charged with murder, you will be taken to the Marion County Jail.

If you are arrested by the Sheriff's Department, you will be taken to the Sheriff's office, where you will wait until your parents are notified, and go through a process. similar to that used by the Juvenile Branch of the Police Department. The information sent to Juvenile Court is set out on a "petition."

You can be sent to the Indiana Boys School or the Indiana Girls School by the Judge of Juvenile Court, or referee before whom you appear.

A Criminal Record Is Forever

A Single Act of Recklessness Can Spoil Your Entire Life

A person who has been convicted of a crime in a criminal court has a criminal record for the rest of his life. The punishment ordered by the court, such as prison or a fine, is only one of the consequences of a criminal conviction.

Anyone with a criminal record will find it harder to make and keep friends or get a good job.

Many businesses require employes to be bonded, and insurance companies usually refuse to bond anyone with a criminal record.

Civil service and other government jobs may also be closed to those convicted of crime.

A driver's license may be refused on the basis of a criminal record. No car or no license closes the door to many jobs.

The Army, the Navy, and the Marine Corps will usually not give a commission to anyone who has been convicted of a crime.

A person convicted of a crime cannot be a lawyer.

A person who has been convicted of a felony loses his rights and cannot vote in any election unless the governor restores these rights.

Youth and The Law

The laws that affect you are these:

Vol. 4, Burns Indiana Statutes, Part 1, Cumulative Pocket Supplement, Sec. 9-3204 (1963).

"Delinquent Child" defined—The words "delinquent child" shall include any boy under the full age of eighteen (18) years and any girl under the full age of eighteen (18) years who:

(1) Commits an act which, if committed by an adult, would be a crime not punishable by death or life imprisonment:

(2) Is incorrigible, ungovernable or habitually disobedient and beyond the control of his parent, guardian, or other custodian:

(3) Is habitually truant:

(4) Without just cause and without the consent of his parent, guardian, or other custodian, repeatedly deserts his home or place of abode:

(5) Engages in an occupation which is in violation of law:

(6) Associates with immoral or vicious persons:

(7) Frequents a place the existence of which is in violation of the law:

(8) Is found begging, receiving or gathering alms, whether actually begging or under the pretext of selling or offering anything for sale:

(9) Unaccompanied by parent, patronizes or visits any room wherein there is a bar where intoxicating liquors are sold:

(10) Wanders about the streets of any city, or in (on) or about any highways or any public place between the hours of eleven (11:00) o'clock P.M. and five (5:00) o'clock A.M. without being on any lawful business or occupation, except returning home or to his place of abode after attending a religious or educational meeting or social function sponsored by a church or school:

(11) Is found in or about railroad yards or tracks: or who jumps on or off trains: or who enters a car or engine without lawful authority:

(12) Is found in or about truck terminals, including freightdocks. garages, other buildings incidental thereto, or who enters a truck or trailer without lawful authority:

(13) Uses vile, obscene, vulgar or indecent language:

(14) Uses intoxicating liquor as a beverage, or who uses opium, cocaine, morphine or other similar drugs without the direction of a competent physician:

(15) Knowingly associates with thieves or other maliciously vicious persons:

(16) Is guilty of indecent or immoral conduct:

(17) Deports himself so as to wilfully injure or endanger the morals or health of himself or others.

(18) Deports himself so as to wilfully injure or endanger the person or property of himself or others (Indiana Acts 1945, Ch. 356, Sec. 4, Page 1724: 1959, Ch. 237, Sec. 1, Page 566; 1961, Ch. 274, Sec. 1, Page 622).

In addition, there are ordinances and other laws which directly affect juveniles.

Only about 2% to 3% of young people get into trouble —but the repeated problems caused by juvenile delinquents can affect an entire city—an entire county. There are no minor crimes. One crime is too many. One dropout is too many.

Inspector Edward C. Kemper Jr., Federal Bureau of Investigation staff of Director J. Edgar Hoover, was asked when he spoke recently in Indianapolis: "What can be done about juvenile delinquency?"

His answer was the following:

Open Letter To A Teen-Ager

What can we do....?
Where can we go....?
The answer is .... GO HOME!

Hang the storm windows. Paint the woodwork. Rake the leaves. Mow the lawn. Shovel the walk. Wash the car. Learn to cook. Scrub some floors. Repair the sink. Build a boat. Get a job.

Help your church, the Red Cross, the Salvation Army. Visit the sick. Assist the poor. Study your lessons. And then when you are through—and not too tired—read a book.

Your parents do not owe you entertainment. Your village does not owe you recreation facilities. The world does not owe you a living. You owe the world something. You owe it your time, and energy, and your talents so that no one will be at war or in poverty, or sick or lonely again.

In plain, simple words: GROW UP. Quit being a crybaby. Get out of your dream world. Develop a backbone, not a wishbone. Start acting like a man or a lady.

I'm a parent. I'm tired of nursing, protecting, helping, appealing, begging, excusing, tolerating, denying myself needed comforts for every whim and fancy, just because your selfish ego, instead of common sense, dominates your personality and thinking and requests.

"The only thing necessary for the triumph of evil is for good men to do nothing."

—Edmund Burke

MEASURING THE EFFECTIVENESS
OF THE
INDIANAPOLIS POLICE DEPARTMENT

FLEET PLAN

WINSTON CHURCHILL
CHIEF OF POLICE

MEASURING THE EFFECTIVENESS OF THE INDIANAPOLIS POLICE DEPARTMENT FLEET PLAN

AN
INDIANAPOLIS POLICE DEPARTMENT
PROJECT
BY

RAYMOND A. WALTON, JR.

December, 1972

Keeping in mind the primary objectives of any Law Enforcement agency, as well as its responsibilities to the citizens it serves, the Indianapolis Police Department is constantly on watch for new programs and ideas which will further these ends.

When programs meeting these criteria are initiated, only part of the task is complete. Following implementation must be surveillance, evaluation, and if deemed necessary, procedure changes or even the complete discontinuation, if the program is determined insufficiently effective.

The following document - only a part of the Department's continuing crime study and research program - was written in an effort to determine the effectiveness of the Indianapolis Police Department Fleet Plan.

The data from which the conclusions are made are presented in the tables at the end of the study so that any department interested in initiating a similar Fleet Plan program may better compare their statistics to those of the Indianapolis Police Department.

We feel that this Fleet Plan is better enabling us to meet our responsibilities to the Citizens of Indianapolis.

Winston Churchill

Chief of Police

TABLE OF CONTENTS

CHART INDEX

TABLE INDEX

SUMMARY

This study is intended to evaluate the Indianapolis Police Department's Fleet Plan. Under this plan each field patrolman was issued a marked patrol car to use full time. This included both on-duty and off-duty. The field Sergeants and Lieutenants were also issued their own personal marked patrol vehicle.

These officers may - and in fact are encouraged to - use their patrol cars while off-duty, but when doing so must maintain radio contact at all times so as to be available for emergencies which may occur in their immediate vicinity. The individual officers are responsible for the cleanliness of their vehicle, inside and outside, and must change their own flat tires when off-duty.

In return for this personal use of department vehicles, the department buys the vehicles, provides all preventive maintenance, including gasoline, provides all repairs, both mechanical and body, and pays for the insurance coverage.

This study is based on two types of analysis of data. One is comparing data before and after the inception of the Fleet Plan. The other is analyzing data covering a period of several years to indicate trends which may or may not be effected by this plan.

Following are the principle findings of this study.

95-158 O—73—pt. 1——14

Vehicle Costs

The initial cost of increasing the fleet size from 110 vehicles to 455 vehicles was $650,000, of which about $212,500 would have been spent on normal replacement. This puts the increased expenditure at $437,500.

Average annual vehicle replacement costs have increased about $50,000.

Average annual preventive maintenance/repair costs have increased about $317,000.

Insurance premiums have increased $52,000 a year.

Preventive maintenance/repair costs per vehicle dropped 17.3% in the first full calendar year after the Fleet Plan.

Visible Crimes

Due to a more complete and accurate reporting system going into effect in 1970, selected crimes - Robbery, Burglary, Larceny and Vehicle Theft - went up. However, the drop in these selected crimes in 1971 saved potential victims about a half million dollars. These crimes were selected because of their visibility from a patrol car and the deterrent factor which marked patrol vehicles can have on these crimes.

Accidents

Although the total number of accidents involving marked patrol cars increased slightly, on an accident-per-vehicle rate, there was a decrease from 3.1 accidents to 1.8 accidents per marked vehicle per year.

Reported accidents from citizens were already on a downward trend before this plan, but during the full calendar year after the Fleet Plan the total reported accidents dropped an actual 10.6%. This was 7.3% more decrease than indicated by a projected trend. On a per accident cost basis in the three general categories of fatalities, personal injuries, and property damage accidents, this amounted to a savings of about .7 million dollars.

Citations for Moving Traffic Violations

Citations issued for moving traffic violations increased 48.8% in 1970 over 1968.

Manhours of Street Exposure

There is a definite increase in manhours of street exposure without having to hire more personnel. The one measurable facet of this is an additional 1.5 hours per man per day of patrol time. This is the equivalent of an additional 73.8 patrolmen at an annual salary of $635,000, not including any fringe benefits.

Morale

No documentable facts were uncovered, but the indications point to an upward trend.

CHAPTER I

INTRODUCTION

The Indianapolis Police Department Fleet Plan is the issuance of marked patrol vehicles to each officer in the Operations Division who is assigned to the field. This includes beat Patrolmen, field Sergeants and field Lieutenants. Each of these men has full use of his own marked patrol vehicle on a 24-hour basis, including on-duty and off-duty time. These officers are encouraged to drive their patrol vehicles when off-duty, but must observe certain rules which were established to govern their conduct when doing so.

When the Indianapolis Police Department implemented its Fleet Plan, expectations of resulting effects were high. The areas of expectation are pursued in this study in an attempt to determine the "cost vs benefits" effectiveness of the Fleet Plan.

Some of the data collected lends itself to a comparison of the facts immediately before and after full implementation of the plan. Other data presented covers a period of years indicating a trend which, in some cases, changes during the full calendar year following the plan going into effect.

The Indianapolis Police Department started issuing the new vehicles in June of 1969 and by August the Fleet Plan was in full swing. However, due to the available data being grouped by calendar years, it was decided to use calendar years for this

study rather than fleet years, which would have been from August to August.

The general areas pursued by this study are:

1. Vehicle costs
2. Visible Crimes
3. Traffic Accidents
4. Manhours of Street Exposure
5. Traffic Citations
6. Morale

CHAPTER II

AUTHORIZATION - RESTRICTIONS - RESPONSIBILITIES

In order to implement the Fleet Plan, a City Ordinance had to be passed authorizing the purchase and financing of these fleet vehicles. This included not only the maximum amount of money to be spent but complete and precise vehicle specifications as well.

The Indianapolis Police Department then issued a Special Order covering the maintenance, care, and responsibilities of driving the city-owned marked patrol vehicle. The maintenance, including gasoline and oil and all repairs, is the responsibility of the Department. Each officer, however, for presenting his car at the city garage in order to receive this work. Each officer is also responsible for the cleanliness of his vehicle, inside and outside.

When an officer is driving his vehicle off-duty, non-sworn or civilian personnel may ride in the vehicle but shall not drive it. At all times, however, the officer driving the car is responsible for the actions of any "non-official" passengers. Each officer is required to stay in radio contact anytime he is in the vehicle and must respond to any emergency in his immediate vicinity. No vehicle may be taken outside of the county without proper permission.

CHAPTER III

VEHICLE COSTS

Initial Cost

The greatest single expenditure of the Fleet Plan was the initial cost of purchasing the vehicles. Prior to this plan, the Operations Division maintained about 110 marked vehicles[1*], replacing about 85 of them each year[2].

To put the Fleet Plan into effect, 320 new vehicles were purchased. For this purpose, the city council appropriated $650,000.[3]

Replacement Cost

The department expected the new fleet vehicles to last about three times as long as they did under the former plan. This expectation was realized and in the late spring of 1972 another fleet purchase took place. This time 314 new vehicles were purchased at a per unit cost of $2912.27.[4] Considering the former replacement rate of 85 vehicles per year, then the new Fleet Plan shows an average annual replacement rate of 105, or just 20 more per year than before the new Fleet Plan. Since the cost of vehicles varies from year to year, an arbitrary amount of $2500.00 per unit is used to compare the before and after the Fleet Plan cost of vehicle replacement.

At the replacement rate of 85 vehicles per year at $2500 per vehicle, the cost of vehicle replacement prior to the Fleet Plan was about $212,500 annually. The after-the-plan

*Superscripts refer to the corresponding number in the Bibliography

rate being 105, puts this amount up to $262,500 or an average annual increased expenditure of about $50,000.

Preventive Maintenance/Repairs

The total funds disbursed by the Indianapolis Police Department to the city garage furnished the basis for analyzing this area of study. The city garage provides all maintenance and repairs for the department's vehicles. The categories covered under these funds are:

1. Parts and Supplies - including gasoline and oil
2. Labor
3. Overhead
4. Outside Contractual Services

The amount disbursed (Table 1) went from $127,103.90 in 1968 to an annual average of $444,051.18[5]. This is an increased annual expenditure of $316,947.28.

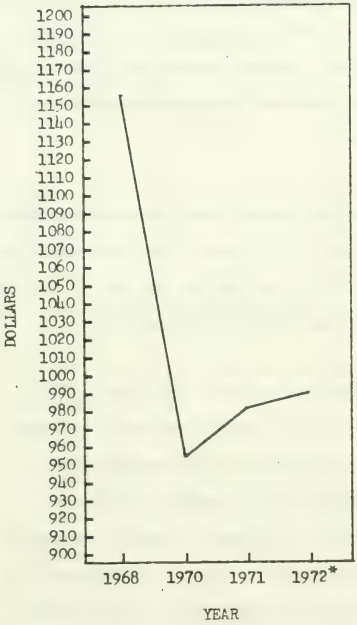
An interesting point brought to light while checking the garage disbursements was the per vehicle cost (Chart 1). The preventive maintenance/repair cost per vehicle in 1970 dropped 17.3% from 1968. The increase in per vehicle cost of 2.8% in 1971 and .9% in 1972 seems to reflect the normal increase in the cost of everything. The fact that the per vehicle cost decreased this much and has fairly well held it for three years is reflected in the vehicles lasting for three years.

Insurance Costs

The Indianapolis Police Department carries liability insurance on each of its vehicles. This insurance covers other

CHART 1

PREVENTIVE MAINTENANCE AND REPAIR COSTS PER VEHICLE FOR THE INDIANAPOLIS POLICE DEPARTMENT FLEET



SOURCE: INDIANAPOLIS POLICE DEPARTMENT BUDGET RECORDS

*THE FIGURES FOR 1972 ARE PROJECTED FROM THE STATISTICS FOR THE FIRST NINE MONTHS OF THE YEAR

drivers, passengers and vehicles for both personal injury and repair, should the driver of a police vehicle be involved in an accident in which it is determined that the officer is at fault. The police vehicles are repaired in the city garage at the Police Department's expense.

The cost of this insurance coverage in 1968 was $100 per vehicle and was raised to $137 per vehicle after implementation of the Fleet Plan.[6] With the increase per vehicle and the greater number of vehicles, this represents an increase of $52,000 for the after-the-plan costs.

Car Washes

Prior to this plan the marked patrol vehicles were washed about once a week at a cost of $1.25 each. Under the Fleet Plan each officer is responsible for washing his own car - or having it washed. This is a savings of about $7,000 annually.

Snow Tires

The department formerly furnished snow tires for each marked patrol vehicle. This is no longer true under the Fleet Plan. If an officer wants snow tires on his personal patrol car, he must furnish them at his own expense. This is not a savings, however, because the department now equips the patrol vehicles with positraction type rear axles. The savings on the snow tires and the cost of the special axle just about cancel each other out.

Miscellaneous

Batteries and brakes on the vehicles used twenty-four

hours a day, seven days a week, averaged lasting about six months. Under the Fleet Plan the average life of both of these items has increased 200% to eighteen months.

According to the Indianapolis Police Department Vehicle Inspection records, the breakdown of how well the officers are taking care of their personal police cars is as follows:

one third took average care

one third took good care

one third took excellent care

CHAPTER IV

VISIBLE CRIMES

One of the higher expectations of the result of more marked patrol cars on the street was the deterrent factor in crimes which may be visible - and consequently somewhat preventable - from a patrol car. The crimes selected which fulfill this criteria are Robbery, Burglary, Larceny and Vehicle Theft. Charts 2 through 5 illustrate the number of crimes reported to the Indianapolis Police Department for 1964 through 1972.[7]

As can be seen in these charts, there was a substantial increase in reported crimes in 1970, which was the first full calendar year after the initiation of the Fleet Plan. This increase may well be due to the department changing its reporting system to be more complete and accurate. This change involved not only using more of the computer's potential, but also coming more closely in line with the F. B. I. Uniform Crime Reporting system.

Another factor to be considered is the national average. As shown in Tables 3 through 6, the total number of selected crimes showed a substantial increase nationally.[8] To state this another way, also listed on these tables is the percentage increase of each of the four selected crimes for several years. This, too, illustrates that the national average was on the rise in 1970.

Due to these factors, 1971 is used in an attempt to de-

termine the effectiveness, if any, of the additional exposure of the marked patrol cars. Again, looking at Charts 2 through 5 it is obvious that the decrease in these visible crimes is notable. It is felt by this writer that the increased exposure of marked police vehicles is primarily responsible for these decreases.

To measure this decrease in reported visible crimes, it was necessary to translate it into dollars. This was done by using the total value of stolen items as listed in the Indianapolis Police Department's annual statistical report. Using this amount in each category along with the number of reported crimes listed in each category, an average dollar-value per crime was computed. Table 7 shows the method of computation which took into consideration the value of stolen property which was recovered.

The final total dollar-value for each category of crime is illustrated in Chart 6 which indicates the savings to the citizens of Indianapolis in 1971 due to the decrease in the selected visible crimes. Figure 1, which illustrates the per crime savings, also shows that the total savings is close to a million dollars.

Robbery	$ 12,038.46
Burglary	$443,823.20
Larceny	$220,227.02
Vehicle Theft	$255,937.10
Total	$932,025.78

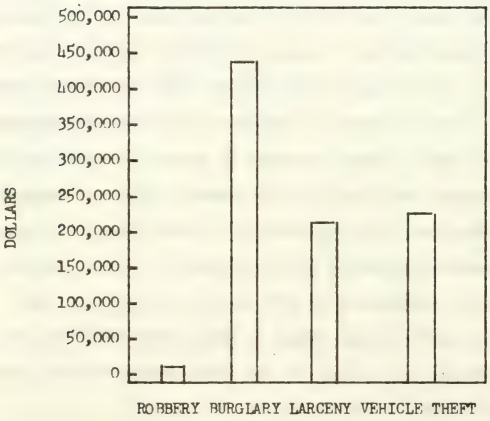
(Figure 1)

Although no other major change in the Indianapolis Police Department's procedures came to light during this study, it is

95-158 O—73—pt. 1——15

CHART 6

MONEY SAVED BY THE CITIZENS OF INDIANAPOLIS
IN 1971 DUE TO DECREASE IN VISIBLE CRIMES



SOURCE: INDIANAPOLIS POLICE DEPARTMENT
ANNUAL STATISTICAL REPORT - 1971

recognized that these are probably other variables involved which are not explored here. Due to this, it will be conservatively estimated that only about fifty percent of the decrease in selected visible crimes is attributable to the Fleet Plan.

This brings the amount saved down to a probably more realistic figure of about .5 million dollars. This amount in itself would almost cover the original investment of the additional vehicles for this Fleet Plan.

One other possible variable which could be part of the answer to the decrease in these crimes is the national average. It was thought that if the national average had also dropped noticeably in 1971 that whatever caused this drop could have also contributed to the decrease in Indianapolis. However, a quick look at Tables 3 through 6 show that the national average not only did not decrease but in fact substantially increased.[9]

For a comparison of the national average in 1971 to Indianapolis in 1971, Chart 7 very clearly shows that Indianapolis was in much better shape statistically. Figure 2 shows the difference between Indianapolis and the national average.

Crime	Nation. Avg. Increase	Indpls Decrease	Difference
Robbery	+2%	-25.1%	+49.1%
Burglary	+14.5%	-25.3%	+39.8%
Larceny	+14%	-31.8%	+45.8%
Vehicle Theft	+04%	-37.7%	+41.7%

(Figure 2)

Therefore, the decrease in Indianapolis can not be considered indicative of the national average. In fact, the differ-

CHART 7

SOURCE: F.B.I. UNIFORM CRIME REPORT - 1971 AND INDIANAPOLIS POLICE DEPARTMENT ANNUAL STATISTICAL REPORTS - 1971, 1970

ence could be computed on the same dollar-value per crime basis as before and probably show a savings of well over a million dollars. However, it seems that the method already used for computing the savings is a much more accurate one, which, to reiterate, saved the people of Indianapolis about a half-million dollars in 1971.

CHAPTER V

ACCIDENTS

In a study of this type, two general categories of accidents must be considered. One is accidents involving vehicles of the Indianapolis Police Department fleet and the other is reported accidents from the community.

Fleet Vehicle Accidents

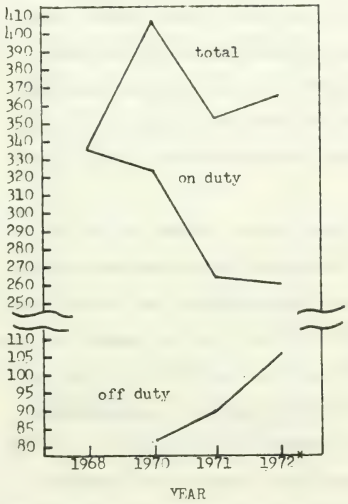
Accidents involving police vehicles have always been an area of concern to the administrators of a police department, and with the coming of the Fleet Plan has become more so to the Indianapolis Police Department Officials. A superficial look at the total accidents involving marked patrol cars[10] (See Chart 8) shows the cause for the increased concern. Although the total number of accidents dropped in 1971, it shot up in 1970 and headed back up in 1972. At no time has the number of accidents dropped below what they were before the start of the Fleet Plan.

The cost of these accidents is difficult to determine since the City's insurance does not cover the repair of the City-owned vehicles. In addition to this, a settlement from a citizen's insurance company does not come back to the Indianapolis Police Department to pay for repairs but, instead, is put into the City's General Fund. This means that both under the old and the new plan, the Indianapolis Police Department loses money from its budget.

The superficial picture, however, does not point out an interesting fact which does come to light when the fleet ve-

CHART 8

MARKED PATROL CARS OF THE INDIANAPOLIS POLICE DEPARTMENT INVOLVED IN ACCIDENTS



SOURCE: INDIANAPOLIS POLICE DEPARTMENT'S ACCIDENT REVIEW BOARD RECORDS

*THE NUMBER OF ACCIDENTS FOR 1972 ARE PROJECTED FROM THE STATISTICS FOR THE FIRST NINE MONTHS

hicle accidents are more closley scrutinized. Chart 8 also breaks down the accidents into two sub-categories:

1. On-duty accidents
2. Off-duty accidents

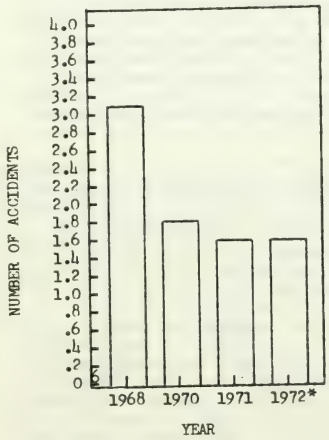
When these sub-categories are studied, it can be seen why the total number of accidents is increasing: the off-duty accidents are the cause. Since marked patrol cars were not generally used off-duty prior to the Fleet Plan, the off-duty accident rate starts in 1970, and steadily raises. The on-duty accidents, however, run just the opposite. They have declined since 1968 at a more than casual rate. Following the present trend of on-duty and off-duty accidents, they should be about the same in a few years.

This writer feels that in order to stem the tide of off-duty accidents, the Indianapolis Police Department will have to apply more stringent restrictions on the off-duty driving of marked patrol vehicles. This is not to suggest that they not be driven off-duty, because this would kill the "more exposure - less crime and accidents" theory. It is recommended, however, that the types of errands on which they should not be driven off-duty be more explicitly stated by the department. It would then necessarily follow that an officer involved in an off-duty accident who was found guilty of violating these restrictions must be more surely disciplined.

Still another way of looking at these accidents is on an average accident per vehicle basis. Chart 9 shows the average

CHART 9

AVERAGE NUMBER OF ACCIDENTS PER YEAR
PER MARKED PATROL VEHICLE



SOURCE: INDIANAPOLIS POLICE DEPARTMENT ACCIDENT REVIEW BOARD RECORDS

*THE FIGURE USED FOR 1972 IS PROJECTED FROM THE STATISTICS FOR THE FIRST NINE MONTHS

accident per vehicle rate before and after the plan. Since each car is - in theory - only on-duty one third as much as it was previously, this exposure factor was included in computing the accidents per vehicle rate. The actual average accident per vehicle rate was as follows:

1968	3.1 accidents per vehicle
1970	.9 accidents per vehicle
1971	.8 accidents per vehicle
1972	.8 accidents per vehicle

However, under the Fleet Plan, the marked patrol cars are on the street much more than the former seven and a half hours. For one eight hour shift they are on the street about nine hours considering travel-time from home to the roll-call sight and back home again.

They are also on the street on the officer's day off for preventive maintenance, repairs, court, inspections and other errands of a personal nature. Therefore, it is thought that each car is moving on the street only about half as much as it was before the plan. Using this as a measure, the average accidents per vehicle were doubled, arriving in the amount shown in Chart 9. Although there must be an overall increase in the total cost of repairs due to the increase in total number of vehicles, it is a point in favor of the plan that the per vehicle repair cost has decreased.

Reported Accidents from Citizens

This is another area of high expectations by the creators of the Fleet Plan. To measure the plan's effectiveness in this area, statistics have been analyzed for 1964 through 1972.[11]

These statistics (Table 9) indicate trends in the annual number of reported accidents in all categories. For this reason, the period of time covering the trend immediately before and after the start of the Fleet Plan is the period of time used here to study the plan's success or failure.

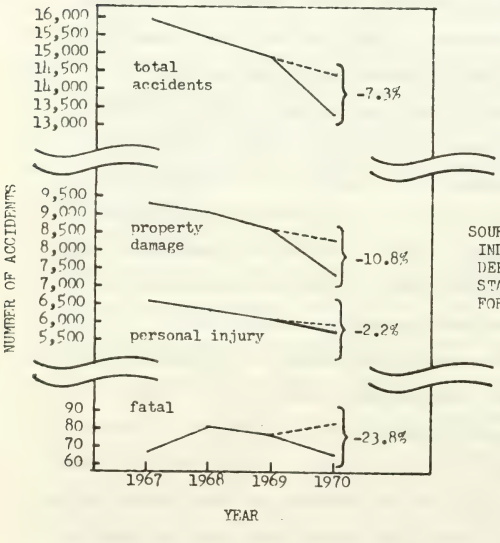
The year 1968 began a general downward trend of total annual accidents. Therefore, when it is said that the number of accidents decreased in 1970, the first full calendar year of the Fleet Plan, it does not give a true picture of what really happened. To get a true picture the already downward trend was projected for 1970. This, compared to the actual number of accidents in each category in 1970, could be compared as shown in Chart 10. The difference between the projected trend and the actual number of total accidents is 10%. In other words there were 7.3% less total accidents in 1970 than might have been expected through projection.

What this means to the citizens of Indianapolis is less money expended. Every accident, regardless of the type, represents money spent by someone. These expenditures include but are not limited to salary lost due to time off from work, car repairs, hospital costs and increased insurance premiums. While a continued decrease in the accident rate might not cause insurance rates to decrease, it should lessen the proability of them being raised.

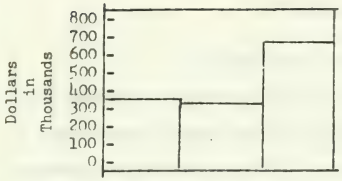
In terms of dollars, the difference between the projected number of accidents and the actual number was used to compute the savings.

CHART 10

TYPE AND NUMBER OF ACCIDENTS REPORTED TO THE INDIANAPOLIS POLICE DEPARTMENT FOR 1967 through 1970



SOURCE:
INDIANAPOLIS POLICE DEPARTMENT'S ANNUAL STATISTICAL REPORTS FOR 1967 - 1970



(Figure 3)

Figure 3 graphically illustrates the decrease into dollars saved. The translation into dollars was accomplished using the following information:[12]

Average $ 360 per Property Damage accident;

Average $ 2,300 per Personal Injury accident;

Average $38,700 per Fatality accident.

934 fewer Property Damage accidents than projected;

134 fewer Personal Injury accidents than projected;

18 fewer Fatality accidents than projected.

Therefore the gross amount saved is $1,338,040.

Here again, as in the visible crimes discussed earlier, it is recognized that there may be other variables involved. Although none were uncovered by this study, it is estimated that the net savings contributable to the Fleet Plan are about half of the total. This brings the savings to about .7 million dollars.

CHAPTER VI

TRAFFIC CITATIONS

Although there are about the same number of marked patrol vehicles on-duty at any given time, due to there being off-duty cars on the street too, the total number has increased. The anticipated effects of this additional exposure led the department to expect an increase in citations written for moving violations. It was thought that the additional citations written might help contribute to a decrease in the total accident picture.

From Chanter V it has been seen that the accidents have substantially decreased. Whether or not citations written for moving violations influenced this decrease is only speculation. It is known, however, that the number of citations issued for moving traffic violations jumped from 32,701 in 1968 to 58,624 in 1970.[13] This is an increase of 48.8%.

Although these citations were paid for by the citizens who received them, it is felt that this expense by the violators is far more than cancelled out by the monetary savings in accidents.

CHAPTER VII

MANHOURS OF PATROL TIME

What is being studied here is an increase of manhours on the street in marked patrol vehicles without an increase in the number of personnel. This area is much more difficult to pin down. It is hard to substantiate the true number of extra manhours received because it is not exactly how many off-duty hours the marked patrol vehicles are on the street. It is known, however, that the officers are using their marked cars off-duty. This is evidenced by the fact that from 20% to 30% of the accidents involving marked patrol cars happened during off-duty driving time.

For the purpose of this study two areas of additional manhours will be considered: the incalculable areas; and the calculable areas. The areas of activities which can not be measured anywhere close to accurately includes:

1. Off-duty officers responding to radio calls
2. Emergency mobilization
3. Non-report services performed

Off-duty Cars Responding to Radio Calls

Under the Fleet Plan, each officer is charged with the responsibility of remaining in radio contact anytime he is in his police car. It is well known within the department that this responsibility is - for the most part - being met. At the scene of an incident requiring several officers, it is commonplace to see some of them in civilian clothing, an indicator of their off-duty status.

Emergency Mobilization

Unfortunately, there will be occasions when it is necessary to mobilize off-duty personnal. Prior to this plan, an officer had to drive his personal car to headquarters, hope to find a parking place and then wait at headquarters for department transportation to the emergency area.

Under the Fleet Plan, when an officer receives the call to mobilize, he may also be told where to mobilize. This saves all of the time previously stated and puts the officer right into the exact location needed to deal with the emergency.

Non-report Services Performed

Non-report services are those services for which it is not necessary to submit a formal report. An example might be a citizen requesting information of some type. In an instance in which a citizen might normally have to telephone headquarters for a patrol car, the chances are good that the same citizen will see one of the many off-duty cars and be able to obtain the information from him. This would save the time of an on-duty officer thereby freeing him for other radio runs.

Measurable Area

The area of increased manhours which can be measured is that of extra time on the street immediately before and after the assigned on-duty time. As an example, an officer who was on the 8:00 A.M. to 4:00 P.M. shift did not leave roll-call until about 8:15 A.M. and left his beat to return the car to headquarters about 3:45 P.M. This amounts to a

street time of about seven and one-half hours.

Under the Fleet Plan, the same officer on the same shift will leave home in his marked police vehicle by 7:30 A.M. and will hopefully be back home by 4:30 P.M. This comes to about nine hours of street time which is an increase of an hour and one half per man per day. The number of additional manhours on the street gained per year amounts to 136,956. Translated into additional manpower, this is equivalent to hiring an additional 73.8 men.

This would require an initial budget increase of $542,430 for salaries alone. The average length-of-service time of the patrolman on the street is five years, according to the Planning and Research Branch of the Department. The salary for these additional 73.8 men at the five year level would be $635,060. This is a more realistic amount and still does not include items such as clothing allowance and other benefits or normal personnel costs.

Other increases in manhours on the street to be mentioned are travel time while obtaining preventive maintenance, repairs, inspections and car washes. Whereas all of these activities used to be accomplished while on-duty, they are now performed during off-duty hours. This puts marked patrol cars on the street and increases their exposure.

-30-

95-158 O—73—pt. 1——16

CHAPTER VIII

MORALE

This is one area in which there are no data from which to draw a conclusion. There are, however, indications tending to support the Fleet Plan from a morale point of view. The department has presented this Fleet Plan as having the effect on each individual officer who has the use of a full time police vehicle of the equivalent of a sizeable raise in pay. This contention is backed by the fact that the officers are encouraged to drive their police vehicles off-duty, thereby saving these officers the expense of driving their personal car or of buying a second car.

This premise appears valid, although it is not known just how much of a morale boost this is for those officers who have their own police vehicles. Conversely, it is not known whether or not this has any negative effect on those officers working in other divisions of the department who are not assigned their own police vehicles.

To reach a conclusion on the total morale factor - positive or negative - would require an in-depth study of all of the sworn personnel on the department.

CHAPTER IX

CONCLUSION

This study has attempted to analyze the Indianapolis Police Department's Fleet Plan. To arrive at a conclusion on a cost vs savings basis, as many areas as possible have been translated into dollar values. Following are the findings:

Costs	
Initial cost	$650,000
Minus the 255 cars which would have been purchased under the old plan in 1969, 1970, 1971	-$510,000
Net Cost	$140,000
Increase in Preventive Maintenance/Repairs	$317,000
Increase in cost of insurance coverage	$ 52,000
Savings	
Car Washes	$ 7,000
Decrease in Visible Crimes	$500,000
Decrease in Citizen's accidents	$700,000
Increased Manhours of Patrol time	$635,000
Total Costs	$ 509,000
Total Savings	$1,842,000
Difference	$1,333,000

Therefore, the result of this study is that the citizens of Indianapolis have thus far saved about 1.3 million dollars on the Indianapolis Police Department Fleet Plan.

Further, it is recommended that any police department considering conversion to a Fleet Plan should include in this conversion a pre-established method of collecting data for periodic analysis of the plan's effectiveness. In this way a department can either justify the continuation of a Fleet Plan or make necessary changes in the plan which will keep it an on-going and effective program.

Chairman PEPPER. I will ask Mr. Keating if he will be kind enough to present the distinguished witness.

Mr. Keating?

Mr. KEATING. Thank you very much, Mr. Chairman.

I appreciate the opportunity to introduce Carl Goodin and the other representatives from Cincinnati who will be talking about the Com-Sec program.

I might say this is the second opportunity I have had to introduce Chief Goodin, the first occasion being made when he testified on gun control, and he managed to come all the way to Washington with a kit full of guns and nobody stopped him until he got in the Rayburn Building.

Chief Goodin was selected to head the 1,000-member police force in Cincinnati at the age of 37, after progressing through the ranks of the police department. Having obtained a master's degree in police science and administration from Michigan State University, Chief Goodin has been thoroughly trained and educated for the position he now holds. During his tenure as police chief, Carl Goodin has implemented many innovative programs which have been accepted by all areas of the Cincinnati community.

He has also developed and earned a high degree of confidence and respect from the general public as he recognizes the many human values which are an integral part of police work.

I am confident that Chief Goodin will continue to bring honor to his chosen profession, to the city of Cincinnati, and to the Nation as a whole.

We also have with us today Mr. Carl Lind, whom I have known for more than 20 years, I suppose, in different capacities. He is the director of the program management bureau of the Cincinnati Police Department. Mr. Lind played a key role in the planning of the Com-Sec program, as he had overall responsibility for coordinating the effort within the police department to design a program that would be meaningful and effective.

Captain Howard Espelage is also with the committee this afternoon. He is the individual who commands police district 1, where the Com-Sec program has been fully implemented. Captain Espelage has overall control for the sectors which comprise that district. I am certain he can give the committee some helpful insight on how this program is functioning.

Officer Lawrence Panno and Officer Richard Brand are also with us today. They are two police officers who work daily in the Com-Sec program as policemen on the beat, These policemen are actually charged with the responsibility for making Com-Sec fulfill its mission.

Finally, Mr. Frank Yunger, president of Findlay Market Association, has come before the committee today to give us a better view of how Com-Sec has helped those businesses directly affected by this new and innovative form of police protection.

Mr. Chairman, I believe this distinguished group of men from Cincinnati will provide the committee with some valuable insight into the program, and although it still is in the beginning stages, it offers a great deal of hope for even better police protection in the communities throughout the United States.

I just want to say that, personally, I have been associated in a professional manner, social manner, with these men over an extended

period of years and I have the highest regard and respect for them and their ability.

Chairman PEPPER. Thank you very much, Mr. Keating.

Chief Goodin, we are delighted to have you and your able associates with us today.

Mr. Lynch, will you proceed.

Mr. LYNCH. Chief Goodin, I believe you have a statement to present to the committee. Would you do so now?

PANEL OF CINCINNATI (OHIO) POLICE DEPARTMENT OFFICIALS, ACCOMPANIED BY LOCAL BUSINESS REPRESENTATIVE:

BRAND, RICHARD L., PATROLMAN;
ESPELAGE, HOWARD, CAPTAIN;
GOODIN, CARL V., CHIEF OF POLICE;
LIND, CARL A., DIRECTOR, PROGRAM MANAGEMENT DIVISION;
PANNO, LAWRENCE C., PATROLMAN; AND
YUNGER, FRANK, PRESIDENT, FINDLAY MARKET ASSOCIATION

Statement of Carl V. Goodin

Mr. GOODIN. Thank you, Mr. Chairman, Congressman Keating, and distinguished members of the committee.

It is indeed an honor and a pleasure for us to appear before your committee to discuss the very important issue of crime.

We believe the basic question to be addressed in this brief discussion is: How can a police agency organize itself to deal more effectively with its primary responsibilities in the coming years? A very common reply given in the United States today is "team policing."

Among the many programs called team policing, the common denominator seems to be the assignment of a group of officers to patrol a given area. We need to go much beyond this simplistic statement in order to determine what there is in team policing which generates some ray of hope for the future of policing. Therefore, the focus of this paper will be to analyze the mechanisms which are present in some team policing models which would enable a police agency to more effectively deal with criminal victimization.

The objectives of police agencies are often described as being:

(1) Prevention of crime;
(2) Protection of life and property;
(3) Suppression of criminal activity;
(4) Apprehension and prosecution of offenders;
(5) Regulation of noncriminal conduct; and
(6) Preservation of the public peace.

We have found that we are not uniformly effective in attaining these objectives; crime is still increasing despite our best efforts. The President's Commission on Crime pointed this out and also indicated that we cannot attain these objectives so long as police agencies are expected to struggle with these problems in an atmosphere lacking the assistance of the greater community.

The Commission also suggested a solution—team policing. Team policing does not aim toward new objectives and goals—it is not just a public relations program—in fact, the goals and objectives of the police have stood the test of time. Team policing is designed to

recognize that the attainment of these goals cannot be accomplished by the police agency alone. Instead of operating in a vacuum, the community, social and other governmental agencies, and society itself, all play a role in carrying out the police function.

The aspects of team policing which are crucial for reducing criminal victimization seem to be:

(1) Consistent assignment;
(2) Unification of control, responsibility;
(3) Team decisionmaking power;
(4) Development of the police officer as a generalist; and
(5) Communications.

The consistent assignment of an officer to the same area allows the officer to become familiar with that area and its people to a much greater extent than is possible under a system of rotating assignments. Consistent assignment tends to breed a proprietary interest in the community on the part of the police officer once the officer recognizes that present actions may cause problems for him in the future.

By unifying the control, responsibility, and supervision in an area, the actions taken by police officers can become more consistent. By developing a consistent, high level of service, a major roadblock to communication is removed. We all too often find a high level of fear attached to situations with which we are unfamiliar.

Certainly citizens must experience great anxiety in their contacts with police officers, considering the current practices of many police agencies. Many different units, each having its own specialized function and its own line of command, may operate in the same small area in the same day.

As an example, in a very small geographical area, indeed, the citizens could be exposed to a traffic specialist, an investigator, a patrol officer, and tactical unit officer, all within the same timeframe.

Coupling a simplified control structure with team decisionmaking power enables the police to develop plans on the basis of local level information which should be more in keeping with community needs. This approach allows the officer on the street more latitude in dealing with the problems he faces. The more consistent performance and greater commitment developed through such a system should create an environment in which police officers and community residents can develop an effective alliance against crime.

Another element of this plan is the development of a generalist officer. A generalist should be capable of delivering the complete spectrum of police services, thus providing more effective followthrough concerning the delivery of those services. An officer who has had adequate training and experience should be able to carry out investigations of all types as well as provide the routine services expected of patrol officers.

All of the above factors should also tend to improve communications both within the agency as well as between its representatives and the community. The current structure of police agencies is a great deterrent to the effective communication of information which is of importance to the agency. By simplifying the chain of command and responsibility, the major obstacle to internal communication is removed. Furthermore, the policy agency itself must take the first step in improving its relations with the community. The development of stable lines of communications is of great importance in encouraging

mutual trust, understanding, and aid among the police and the community.

Providing an officer the opportunity to understand the community, allowing a group of officers to define their own problems, goals, and policies, developing a generalist notion of policing and improving communications should improve the outlook of policing in the future.

Perhaps none of this discussion is new to any of us, but we must begin to look for new methods of providing police services. The ever-increasing problems that face us serve as prima facie evidence that we have not yet obtained the ultimate goals of policing.

The need to find new solutions is to become even more urgent as our society clamors ever more vociferously for better police service. Even if crime does not overwhelm us in the coming years, public sentiment will, unless viable methods of policing are developed. The reorganization which has been outlined in these pages is one method which hopes to achieve the vital alliance among the police and the community needed to promulgate the more effective delivery of police services.

Cincinnati, in keeping with these principles, has developed, has designed and implemented a form of team policing called community sector team policing. For short, we call it Com-Sec. It is known in the community as Com-Sec.

It has as its overall goal to improve the effectiveness of the services to the community. This overall goal has been broken down by people in the community, by the police officers who deliver the services, into several impact goals and they are to, very briefly, reduce the level of criminal victimization of both people and property, to improve the understanding by the police and sensitivity to the people they serve, to develop a proprietary interest in the police for the safety and welfare of the people, improve citizen cooperation with the police in crime prevention, detection, and apprehension, and develop in the citizens a sense of trust and close identity with the police officers.

Along with this are a couple of other impact goals which have, I am sure, importance to this committee, and one of the major reasons this is a funded project by the Police Foundation based in Washington, is that they hope to develop some innovations in patrol and in policing, the basic delivery of police service to the community, which can be transported then to other cities and other police agencies throughout the country.

Some of the Com-Sec design concepts which are highlighted in our system of team policing are these. We had divided the district 1 area geographically into six sectors. These six sectors conform naturally to neighborhood boundaries and neighborhood boundaries are conceived by those people who live and work in those areas.

One of the highlights of Com-Sec is the fact the basic operational unit provides all police services to the residents and the business people in that sector, with the exception of the investigation of homicide. The other services totally are delivered by those police officers.

We have realined the supervisory structure from the traditional three shifts, or three watches, or three relays commanded by the lieutenant and supervising personnel and changing every so often, and so forth, to one in which the leader, the commander of the shift, or the commander of that area, of the Com-Sec, is a lieutenant, he is a team leader.

He is responsible for the delivery of police service over a 24-hour day, 365-days-a-year operation. He has a great deal of flexibility in both the assignment of personnel, equipment, and methods to meet the needs of the people. He may assign his officers, deploy his officers, on a proportional need basis, so that there is a minimum representation of uniformed police during certain hours of the day, and others there is a saturation patrol. He and the team members make a decision as to methods of patrol, whether they will be on foot, by motor scooter, automobiles, rooftop surveillance, undercover surveillance, or whatever methods may be provided by the patrol officers and team members.

Essentially those are the outstanding features of Com-Sec. The expanded scope of responsibility and authority permit the team policemen to do the preliminary investigations and followup investigations on all crimes except homicide. They can make direct referrals to social agencies, to circumvent the overcrowded criminal justice system, the court system.

They can devise and operate various kinds of patrol procedures and they take part in the decisionmaking process of the team.

They meet at least once a month on a formal basis with the residents and working people in their sector to discuss the problems, mutual problems, identifying needs of the people, and working together to resolve how best to meet those needs. And, certainly, the day-to-day relationships with the people are those features of the Com-Sec program that we hope will achieve the kinds of cooperation so vital to reducing crime in Cincinnati.

We think this is probably the most outstanding project with which we are involved. We have a list of about 30 others that will be available to your staff, but we feel this probably has more importance for the committee than any others.

We have with us personnel who have responsibility for the manning of this, as Congressman Keating pointed out, the district commander. And we brought the live article to the committee in the form of these two police officers who actually deliver the police service, and a recipient of those services, Mr. Yunger.

We stand ready to try to respond to any questions by the committee.

Mr. Lynch. Mr. Chairman, if it would be agreeable, I think it might facilitate matters if we could quite briefly hear from Officers Brand and Panno, as to what it is they do as community sector policemen which is different from that the regular patrolman will do. Perhaps Captain Espelage could describe his duties and from there, we could go to individual questions.

Chairman Pepper. Go right ahead.

Statement of Richard L. Brand

Mr. Brand. Basically, we do the same thing in Com-Sec that we do throughout the rest of the Cincinnati Police Division. However, the big difference is we have more time to do the things that we need to do. For example, in Com-Sec the basic means of patrol is foot patrol. That means that several men throughout district 1 are assigned to foot patrol. If a man is assigned to an automobile, to automobile patrol, he takes his automobile, he takes it out someplace, he parks it, he gets out of his automobile, he walks around on foot, he meets dif-

ferent members of the community, he stops and talks to businessmen, things like that.

If a crime happens we go to the crime scene. We not only do a police investigation but we also do followup investigations.

Prior to Com-Sec, mainly, we were what you would call report takers. We would go to the scene, make some type of investigation; we would make a report, and that would be about the last we would hear of it. This way there is a followup investigation. We are responsible for everything.

Many times in the past, prior to Com-Sec, if a citizen needed a particular type of police service we would refer them to someone else, refer them to some other portion of the police department to get that kind of service. But now we don't do that because we provide all of the services, we don't refer anybody any place else. We are the people that provide all types of service.

It used to be that if you were having a problem with someone, if a particular family on the beat you patroled was always fighting on Saturday night, or things along that nature, there was nothing we could do with them. We couldn't send them any place. The only thing we could do was put them in jail. But now we have the capacity, instead of putting them in jail, we can refer them to an agency where they can get perhaps what we hope is help. So we don't continually respond back to one location, time in and time out, with nothing you can do. We are trying also to get them help.

I guess I could go on and on. There are a lot of different things we do now we could never do in the past.

Mr. LYNCH. I wonder if we could hear from your partner now.

For purposes of the record, are you Officer Panno?

Statement of Lawrence C. Panno

Mr. PANNO. Yes, sir.

In addition to what Patrolman Brand said, operating under the function of the complete service policeman, when we are summoned to a scene and investigate a crime, we become better policemen, better investigators, and better citizens under the Com-Sec philosophy.

We improve ourselves because we know more about the investigative techniques from motor patrolmen or just from experience. We take the case from the time it happens until the time of the conviction in court—we hope conviction in court.

Before, when we responded to the scene, we gave the emergency assistance that was needed, then, wrote up the report, and, usually, on felony cases, it was turned over to our crime bureau. Now the policeman that responds investigates that crime, and I believe it is working out real good.

It has made us all a little bit better investigators. It makes us work harder and does build a proprietary interest in the service that we deliver at that time.

As Patrolman Brand said, we are basically all foot patrolmen. Polarization got us away from the public; and that is one of our goals, to try and get closer to the public. Most of the officers still have an automobile. We drive it to our beat and get out and walk as much as we can. In the past, especially during the summer months, we re-

sponded to so many radio runs we barely had time to wave to someone going by. Now, under the Com-Sec philosophy, with a few more policemen out in a certain area, we can stop and talk with the merchants and the people in the street.

We stay within our district or our sector boundaries. Before we would be assigned to one specific area and 60 percent of our calls would be out of that area. It is kind of hard to keep your finger on the pulse of that neighborhood when you are spending 60 percent of your time somewhere else.

Mr. LYNCH. Are you in uniform all of this time?

Mr. PANNO. I work in uniform. I work in plainclothes. That is the flexibility the concept has. If I get a line on some narcotics case or some burglar working in the area, I go to my team leader and we decide, first of all, if I can afford to be put in plainclothes. If we can, then I get a chance to follow through on that investigation, or on that lead.

Com-Sec is helping us out. Just in the past month or so, since it has been in full swing, we have gotten a better response from the public, more tips on things that are going on in the neighborhood. The people feel closer to the policeman and hence feel more secure.

I heard the comment several times that these are "our" policemen, not "a" policeman.

Mr. KEATING. Years ago when you had indigents on the beat, usually elderly persons who had no home, they would ask the police officer to lock them up so they could go out to the workhouse to get cleaned up, to get a few meals, and so on. What do you do with that person now?

Mr. PANNO. The person falls in several different categories. The ones that will accept help we can send to the Salvation Army Post or give them advice on places where to go. But they have to help themselves. We give them the available avenues to help, rather than be locked up during the winter months or sleep in the alleys at night. But we do send them to the Salvation Army and other agencies that can care for them and can help them along.

Mr. KEATING. You are better equipped with that knowledge, being part of the Com-Sec program and knowing people in the neighborhood you are working with, so you can give them these alternatives. Whereas, before, they bring them in and put them in the station, and the judge would send them out to the workhouse where they could get cleaned up and get a few meals and they would be back on the streets again.

Mr. PANNO. Yes, sir.

Mr. KEATING. So this program has more effect, and in a new manner may solve that problem.

Mr. PANNO. Yes, sir.

Mr. KEATING. Not completely?

Mr. PANNO. Solving the problem on the long basis that Patrolman Brand hit on softly, but in the past, when we responded to a family fight or a person that was down and out, had no means of support or no place to go——

Mr. KEATING. Could you tell people who don't have the background, what "down and out" means?

Mr. PANNO. Just broke and no place to go or food to eat. Down and out drunk, maybe. But in the past, we had always taken care of it

during the 10-minute timespan. You have a problem, this man is on the street, how do you get rid of this man? You lock him up since he is drunk or is a vagrant. Since then, they abolished the vagrancy laws in Cincinnati and I am not too sure it was a good one to begin with.

But the time of problem solving we have is a long-range basis, rather than locking the guy up every other day throughout the year, or 6 months, send him some place where they can help him. Maybe they will only have two or three contacts with him until they instill in him the way to help himself, or they can help him.

Mr. KEATING. In the "Over-the-Rhine" area, which is part of the area you are covering in Com-Sec, do you have confrontations between Appalachian groups and maybe black groups, or some other composition? Is it easier for you to meet that situation and solve it without a flareup because you know the principals involved?

Mr. PANNO. Yes. Many times when they see a police officer that they know responding to the scene, they automatically calm down a little bit. Through past experience with the policeman, through the policeman knowing this individual. There are a lot of people that get loud and boisterous that are harmless. There are some people that are quiet and quite dangerous. As a policeman, you get to know these people, their moods, and how they will react.

It is a lot easier to deal with them. Again, they know the policeman and they know how to deal with the policeman, also.

Mr. KEATING. Whereas you were a third force before, you now become an intermediary.

Mr. PANNO. That is right. Many times we responded to break up a fight and both parties turned on us simply because of the lack of knowledge and communication.

Mr. KEATING. That has diminished as a result of the program.

Officer Brand?

Mr. BRAND. A couple of other points I would like to make. One of the biggest things is that the patrolman has a voice in the decision-making process of the police department and in the decisionmaking process of your team. When the team meets we have a chance to put our views forward.

There is one thing that is in the program that is very good from a patrolman's standpoint, and that is what is called an acting team leader. When there is no supervisor working in a particular sector you work in, a patrolman is appointed as an acting team leader and he assumes all of the responsibilities of a supervisor, with a few exceptions.

Also, Chief Goodin touched on this briefly. When you are assigned to a certain area, it does breed a type of ownership in you for that particular area and when a crime is committed in that area, or to use a slang expression, it does gripe you so you have a greater interest in solving the crime than you had before.

Mr. KEATING. Do you have any statistical impact, Chief, on the results of your program to date?

Mr. LIND. Mr. Keating, we looked at the record and Com-Sec has been in existence just such a short period of time that we were unable to get any impression in connection with any changes in crime. Crime in Cincinnati has been in very minor decline. The decline began sometime in 1972. And because of the fluctuations occurring in the crime pattern we are really unable to make any decision.

Mr. WINN. May I ask a question?

Chairman PEPPER. Yes.

Mr. WINN. To what do you attribute the slight decline in crime in 1972?

Mr. KEATING. Obviously, the excellent performance of the Cincinnati Police Department.

Mr. LIND. We took some special measures to deal with the problems of crime toward the end of the year. There were some fluctuations in crime. It appeared to be stable in 1972, compared to 1971. But in late November, because of the unusual seasonal crime experience at that time, street crime particularly, the chief instituted a task force which was representative of the entire division, drawing on the various bureaus and sections for their personnel.

This was an 80-man task force and its principal mission was to go out on the street, selecting those areas which had been target areas for victimization, and concentrate the special task force.

As we reduced crime in this 5-week period of time considerably, we reduced our robberies that we had projected by 50 percent, and there were also other interesting things that occurred. It seems crime was depressed, all index crime, during a period of time and our crime overall declined 5 percent. A 4-percent decline is found in the index of larceny; 1 percent in the auto theft; with a decline in aggravated assault and in murder.

But burglary and robbery for the year were stable. They did not decline. We think that a special effort toward the end of the year, put us on the minus side.

Mr. LYNCH. I point out that Mr. Carl Lind, while he is a civilian as I understand it, at this time has long years of experience with the Cincinnati Police Department and is head of the program management bureau in that department. He was one of the architects of this plan and worked closely with the police foundation in formulating the proposal.

I wonder if Mr. Lind could briefly tell us what position of this grant from the police foundation will be involved with evaluation work on the project.

Statement of Carl A. Lind

Mr. LIND. We received two awards from the police foundation. We received the planning grant of $478,100 in October of 1971. And in July of 1972 we received an action grant of $1.9 million. Now, the evaluation program is being conducted at two levels. The urban institute, a research and evaluation organization based here in Washington, is doing a long-term evaluation of Com-Sec. The cost of that is close to $400,000.

We are doing a short term, using in-house personnel, to conduct our evaluation.

Mr. GOODIN. If I may add just a comment to Carl's statement about our response to the pending dramatic increase in street crime and armed robberies, and so forth, toward the end of the year, this really was a four-point involvement in the community, the media, and the police.

Through Carl's operation in the analysis unit they predicted there would be a dramatic increase in the number of robberies and street

crimes during the holiday season. I met with the Media Advisory Committee in Cincinnati, which is sort of an ad hoc group of representatives from every member of the print and electronic media in Cincinnati, to discuss this problem.

We decided on sort of a task force approach from the police standpoint and asked their assistance in making Cincinnati safer in the coming days. The media, there is no question about it, spent thousands of dollars on air time, prime air time, to instruct and educate citizens on how to harden the target, both from their physical person standpoint and from their own residence and business standpoint.

They publicized the task force, the arrests it was making, and so on. The police canvassed 2,400 business establishments in that period of time in high-crime areas and gave them literature and also person-to-person instruction on how to harden the target.

We met with the municipal level courts and they agreed in those instances where we would bring in people who were multiple offenders, repeat offenders, they would set a sufficiently high bond to keep them off the street. That was done and through that cooperative effort, we feel we reduced crime dramatically during that period of time, although certainly those task forces are short range, we feel Com-Sec has long-range implication.

Mr. KEATING. May I ask one more question?

Chairman PEPPER. Yes.

Mr. KEATING. Mr. Yunger, could you give the citizens' and businessmen's viewpoint of the Com-Sec program, as you see it?

Statement of Frank Yunger

Mr. YUNGER. I have in the past attended three Com-Sec meetings, and as have members of my association, which is the Findlay Market Association. Findlay Market is a national historical association and we are proud to be a part of this area.

Many oldtimers in this old marketplace have always said the foot patrolman is the thing to prevent crime—now, since we have foot patrolmen in the area, I have noticed the close contact between the partolman and merchant. Now the merchants realize greater security, knowing a patrolman is close by. This patrolman has a personal radio so he can call for help if needed.

There has been in the past, before this started, many, many cases of window breaking. We have furniture stores and other merchandise stores in the area subject to this destruction of property.

I can see there has been a drastic reduction in purse snatching and window breaking, burglary, and similar crimes. I think our police department is to be commended on what they have done to this point and I see nothing but good things for the future.

Statement of Howard Espelage

Mr. ESPELAGE. I would like to respond. All Cincinnati policemen have equipment, what we call personalized radio. This enables any of the policemen, regardless whether in cars or on foot, to respond anywhere, and they can be recallable from any location. Even though a man is assigned to a car, he can actually park the car and still be recallable and be on foot patrol.

Mr. LYNCH. Chief Goodin, you were in the audience when Chief Churchill testified he has 140 patrol cars, single-man cars. And if I recollect his testimony properly, he does not employ foot patrolmen. It seems to me, in essence, your young patrolmen here are telling us your philosophy is directly opposite to that. Would you comment on that?

Mr. GOODIN. It is substantially different in the sense that Indianapolis and most other police agencies equip the automobile or the vehicle with a radio, which in essence anchors the policeman to that unit. We equip policemen with the radio. We have no radios in automobiles, or on motorcycles, or anything else. The policeman carries it and he never, never is, in essence, out of service for an emergency call.

Mr. LYNCH. Excuse me.

With that radio he carries, can he communicate with other foot patrolmen as well as the base?

Mr. GOODIN. He can communicate with other policemen and the base station. It is a six-channeled unit, bought and paid for by the citizens of Cincinnati. And, really, quite sincerely, has been the technological advance of this in team policing that has convinced Cincinnati to experiment with, and be innovative in, terms of patrol strategies and things of that nature.

Mr. LYNCH. Could you tell us, Chief, why you selected district 1 as the sector for this experiment?

Mr. GOODIN. It is a high-crime area. It has a mix, and sort of services as a microcosm for the city. It is composed of the downtown business district, black neighborhoods, it has the poor white Appalachian neighborhood, it has a rather affluent neighborhood on the hill overlooking Cincinnati, and it sort of serves, in terms of crime, as a good composite of crime in the city.

It boils it down to one-fourth of the total workload for the Cincinnati Police Division. We felt in the experiment if we can prove Com-Sec successful in district 1, it will work anywhere.

Mr. LYNCH. I know the members of the committee will have some questions for you, especially Mr. Keating. I would like to ask Captain Espelage, if he would, to describe his role as the commander of this unit; how it differs from your past experience, Captain, with the department, and what progress you think it is making in reducing crime.

Mr. ESPELAGE. My role mainly is that of coordinator. I have six police departments under my control and I have to pull them all together as a district operation. I act as an adviser to the team leaders and, of course, all of the paper flow goes to and from my office to upstairs, the chief's office, to other districts, et cetera.

I really have been enthused about this thing since March 4, 1973, for the simple reason the men have really innovated us down there. Of course, it is too early to tell, but from the enthusiasm put forth by the men I think it is really going to be the plan of the future.

Chairman PEPPER. Any questions?

Mr. RANGEL. No questions, Mr. Chairman.

Chairman PEPPER. Mr. Winn?

Mr. WINN. No questions.

Chairman PEPPER. Mr. Keating.

Mr. KEATING. I just want to again compliment the chief and members of his staff for doing for my city and the rest of the citizens of

Cincinnati such a fine job in trying to innovate and work with the people in the community in a very effective manner. Do you have any other plans you want to tell us about?

Mr. Goodin. As I mentioned, we have about 30 other odd projects, which are conventional in scope, innovative in terms of the criminal justice units, which we are instituting, designed to improve the flow of the offender from detection and apprehension through the system. To track him, we have criminal justice information systems which are computerized, and I heard you ask the previous witness whether we need to make this information available to the public.

Indeed, it will be available to the media on computer printouts all the way through the system. We feel that, to support something Mr. Keating said earlier, I sincerely believe that there is a tremendous amount of help that is needed, not only in terms of crime, but training and management response in the court system and the other parts of the system.

We need help as well and we have seen this in Com-Sec; to improve one part of the system dramatically so their effectiveness increases the impact and clogs up the other end of the system and we go back in a circle. Unless the other components of the justice system are brought along at the same pace we are going through a revolving door kind of situation.

Mr. Keating. Let me make one comment. The computer system we have in the community, would you like to comment on that?

Mr. Goodin. Yes, sir. This is a countrywide computer system. It is a shared system and one which is made up of the components. It has a law enforcement component which is countywide, 39 separate police agencies within Hamilton County—Cincinnati being the largest—and it is a shared system among all of those police agencies.

There is another component which deals with the county administrative system, the court system, welfare system, things of this nature, which are countywide. Another component which deals with the city of Cincinnati, computerizing payroll records and other administrative matters such as that. This is a system, the law enforcement component, which is paid for through a renewal levy by the voters of Hamilton County, and has its primary emphasis and operational data for the policeman on the street.

Our police officers with portable radios can make an inquiry through the computer center, statewide, for our own records, statewide, and through the FBI's National Crime Center, from the alley where they are talking to a complainant. They need not go to a phone or to an installation to make that inquiry. They can do it right at the scene.

Mr. Lynch. Chief, I guess there are several areas we have not yet touched on. It is my understanding that your teams, the community sector teams, hold monthly meetings out in the neighborhoods in which they are policing. Could you describe those for us? Tell us what takes place at one of those meetings?

Mr. Panno. Our community section meetings, what we call them, and every month at the same time and the same location, we have a community meeting. We invite all of the public who wish to attend to come and the policemen that are involved in policing that area, the Com-Sec policemen, go to the meeting.

We start out with a formal-type meeting, just to get things going. When I say "formal," I mean the policemen made the agenda. After

we got things going, got some people coming in, we changed it to where half was run by the policemen, and the other half more or less the citizens themselves.

We got suggestions on speakers they wanted to hear and we got movies on accident information and burglaries. We brought one of our K–9 dogs down. The policemen themselves give lectures and instructions on how to secure homes against burglars and housebreakers, how to better protect themselves out in the street, to guard against street robberies. How to protect their automobile and the packages or articles they have in there. There are numerous types of ways to help them help themselves and help us.

Mr. LYNCH. What kind of public turnout do you get at those meetings?

Mr. PANNO. They vary. Depending on the geographical location, the weather conditions. Our biggest meeting has been when we had incidents within the community that there might be a little hostility between two groups or between one group and the police. But they have always, in my opinion, helped settle those hostilities that cut off future hostilities.

Mr. LYNCH. Thank you.

Chief, could you tell us, or could one of the gentlemen here tell us, what criteria you used to select officers for this program?

Mr. GOODIN. I will reply very briefly. We used existing personnel in the district. The additional officers that were assigned, to make sure for evaluation purposes we had a proper blend of people, of both poor performers and average and outstanding performers, we assured that by selection of those people who were on what we call a rotation assignment, those duties to be rotated throughout the police division, through the six police divisions.

So we selected a broad blend of those people so the previous rating levels represent fairly well the entire range of policemen in Cincinnati.

We provided to all the Com-Sec officers a series of training exposures and interpersonal relations and philosophies of Com-Sec and things of that nature; technical training such as crime scene searches, fingerprinting, things of that nature, being conducted among the teams themselves.

Mr. LYNCH. In other words, the selection criteria in part was used to facilitate individual performance evaluation later on. You have in essence a cross section, as it were, of the department.

Mr. GOODIN. That is correct.

Mr. LYNCH. What kind of morale effect has this program had on the overall police operations, in your department as a whole?

Mr. GOODIN. I think it has had a very stimulating effect. There have been some negative indicators of morale, but overall, I would say the morale of the Cincinnati Police Division, if measured by all of the accepted indexes of high morale—response to the problem, willingness to work overtime, numbers of activities in which they are engaged for the benefit of the division—is the highest it has ever been in our history.

I would say morale is high. If there is grumbling within the division, it is like in the military. I was told as a military man, if there isn't some grumbling, the morale is low. It was based primarily on the belief by some of the other commanders, Com-Sec would rob them of their best

personnel and they would be stripped of numbers of people so they could not deliver adequate services to the community.

This was found not to be the case. Through some adjustments within the division, we disbanded the traffic section considerably; we do not have a tactical unit as most cities do; and we are adhering to the generalized concept in Cincinnati. This then convinced the commanders they had the same proportion of personnel in the division as district 1. So that sort of negated a lot of the negative obstacles that had been placed in the path of Com-Sec implementation.

Just the planning and design of it, the involvement of people—we involved officers from cadets, patrolmen, all the way through the ranks—in the actual design and planning and implementation of this project. It is truly a Cincinnati Police Division project. These two officers here were involved in writing the guidelines and how to implement them. The fellows who are actually going to have to do the work, wrote the rules, so to speak.

It is their program; it is not something that came down from the ivory tower. It is a police division project interspersed with citizen cooperation, citizen input, policemen. It is their program and if enthusiasm is any indication of success, it is successful already.

Mr. Lynch. In reading your proposal it became apparent—and I assume it was Mr. Lind that made a very strong point—in programs of this nature that frequently they are developed by people who, in your term, are "ivory tower" types and not policemen. Apparently that was not the case.

Mr. Goodin. Yes, sir.

Mr. Lynch. Chief, earlier this afternoon, you heard Chief Churchill indicate that while he only has 1.7 policemen per thousand population, he did not feel a need for additional police. You have, I believe, something in the neighborhood of 2.5 police per thousand inhabitants. That is the standard metropolitan area figure, not the Cincinnati figure. I assume it is somewhat close to actuality, however.

Mr. Goodin. That is a close figure and that really is total police employees.

Mr. Lynch. I understand that.

Mr. Goodin. I was delighted to hear Mr. Churchill, who is a friend of mine, say he didn't need personnel. He is the first chief I met who said that. In Cincinnati we need 244 sworn people, additional, to implement Com-Sec. This is based on hard data that was gathered on all time spent in servicing citizen calls and a built-in component for police-citizen interaction, positive police-citizen action.

Mr. Lynch. An additional 244 men?

Mr. Goodin. Yes, based on 1972 data.

Mr. Lynch. Do you have present plans to implement Com-Sec on a citywide basis?

Mr. Goodin. We have a plan that developed, that if proved successful, based on our evaluation or whatever modifications need to be made, we are convinced, philosophically, it is the right approach. We have asked for that number of personnel, to be granted over a 3-year period, 76 for this year, with the design in mind to implement the team policing principle throughout the city.

Whether or not we will get them next year we do not know. We have to go on a year-to-year basis.

Mr. LYNCH. One more question. How is the action money from the Police Foundation being used? Is that paying for any of your Com-Sec personnel?

Mr. GOODIN. It is paying for 62 personnel.

Mr. LYNCH. Thank you very much. No more questions.

Mr. KEATING. Just a couple of questions. What is your per capita of uniformed policemen per thousand population, which, I believe, was the reference points made by Chief Churchill?

Mr. GOODIN. It is a little better than two.

Mr. KEATING. About 2.1?

Mr. GOODIN. Something like that. Yes, sir.

Mr. KEATING. You said you needed 244 uniformed policemen?

Mr. GOODIN. Uniformed policemen.

Mr. KEATING. What do you need to back up those personnel?

Mr. GOODIN. I think with our civilian levels, ratio levels increased substantially during the past 2 or 3 years, to the point that I think with a minimum of civilian personnel, about 60 civilian personnel, we can maximize the civilians in the police division and accomplish the team policing philosophy throughout the city. About 60 civilians.

Mr. KEATING. If you ran two recruit classes a year, which I guess is about as many as you can run—can you run more than that?

Mr. GOODIN. We can run them continuously now. We have different academy facilities.

Mr. KEATING. You can actually get an increment of 75 in 1 year?

Mr. GOODIN. Yes, sir. Easily.

Mr. KEATING. Do you have enough applicants in order to meet this need?

Mr. GOODIN. Yes, sir; we do. We have enough applicants and we pay our starting police officers almost $10,000 a year. Roughly, $10,000 a year. And we have enough applicants. We draw not from the unemployed, but from the employed.

Mr. KEATING. With maximum operation, how long would it take you to add 244 police to do the job you feel should be done?

Mr. GOODIN. About 2½ years.

Mr. KEATING. Fine. This also means you would have more sergeants, more lieutenants, more supervisory teams?

Mr. GOODIN. Yes, sir. And they are built into the 244. Those are all sworn personnel, all ranks.

Mr. KEATING. You would end up with two more assistant chiefs?

Mr. GOODIN. They just go up through the rank of lieutenant. We would not increase the ranks above that of lieutenant.

Mr. KEATING. Is this because of the Com-Sec program or is this because of the combination of utilization of Com-Sec plus the difficulty of policing cities the size of Cincinnati with this mix?

Mr. GOODIN. The combination of policing a city the size of Cincinnati with the problems that are unique to Cincinnati, hilly terrain, things of this nature. And the fact that we know for the first time we are able to say we need "x" number of man-hours to deliver the called-for services in Cincinnati.

And that can be about a third less than that figure, just to meet the called-for services, and we can do it. But we feel the citizens of Cincinnati in their cooperative spirit that seems to be unique to that area, for some reason, that we can do just about whatever we want in terms of,

lowering the crime rate, with that additional time for the officer to meet with the citizen in a nonthreatening manner, to solicit his cooperation in crime control and crime prevention.

Building those factors in, which are extremely important, the number comes to 244.

Mr. KEATING. There is always some additional requirement. You need, say, 60 civilian personnel to help back it up, and you need an increase in sergeants and lieutenants. What about the mechanical equipment? Will you need an increase in cars, et cetera.?

Mr. GOODIN. Radios, personalized radios; yes, sir.

Mr. KEATING. I remember that radio situation very well. We got in on that.

Then you feel we would be at the optimum level in the city of Cincinnati?

Mr. GOODIN. Yes, sir; I do.

Mr. KEATING. Do you have a figure that it cost to put a policeman in uniform with all of the backup personnel? Is there a cost to the city that you can figure out? Fully equipped, basic salary, after he has become a patrolman, after recruit training, what does it cost per patrolman? Do you have that figure?

Mr. GOODIN. About $17,000. That would include the first year's salary. The first year is training. The entire year is considered a training program in our department, as a probationary period.

Mr. KEATING. Because you are really making a professional man. What kind of technical equipment do you feel that you might need to carry out the mission of the police department that is still on the market that you might not presently have?

Mr. GOODIN. The other members of my staff can feel free to comment. I mentioned the radios. We would like to experiment with some digital computers. We are in the process now of ordering equipment that is available and we have, through LEAA grants, a report system which is fully automated in that the policeman who takes the report to the citizen, if you report your car stolen, the policeman would write that data down and give it to some civilian at the station who would type it into a video data terminal and it would be sent out to all of the units in the city. At the same time that particular auto theft would be scored for uniform crime reporting, all done electronically through the computer system.

We have a need for that. Our needs are a little greater than initially estimated with LEAA. Again, I might add, this is a first project of its kind, in that the uniform crime reporting procedures would be automatically done.

Mr. KEATING. Could you use the base system Mr. Atkinson has and build on that to develop your digital computer?

Mr. GOODIN. Yes, sir; this whole program is built on that.

Mr. KEATING. Just complements that?

Mr. GOODIN. Yes, sir.

Mr. KEATING. When the radio system went in, it had the effect of increasing the number of patrolmen, by reason of communication, by about 100, 125—I might be wrong on that, but it had the result of effectively increasing the number of patrolmen. If you had the sort of system that would reduce the paperwork and civilian backup would that increase the effective force of your department?

Mr. Goodin. Yes, sir; it will. I don't have the exact man-hours with me unless Carl might have them. But I do have this kind of figure. We spend the equivalent of 40 street policemen awaiting trials in the court. If we could do away with the delays of policemen waiting to testify we could effectively put about 40 more policemen on the street.

Mr. Keating. This goes back to the old indication that so many people have given to me, that the policemen would not have to come in for a second court appearance.

Mr. Goodin. That is on that innovative kind of system.

Mr. Keating. That has been something the police division has been wanting to do for some time.

Mr. Goodin. Yes, sir.

Mr. Keating. Is there any likelihood you can get this support from the prosecutor, the counsel, and the judiciary to team develop that?

Mr. Goodin. We can see some road signs for real dramatic improvements in the courts in Hamilton County. Cooperative arrangements heretofore not even thought possible are being worked out. We have our police officers working on committees with judges and their staff to develop procedures to expedite the docketing of cases and hearing of cases. I think we are just around the corner for real dramatic improvements.

The city council has taken a receptive ear toward this wasteful figure of 40 people and it could well be policemen will be paid for court appearances, which I am sure will dramatically increase the effectiveness of the courts when money is outlayed.

Mr. Keating. Compensatory time is really a disrupting influence, isn't it.

Mr. Goodin. Yes, sir. The 40 policemen are a composite increment of compensatory time. That is what it amounts to.

Mr. Keating. Haven't two of the principal computer systems been approved by the county voters, plus the radio system? All of this will lead to computerization of the entire court docket?

Mr. Goodin. Yes, sir.

Mr. Keating. For one thing, and it just is a mechanization of our whole process, or our whole legal process.

Mr. Goodin. Yes, sir.

Mr. Keating. Mr. Chairman, I have consumed enough time.

Chairman Pepper. Chief, I want to ask you a few questions. First, about the LEAA funds. How much do you get and what do you use those funds for?

Mr. Goodin. Mr. Chairman, since the existence of LEAA, prior to that, OLEA, we have invested about a million dollars for the city of Cincinnati. That is a somewhat misleading figure because much of the moneys that have been spent in Cincinnati have been spent on a countywide basis, which is for regional crime laboratories, for scientific training at Xavier University, which is countywide in nature; things like this.

Specifically, Cincinnati has used its LEAA funds for programs and sort of software kinds of things, and research.

The program management bureau is partially funded for operations analysis. We have a regional law enforcement narcotics unit composed of officers from each of the departments all over the county. We have an organized crime unit which is funded by LEAA.

We have a police cadet program which is partially funded for youngsters through the ages of 17 to 21, who work as civilians in our department, and co-op at the University of Cincinnati. Upon graduation they receive an associate degree, have been trained during their quarter breaks and are promoted and go out in the street as policemen without any 20-week delay in training.

We have a criminal prevention program which involves a person at each district, which has primary responsibility for developing crime prevention programs.

Chairman PEPPER. Do you think the use of LEAA funds is more effective in curbing crime than to put that money in employing more men to be in uniform on the streets?

Mr. GOODIN. I think it is; yes, sir. I think the only criticism I would have of the administration of funds would be their guidelines are unduly restrictive. Quite frankly, it restricts a city like Cincinnati in that our own moneys, city budget dollars, were spent for training and programs. Being innovative and being funded by LEAA was pioneered in the Cincinnati Police Division by Chief Schrotel and others.

LEAA funds police cadet programs all over the county. Cincinnati has had it since 1955. We would like to expand on it but are not able to do so because it is an expansion program. We feel each city, each community, should have the dollars to spend as the city administration sees best to spend them, based on the needs identified in their community.

Chairman PEPPER. I agree with you on that. The difficult decision was to you, how best to use it and you used the money wisely.

Suppose the Federal Government were to inaugurate a program to provide more police on the streets of the cities of this country; suppose the Federal Government were to put up 25 percent of a certain sum for that purpose and your States were to put up 25 percent, and the cities would put up 50 percent. Would that be a helpful program, or should there be some other formula for the division of the money, in case such aid would be forthcoming?

Mr. GOODIN. I would have to answer that simply by saying I think it would be beneficial. I think the testimony that I have heard in the major cities is that most police departments are undermanned, understaffed. I think that is disputable because they may be ineffectively deployed or allocated among the departments. But that certainly would be a way for the Federal Government to help. Subsidy for police salaries, for police education, needs to be expanded.

Chairman PEPPER. You think that would be a proper function for the Federal Government to get into?

Mr. GOODIN. Yes, sir.

Chairman PEPPER. Helpful in curbing crime?

Mr. GOODIN. Yes, sir.

Chairman PEPPER. And if they want to do these other things, all right.

Mr. GOODIN. Yes, sir.

Chairman PEPPER. But, after all, the greatest single factor in curbing crime is the availability of trained police to deal with the problem; would you agree with that?

Mr. GOODIN. I would agree with that, Mr. Chairman. If we would isolate it to one single factor; yes, sir.

Chairman PEPPER. What about the cooperation between your police department and the prosecuting attorney's office?

Mr. GOODIN. We have excellent cooperation within the Cincinnati Police Division and the local prosecutor and the county prosecutor. I might say, it might be a model to be looked at by other agencies.

Chairman PEPPER. And there is good will between the two departments?

Mr. GOODIN. Absolutely.

Chairman PEPPER. What about between the police department and the courts?

Mr. GOODIN. We have excellent cooperation between the police departments and the courts. As I indicated earlier, the courts have gone out of the way to establish their committees to work with us on problems of police time. They have identified weaknesses in the testimony of officers, for which we have developed training programs, and given freely of their time and trained the police officers.

Chairman PEPPER. What about the dispatch of cases in the court?

Mr. GOODIN. We think the overloading of the criminal court dockets on both levels, common pleas level and municipal level, is atrocious.

Chairman PEPPER. How long does it take, ordinarily, between the time the charge is made against the defendant in Cincinnati and the actual trial?

Mr. GOODIN. It certainly depends on the nature of the crime and skillfulness of the defense attorney. I would say some cases run as long as a year. Some of them have not been finally adjudicated that are over a year old.

Chairman PEPPER. That is a great frustration to the police department.

Mr. GOODIN. Absolutely. It is probably one of the greatest frustrations police suffer.

Mr. PANNO. I have only been on the force a short period of time, 5, going on 6 years, but I have had cases go from the time of arrest until a disposition in common pleas court in 4 months, and other cases go as long as 13 to 15 months. It is disenchanting to spend a lot of time and a lot of technology to catch someone at a crime of stealth and have that man beat you back out on the sidewalk from the court room.

Chairman PEPPER. I know that is very frustrating to the police. Heretofore, we have had a lot of witnesses and it has come to the personal knowledge of many of us that there is little cooperation in respect to this matter between the courts and the police authority. Sometimes the courts think that is no business of the police authorities, it is their business.

And in a great many instances the courts have not been subject to any kind of supervision. A judge sat when he wanted to, he left in the midafternoon if he wanted to, he tried as many cases as he thought he should.

In Miami, where I live, we just set up a new system in the courts, so we only have in each county, two courts: county courts, which handle lesser offenses; and circuit courts of general jurisdiction. But either one can sit in the other court. Now, for the first time, a circuit judge, who is the supervisory judge, you might call him, a managing administrative judge of all of the judges in the circuit system, and another supervisory judge, managing judge for all of the judges in

the circuit system, and another supervisory judge, managing judge for all the judges in the county system, can review the dockets. He can examine the length of time the judges put in; he can prod those judges to greater performance. If the system is not working he can check on it, and if necessary go to the Governor or to the legislature.

So we are getting a much more efficient judicial administrative program than we were getting when each judge was a separate entity unto himself.

Do you have anything like that in your area?

Mr. KEATING. Mr. Chairman, can I make a comment and intercede? We have a new Chief Justice of the Supreme Court of the State of Ohio, C. William O'Neill, who was formerly Governor of the State. Justice O'Neill has, since his appointment as chief justice, been attempting to implement a speedier judicial disposition of civil and criminal cases in the State of Ohio.

I think he has been very successful in accelerating the date of trial, but until you get to a point where a case is tried within 60 days, then we have not completed the job. But he has been a great force for this cause in our State and has been extremely effective. But when you go from the position we were in before to the position you want to be, there is much left to be done.

Chairman PEPPER. In Florida, the State supreme court has practically required a man to be tried within 60 days and if he is not, unless it is some justifiable reason for his not being tried, the case is to be dismissed. At the beginning of that program some cases were dismissed. Now, the prosecuting attorneys diligently take care to see that the cases are brought to trial within 60 days.

What about the correctional system in your area? We generally say the police, prosecuting attorneys, the courts, and the correctional systems, are the various essential elements of the system for the administration of justice. In many areas, the correctional system is the first problem, also. How well have you come to deal with that problem in your area?

Mr. GOODIN. We have an opportunity for input into correctional matters, operations, design of systems, things of this nature, but not nearly as much as we do with the courts.

To follow up on your comment about the courts, we have had an invitation by the chief justice extending an opportunity for our officers of Cincinnati to serve on committees, on the revision of the Ohio Criminal Code, the rules of criminal procedure, which has to be sort of unique in terms of criminal justice cooperation. We sort of walk through a lot of those procedures from what it would actually mean to the police and citizen on the street, which will make the rules much more effective for the people.

In terms of correction, probation, and parole, and things of this nature, it is probably just like every place else: It is a miserable failure. Their batting average is worse than that of the police. If we arrest less than 29 percent of the violators and they correct less than that, then it is a complete flop.

Chairman PEPPER. Have you, as most States generally have, one big State penal institution in Ohio?

Mr. GOODIN. We have an Ohio Penitentiary but there are other institutions spread through the State.

Chairman PEPPER. Where is that located?

Mr. GOODIN. Columbus, Ohio.

Chairman PEPPER. Thank you very much, Chief, and all of the gentlemen associated with you, for coming here today and helping us. You are recognized as one of the most innovative chiefs in the country. You were first brought to my attention by Mr. Tamm, one of the outstanding chiefs of police in the country. You obviously have a very able group of associates here who are helping you to do a good job.

I just want to ask you this last question. Despite the progress you have achieved in the past, you still have a lot of violent and serious crime. What can you offer to the people of Cincinnati; what can you do to cut down on the number of crimes you still have; and what can be done, in your opinion, to reduce the number of crimes you still have in your city?

Mr. GOODIN. We feel all of the programs we work on and that we develop and design have a goal of crime containment, reduce citizen victimization. We feel that a coordinated, well-planned effort with the proper analysis is the best kind of response to a problem. We, many times in law enforcement, are required to respond to the fear of crime, not of the incidence of the crime, itself.

I will give you an example. In Cincinnati, we have sort of in the center of the city downtown area a town square which is visited by most people who come to Cincinnati and it is one of the finer points of the city. We have several strong-arm robberies and assaults over a week, four or five, involving youngsters and some adults. Most were closed by arrests. But an uninformed media portrayed that as practically a crime wave. There was no more of a crime problem there than anywhere else. That is not a crime problem when you have kids assaulting other kids. They were doing that when I was a child. It was not a crime problem.

But to maintain the confidence of the community, we assigned uniformed officers there, highly visible officers on foot, with the K–9 unit walking across the fountain occasionally, to calm the public. After 10 or 15 days of that kind of deployment, which was a total waste of manpower, people sort of assumed the downtown area really is safe—"look at all of those policemen."

So many times we do respond to the fear of crime rather than the actual crime problem. A systematic approach to deal with that includes close liaison with the media and the criminal justice system, which is the best we can offer to the citizens of Cincinnati.

Chairman PEPPER. Chief, the Government tells the people there has been a reduction in crime and it is in the magazines and their media: There has been a reduction in serious crime for the first time in 17 years, a slight reduction, a few percent. But the media say, in effect, there is an increase in violent crime; small increase, but there is still an increase. And the people want to know: Do we have to live all of the rest of our lives, and our children and grandchildren live their lives, with the tragic amount of crime we have in the country today?

These muggings, rapes, and robberies. Do we have to accept anything like the rate of crime we now have, today, as the inevitable experience of the people of the country? What can we hope for as a major breakthrough so there will be a real large meaningful diminution in the amount of crime in this country?

Mr. GOODIN. I think the systems approach to the problem we have today, we have heard discussed thoroughly through the criminal justice system, a stronger stand on a certain kind of violent crime, place a priority by the judicial system on crimes of violence, put it at the top of the docket. That kind of practical approach to it will let the criminal know, those inclined to crime, that the citizens of this country and of Cincinnati, or whatever community, will not tolerate abuses of its people or violations of its laws.

And when the citizen knows, as he did before the civil disturbance era of this country, that if he commits a crime he is likely to be caught and dealt with quickly and justly, then when we can achieve that and instill that in the mind of the citizenry, we can do something about crime. Until that, people inclined toward crime believe it to be the case, as it actually is, swift justice is a myth, we are not going to do much about it.

Chairman PEPPER. Would you put great emphasis also on juvenile crime?

Mr. GOODIN. Absolutely. A very integral part of our process.

Chairman PEPPER. Thank you.

Mr. KEATING. May I comment? I don't want to embarrass the chief, but I would like to see the chief as the Director of the FBI.

Chairman PEPPER. He would be a good one. He has appeared to me as one of the top outstanding chiefs of police in the country. We in Miami have a good candidate in Rocky Pomerance of Miami Beach.

Thank you very much, Chief.

[Chief Goodin's prepared statement and a pamphlet on Com-Sec, previously mentioned, follows:]

PREPARED STATEMENT OF COL. CARL V. GOODIN, CHIEF OF POLICE, CINCINNATI, OHIO

TEAM POLICING: REORGANIZATION TO MEET THE CHALLENGES OF THE FUTURE

The basic question to be addressed in this brief discussion is: How can a police agency organize itself to deal more effectively with its primary responsibilities in the coming years? A very common reply given in the United States today is "Team Policing." Among the many programs calling Team Policing, the common denominator seems to be the assignment of a group of officers to patrol a given area. We need to go much beyond this simplistic statement in order to determine what there is in team policing which generates some ray of hope for the future of policing. Therefore, the focus of this paper will be to analyze the mechanism which are present in some team policing models which would enable a police agency to more effectively deal with criminal victimization.

The objectives of police agencies are often described as being:

(1) Prevention of crime;
(2) Protection of life and property;
(3) Suppression of criminal activity;
(4) Apprehension and prosecution of offenders;
(5) Regulation of non-criminal conduct; and
(6) Preservation of the public peace.

We have found that we are not uniformly effective in attaining these objectives; crime is still increasing despite our best efforts. The President's Commission on Crime pointed this out and also indicated that we cannot attain these objectives so long as police agencies are expected to struggle with these problems in an atmosphere lacking the assistance of the greater community.

The Commission also suggested a solution—team policing. Team policing does not aim toward new objectives and goals (it is not just a public relations program)—in fact, the goals and objectives of the police have stood the test of time. Team policing is designed to recognize that the attainment of these goals cannot be accomplished by the police agency alone. Instead of operating in a vacuum, the

community, social and other governmental agencies, and society itself, all play a role in carrying out the police function.

The aspects of team policing which are crucial for reducing criminal victimization seem to be :

(1) Consistent assignment,
(2) Unification of control, responsibility,
(3) Team decision-making power,
(4) Development of the police officer as a generalist, and
(5) Communications.

The consistent assignment of an officer to the same area allows the officer to become familiar with that area and its people to a much greater extent than is possible under a system of rotating assignments. Consistent assignment tends to breed a proprietary interest in the community on the part of the police officer once the officer recognizes that present actions may cause problems for him in the future.

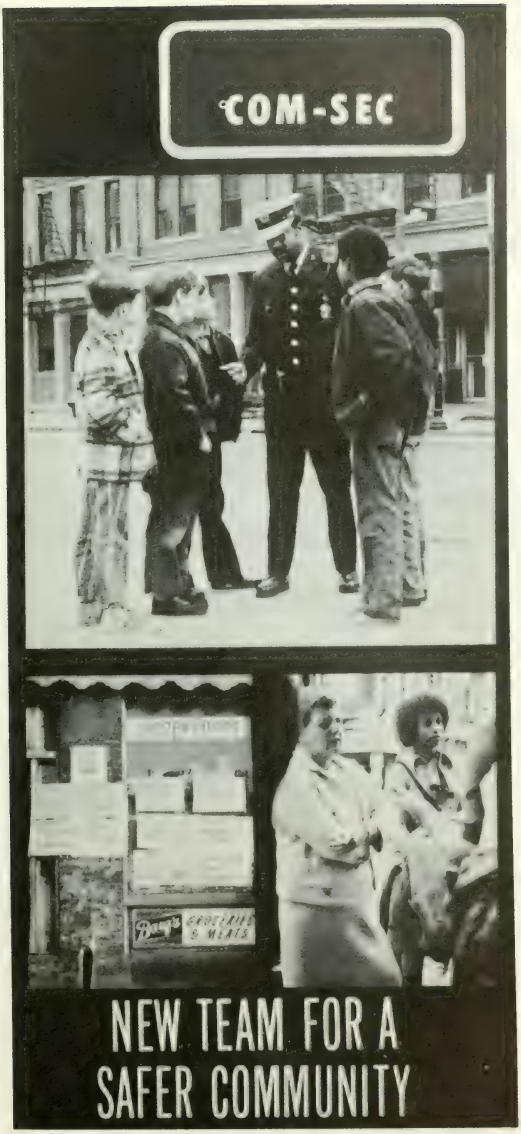
By unifying the control, responsibility and supervision in an area, the actions taken by police officers can become more consistent. By developing a consistent, high level of service, a major roadblock to communication is removed. We all often find a high level of fear attached to situations with which we are unfamiliar. Certainly citizens must experience great anxiety in their contacts with police officers considering the current practices of many police agencies. Many different units, each having its own specialized function and its own line of command may operate in the same small area in the same day.

Coupling a simplified control structure with team decision-making power enables the police to develop plans on the basis of local level information which should be more in keeping with community needs. This approach allows the officer on the street more latitude in dealing with the problems he faces. The more consistent performance and greater commitment developed through such a system should create an environment in which police officers and community residents can, develop an effective alliance against crime.

Another element of this plan is the development of a generalist officer. A generalist should be capable of delivering the complete spectrum of police services, thus providing more effective follow-through concerning the delivery of those services. An officer who has had adequate training and experience should be able to carry out investigations of all types as well as provide the routine services expected of patrol officers.

All of the above factors should also tend to improve communications both within the agency as well as between its representatives and the community. The current structure of police agencies is a great deterrent to the effective communication of information which is of importance to the agency. By simplifying the chain of command and responsibility, the major obstacle to internal communication is removed. Furthermore, the police agency itself must take the first step in improving its relations with the community. The development of stable lines of communications is of great importance in encouraging mutual trust, understanding and aid among the police and the community.

Providing an officer the opportunity to understand the community, allowing a group of officers to define their own problems, goals and policies, developing a generalist notion of policing and improving communications should improve the outlook of policing in the future. Perhaps none of this discussion is new to any of us, but we must begin to look for new methods of providing police services. The ever-increasing problems that face us serve as prima facie evidence that we have not yet obtained the ultimate goals of policing. The need to find new solutions is to become even more urgent as our society clamors ever more vociferously for better police service. Even if crime does not overwhelm us in the coming years, public sentiment will, unless viable methods of policing are developed. The reorganization which has been outlined in these pages is one method which hopes to achieve the vital alliance among the police and the community needed to promulgate the more effective delivery of police services.



COM-SEC
NEW TEAM FOR A
SAFER COMMUNITY

COM-SEC

EVERYBODY WANTS A SAFER COMMUNITY... COM SEC IS THE NEW WAY TO GET IT ...

COM SEC (short for community sector) is a new style of policing that bases a highly responsive, mini-police department in your own community. This community police department is manned by a team of permanently-assigned officers especially trained to provide all your police services.

WHERE WILL COM SEC OPERATE?

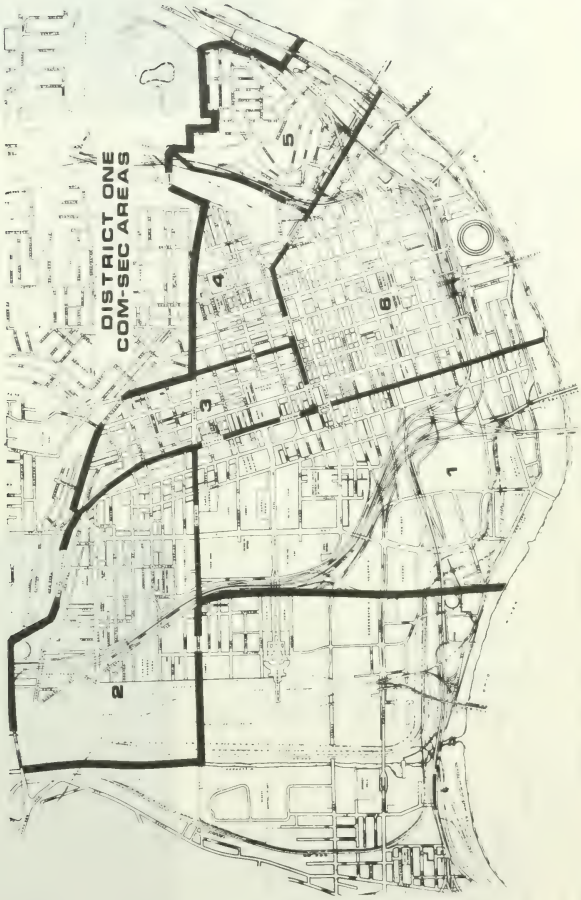
In the beginning, COM SEC will operate in Cincinnati Police District One, which includes the downtown business section, Over-the-Rhine, West End, Mt. Adams, and the downtown Riverfront. In this area of less than four square miles will be six mini-police departments, one each of the six communities within the District.

HOW IS COM SEC DIFFERENT?

Until now, you may not have known your policeman (and perhaps you did not care). He did not know you because he worked in many different communities. Under COM SEC, the policeman will be permanently based in your community. He will have time to know you and understand your problems, just as you will get to know him and his problems.

WHAT IS IN IT FOR YOU?

COM SEC is not a "miracle cure" for all your community problems. By itself, it won't produce jobs, better education or lower prices, which certainly are prime concerns. But COM SEC should result in far less crime and a safer neighborhood for you to live in. And that's a good start toward solving community problems. Studies show that, over the years, safe communities ultimately mean lower prices at the stores, they attract stable businesses, develop more jobs and better education opportunities for residents.



DISTRICT ONE
COM-SEC AREAS
1
2
3
4
5
6

SOME THINGS YOU WILL SEE IN COM SEC:

MORE POLICEMEN IN THE COMMUNITY. More policemen mean quicker response to your calls for help. More policemen also help prevent crimes before they happen just by being around.

SWIFTER ARRESTS OF CRIMINALS. Policemen can do a better job in communities they know well, among people they understand and care about. By being permanently based there, your COM SEC officer will know your community . . . . . and he will care.

A FRIEND IN UNIFORM. People don't become friends overnight. But through COM SEC's opportunities for personal contact, day-in and day-out, you can meet your policeman, talk to him, and he can meet and talk to you. Talking helps develop understanding, mutual trust and cooperation . . . . all of which lead to a safer community and less crime.

WHAT IS THE FUTURE OF COM SEC?

For the time being, COM SEC will operate only in District One as a test, funded by the POLICE FOUNDATION, a non-profit private agency dedicated to helping cities develop better police service. If COM SEC proves successful, it may be extended to other districts of the city and you will see all of Cincinnati dotted with mini-police departments geared totally to the communities in which they are located.

YOU ARE PART OF COM SEC.

COM SEC is an idea developed by many people in your community working with the Police Division. It operated on a very limited basis for a little over a year, while residents and police together developed a more comprehensive program.

The Com Sec Plan is never finished. Though carefully thought out it is not a finished document on the shelf, but a living, flexible plan designed to fit changing community needs. As long as there are community problems and people concerned enough to solve them, COM SEC will be a valuable tool.

Carl V. Goodin

Police Chief, Cincinnati Police Division

COM-SEC
COM-SEC
COM-SEC

HOW CAN YOU GET INVOLVED?

- Get to know your COM SEC policeman
- Offer him your suggestions to improve police service
- Participate in crime prevention activities
- Take an active part in monthly COM SEC meetings
- Get your friends to attend
- Invite your policemen to attend other community organization meetings
- Report crimes or community problems about which you may have information.

GOOD POLICE SERVICE NEEDS THE WHOLE TEAM: YOUR POLICE OFFICER AND YOU!

YOU ARE INVITED TO THE COM SEC MEETINGS IN YOUR COMMUNITY. CALL 352-3505 FOR TIME AND PLACE OF THE NEXT MEETING.

Chairman PEPPER. We will adjourn until 10 a.m., tomorrow, when we will meet in room 1302, Longworth House Office Building.

[Whereupon, at 5:30 p.m., the committee adjourned, to reconvene at 10 a.m., on Wednesday, April 11, 1973, in room 1302, Longworth House Office Building.]

STREET CRIME IN AMERICA

(The Police Response)

WEDNESDAY, APRIL 11, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice at 10:10 a.m., in room 1302, Longworth House Office Building, the Honorable Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Murphy, Rangel, Winn, Sandman, and Keating. Representative Ralph H. Metcalfe, of Illinois, was an invited guest and sat with the committee.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

During the morning we will be hearing testimony about the Chicago Police Department's community service aid program. One of our distinguished members is from the great city of Chicago.

We also have the honor of having with us this morning another distinguished Representative from the Chicago area, Hon. Ralph Metcalfe. Mr. Metcalfe has made a very distinguished record here in the House of Representatives. We are delighted to have him join us this morning.

Mr. Murphy, will you be kind enough to introduce our first witness this morning.

Mr. MURPHY. Thank you. Mr. Chairman and members of the committee, I am pleased to introduce this morning the distinguished deputy superintendent of the Chicago Police Department, Mr. Samuel W. Nolan, Deputy Superintendent Nolan is in command of the department's bureau of community services and in that capacity has been in charge of the community services aide program.

Superintendent Nolan is a veteran of 28 years of service in the Chicago Police Department. As most of you know, the Chicago Police Department is one of the Nation's largest law enforcement agencies. It has a present strength of more than 13,000 men and women.

Superintendent Nolan has brought with him this morning four representatives of the department who have worked in the community service aide program and I will ask the superintendent to introduce them for the committee at this time.

PANEL OF CHICAGO (ILL.) POLICE DEPARTMENT OFFICIALS: CHAMBERLAIN, JOHN D., SERGEANT; CROSBY, WAYNE, COMMUNITY SERVICE AIDE; JUNGHEIM, ANNETTE K., COMMUNITY SERVICE AIDE; NOLAN, SAMUEL W., DEPUTY SUPERINTENDENT; AND ROTTMAN, HERBERT R., LIEUTENANT

STATEMENT OF SAMUEL W. NOLAN

Mr. NOLAN. Thank you, Congressman.

Mr. Chairman, I would like to say thank you very much for inviting the city of Chicago's police department representatives to appear before your committee today.

Chairman PEPPER. Mr. Nolan, we are very much honored to have you here today. You know these hearings are for the purpose of presenting to the Congress and the country the most innovative, imaginative programs that are being carried on in the various parts of the country in the fields of the administration of the criminal justice system of this Nation.

The police program is the first one; then we will delve into probation; prosecuting attorneys; courts, trial and appellate; and juvenile delinquency.

Your great city has been chosen as one of the cities which has a very outstanding and innovative program. We are very much pleased to have you and your associates here today to tell us about it.

Mr. NOLAN. Thank you, Mr. Chairman.

On my right is Lt. Herbert R. Rottman, commanding officer of the community service aide program since its inception on Chicago's West Side. To his right is Mrs. Annette K. Jungheim, a community service aide, who works in what we refer to as the "uptown area," the North Side of Chicago and she, too, has been a community service aide since the inception of the program.

On my left I have Sgt. John D. Chamberlin. Sergeant Chamberlin has been acting commander of the Near South Community Service Center, also since its inception. And on his left is another community service aide, Mr. Wayne Crosby, a young man who has been an assistant squad leader in our program for the last 3 years.

The Chicago Police Department Community Service Aides Project is administered by the superintendent of police through the deputy superintendent of the bureau of community services. The community service centers and their assigned personnel are under the direct supervision of a project director. This program was developed and brought into being after 2 years of target area study and preparation, in conjunction with Model Cities representatives and area neighborhood councils and their members.

In January 1970 the hiring of 422 community service aides began and simultaneously six community service centers in predesignated target areas were opened to fulfill a specific police purpose.

To accomplish this purpose two immediate goals were set and considered of paramount importance: (1) To assist in decreasing the incidence of crime and allowing the police patrol force to spend more time in the area of crime prevention and enforcement activities; and

(2) to assist in improving the quality of urban life in the designated target areas.

The Model Cities target areas consist of 300,000 residents in approximately 30 square miles. It is at high-density residency and generally considered high crime rate areas. The complaints, fears, and general misunderstanding of the police functions, their responsibilities and duties, all provided an insight to develop programs; and the lack of sufficient career opportunities and employment of target residents also was of prime importance in planning for this project.

The essence of the community service aide involvement is citizen participation, and the injection of more citizens directly into the law enforcement system. The unreported and unabated problems, especially those of a criminal nature, that have gone unresolved and are a constant source of anxiety and frustration, are all a contributing factor that leads to crime and antisocial behavior.

At the start of the program, the superintendent of police issued department directives to all members of the force and a community service aide official procedure manual was prepared and officially issued to department heads as well as the aides. All units of departments were directed to render assistance to this program including, but not limited to, the training division, the department psychologist in the personnel division, the medical section, and all other specialized units within the department whenever their services were needed.

Units such as auto theft, burglary units, narcotics, and youth officers were constantly utilized to conduct seminars.

Community service aides, after initial selection—age group of 17 years to 35 years, both males and females, some even with past police records—began 455 hours of training, starting with 200 hours of preservice training, and 255 hours of inservice training.

The single dominant criterion for employment was residency in target areas of employment. There are no exceptions to this requirement. The preservice training helped determine quality, as the civilians participated in this new learning device, to learn Model Cities concepts and goals, administrative duties and discover their own abilities.

This training was divided into three phases to develop the practical side of need for vital service responsibilities of coping with crisis areas—police community interactions—sociological dilemmas, and how best they be utilized in all duties permitted by law.

Some of the courses taught were criminal law, department standards, field procedures, general and specific duties, investigation and report writing. Advanced inservice training dealt with specifics of the above and consisted of two phases.

The backbone of the program is the patrolman. As supervisor, he is responsible for the output of the aides and assists in developing the leadership within the ranks of the aides. The basic work unit is team patrol, and the basic patrol philosophy is taught in training sessions.

It was recognized that therein lies, for some, a difficult transition of lifestyle, as not usually seeing the policeman as a partner. A learning experience begins for both the community service aide and the police officer. But the mere presence of the uniformed aides and the officer has in many instances been a deterrent factor in high-crime areas.

One project function is the education and counseling program which is offered in three tracks, and preliminary testing and counseling places all aides in one of these tracks.

It is an important aspect in upgrading formal education of community service aides at their own level. Chicago City College, Public Service Institute, under contractural agreement, has provided a basic education program, G.E.D. preparation program, and college-level programs.

All of these opportunities, of which 97 percent of community service aides participated in at least one of the three levels, stated the goal of this effort was to help aides decide on realistic vocational goals.

Each center, as an integral part of the program, has a full-time assigned counselor. Not only for secondary school attendees, but for regular assistance in the basic education programs, and to conduct those classes needed so that aides complete at least a high school level; 9 hours per week are allowed for educational courses, with pay.

There is no guarantee of professional law enforcement officer employment due to rigid civil service requirements. However, the training and experience does prepare community service aides for advancement and entrance into the public safety agencies and other human services agencies and also the private sector of the economy.

Aides have gone on to many diversified jobs: Police officer, stewardess, park employees, post office and other governmental jobs.

By their knowledge and firsthand experiences in community problems, new directions and added duties developed mainly designed to the steering of the young from a criminal involvement to a socially gainful environment, in the aides immediate recognition of the basic factors inherent to unlawful acts. which is the desire to perform a specific act and the afforded opportunity to go undetected.

Community service aides have performed a myriad of service functions, normally handled by sworn personnel, designed to increase safety of persons and property. In accomplishing some of their tasks, community service aides relieve police personnel of adult missing persons investigations, abandoned vehicles and recovery of stolen vehicles processing, rabies control, dog licensing program, and the bicycles registration program.

Neighborhood burglaries are an important area of patrol and the new operation identification program is aimed at curtailing criminal activity in looting homes and businesses. The formation of community workshops at the neighborhood level block clubs, even in high rises, has been instrumental in better understanding of a need of citizen participation in crime prevention.

Aides have assisted in the apprehension of offenders of criminal acts and their high visibility of team patrol in those pockets of crime-laden areas where schoolchildren extortion and physical attacks occur, and also those areas reporting purse snatching and auto thefts, auto parts, and those experiencing high incidence of arson difficulties.

They are also involved in reporting building violations, assisting in crowd control, tutoring programs, cultural involvement programs, senior citizens' activities, and many other needed services to their communities.

The following is a statistical comparison of index crimes for a like 6-month subsequent period as reported in the police community service centers comprising six designated target areas.

It is recognized from September of 1971 through February of 1972 that there has been a decrease in the amount of homicides to 35 from 63. There has been in the area of rape a decrease, 129 from 267. Serious assaults, unfortunately, have risen over 200. Robbery has been reduced to 1,859 from 2,640. Burglary has been reduced about one-third. Theft of autos has increased about one-third; and grand theft has increased, unfortunately, to 838 from 605.

I think at this time, by permission of the chairman, we would talk just a moment about our funding.

Chairman PEPPER. We would be very glad to hear it.

Mr. MURPHY. Mr. Nolan, I would like to question you regarding your funding. Obviously your community service aides program has received Federal funds and we would like to know how much funding. What effect will the proposed budget cuts have on your funding?

Mr. NOLAN. Very good, sir. At the inception of the program this model cities aid project was funded entirely by our model cities administration in our city through Housing and Urban Development. Shortly thereafter, in July of 1970 the Illinois Law Enforcement Commission supplied us at the fiscal year with one-third, which was $1.3 million. Total funding of that program at that time was $3.2 million. This went on for the first year and the second year.

The contingency was through the Illinois Law Enforcement Commission that the department would apply for discretionary funds through the Law Enforcement Assistance Administration. This was done, but denied in November of 1970 on the basis that the department's program did not fit into any category that they had under which they could fund our program.

Mr. MURPHY. I would like to pursue that, if I may. We are talking about LEAA funds?

Mr. NOLAN. Yes, sir.

Mr. MURPHY. And the Chicago Police Department submitted a request for those funds?

Mr. NOLAN. Yes, we did.

Mr. MURPHY. And it was denied on what basis?

Mr. NOLAN. On the basis that under the categories in which we applied there was not sufficient funds direct from LEAA to supply us the amount of money we request namely; $1.3 million.

Mr. LYNCH. Mr. Murphy, if I may, I would like to know whether that denial was from the Illinois Law Enforcement Commission or the LEAA in Washington.

Mr. NOLAN. On request of the Illinois Law Enforcement Commission we were told to apply direct to LEAA in Washington.

Mr. LYNCH. For discretionary grants?

Mr. NOLAN. That is right.

Mr. MURPHY. That, too, was denied?

Mr. NOLAN. That was denied.

Mr. MURPHY. On what grounds? That the particular program you had in mind was not contemplated by LEAA?

Mr. NOLAN. The only reply we received was that in the category in which we applied—this was their words—there was not sufficient funding for a program such as ours.

Mr. MURPHY. That was in community service programs?

Mr. NOLAN. The community service aide project.

Mr. MURPHY. How were they funded prior to that?

Mr. NOLAN. They funded it through the Illinois Law Enforcement Commission prior to that. That is where one-third funding had been received.

Mr. LYNCH. The Illinois Law Enforcement Commission is the State planning agency for the State of Illinois under LEAA?

Mr. NOLAN. That is right, sir.

Mr. MURPHY. What would you have done with those funds had they been received? Would they have been used for walkie-talkies, radios, and other equipment?

Mr. NOLAN. They could have been used for communication, but mainly they could have taken up that one-third needed funds and carried the program at its present level.

Mr. MURPHY. You just recited a number of reductions in auto thefts, burglaries, and other categories of crime as a result of this program; is that correct?

Mr. NOLAN. Yes, we have.

Mr. MURPHY. And yet the Federal Government denied these funds, stating that the category wasn't proper?

Mr. NOLAN. Yes; they have been denied. But the program did not suffer because the city of Chicago, through our own Model Cities Administration, found funds to carry it on until just March 31 of this year.

Mr. MURPHY. Will you be able to continue to carry that on?

Mr. NOLAN. No, we will not; because as of March 31 this year it was necessary for the superintendent of police to direct me to close six of our centers and to lay off better than two-thirds of our people, from 422. We are down to 81. They closed all of our centers and these 81 people are scattered in the six police district stations in the target areas.

Mr. MURPHY. Mr. Superintendent, do you know of any other major cities that have a program like this community service aides program?

Mr. NOLAN. No; there are none in the country.

Mr. LYNCH. If I may, Mr. Murphy, the Chicago Police Department community service aides program is the country's largest. I think there are other aide programs, but no city has invested as much manpower or money as has Chicago, concentrating in specific target areas.

I wonder, Mr. Superintendent, if you could tell the committee how many centers you had and would you also describe what you mean by the term "center?"

Mr. NOLAN. The police community service center is located in the heart of the target area. It is usually a store-front building. It comprises a number of aides that are 8 percent of the population of that particular area.

For instance, our Grand Boulevard area, one of the areas of our city in which Congressman Metcalfe is the Representative, is one of the largest. It has 102 aides assigned there. But Grand Boulevard, just immediately east of there, is a smaller area because of some of the abandoned and vacant buildings, and we have 41 aides assigned at that particular center.

We have two at the West Side. One has a complement of 78 aides, and one has a complement of 39 aides, and the one we have in the Woodlawn area has a complement of 78 aides. And we have one up on

the far North Side, uptown, which has a complement of approximately 78 aides, also.

Mr. LYNCH. You had a total of six centers; is that right?

Mr. NOLAN. A total of six.

Mr. LYNCH. And they have all been closed?

Mr. NOLAN. They were closed.

Mr. LYNCH. And they could be characterized as store fronts, neighborhood walk-in centers?

Mr. NOLAN. Yes.

Mr. LYNCH. Did you, in fact, have people in the neighborhood other than aides or police personnel employed in the program who used to come into those centers and, if so, what did they come there for? What service was rendered to them there?

Mr. NOLAN. The centers were commanded and run by police personnel, lieutenant or police commander, and sergeants charged with supervision, and patrolmen as squad leaders. But we also used the centers to indoctrinate the community residents that this was a satellite police station where they could come for services which could be explained very well by some of our aides here, of the type that was given; come in for services, come in to register complaints, come in to learn how to get better service than what they usually have in the community in which they live.

The centers were also used to conduct programs, to bring young people into a gathering place, for senior citizens, to conduct tutoring classes, but mainly to let the citizens know that police community workshops, block club meetings, any type of community services that they desired within the realm of police personnel, could be conducted in those centers at any time of the day or evening.

Mr. LYNCH. You told Mr. Murphy that a discretionary grant application directed to LEAA here in Washington was denied on the basis that your program did not fit into LEAA's categorical grant format? You also indicated that you had been denied additional funding by the Illinois Law Enforcement Commission.

What is the situation with Model Cities funding now? Have they been reduced in the city of Chicago?

Mr. NOLAN. They have been reduced. I might add one clarifying point, counsel, with respect to the Illinois Law Enforcement Commission. One of the contingencies of the second-year funding was that the third-year funding would be reduced accordingly. The second-year funding had an attached rider letter which required us to apply directly to the Washington LEAA program, and, in turn, we were turned down.

Mr. LYNCH. How much money had the ILEC given you?

Mr. NOLAN. They had funded us for 2 years. We are now waiting for third-year funding, which is not forthcoming as yet.

Mr. LYNCH. This funding amounts to how much?

Mr. NOLAN. $1.3 million, or a reduced amount.

Mr. LYNCH. During the second year, was that money reduced?

Mr. NOLAN. No, the same amount.

Mr. LYNCH. And what was the contingency for additional funding?

Mr. NOLAN. The application into the LEAA and their reduced amount for the third year.

Mr. LYNCH. Have you, in fact, reapplied to ILEC for additional money?

Mr. NOLAN. We have applied.

Mr. LYNCH. When did you do that, sir?

Mr. NOLAN. The 30th of January the mayor forwarded a letter to the chairman of the Illinois Law Enforcement Commission, stating the Chicago Police Department Police Community Service Aide Project was requesting at that time an honor of the commitment of the Illinois Law Enforcement Commission for third-year funding.

Mr. LYNCH. And the chairman is Mr. Bilek?

Mr. NOLAN. No. It is presently Mr. Donald Page Moore.

Mr. LYNCH. Did Mr. Moore respond to the mayor's letter?

Mr. NOLAN. He responded that the matter would be taken up at the standing committee meeting in February, which it was, which the superintendent was a member of the standing committee. I, myself, was present, and it was stated in their particular minutes at this particular time, with the superintendent of police abstaining, that they would honor their commitment; the full amount would not be given but a substantial amount would be as soon as funds were located. We are still waiting.

Mr. LYNCH. As soon as funds were located?

Mr. NOLAN. We are still waiting for those funds.

Mr. LYNCH. What does that mean?

Mr. NOLAN. Frankly, I don't know.

Mr. LYNCH. Are you now receiving any moneys from the Chicago model cities program?

Mr. NOLAN. Yes, we are. We are receiving, as of April 1, $1 million to conduct a program which we are putting into effect immediately, that will run us through, budgetwise, June 30, 1974.

Mr. LYNCH. And that will enable you to function with 81 aides; is that correct?

Mr. NOLAN. Eighty-one aides and nine police officers.

Mr. LYNCH. And that would be as compared with 422 aides prior thereto and some 71 police officers.

Mr. NOLAN. Yes.

Mr. MURPHY. Counsel, may I interject at this moment?

Superintendent, what effect on crime statistics will reduction in aides and police officers have?

Mr. NOLAN. Well, it would relieve us of the uniformed patrol of the aides into all aspects of the community and I am sure that some of the things that already have been brought to our attention, such as businessmen who felt a degree of safety from the very fact these satellite stations were located in the community; there were police personnel around as well as community service aides.

Again, the myriad of the services that have been offered by the aides over the last few years is certainly going to have a great deal of effect on what we would refer to as street crime.

Mr. MURPHY. In other words, you see street crime rising as a result of this cutback?

Mr. NOLAN. In these particular areas where these centers were located, yes, I do.

Mr. MURPHY. And the purpose of the Federal LEAA program was to reduce your crime, was it not?

Mr. NOLAN. It certainly is, sir; at least that is what we were told.

STATEMENT OF HON. RALPH H. METCALFE, A U.S. REPRESENTATIVE FROM THE STATE OF ILLINOIS

Chairman PEPPER. Mr. Metcalfe, we will be glad to have you participate and ask any questions you desire.

Mr. METCALFE. I would like to simply say I am of the opinion that the relationship between the Chicago Police Department and the Federal Law Enforcement Assistance Administration is not very cordial, because the Chicago Police Department has not been very amenable to the demands and wishes of LEAA.

Recently they had an examination and they asked to come in and monitor the captain's examination and they were denied that opportunity to come in. In March of this year they appointed three consultants to look into the question of police policies and hiring practices of blacks and other minorities. I think the record will show that the blacks constitute 33 percent of the Chicago population, and yet on the police force in excess of 13,000, the blacks constitute only 17 percent.

In the rank of captain we have only 1 percent black and above the rank of captain, the appointed office such as the distinguished office you have, only 7 out of 78, and 46 out of 226 youth officers are black.

Aren't you really receiving the brunt of the problem with the Federal Law Enforcement Assistance Administration because of your desire to cooperate with them and from the statements given by Superintendent Conlisk after the report was mentioned by the Law Enforcement Study Group that it was discredited and was found not to be factual, when actually it was?

Aren't you suffering as a result of this in the program that is administered by the community service program?

Mr. NOLAN. Mr. Congressman, I would hope that the Law Enforcement Assistance Administration would not judge the worth of this program by the kind of survery made of the department a short while ago by its representatives. There are 13,000 police officers in our city and I agree with your other facts entirely.

Yes, we, as minority members—and as I say, this is in a selfish way, sir—would certainly like to see more blacks, Latins, in command positions within the department.

Unfortunately, we only have 17 percent at this time and I am sure that you and the help you have given the department in finding the recruits are very well aware of the fact the department left no stone unturned in trying to get the young blacks, the young Latins to take the police exam. I think the turnout was very good.

Unfortunately, the police department does not give the police exam. Also, as the Congressmen is aware, and the gentlemen are, it is given by the civil service commission. For those that have failed the exam, unfortunately, the greater number percentagewise has been black.

Tutoring programs have been set up. We even conducted classes for patrolmen and policewomen in our centers. This is also the function of the centers, to find schoolteachers with the ability to volunteer to come into the center to help the blacks and help the Latins take the police exam. I think our problem is similar to other cities throughout our Nation.

But again, sir, I would hate to think the LEAA would use that as a criterion to deny funding for a program such as this, that I think

goes above that factor, inasmuch as they are serving the human needs of all people in the community in which they are now serving.

Mr. METCALFE. Can it not be the fact the police department is under the city administration and the civil service commission also is under the city administration, and therefore they felt the city administration should take steps to eliminate the discriminatory practices that actually exist at the hiring levels, and that is the reason there are only 17 percent blacks where they are turned down for the slightest excuse and many of them not based upon fact?

At one time they were turned down because they said blacks have flat feet and it was proven that flat feet were not a deterrent to a policeman being an effective officer of the law. As a matter of fact, the police department is motorized and, therefore, that did not hold water.

Recently, in the last few years they have turned blacks down and accused them of having heart murmurs when, in fact, they have not had heart murmurs. So as to cut down purposely on the number of blacks in the police department.

Now, you cannot expect to have more black officers working in the community services or any other department as long as this particular practice exists. And it seems to me that you are in a vacuum here because you are in need of additional black police officers, and yet the civil service is not certifying them because of their discriminatory practices.

Mr. NOLAN. I would agree, Congressman, certainly the community feels there is a need for another look at civil service entrance exams for all people coming into the department today. They feel this is something that is important, and we have found has been causing quite a few problems, especially among minority members.

The flat feet concept, as you mentioned, as you know, since the first opposition to it had arisen a few years ago, has been taken out of their concept of physical exam.

The heart murmur, whenever it occurs we certainly try to reach the young man and ask him to go to his doctor and reapply. We found many of our organizations in our city. Operation Push, Urban League, other places such as that, have all contributed, seen to it the young man was able to afford a medical examination and to attest to the fact he did or did not have a heart murmur.

So I would agree with you.

Mr. METCALFE. And is most cases they found that person did not have a heart murmur, although the family physician for civil service said that he did. Then upon submission of a statement from a duly licensed cardiologist, they then admitted to him, when they should have admitted him in the first place.

Then, this situation got even worse, because then it became a matter of them bringing in a statement signed by a licensed physician, who was a heart specialist, and they said: "We say you have a heart murmur," and the expert says, "You do not have a heart murmur," and he is still rejected.

Mr. NOLAN. We certainly encourage all individuals who have been turned down for that facet of physical problems to reapply. And the matter you spoke of has certainly turned to the better for the man in question and in some instances it has turned against him.

Mr. METCALFE. You understand, Superintendent, of course, I am not directing my remarks to you, because this is something over which

neither you nor the police department have any control because of civil service.

Mr. NOLAN. I understand, sir; yes.

Mr. LYNCH. Mr. Superintendent, you indicated you would hope that LEAA would not evaluate this particular program on the basis of the evaluation that was done in the department by their consultants. In that regard, is it not the fact, sir, that on three separate occasions the Chicago Police Department's police community service aides program has been independently evaluated; once in 1970 by a private consulting firm; shortly thereafter by Loyola University of Chicago; and finally by the International Association of Chiefs of Police?

Mr. NOLAN. Yes, it has.

Mr. LYNCH. In your judgment, what were the salient findings of those evaluations?

Mr. NOLAN. Very good, sir. I will be happy to answer that.

As you know, the Criminal Justice Educational Foundation that evaluated our program in 1970 had some very valid concerns and recommendations, and which have all been followed.

Prof. Paul Mundy of the Loyola University undertook a study of the department, of which he commented on his phase I of the Illinois Enforcement Committee hearings in 1972, in which Professor Mundy stated that if this is how his taxes were spent, he wouldn't mind paying taxes. This was a public statement made by Professor Mundy at this particular time.

Professor Mundy is now in this second phase of his evaluation of our program. Also the Model Cities Administration is conducting their second-year evaluation. We have been evaluated, I should say, also by the Government Accounting Office, and I must say in all respect, with the recommendations, and that is the first year growth that everyone has, in such things as squad leadership, such things as sufficient quarters, such things as community response.

We have found the evaluations—and we have copies here to be passed out if you would care to look at them—the evaluations have been extremely favorable to a program of this nature. Naturally, no program can rest on laurels of last year, but we are very happy to say this program is continually evaluating itself.

The superintendent requires this on a monthly basis and we certainly attempt to direct it toward positive goals and accept recommendations as we are able to handle them. The only recommendation that was handed to us that we were not able to handle was to place aides in squad cars. We felt because aides do not have arrest powers, because the aides do not carry weapons, that placing them in squad cars in the target areas in which they live and work would be too much of a danger that we would not want to subject them to at that particular time.

So they have not ridden in squad cars in the community in which they are assigned.

Mr. METCALFE. Superintendent, why is the police department so secretive about releasing reports? I made a request for the report of the International Association of Police Chiefs when they made their study. And our Library of Congress informs us that the only way we can get that report is for Superintendent A. P. Conlisk, Jr., to release it. He has refused to release it to the Library of Congress and there-

fore it has not been made to me, as the Congressman, and especially my district in Chicago.

Why it is we cannot get that report?

Mr. NOLAN. I am not aware of that, Congressman, but it would appear to me, just talking off the top of my head at this particular time, that if a Congressman of the United States requests a report I am sure the superintendent of police, if this is a matter that has been brought to his attention, would certainly have answered at this particular time. I imagine it has been some time. The report is 2 years old.

Mr. METCALFE. Normal channels is to go to the Library of Congress, because they are our source for information and they, in turn, will ask it and I am sure they asked for it in my name and indicated I was desirous of getting that report.

Mr. NOLAN. Could I take the liberty of following that up and getting back to you?

Mr. METCALFE. I would appreciate it if you would do so.

Mr. NOLAN. I will take the liberty of following up.

Mr. LYNCH. Mr. Superintendent, it is your judgment that in a general sense all of these separate evaluations of this program—and they were field evaluations. I take it—were generally positive in nature?

Mr. NOLAN. Yes; they were, sir.

Mr. LYNCH. I would like to read to you the introductory paragraph from one of the evaluations. It says:

For the better part of the summer

and this is referring to the summer of 1970——

The Criminal Justice Education Foundation with the assistance of the firm of Ernst & Ernst has been engaged in evaluating the Chicago Police Department's Police Community Service Aide Project. The summer has been a violent one. During the months of June, July, and August 105 murders have occurred within those police districts within which the community service aide project is operating. During the same months, five Chicago police officers were murdered, two of them in districts within which the project is operating.

Your testimony is that subsequently, perhaps due to this program, the level of homicides in those districts dropped by almost 50 percent. Is that correct?

Mr. NOLAN. Yes; 73 to 36. And I say this in this respect, sir: Our figures naturally are taken from the police reports. I cannot say, realistically, that every reduction in murder was due to an aide being part of that prevention of a crime. But I say through the statistical reports of the Chicago Police Department, in those particular areas—and I am talking about beat numbers of district—in which the community service aide project operates there was this type of a reduction in a 6-month period from September 1971 until February of 1972.

Mr. LYNCH. Was the same reduction level, for instance a 50-percent reduction in homicide from 73, I think you said, down to 36, apparent in those police districts in which this program was not operating, or do you know?

Mr. NOLAN. We did not take a run of that type of statistics; no, we did not.

Mr. LYNCH. So there can be no question of prejudice, I suppose that the record ought to show I served as project director for one of these evaluations and had the pleasure of dealing with Superintendent Nolan.

Superintendent, I wonder at this time if you could ask Lieutenant Rottman to describe to the members of the committee what function he serves in the department, what service center he commanded. And I think we would all be interested in hearing some of his new experiences as a community service aide unit commander after a long period of service as a regular Chicago policeman involved in street-level enforcement.

Mr. NOLAN. I would be happy to.

I would first like to say with respect to Lieutenant Rottman and also Sergeant Chamberlin, as you know, this is a departure from normal police procedure. A man working in this particular type function has to have desire and attitude. All of the 71 sworn personnel who came into this program volunteered. I am happy to say this gentleman that will now testify was on furlough at the time of the selection, and on the very last day, came to work, heard about it, read up on what the requirements were, applied, and was accepted almost outright.

Lt. Herbert Rottman.

Mr. LYNCH. Before you speak, Lieutenant Rottman, I would like to tell the committee that the last time I saw you you were showing me a shotgun blast through the front door of your center and took me upstairs to show me where a molotov cocktail had been thrown the night before.

Statement of Herbert R. Rottman

Mr. ROTTMAN. That is true.

Mr. Chairman, gentlemen, as the deputy mentioned, I came into the program at its very inception. I serve as the commanding officer of the center in the Lawndale District of Chicago. It is the Fillmore Police District, Lawndale Section.

I am located—you Congressmen have perhaps been in Chicago—at Harrison and Sacramento.

Mr. Lynch mentioned the fact he made a visit to our center and, unfortunately, the previous night or two nights to that, I had had an attack upon the center. Presumably it was a gang we were in disfavor with. But to prove a point, discussing the effectiveness of our program, I think it was brought home so dramatically at this time.

I had conversation with residents who lived directly across the street from the center. I am in a two-story brick structure. It was formerly operated by a wire company. On the second floor level are offices and here we conduct our class rooms, our inservice training. This is where we hold our inspections and this is where we operate from.

The first floor level was formerly used for storage and it is similar to a huge garage. The first floor level is now used mainly for the youngsters in the neighborhood who come in very frequently after school, but I don't want to digress.

Getting back to Mr. Lynch's visit. As I say, we had been attacked the night before and presumably it was a gang whom we weren't in too good favor with and they threw a few Molotov cocktails against the side of the building and one in my office.

But, talking about the effectiveness of our program, I had people across the street come in to me personally, saying: "We see what is

going on over here. A group of boys came over and started to throw these gasoline containers against the building."

But the surprising thing, gentlemen, around the corner came another group of kids and they drove them off. They protected our little center. It made me feel real good, the feeling that the residents wanted us, they needed us, and they protected our little property. They, in turn, are taking advantage of our center.

Getting back to the many things we do, I want to emphasize the things that identify. We always do it in a team control concept, be it visiting shut-ins, be it a door-to-door canvass to identify children who may be victims of lead poisoning, sanitation irregularities, or lights out.

We are open until 8 o'clock in the evening; the late evening hours the aides are out identifying reports on alley lights out or street lights out. It is always with the team patrol concept.

We have uniforms like this young lady is wearing, green uniform identifying her as a member of the police department, always accompanied by an officer.

I wear my uniform very proudly to work every day. I don't say it as a cliche. I did. The sergeant here would appear in uniform. Also, we are performing functions that maybe you wouldn't generally consider a police officer should be performing. It was of necessity we did some of these things, because there was no other agency to fill the void.

So, while we were out on surveys we were also out in a patrol concept and we were, I feel, preventing an incidence of crime by our presence on the street.

Mr. LYNCH. Lieutenant, I wonder if I could interrupt to ask you if you would tell the committee the service the organization performed in reference to abandoned automobiles, and explain for those who are not aware of the size of that problem in Chicago how bad it is, and why abandoned autos can constitute a threat to the safety of people.

Mr. ROTTMAN. Surely. The number of cars abandoned on the streets of Chicago is horrendous. People abandon them for various reasons; perhaps mechanically it just doesn't run any more and they can't afford to have it fixed; they can't afford the license, things of this nature; and they let them sit on the street. They park them and there they are. They can create a real hazard.

No. 1, children are attracted to them; No. 2, they are a means of people, derelicts, sleeping in the car. After weeks they become rat infested. I think they contribute, I know they contribute, to the deterioration of the neighborhood.

The responsibility of the aides when they went out on this patrol was to identify these cars, to report on them, to prepare little reports that were forwarded to the Fillmore district police who have "abandoned" officers working in this capacity to see the cars are eventually towed.

We would set up the mechanism and forward the reports to them. Normally this report is done by beat cops, police officers, so by relieving them of this responsibility, we would take the time—"we" meaning the aides—to identify these cars and prepare the reports and allow the beat officer on that particular beat more time to concentrate on the serious crimes.

Then subsequently, the cars would be towed and we have a followup program. They go back the next number of days to see that this work was being done. And if it wasn't, we would have another report we

would prepare or would call the district commander, personally—and we had a very good cooperation between the districts—and would bring it to his attention and the car would be towed.

Mr. LYNCH. You worked directly with the mayor's office of information and inquiry. Explain how that operates.

Mr. ROTTMAN. Yes, sir. Right down the street from the center. These reports we prepare, regulatory reports, will be forwarded to the mayor's office and then they, in turn, would direct them to those agencies that have the responsibility to correct the conditions that we were reporting on: Broken sidewalks, abandoned cars, street lights out, sanitation, dangerous porches, refrigerators abandoned, and things of this nature.

Mr. LYNCH. Lieutenant, I wonder if you could describe the racial makeup of your aides and tell us how many aides were under your command while you still had your service operating.

Mr. ROTTMAN. I had 39 aides, 5 patrolmen, 3 sergeants, and myself, operating that little center. About 60 percent were female and 40 percent male. Toward the end of the program we were trying to correct it and bring it up to a 50–50-percent level.

Mr. LYNCH. Is the neighborhood you were operating in predominantly black?

Mr. ROTTMAN. All black.

Mr. LYNCH. Were the aides predominantly black?

Mr. ROTTMAN. All black.

Mr. LYNCH. How were they selected?

Mr. ROTTMAN. Well, as the deputy mentioned, there was no criteria other than residence criteria. We are obliged to live in the target area.

Mr. LYNCH. What was the age range?

Mr. ROTTMAN. From 18, roughly, to 35. They made some exceptions on the end of the 35. I know, in my instance I had a grandmother in my program who, I would say, would be close to 50 years of age; very effective, though; very effective. This woman had an understanding and compassion that we needed, desperately needed.

Mr. LYNCH. The fact that there was no entrance examination, was, I take it, intentional, and the motive was to pick people who could communicate and who could understand the neighborhood in which they lived; is that correct?

Mr. NOLAN. Yet, it is.

The major factor, as stated, the only criterion being, to be a resident of the neighborhood. We were seeking individuals, again, as I say, no matter if they had a nice background or police record. In this respect we had young men who had been involved in stealing cars and purse snatching; a young woman who had been involved as a prostitute or arrested for shoplifting.

It was our feeling these individuals deserved a second, and in many instances, a third chance.

Back to our employment criteria: Residency, as we mentioned earlier, is the prominent one. Police record, if one has had problems with the police, we believe the second and third chance is necessary. There is a written examination given. The written examination has no effect whatsoever on the person being employed. It just gives to us a better idea of the need for an educational concentration.

The other criteria relating to height, weight, or anything else, is completely ignored. We tried to select people who want to get involved in work.

We found many of your young ladies and men also, who had been on welfare, were very receptive to applying and reapplying and almost demanding we hire them. As Lieutenant Rottman has stated, we found we had to relinquish the 17 to 33 age limit on men and 18 to 35 age limit on women simply because there were these kinds of people that had the talent and desire and wanted to get into the program. We decided to use a few and scatter them around and see how well they would do and we found out they turned out to be some of our better workers.

Mr. LYNCH. Could you have Sergeant Chamberlin describe his service?

Mr. NOLAN. We would be happy to.

Sergeant Chamberlin, by your wishes, Mr. Chairman, has brought along a few slides. Unfortunately, they relate to his particular center. If the committee would care to review them, they would take but a few minutes.

Mr. RANGEL. Before we get into the slides, I was interested, Mr. Superintendent, in the fact that you seemed rather impressed with the type of aides that you have been able to recruit to work in this very exciting program. And yet earlier in your testimony you had indicated that many of them were precluded from joining the police department because of a civil service examination.

My question is: Is this examination administered by the city or by the State?

Mr. NOLAN. It is administered by the city of Chicago, the civil service commission, a separate agency from the police department.

Mr. RANGEL. From reading the activities of the aides and listening to your testimony, I assume that after months or years of this type of experience, that these aides—that is those without criminal records—have gained quite an expertise in many facets of police work.

Mr. NOLAN. Yes, they have, sir; and many have also gone on to law enforcement activities other than the Chicago police. One of the deterrent factors has been, Mr. Congressman, the height and weight requirements of the civil service commission, and also the test Congressman Metcalfe spoke of has been a deterring factor. It is a very rigid type test and, unfortunately, it has been a deterring factor for those aides who have met the height and weight requirement, even with the tutoring we have been able to give some of them in our particular classes.

Here again, we find our civil service commission is not unique in this area. This is something that is done throughout the country. All police departments, and I think there is possibly something that is being tested now in court—and that is civil service exams throughout the Nation. It is felt, due to the current level of young people that we have, those of them that are interested in law enforcement, there is going to have to be a need to look hard at civil service tests throughout the Nation.

Mr. RANGEL. I agree with you, Mr. Superintendent. I think this is especially true of the Spanish, who do have less than the average height requirement, but I am rather surprised that there is a difference

between the height and weight requirements as opposed to your age. Could you elaborate on that, because we have rather rigid physical requirements in New York, but our youngsters certainly can outrun many of the people that are on the police department.

Mr. NOLAN. I am not surprised. Some of us in the department have a tendency to lose our physical condition immediately afterward.

But in 1966, the Chicago Police Department at that time saw fit to lower the height requirement from 5-foot 9 inches to 5-foot 8 inches. And in 1966, because of our Latin citizens, it was necessary to lower those requirements to 5-foot 7 inches.

In my communication with Puerto Rico it was determined that that is also the requirement for police personnel there; namely, 5-foot 7 inches. So that is the height requirement as it stands now, and weight is in comparison to one's height.

We recognize this problem could be further advanced as far as bringing women into the program. Again, along your line of thought it is found a woman 5-foot 2 inches is considered eligible for the police department and will soon be assigned to the same type job—almost same type job—as policemen are now handling.

So the question I am sure will come about: Why isn't this true for men also?

We visualize many types of problems of this nature coming up. But again, I say these are the rigid requirements of our civil service commission and until they are changed by law, we have to obey them.

Mr. RANGEL. Am I to believe the physical requirements are the greatest impediment to men getting on the police force, other than the written examination?

Mr. NOLAN. Those are all components. Each has a weight value. The written test has a weight value, and the height. The physical requirements have another weight value and unless a man is able to balance all of those into a passing grade, then he is summarily dismissed or unable to pass the exam.

Mr. METCALFE. Would you yield? I think it ought to be also pointed out, in the written examination there is no designation as to race, wherein in the physical examination it is obvious what a person's race maye be, and that may be a deterrent factor in having a minority.

Mr. RANGEL. The direction of my question was whether or not the civil service commission might consider the experiments that the aides meet other requirements—other than the written requirements—might consider that a factor without violating the high standards of the municipal civil service in determining qualifications.

Mr. NOLAN. We have attempted in the past, sir, to ascertain if points of any type could be given to an aide taking a civil service exam. This was not considered for the very obvious reason it was not included in any of the civil service rulings, except a man or woman being a veteran of the service. Other than that, no points could be given.

We were able to insert points in a civil service exam for aides who were brought into a new position opened by the Chicago Police Department, superintendent of police, of January 1, 1973, and that was senior public service aides.

Now, of the 200 people who took that examination of which many were our community service aides, not only because of the points, we feel, but also because of their own aptitudes, out of the first 100, only

8 were not community service aides. All of the balance were community service aides. In fact, the first 40 that were called were all community service aides.

Mr. RANGEL. Do you have a Chicago police union or benevolent association; that type of thing?

Mr. NOLAN. We have many in our city; yes, we do. We have a patrolmen's association, which amounts to five different ones, each rank has its own association: the lieutenants, the captains, and the sergeants.

Mr. RANGEL. What was their general attitude toward these proposals to incorporate aides into the police department?

Mr. NOLAN. They were not surveyed as to this. None of our police associations were surveyed. I think I misinterpreted your question. I think your question might have been, if I understand it correctly now, do we have in our city one union that speaks for the police department?

Mr. RANGEL. No, sir. My experience is that our Police Benevolent Association, which is the major police association, really fights desperately hard, political, to exclude any breakthroughs for minorities in joining the police department, even if it is a new category or new grade level being set up. I was concerned about the attitudes of the police unions in Chicago.

Mr. NOLAN. No; we have one of our police associations that actually conducts classes to bring minority groups in. In fact, we have two. One is Latin American and the other is a black association. And Guardians—three associations—also conduct classes and recruit young men, minority groups, to teach them how to take the exam and come into the department.

Mr. RANGEL. Is there a residence requirement to become a regular member of the Chicago police force?

Mr. NOLAN. Yes, there is. That has been changed on the last exam of December 4, 1971. Now a person must be at the time of the examination a resident of the city. Previous to that it was within 6 months move into the city, if one was called into the service. But now one has to be a resident prior to taking the examination.

Mr. RANGEL. I am shocked by the progressive nature of police departments in Chicago compared to my home city of New York. Thank you.

Mr. NOLAN. I understand in some cities, for instance Washington, a man can live within x number of minutes away from his assignment, a suburban area or elsewhere, but due to the nature of large numbers of people, we have 33 percent black. We have a great many Latin citizens in our city and we felt it would be unfair to them to open the examination up to those who were not city residents.

Mr. MURPHY. Superintendent, are a lot of young people applying for a job as a policeman today? Is it a very competitive field?

Mr. NOLAN. Yes, it is. The last exam I spoke of, December 4, 1971, we had 13,000 men on the job. The examinations that were received by the Civil Service Commission totaled in excess of 9,000; 8,300 men showed for the examination itself. Only 35 percent or 3,500 passed that examination. So we have a tremendous amount of people that do apply.

We have an excess amount of men that have passed the exam. In fact, we are trying to pull an additional 500 into this particular position of patrolmen prior to June 30, 1973, because of the need.

Mr. MURPHY. What is the starting salary of patrolmen?

Mr. NOLAN. In excess of $10,000. And at the end of 4 years his salary increases to $14,000—$13,800.

Mr. MURPHY. In other words there is a lot of competitiveness for these jobs?

Mr. NOLAN. There is. It is a salary that is in comparison to the average kind of salary. We recognize, too, education plays a very big part, although a college degree does not enter into the picture of a man applying to the department. We recognize also in today's fair employment practices that many industries and businesses also are searching for that minority citizen. We see him being pulled into other areas other than law enforcement. Naturally, we applaud that.

Mr. MURPHY. I yield to Congressman Metcalfe.

Mr. METCALFE. Superintendent, is it not true that the Chicago police patrolmen are the second highest paid in the United States?

Mr. NOLAN. Yes; they are, sir.

Mr. METCALFE. Isn't it also true, now that they are the second highest paid there are more whites who are now applying because the job is more appealing to them, and if the discriminatory practices were eliminated there would be far more blacks with the police department?

Mr. NOLAN. I would agree at this time only with the first part.

Mr. METCALFE. In the last three or four examinations for patrolmen, you have had an unusually large number of white applicants, have you not?

Mr. NOLAN. Yes, because of the salary.

Mr. METCALFE. Thank you for yielding.

Mr. MURPHY. I have no more questions.

Mr. METCALFE. Mr. Chairman, may I ask Lieutenant Rottman some questions?

Chairman PEPPER. Yes.

Mr. METCALFE. Lieutenant Rottman, I think you indicated that you have 39 aides, do you not?

Mr. ROTTMAN. Yes, sir.

Mr. METCALFE. And five sergeants?

Mr. ROTTMAN. Three sergents, five patrolmen.

Mr. METCALFE. Five patrolmen?

Mr. ROTTMAN. Yes, sir.

Mr. METCALFE. Is each patrolman assigned a certain amount of aides?

Mr. ROTTMAN. Yes, sir; we have a regular organizational chart. Our little center makes up a company, and the company is broken down into platoons, and platoons into squads. The platoon is commanded by a sergeant and the squads are headed by patrolmen. They have 8 or 10 aides under their direction in the squad formation.

Mr. METCALFE. In hearing Superintendent Nolan's testimony, he took credit for the reduction of crime to some degree, but did not take full credit for it, and yet I find that much of your work is, as your title indicates, in community services.

Lead poisoning, you indicated you conduct surveys, you work in sanitation, stolen automobiles. How much does that leave for actually the deterrent of crime?

Mr. ROTTMAN. Their primary requisite when they leave that center is crime.

Mr. METCALFE. How does sanitation relate itself to crime?

Mr. ROTTMAN. In order to report on sanitation, they must be out and they are visible in the neighborhood. They do wear a uniform; they are accompanied by a police officer. So, sanitation would actually, in a crime incidence, be secondary, naturally, to reporting on a sanitation delinquency.

Mr. METCALFE. It is the same with making surveys on the poisoning?

Mr. ROTTMAN. That is right. They are available to the people in the area.

Mr. METCALFE. Isn't that a duplication of effort? In the case of your CCO's in Chicago, your urban progress centers send out teams to check on lead poisoning. Aren't you duplicating that effort?

Mr. ROTTMAN. This is the amazing part. We have an urban progress center a few blocks from our center that actually does the lead poisoning testing, but it is surprising how many of the families—first of all, they are not aware of it for some reason. They do not comprehend all of the services that are available for them.

Mr. METCALFE. I submit to you this is one of their major projects, to send out their aides from these centers to do a door-to-door survey. It seems to me it is a duplication of effort that they are going to do. Maybe you are saying they are not doing the job if you have to come behind them and find these families to educate them on the serious effects of lead poisoning.

Mr. NOLAN. I would make the apology, Mr. Congressman, if the impression was given that our function alone is that of a contributing factor to the reduction of a degree of crime. As Lieutenant Rottman stated, certainly we recognize in all of the communities, confusion, attitudinal change, the acceptance of police responsibility, as that agency is available 24 hours a day, 7 days a week when one needs service, this is the agency that they call.

If it is something that is of a nonpolice nature and we find that it is necessary, we address ourselves to it. We do work in conjunction with the agencies you spoke of. Naturally, because there is expertise, we find it necessary that working with them helps our job as well as it helps ourselves.

As being said by Lieutenant Rottman and myself, we feel that by providing service, or showing people how they can give service, it would take away the opportunity to rise up in frustration, to allow themselves to get just in a state of frustration about what goes on in the community.

One of the most disturbing factors I think we find among our low socioeconomic groups in our country is that there is no opportunity to make change and if people can get involved in ways of making change, such as a child being sick and where to take it; how to avoid the lead poisoning. We recognize in the black community that sickle cell anemia is one of the most disruptive types of diseases that occurs in our race, that these young people—as part of their duties—can direct families, even force families to submit their children to this type of examination in conjunction with the Chicago Health Department.

We feel this service, although it is far removed from normal police procedure, is something that is a contributing factor to that community's welfare.

Mr. METCALFE. I would like to ask Lieutenant Rottman a question and then I want to ask Mrs. Annette Jungheim a question along the same lines.

You are a supervisor by virtue of your rank, so is Sergeant Chamberlin. Would you give me a typical day for a patrolman. What does the patrolman do on a typical day? I would like to know from you what does an aide do after he finishes.

Mr. ROTTMAN. Working hours, we have two watches—a second watch and third watch. The first watch works from eight in the morning until 4 in the afternoon. The aide comes into our center, they sign in. They are required to sign in. Then we have rollcall. And it is conducted either by a sergeant, by a patrolman, or both. Generally, the patrolman is involved with his sergeant in making his rollcall.

We discuss matters pertinent to the neighborhood; we distribute daily bulletins—bulletins published by the police department—containing lists of stolen automobiles, licenses, persons wanted. The patrolman conducting this rollcall would refer to anything in this daily bulletin that may have occurred in our particular target area—perhaps persons wanted, missing persons primarily. We are very concerned about this, plus bringing to the aides' attention the fact that there are a number of licenses now published. "Please when you are out on the street, carry this daily bulletin and be aware of it."

We have uniform inspection conducted by the sergeant in conjunction with the patrolman. We have inservice training of mostly a half hour—45 minutes in the morning. A majority of our mornings are kind of rush because we are out on school patrol. The patrolman in the squad patrols our local schools because we have quite an incidence of older children attacking the younger children.

The aides, their work responsibility in the morning is our school patrols. In fact, in conjunction with some of the directors of the different schools we have set up safe school routes where the children are advised to "Take this route; it will be controlled by community service aides along with this patrolman." The patrolman has a responsibility of the activities of the aides on the street. He directs them; he guides them; and he is with them.

The school patrol—we are there in the capacity, our attitude was and is: here we are; how can we help you? I repeat again, that is so important. The officers in uniform, the aides in uniform.

Mr. METCALFE. How do you coordinate that activity of patrolling a school along the safe routes, telling them how to avoid the turfs controlled by the street gangs, as related to the work of the youth division of the police department?

Mr. ROTTMAN. First of all, when the safety routes are designed, or are identified, then the children in an assembly are advised to take these particular routes. We also work very closely with local district youth officer and he is advised of these routes. These are identified to him, and all three of the schools in my area have an officer or school patrol officer right in the school; he stays in the school proper.

We also keep in contact with the regular school patrols. We have *x* number of vehicles throughout the city manned by police officers who do emphasize their attention to the school areas. And we work,

all three are working in conjunction with each other regarding the safety of the kids, not only in the morning hours, but at noon recess.

Recently we had what we called "closed campuses," they haven't been going home; they find it better to keep the kids at school. Also in the evening, in the afternoon when the children leave the schools, the aides are there out on patrol.

Mr. METCALFE. That is a typical day for you?

Mr. ROTTMAN. Yes, sir. Then when they finish their school patrol they are assigned to beat areas. They carry a regular beat map that the officers in the district carry. They are assigned to particular areas. We may concentrate one day on one particular irregularity—"Let's be very observant for thefts."

We may change from day to day, whatever they are emphasizing, they are looking for. But it is a case of walk and talk to the people in the area.

Mr. METCALFE. How many vehicles do you have in an area?

Mr. ROTTMAN. I have two station wagons assigned to my center.

Mr. METCALFE. Mrs. Jungheim, would you tell me what a typical day is for an aide?

Statement of Annettee K. Jungheim

Mrs. JUNGHEIM. First of all, I would like to talk with regard to lead testing in our program.

In our program, while you may say it was a duplicate of what community reps did, we used to view our job as kind of a duplication, but we realized that if we worked together we would do more. So last year our program in Chicago was brought to Washington at the Mayor's Conference on Lead Testing and Poisoning and it is going to be used as a model throughout the Nation because we were highly successful.

This was coordination of community service aides, community reps, mayor's office and I. I worked very closely with that program, coordinating it uptown and then to the Lakeview area.

So I say, while we do duplicate it, we really extend the effort. The previous summer we had 250, last year 1,500.

Mr. METCALFE. May I interrupt your testimony to ask you: Are you in a supervisory capacity?

Mrs. JUNGHEIM. No, sir.

Mr. METCALFE. You are a typical aide out in the community working?

Mrs. JUNGHEIM. Yes, sir.

Mr. METCALFE. What else do you do?

Mrs. JUNGHEIM. We have our school patrol like the lieutenant mentioned. Not only are we on the street to make our presence known, to guide the children, see they get home safely, we kind of like to rap with kids, see what kinds of problems they have. We organize trips, organize activities, realizing there is a lot of idle time. We organize the movie programs because the kids in our neighborhood don't have the money to go to the local shows and it gives them something to do.

We talk to residents, let them know what is available. Part of the problem, the uptown has like 110 social service agencies. It was to get this information out to community residents, how best to use these

social service agencies available. So we would pass out fliers informing the people what was available.

I must have attended something like 200 workshops in people's homes and senior citizens' homes, telling them about our program, about the services the police department provides, how best to use these services, how to report crime efficiently, properly, who to call. There is a lot of misinformation about crime or how policemen do things.

So we try to do this, in addition to being on the street and getting to know community residents. You had the cop on the corner; now you have the aide on the beat. And this is some of the things I have been involved in.

I think Wayne has been involved in other sorts of things. I organized a lot of programs.

Mr. METCALFE. Before we go to Mr. Crosby, you pointed out how to report crime. Have you had any success in actually reporting crime in the community?

Mrs. JUNGHEIM. Yes, sir; I think we increased the reporting of crime. Maybe they won't call the police sometimes, but they will walk into the center and say, "Hey, you know, something is going on on the corner," or "Yesterday I had my purse snatched. I would like to report it." So then we make the call. We have the beat car come and the report is made.

Mr. METCALFE. From my experience it has been just the opposite, that people are very reluctant to report crime. I imagine it is because they fear the criminal, they fear being intimidated by the criminal, and they lack confidence in the police department. That is the reason I asked you whether or not you had any success.

I tried, and so did an organization I headed up. They met with absolutely no success, even with 6,000 members who signed up for the Third Ward Committee on Crime Prevention. People were not reporting it because of their evaluation of the policemen and of not having any confidence in them. That is the reason I wanted to know what success you have had in getting people.

I agree, and I think you will agree with me, that they see crime, all of us see crime committed in the inner city. And especially in the Model Cities areas, but they don't report it for those reasons.

Mrs. JUNGHEIM. I will say one thing, Mr. Metcalfe, and that is if we go out in one of our local meetings and explain to folks how to report crime and they do report it and they don't get the kind of service they expect they should get, they will let us know about it. And by living in that community I have people come to me at the grocery store, at the stoplight, and say, "Hey, you told me how to do something and it didn't work."

So we do a followup and see what went wrong and bring this to the attention of our supervisor, lieutenant, or district commander and work toward improving police response to a call for service.

Mr. NOLAN. I might add just for a moment to the question asked—I think it is a very important one—and that is with respect to confidence our citizens have in police.

I recognize that in the area the Congressman is speaking of it is a difficult matter. It was a difficult matter for many reasons and that is the citizens have the feeling in many instances, police service will

not be granted. I think this is the kind of thing we are talking about in programs of this nature. The confidence of the citizen and the need of cooperating with the police, their participation in law enforcement for at least controlling crime, which we recognize is a very, very difficult matter.

Crime prevention and crime control are easier said than done.

But what I think is important is there are 422 aides scattered in the city of Chicago that has something like 3.5 million people and I know a good third of those people need all of the help that is possible. And the fact of calling the police and the police don't respond, our superintendent has set up many safeguards where there is an avenue of complaint that should be answered.

We recognize we are never going to satisfy all of our citizens, but I think it is important, as Mrs. Jungheim stated, that where there have been failures, and I agree with the Congressman saying it has to be brought to the police attention immediately, something has to be done.

Mr. METCALFE. Superintendent, at one time the Concerned Citizens for Police Reform, of which I am a member, had some negotiations cut off by the superintendent at the request of the mayor. We had policemen who were instructed by the superintendent to get out of their squad cars 1 hour a day and walk the streets. I found that to be very effective, but what has happened to that program? They are not doing it now.

Mr. NOLAN. Unfortunately, at that particular time we were using mostly one-man cars and we used it with the one exception of beat patrol and the use of the hand-held radio. Unfortunately, because of an increase of crime it was taken for a short period of time. But as the Congressman is most likely aware, just 2 weeks ago we transferred over 250 men out of traffic. These men are now assigned to beat cars, partly on the day, but especially the afternoon watch, 4 to 12 and the first watch, 12 at night to 8 in the morning.

All cars, especially in 95 percent of our beats, are now manned by a two-man system and part of these people's function, especially in the neighborhood and business area from 4 to 12, is to park the car, for one man to get out of the car, to stay within sight, if you will, of that particular beat car, but to patrol on foot.

We agree without a doubt that the essence of the police concept of removing men from the post on the foot patrol has not been a good factor in our mobility of trying to cover all of the beats in our city. We recognize it is a must that people get back on the street. Many of the men who came out of traffic were placed in our Loop area. Loops throughout the Nation, or shall I say the downtown area of our Nation, have suffered for lack of police patrols.

In the city of Chicago the superintendent has issued as of April 1, a department order that policemen would patrol on foot in the Loop area all hours of day and night. This is being done for the sole purpose of curtailing crime and giving all of our citizens a feeling of safety in that particular area.

Mr. METCALFE. It is also because of the vast billions of dollars that are vested in the downtown area and that is protection for the businessman's interest, but not in the community where the crime exists. I submit to you that this program is not in effect now and I would like to be proven wrong. I know it was in effect and it was very effective,

but I submit to you it is not in effect. These two-man squad cars are not getting out of their car and walking the streets as they did for a short period of time right after we conducted our hearings in Chicago, and brought so much attention to the poor police community relationships that exist in Chicago.

Mr. NOLAN. Approximately 1 year ago, in our 19 police districts in the matter now being addressed by the Congressman, a pilot project of a police officer using the hand-held radio, patroling a designated post, was utilized by the superintendent and found to be fairly successful. This same program was, should I say, put aside for a short period of time for lack of personnel. Now these new men we are speaking of have been hired. Now the cars have gone into the two-man concept.

I am very sorry to hear that in the area that has been addressed to by the Congressman it has not occurred, but I would like to say we certainly would like to have an opportunity to have it brought to the Congressman's attention as quickly as possible, that this type of patrol system is in effect, hopefully in effect with the cooperation and support of business, and as he stated earlier, resident people to have a feeling of safety.

It is important that policemen patrol the inner city. It is important that policemen get out of their cars in the inner city because this is where the problem lies. If the lady does not feel safe in going to the store at 6 o'clock in the evening that is just a block from her home, then our cities are in trouble, and this is the kind of condition we are to alleviate.

Mr. METCALFE. Mr. Chairman, I appreciate your indulgence. You have been more than kind, but there is one question I would like to ask of you.

Was Superintendent James Conlisk, Jr., invited to come before this committee and testify?

Chairman PEPPER. I am informed the superintendent was invited.

Mr. METCALFE. May I, at this particular time, enter into the record some questions I would have asked the superintendent? One is: As a result of the LEAA study of the Chicago police, that it found out the Chicago civilian death rate in the hands of law enforcement officers was almost 1½ times the rate of Philadelphia; more than three times the rate of New York, Los Angeles, Detroit; and 75 percent of the civilians killed by police officers in the Chicago area are predominately blacks.

I would have asked him about the charges of police brutality and why there is a lessening of confidence on the part of the people, which goes to the heart of the question I asked Mrs. Jungheim a moment ago—because of the lack of confidence in them.

I would have asked him whether or not the efficiency rating system, the disciplinary system, and appointment of specialized duties systems, have been changed to eliminate discrimination in the city departments.

I would have asked him also how is it that within the police department—this is not civil service—they have psychological examinations, and why it is that the policemen who have been found to be psychologically unfit are passed in the examination and then are assigned to high crime areas, which is in the inner city, during their first tour of duty, rather than to have them eliminated when it has been proven they are sadists or they are racists or they are inclined to be.

I would have asked him those questions, because my information comes from a former member of the police department. He was a civilian, Mr. Mendelson, who is a psychologist, and who made these examinations, gave his report to the police department, and still they hired them.

And this has been a cause of it.

I would have also pointed out to him that as a result of being a member of a commission that was appointed by Mayor Daley, known as the Austin Commission, which I sat on, it was found out that the basic cause of the riots on the West Side following the assassination of Dr. Martin Luther King came as a result of the pent-up feelings that people had in that particular community against the police.

I would have pointed out to him that the other riot they had, again where a woman was killed by the lamp post that was knocked down by a firetruck, was the result of the pent-up feeling. And I say that you are working at a distinct disadvantage when you have to work under that cloud of a condition where the people if they do make a report they then become the defendant in the case and therefore you have not had many people to come forward.

Those would have been some of the questions I would have asked the superintendent; but I do not ask the deputy superintendent, because he is not in authority to make that determination.

Thank you very much.

Mr. NOLAN. I would like to make one exception here. The superintendent of police has been sick since the first of the week and that is one of the reasons why his presence is not here today, sir.

Chairman PEPPER. We will move along. We are running a little behind in our time schedule.

Mr. Lynch, do you have other questions?

Mr. LYNCH. Yes, I think it is important to point out that the police officers and the aides who are here with us today are involved in a program which is certainly attempting to alleviate some of the conditions which Congressman Metcalfe has discussed.

I would like to clarify one point, getting back to the community service aides program. Is it not the case, Superintendent, that when aides perform street level duties involving school patrols, lead poisoning surveys, abandoned auto surveys, housing code violations, and the like, that they are at the same time performing a very conspicuous patrol or quasi-patrol function?

Mr. NOLAN. Yes, they are. Their mere uniform's presence being a deterring factor. As we all know, it is difficult to identify and to make statistics on what effect a patrolman in a squad car would have on the prevention of crime. And the same thing goes with an aide.

I think it is fair and I think it certainly can be documented at this particular time, and we relate to you some of the incidents where these aides have assisted in the arrest or causing the arrest of individuals committing crimes.

Mr. LYNCH. I wonder if we might do that a few minutes later. Would it be fair to say, that while this may duplicate work other agencies are doing, it is work in which they are making police contacts with the citizens and pointing out that the police department provides services and help?

Mr. NOLAN. Yes. Very much so, Mr. Counselor.

Mr. LYNCH. I wonder if you could now ask Mr. Chamberlin if he would be kind enough to show the committee the slides about the program.

Mr. SANDMAN. Before you get into that may I ask the superintendent another question.

I read over your objectives and I think they are good. The thing that concerns me a little bit here is that although almost all of your activity is directed to the streets, mainly young people, I don't see anything here—you may have covered this during my absence and if you have, I apologize—with what happens on the school grounds.

This committee had hearings around the country and we found that especially in the cities the drug trafficker was safer in a schoolyard than he was outside the schoolyard. And I am wondering why in your discussion of what you do there isn't more activity here on the supervision within the school grounds. Has there been any activity in that line?

Mr. NOLAN. Yes, there has. First, I would like to say that within the school ground itself, within the building, it is necessary for us to obtain permission. As Congressman Metcalfe stated we do have in our school grounds school patrol officers that work out of the youth division. We also have school visitation officers whose main job is to bring to the students within the school those concepts of things such as narcotics and drugs; what the law is; what their responsibility is.

But as far as the aides themselves are concerned, we have found it necessary to go into the schools at the elementary level, at the sixth grade level, to give instructions, with the permission of the board of education, as to the evils of narcotics. This is done, not necessarily in all of its entirety by the aides themselves, in conjunction with another factor of this bureau, and that is the neighborhood relations sergeant and the school visitation officer.

Charts are made up, examples of drugs that are not real, examples of drugs shown to young people in these grades. We felt they might have been too young at one time, but through the board of education's decision we were allowed to come into the schools to start this.

We recognized in too many instances the drug problem begins at that young level, especially the high school.

Mr. LYNCH. Superintendent, could you tell the Congressman whether or not aides, in their 455-hour training program, are given any training in drug addiction problems?

Mr. NOLAN. Preservice and inservice; yes, they are.

Mr. SANDMAN. In our hearings we had in New York we were told stories that you just couldn't possibly believe, but they were true, about the trafficking. It was safer to pass any kind of drug inside the yard than it was outside the yard.

We brought in the school board and we asked them what activities they were conducting to try to curtail this and they pointblank took the position that theirs was an obligation that pertained to the training of the students and theirs was not an obligation pertaining to the enforcement of the law within the school.

Have you run into that kind of difficulty?

Mr. NOLAN. On the first of April, the department issued a new organizational chart—and this is another reason why the superintendent isn't here—called bureau of investigative services. Within that bureau there is called a game crime unit whose specific responsi-

bilities will rely on young people, especially those around the schoolyard peddling drugs. I am sorry, I was not aware the questioning would have gone into this area or I could have brought some of this premature evidence of their success in trying to stop drug traffic.

This is one of the greatest problems that faces our Nation. The school systems do have a problem addressing themselves to that particular point.

Some citizens in our city, I don't know about other cities, took it upon themselves in June of 1971 to conduct classes for their own teaching staff to make them aware of the evils of drugs and how to detect the same being used in their classrooms.

Mr. SANDMAN. Do you believe, Superintendent, that it is necessary to have police on the high school grounds in the big city area?

Mr. NOLAN. I think in some of the schools in our city that it is not only necessary but it is almost compulsory we have police officers in some respect. I recognize this is not a good thing. I recognize this does not lend toward good education. But I think in order for the schools themselves to be conducted in an orderly fashion, law enforcement forces are there at auxiliary or assigned on a regular basis.

I think it something some of our schools do need.

Mr. SANDMAN. Do you have any kind of law in Chicago, or Illinois for that matter, that requires a schoolteacher, if she has reason to believe the student has any kind of drugs or paraphernalia, must take it away?

Mr. NOLAN. In our school system we have a different system. The board of education provides auxiliary personnel who are off-duty policemen, hired by the board to work in the schools. They notify the office where the police officer is usually found and he immediately goes to the room and conducts whatever activity is necessary in this area.

The schoolteachers themselves, we would prefer for them not to get involved unless of actual necessity.

Mr. MURPHY. Would the gentleman yield in that regard?

The mayor and city council in Chicago passed an ordinance prohibiting loitering around grammar schools and high schools. Police intelligence indicated that cars driven by people obviously beyond the school age would attract clusters of kids for the purpose of selling pills and hard narcotics. That ordinance was struck down by the court as unconstitutional in that the city did not have the right to police the school grounds in that way. That was one of the handicaps we faced.

Mr. SANDMAN. Out of curiosity, what court?

Mr. MURPHY. The Federal court.

Mr. SANDMAN. Under this system that you talk about in Chicago—let me give you this kind of hypothetical case: The schoolteacher has reasonable cause to believe a particular student has drugs in his desk drawer, his locker, or his pocket. As I understand what you say, she doesn't have a responsibility to require him to give that to her, but she must notify someone in that school that does. Is that true?

Mr. NOLAN. I think she has a responsibility, which all of us should understand and follow, that when any activity of crime, believed to be crime, is within a person's scope that they should notify that person in authority, be it her opinion to notify the officer to get up there immediately or to, if he has reasonable grounds to believe the individual has

contraband within his locker, within his desk, it would give the officer reason to believe this person should be searched, then this is done.

Naturally, with the individual's rights in concern.

Mr. SANDMAN. Under your law, does that individual, meaning the police or whoever it is who is called in, have the right to require the student to surrender the contraband?

Mr. NOLAN. In our city, by State law, he does have that right.

Mr. SANDMAN. Thank you.

Chairman PEPPER. Mr. Lynch, are you ready for the slides now?

Mr. LYNCH. Yes, sir, I am.

[At this point in the hearing slides were presented by Sgt. John Chamberlin.]

Mr. LYNCH. Mr. Chairman, I wonder if I might proceed to ask Mr. Crosby several questions?

Statement of Wayne Crosby

Chairman PEPPER. Yes, please do.

Mr. LYNCH. I wonder if you would tell us how long you have been a community service aide?

Mr. CROSBY. I have been a community service aide for almost 3 years.

Mr. LYNCH. How old are you?

Mr. CROSBY. Twenty-four.

Mr. LYNCH. What kind of employment did you have prior to joining this program?

Mr. CROSBY. I was a taxi driver.

Mr. LYNCH. Why did you join this program?

Mr. CROSBY. Well, it gave me an opportunity to help out in the community, plus further my education.

Mr. LYNCH. Further your education in what way?

Mr. CROSBY. I was a dropout prior to coming into the program.

Mr. LYNCH. How has this program helped you in that regard?

Mr. CROSBY. It has helped me obtain a G.E.D. diploma, plus college credits.

Mr. LYNCH. Do you attend classes at the program's expense?

Mr. CROSBY. Yes, I did.

Mr. LYNCH. And you are given time off for that?

Mr. CROSBY. Well, as stated earlier, we are allowed 9 hours a week to attend school, G.E.D. training or college courses.

Mr. LYNCH. Is this a common thing among the aides? How many of your colleagues who are aides also attend school? A large number?

Mr. CROSBY. Yes.

Mr. LYNCH. Would you tell us what the normal course of a day's activities is—what do you do as a community service aide?

Mr. CROSBY. Well, I normally go out on foot patrol and school patrol, covering the schools, making sure that kids aren't harassed or abducted into abandoned buildings close by.

Mr. LYNCH. Do you regard yourself as performing at least quasi-law-enforcement functions?

Mr. CROSBY. Beg pardon?

Mr. LYNCH. Do you perform law enforcement functions?

Mr. CROSBY. Well, no—yes, in a sense.

Mr. LYNCH. In what sense?

Mr. CROSBY. We write up violations to city ordinances.

Mr. LYNCH. On a typical day, how much time might you spend on actual foot patrol, walking through a neighborhood?

Mr. CROSBY. Seven hours.

Mr. LYNCH. And are other aides with you on that kind of patrol duty?

Mr. CROSBY. Oh, yes.

Mr. LYNCH. How many?

Mr. CROSBY. Quite a few. There's about eight of us.

Mr. LYNCH. Are you accompanied by a regular Chicago policeman?

Mr. CROSBY. Yes, we are.

Mr. LYNCH. How many?

Mr. CROSBY. Well, one supervisor, and there is a sergeant up over him.

Mr. LYNCH. Do you attend community meetings with citizens in your community?

Mr. CROSBY. Yes, I do.

Mr. LYNCH. What do you do at those meetings?

Mr. CROSBY. We have various workshops such as you have seen in the film up there, but the tutoring programs we have for kids and various different things that we intend to have at later dates.

Mr. LYNCH. Based on your 3 years' experience, is it your feeling that you have in some way contributed to reducing crime in the neighborhood in which you serve?

Mr. CROSBY. Yes, I feel we have. Just by our presence alone, you know.

Mr. LYNCH. Superintendent, I wonder if I could ask you whether or not it would be your judgment that this kind of program ought to be continued at its former level in your department?

Mr. NOLAN. I believe it should be continued at the level that it was at. I daresay, and I would be the first to admit that there are a lot of kinds of things we were doing that we found in later months of continuous operation that could be done a different way that would better the citizens.

I think some of the programs that we initially started out on, we finally dropped to pick up better programs. Unfortunately, there was nothing we had throughout our Nation to model this type program after. So, consequently, as we see the variations of crime and how a paraprofessional can become involved that has no arrest power, that carries no weapons, but still can make a contributing factor toward the reduction of crime, and I think there are many kinds of improvements that could be made on programs of that nature.

We would not stay in a staid position. I think it should be carried on.

Mr. LYNCH. In fact, you are implementing a program which was, in a sense, recommended by the President's Commission on Law Enforcement and Administration of Justice in 1967?

Mr. NOLAN. Yes, we are.

Mr. LYNCH. And probably constitutes the only department, certainly to my knowledge, that is doing it on a large scale. Would it be your judgment that this is the kind of program which should receive Federal support on a priority basis?

Mr. NOLAN. I would say yes; and I would think it would be a fine thing for our Government to recognize a program of this nature with

citizen participation as one way that the total Nation could be involved and benefit from reduction of crime, which is a major factor in our society today.

Mr. LYNCH. Mr. Nolan, as a policeman with many, many years of law enforcement experience, would it be your judgment that this kind of program should be adopted for use in most of our major urban centers?

Mr. NOLAN. Yes. I think certainly it would have to be patterned as to their particular needs, but I think all of our major cities could use a program of this nature and certainly of this size in comparison with their population, to help in this effort.

Mr. LYNCH. Superintendent, if you have not already done so, would it be possible for you to send us comparative crime data on the district in which your program has operated?

Mr. NOLAN. Yes, we would, sir. And by permission of the chairman, we would like to ask permission to enter an item, various items of specialized efforts by this particular program as it relates to edicts from the department and also rules and regulations under which they work. If it is permissible we would like to have it entered in the record at this time.

Mr. LYNCH. Mr. Chairman, the superintendent has given me a very good summary describing what this program is all about, and describing its accomplishments. I would ask that this be entered in the record, with your permission.

Chairman PEPPER. Without objection, it will be admitted into the record.

[See material received for the record at the end of Mr. Nolan's testimony.]

Mr. LYNCH. I have no further questions, Mr. Chairman.

Chairman PEPPER. Mr. Murphy.

Mr. MURPHY. I have no further questions, Mr. Chairman. I would just like to commend Superintendent Nolan for the fine job and the leadership that he has demonstrated on the Chicago police force. As a Congressman from the Chicago area, I know that Chicagoans are very proud of their police force and men such as Superintendent Nolan. I would also like to thank the fine group of associates Mr. Nolan has brought with him for their attendance and valuable comments.

Chairman PEPPER. Mr. Metcalfe, have you further questions?

Mr. METCALFE. I have no further questions. I would like to also express my thanks to Superintendent Nolan and all of the very fine people who are here to demonstrate what this community service program is. Regretfully, I have to look upon it as being an oasis in the police department.

You are doing a good job and you are giving a good image to the police department. If all of the rest of these departments were contributing to society's needs, I think we would have a good police department in the city of Chicago, which we do not have now.

Mr. NOLAN. Thank you, Congressman.

Chairman PEPPER. Mr. Nolan, I wish, on behalf of the committee, to thank you and your associates for coming here this morning and giving us the very interesting presentation you have made. The idea of the police department wishing to identify itself more closely with all of the different areas and the different people of the district it serves, I think, is a very commendable one.

Undoubtedly, the people can help the police enormously to reduce crime and make it possible to prosecute crime if they work in cordial cooperation with the police department.

The folks must be made to feel that the police department is their protector, their friend; not their enemy. It is to their advantage and to their interest that they work cooperatively with it, because as they help to protect somebody else, some other citizen, that same procedure may later protect them against crime.

The purpose of these hearings is to bring out these innovative programs in the country that various police departments are carrying on. We still have, despite all of the excellence of what is now being done in the country, a large volume of violent and serious crime. That is still a challenge that we have to meet some way or another. What would you suggest could be done?

What could be done if you had the cooperation of Congress, the cooperation of the State legislature, the cooperation of your municipal authorities in addition to what is now being done to further reduce violent and serious crime in Chicago?

Mr. NOLAN. Well, Mr. Chairman, I wish there was a simple answer to that, but I am sure that your committee and yourself are probably way ahead of us as law enforcement personnel. We recognize this as probably one of the biggest problems facing our nation. We recognize the problem of crime encompasses more than the violations of law and the breaking of the laws themselves.

Our citizens have so many frustrations of the social economy, of the housing problem, of the unemployment. If our Federal Government would look kindly on finding ways to helping in this solution, the whole concept of impartially regarding all of our citizens in employment and in housing, I think it would be a step, a long step, in the right direction.

I think most of our crime, some of it of a petty nature that grows into a major nature, is born from frustration; is born from emotional impact from which there is no way out, that people are not considered equal citizens.

I think that many of these things are necessary to bring to the attention of the citizen that he has a responsibility, a serious responsibility, of obeying the law. I think it is a responsibility that many of our citizens are not cognizant of or do not follow.

I think with the cooperation of the Federal Government, of the Congress, these kinds of things certainly could be addressed.

Chairman PEPPER. Last Friday morning in Miami, which is my home, I participated in some hearings before the Education and Labor Subcommittee of the Congress. We talked about the inadequacy of Federal aid in keeping young people in school from being dropouts. I asked, "What would be the significance of the student in school dropping out?"

And they answered that generally speaking they found their way into the juvenile courts. And we found out from juvenile judges who testified before our committee that about 50 percent of the boys and girls who are seriously involved before the juvenile courts go on into greater and more serious crime and wind up in our State penal institutions.

Do you have a school dropout problem in Chicago?

Mr. NOLAN. A very serious one, sir. And it is very high among minority groups, blacks and Latins. I think it is higher among the Latins than the blacks.

Chairman PEPPER. Do you find a relationship between school dropout and juvenile crime?

Mr. NOLAN. Without a doubt. Our crime statistics will show that a larger portion of our crime is committed by juveniles; and we find of those juveniles that are committing crimes a greater proportion of those young people are school dropouts.

Chairman PEPPER. So that if we could just adequately cope with that one problem——

Mr. NOLAN [continuing]. It would be very helpful.

Chairman PEPPER. We would reduce the commission of serious crime and violent crime by a high percentage, would we not?

Mr. NOLAN. Very much so, Mr. Chairman.

Chairman PEPPER. This committee had some hearings in Philadelphia 2 or 3 years ago because they had gang warfare there. And the year before we were there, 31 young men were killed in that gang warfare that went on in the city of Philadelphia.

I remember a businessman testified before the committee as to what the business community was trying to do to diminish that situation. I asked this gentleman, "With all respect for the sincerity of your efforts and the good work you have done, how many recreational areas are in the area where the gangs fight one another?" He said "One."

"How many coaches, how many playground supervisors are there?" "Just one at that particular place." I asked, "Did it ever occur to you, gentlemen, the good results you might get if you hire some playground supervisors and get some more playgrounds and bought some playground equipment for these young boys who just do nothing and roam around idly on the streets?

"If you could get them involved in athletic programs or some sort of wholesome activity, you would reduce their participation in violent crime."

He said: "Well, maybe so, but it hadn't occurred to us that one way to reduce crime would be to divert the energy and activity of those boys into recreation or some sort of wholesome activity."

Mr. NOLAN. We feel, all crime prevention programs should work at giving an individual an alternative, an alternative to participating in non-law-type activities.

Chairman PEPPER. We had hearings in Chicago and had very fine cooperation from your great distinguished mayor and your police officials and your TV stations. Educational TV had us on TV all day during our hearings and summarized our program for 2 or 3 hours in the evening.

I recall you had there a very serious drug problem, also. We had one instance of where money was given to a high school student and that young lady went out and came back within 2 or 3 hours with almost every kind of drug that one could use, that she had bought in her school.

That is one of the things this committee is trying to do, trying to get the Federal Government to help with money that can be used in the schools, to employ drug counselors and to teach the teachers more

about drugs, to aid the parents in learning something more about drugs.

Do you regard that as a serious problem in your area?

Mr. NOLAN. We certainly do and I would like to speak for the 13,000 members of our department and certainly our superintendent and other staff. We compliment this particular committee in working in our behalf and all of the other cities' behalfs. Drugs are a very serious problem in our city and I can only speak for Chicago. Any kind of help that is given, giving youngsters alternative to let them know, recognize as we do, that drugs are not only being misused or have been misused by our minority citizens, but certainly by those in the wealthy areas in the Chicago metropolitan area; those people are suffering, also.

So it is not a problem of minorities alone. We feel that money spent in this area by our Federal Government would certainly be returned twofold by better citizens.

Chairman PEPPER. Very good; one other question. Do you have any serious delay in the courts of Chicago in the trial of people that the police arrest and bring into the prosecution system?

Mr. NOLAN. Yes; we do have a backlog. This is being worked at steadily by our chief judges and other individuals of the criminal justice system. It is something that because of the inadequacy in the past that has been allowed to grow upon us in such a sense that some of our serious crimes have been addressed to rather late, but fortunately there has been a move in another direction, where progress is seen, and we now feel in the city of Chicago our courts are catching up with the backlog of cases.

Chairman PEPPER. I see. Thank you again, Mr. Nolan, you and your associates, for coming here and helping us.

Mr. NOLAN. We thank you for inviting us.

[The following material was received for the record:]

REPORT OF THE SUPERINTENDENT OF THE CHICAGO POLICE DEPARTMENT TO THE POLICE BOARD, DECEMBER 14, 1972

1. *Personnel and training.*—There were 444 Department recruits enrolled in the 39-week Academy training program on November 30, 1972. Of this number, 146 are scheduled to graduate on December 29.

In addition, 48 recruits from nineteen suburban police departments and various county and state law enforcement agencies graduated on November 3 from a 7-week Academy training program. On November 13, 25 more recruits from eleven suburban police departments as well as county and state law enforcement agencies started a new 7-week training program.

Eighteen Department Policewomen recruits were enrolled in a 21-week pre-service training program. This class is scheduled to graduate on March 23, 1973.

Other training programs conducted at the Department's Academy during November include:

14 Sergeants completed a two-week pre-service training program for Lieutenants.

61 Members completed a three-week pre-service training program for Sergeants.

48 Members completed a four-week pre-service training program for Investigators.

63 civilian employees of the City graduated on November 10 from a 6-week pre-service training program to qualify as Community Service Aides.

29 civilian City employees started a 6-week pre-service training program on November 13 to qualify as Community Service Aides. This class is scheduled to graduate on December 22.

306 Members participated in various firearms range activities. In addition, 376 men from five county and state law enforcement agencies took part in supervised range activities.

2. *Awards and commendations.*—Department Commendations for bravery in action were awarded to eight Members. Honorable Mentions for outstanding activity were awarded to 962 Members. During November a total of 201 Officers were complimented for their official actions in letters received from citizens.

3. *Model cities program.*—There were 413 Community Service Aides on active duty on November 30, including those currently enrolled in pre-service training, as heretofore cited.

Aides filed reports during the month relating to 3,684 service requests from the public. They also conducted 1,775 follow-up investigations relating to public complaints about services.

Aides were instrumental in the recovery of sixteen stolen vehicles; conducted investigations into animal bite complaints which involved 22 persons, and investigated reports of four missing persons.

The arrests of a man involved in a drugstore robbery attempt and a second man who was operating a stolen vehicle were made possible by alert reporting of the incidents by Aides.

Aides also participated actively in conducting a program of field trips, educational tours and recreational outings for residents, chiefly youngsters, in the six target areas.

4. *Complaints against members.*—During the 11th period, from October 12 through November 8, a total of 358 complaints were filed against members by citizens and Department personnel.

In the same time frame, the investigation of 453 complaints was completed of which 85, or 18.7 per cent were sustained.

It is pointed out that investigation of 38 additional complaints was terminated or held open because citizens declined to cooperate with Department investigators.

In the 85 sustained cases 109 members were disciplined as follows:

6 received oral reprimands
20 received written reprimands
50 were suspended for from 1 to 5 days
9 were suspended for from 6 to 15 days
24 were suspended for from 16 to 30 days

In addition to the above, eight accused members resigned from the Department while subjects of investigations.

5. *Crime and traffic statistics.*—During the 11th period, from October 12 through November 8, there were 9,267 index crimes reported. This total represents a decrease of 4.8 per cent in comparison to the same period in 1971 and a reduction of 5.7 per cent in comparison to the previous 10th period.

On a cumulative basis, there were 102,968 serious crimes reported during the first eleven periods in 1972, a reduction of 2.9 per cent in comparison to the same eleven periods in 1971.

Further, on a cumulative basis, four crime categories showed decreases and three showed increases in comparison to 1971 as follows:

Homicide, 598, down 16 per cent; robbery, 19,418, down 0.3 per cent; burglary, 30,869, down 3.7 per cent; auto theft, 27,742, down 6.4 per cent.

Increases occurred in the category of:

Serious assault, 9,651, up 0.8 per cent; rape, 1,312, up 4.3 per cent; theft ($50 & over), 13,378, up 0.4 per cent.

Traffic statistics for the month of November follow:

	November 1972	November 1971	Cumulative to date 1972	Cumulative to date 1971	Increase or decrease
Fatalities	28	23	261	256	+
Personal injury accidents	2,170	1,788	25,450	24,093	+1,35
Property damage accidents	12,239	9,912	131,738	111,617	+20,12

As of the end of October, Chicago ranked lowest among cities of over a million population in the number of traffic fatalities per 10,000 registered vehicles:

Rate per 10,000 Registered Vehicles[1]

Chicago	2.5
Los Angeles	2.8
Philadelphia	2.8
Houston	3.0
Detroit	3.7
New York	4.3

TOTAL FATALITIES JAN. 1 THROUGH OCT. 31[1]

	1972	1971	Increase or decrease
Chicago	231	233	−2
Los Angeles	364	366	−2
Philadelphia	157	172	−15
Houston	146	153	−7
Detroit	204	186	+18
New York	712	758	−46

GENERAL ORDER

Subject: Community Service Aides Project

I. PURPOSE

This order:

A. Continues in effect the Chicago Police Department's Community Service Aides Project within the Preventive Programs Division of the Bureau of Community Services.

B. Details the functions and responsibilities of Command and Supervisory personnel with respect to the project.

C. Outlines the functions and responsibility of the Community Service Aides.

II. COMMUNITY SERVICE AIDES PROJECT

The Community Service Aides Project is the Chicago Police Department's part in the Model Cities Program of the City of Chicago, which is operated under the component; Law, Order, Justice and Corrections. The Community Service Aides Project has been designed to address two problems concurrently:

(1) reduce crime in the Model Cities neighborhoods to a level at least comparable to non-model cities areas.

(2) improve relations between members of the community in the Target Areas and the police who serve them.

III. RESPONSIBILITY

The Superintendent of Police will direct and administer the project. He will direct and control the combined and coordinated efforts of the Personnel, Research and Development, Training, Patrol, and Preventive Programs Divisions. The Director of the Preventive Programs Division, under the direction of the Deputy Superintendent, Bureau of Community Services, has been delegated the necessary authority to see that this project conforms to the goals of the Model Cities Program.

The Community Service Centers and their assigned personnel are placed under the direct supervision of the Project Director, who will operate under the direction and guidance of the Deputy Superintendent of the Bureau of Community Services, and the Director of the Preventive Programs Division. The Project Director will assign the various jobs and missions to the Community Service Aides, and assure the proper care, appearance, and efficiency of the service centers.

IV. ORGANIZATION AND FUNCTIONS

The Community Service Aides Project will operate from six Community Service Centers, and be administered and controlled from a Headquarters Office.

A. *Headquarters.*—The Project Director will be assigned one sergeant as administrative assistant and one patrolman. He will also be assigned an accountant, a principal stenographer, a senior stenographer and two principal account clerks. These people comprise the administrative staff and will perform all the necessary accounting and reporting duties.

B. *Community Service Centers.*— The community service centers are akin to satellite police stations, and also serve as a training center and headquarters for the Community Service Aides. The centers will be open 12 hours a day, operating on two eight-hour, overlapping shifts. To each center there is assigned a lieutenant, several sergeants and patrolmen.

(1) Lieutenants. The lieutenant is a visible representative of police management in the target areas. He will administer the center, coordinate the efforts of the sergeants, is responsible for the overall conduct and efficiency of the personnel assigned.

(2) Sergeants. The sergeants will operate a station desk in each center. The desk will be staffed at all times when the center is open and be available to members of the community to express complaints, seek protection, make inquiries, and request not only police service, but service from other concerned city agencies. The sergeants also act as training officers for the Community Service Aides. In addition, the sergeants supervise the patrolmen and are available as counselors.

(3) Patrolmen. The patrolmen will work with and supervise the Community Service Aides in the field. He will be responsible for the output of the Aides assigned to him, assuring that they are on their assignments, checking attendance, and performing other duties of a line supervisor.

V. COMMUNITY SERVICE AIDES

A. *Recruitment.*—The Personnel Division of the Chicago Police Department will have responsibility for recruitment and determining the eligibility and qualifications of applicants desiring to become Community Service Aides. Applicants will be appointed at the direction of a selection board consisting of the Deputy Superintendent, Bureau of Community Services; the Director of Personnel; and the Project Director of the Community Service Aides Project.

B. *Duties.*—Community Service Aides will perform the following duties:

(1) Foot Patrol. Aides will be assigned as a member of a Squad, supervised by a Patrolman, to patrol a specific section of the Target Area on foot. While on patrol the Aides will observe and report on such things as: Abandoned Vehicles—In addition to reporting the abandoned vehicle, check the registration against current listing of vehicles reported stolen; abandoned refrigerators: abandoned buildings that constitute a hazard; dead animals on the public way: dangerous holes or obstructions in street, sidewalk or curb: street or traffic signs that are missing, inoperative or obscured: lost children; aged or infirm persons in need of assistance; missing persons; truants; open fire hydrants; unauthorized persons loitering around schools; live wires down; other hazardous conditions.

(2) Crime Prevention. The Aides will be visibly deployed at all types of public gatherings to minimize the opportunity for citizens to be victims of theft from person (pickpockets, purse snatchings).

The Aides will be utilized to pass out literature such as pamphlets and brochures advising citizens on how they can protect themselves or minimize the likelihood of their becoming a victim of the crimes of burglarly, robbery, rape, etc.

Aides will, by their many face to face contacts with citizens during their patrols and attendance at neighborhood meetings, be in a position to explain the role of the citizen in combating crime and delinquency.

While on patrol in business districts be alert and call to the attention of the proprietor conditions that may make him vulnerable to such crimes as shoplifting, burglary, etc.

(3) Clerical Duties. Aides will be assigned as Assistant Secretaries and Assistants to desk personnel in District Stations; assigned to assist the Review Officer in District Stations; assigned during early evening hours in

Libraries, Schools, and Churches to assist in regulating the demeanor and decorum of school age children in these locations; be utilized as tour guides in Police Stations.

(4) Police-Community Relations. Aides will be assigned to assist the District Commander and the Neighborhood Relations Sergeant in promoting Police-Community Relations Workshops; assist in organizing Block Clubs and other neighborhood clubs, and assist in arranging for these clubs to meet with police personnel on a regular basis; take advantage of every opportunity to explain police procedures and practices to members of the community.

(5) Miscellaneous. Aides will be assigned to assist the Neighborhood Relations Sergeant with youth activities; patrol playgrounds and perimeter of school grounds, reporting undesirable conditions and/or conditions that may lead to crime; provide special escort for children from school, such as a child that becomes ill during school hours, and is sent home.

C. *Disciplinary procedures.*—Disciplinary procedures relative to complaints and/or disciplinary actions against Community Service Aides are prescribed in Bureau of Community Services Special Order Number 70–6, dated 19 May 1970. Complaints against Community Service Aides are reported to Unit Commanders of the Community Services Aides Project, and NOT to the Internal Affairs Division. Complaints against sworn members of the Community Service Aides Project are processed in accordance with the provisions of General Order Number 67–21 as amended.

THE CHICAGO POLICE DEPARTMENT TRAINING BULLETIN

THE COMMUNITY SERVICE AIDE PROJECT

Since February of 1970 the Chicago Police Department has sponsored a "Police Community Service Aides Project" under the auspices of the federally funded Model Cities Program. A total of 422 Community Service Aides have since been hired by the Chicago Police Department to work under the guidance and direction of 72 sworn members of the Department in an attempt to reduce crime and improve the quality of urban life.

To insure a better understanding of the Department's role in this innovative program, a brief description of the origin and operation of the total Model Cities Program will first be presented. This will be followed by a more detailed account of the Community Service Aides Project and the hiring, training and duties of the aides.

"Improving the quality of urban life is the most critical domestic problem facing the United States" reads the opening statement of the congressional legislation which created Model Cities. This statement, plus the recognition by Congress that cities do not have adequate resources to deal effectively with the serious problems confronting them, was the basis for the creation of the Model Cities Program.

On 1 December 1967 the City of Chicago was offered a planning grant by the Federal Government to develop programs in four Chicago communities—Lawndale, Woodlawn, Uptown and Grand Boulevard. These communities have a combined area of about six square miles and a combined population of approximately 327,000 persons. In May of 1969, after months of study, planning, review and revisions the Chicago Model Cities Program was submitted to the Federal Government for review and, hopefully, funding. On 26 June 1969 the first year plan was approved. On 8 August 1969 Chicago received authority to spend $38,159,000.00 in supplementary funds to carry out the first year action program.

Model Cities plans, funds, monitors and evaluates programs, although it does not operate them directly. Public and private agencies having extensive experience in the target areas are contracted to administer projects which fall into ten major categories or classifications. They are Housing; Health; Education; Law; Order; Justice and Corrections; Child and Family Services; Economic Development; Environment; Transportation; Leisure Time; and Manpower. The programs in each category were developed in response to problems that area residents and the City agreed should be given the highest priorities.

LAW, ORDER, JUSTICE AND CORRECTIONS

Of the ten areas of concern being funded in each target area, the one most important to the Chicago Police Department is that of Law, Order, Justice and Corrections. This category involves four projects. The largest of these is the

Chicago Police Department's Community Service Aides Project, which deals primarily with improving the quality of urban life. The other three projects deal with the problem of youths in the correctional system.

ORIGIN OF THE COMMUNITY SERVICE AIDES PROJECTS

In 1967 the President's Commission on Law Enforcement and Administration of Justice recommended the creation of a Community Service Officer position for police departments operating in larger urban areas. According to the Commission's Report, the Community Service Officer would work on the street in close cooperation with police officers. He would not have full law enforcement powers or carry arms, neither would he perform only clerical duties. He would be a uniformed member of the working police who performs certain service and investigative duties on the street. He would maintain close contact with the juveniles in neighborhoods where he works. He might be available in a neighborhood store front, office or Community Service Center. He would perform the service duties that inner city residents need so urgently and that law enforcement officers have so little time to perform. He would be an integral part of a police team.

These suggestions offered by the President's Commission served as the basis for the creation of the Chicago Police Department's Community Service Aide Project.

GOALS OF THE PROJECT

The purposes and goals of this undertaking were set forth in the initial stages of the months of planning that preceded the opening of the first Community Service Center. As enumerated in the First Year's Action Program and as they remain to the present, the purposes of the project are:

1. to prevent and reduce the incidence of criminal and anti-social behavior by saturating the areas with foot patrol teams.

2. to improve police community relations by employing Police Community Aides to interpret the roles of the Police Department to the community and the community to the Police Department.

3. to enhance the utilization of sworn personnel in the areas of law enforcement and arrest by substituting civilian personnel to handle non-arrest functions.

4. to develop community responsibility toward combating crime.

The strategic objectives outlined for the project are to:

1. raise resident income by employment of more than 400 Model Area residents as Police Community Service Aides.

2. improve housing and environment by detecting and reporting conditions detrimental to the environment.

3. enhance community responsibility by saturating the neighborhood with foot patrol teams of Community Service Aides to provide an immediate and accessible source of contact with law enforcement agencies.

4. enlarge human opportunities by providing training to those who desire and are qualified to become sworn personnel.

5. improve city capability to protect persons and property in target areas by relieving the sworn personnel from non-arrest and human service activities and allowing them to direct their efforts to crime prevention.

THE COMMUNITY SERVICE CENTER

In February of 1970 the first Community Service Center was opened in the 11th District at 2945 West Harrison Street. Presently centers are open in each of the four (4) target areas: one center each in the 2nd, 3rd, 10th, 11th and 21st districts and one combined center in the 19th and 20th districts. The exact locations of these centers are as follows:

2nd District—542 East 47th Street
3rd District—871 East 63rd Street
10th District—1308 South Pulaski Road
11th District—2945 West Harrison Street
20th District—4552 North Broadway
21st District—1040 East 47th Street

The Chicago Police Department Community Service Aide Project Administration is headquartered at 1029 South Wabash Avenue.

Each of the above listed centers can be likened to a satellite Police Station, serving also as a training center and headquarters for the Community Service Aides. The centers are opened to the public 12 hours a day from 0800 to 2000 hours.

A lieutenant and several sergeants and patrolmen are assigned to each center. The lieutenant, a visible representative of police management in the target areas, administers the center, coordinates the effort of his sergeants, and is responsible for the overall conduct and efficiency of his command. The sergeants operate a station desk in each center. Members of the community use the centers to express complaints, seek protection, make inquiries and requests, not only for police service but for service from other concerned city agencies. The sergeants also are the training officers for the Community Service Aides. They primarily direct their training efforts toward efficient job performance but emphasize the need for outside formal education. In addition the sergeants supervise the patrolmen and are available as counselors for the aides. The patrolman is the backbone of the operation. He works with and supervises the Community Service Aides in the field. He is responsible for the output of the Community Service Aides assigned to him, assures that they are on their assignments, checks attendance and performs the other duties of a line supervisor.

HIRING, TRAINING AND DUTIES OF AIDES

At about the same time Model Cities Police personnel were undergoing three weeks of training for the Community Service Aide Project, advertisements announcing the hiring of Community Service Aides were being placed in local newspapers and at the neighborhood State Employment offices. Qualifications for the position were prepared by the Chicago Police Department Personnel Division. They are:

1. Males must be age 17 or over; females age 18 or over.
2. No height requirement but weight must be proportionate to height.
3. Passing of a minimum physical examination.
4. Taking a written examination. The exam serves to determine the educational level of the applicants but is not a criterion for employment. This is most essential for designing the training program and in counseling the Community Service Aides as to their educational needs.
5. United States citizenship.
6. If any military service, a discharge paper and a medical history are required.
7. Acceptable character background and driving record.
8. Model Cities target area residence, (MANDATORY).

The salary for the aides is $445.00 per month to start, $467.00 per month after 3 months, $491.00 after 6 months, $515.00 after 9 months and $540.00 per month after one year. This salary does not include the Community Service Aides uniform allowance of $100.00 the first year. Hospitalization insurance is paid for by the city.

Prior to assignment to field duties each aid is given approximately 455 hours of instruction by the center staff. These courses range from criminal law to physical education and from social sciences to Police Department policies. In addition to this classroom training, after four months of employment each Community Service Aide is counseled about his educational background in an attempt to encourage the Community Service Aides to continue schooling. Basic and advanced G.E.D. courses have been established in each center for those aides who do not have high school diplomas. For those who qualify for college, tuition is free and the student is reimbursed for books. In addition the aides are allowed 9 hours a week away from normal duties to attend these classes.

The team patrol is the basic work unit in the Community Service Aide Project. This patrol team consists of one patrolman and seven to twelve Community Service Aides. It is hoped that these team patrols will serve as a crime deterrent by their mere presence in the community.

The Community Service Aides investigate abandoned autos, report sanitation violations, watch for pollution violations and refer building and zoning violations to the proper agencies. Since the aides perform other miscellaneous services that are usually performed by the police, the beat officer is freed from time-consuming service type calls and can concentrate on crime prevention.

Community Service Aides also provide clerical help in the district station and in the Community Service Center. Aides have formed block clubs in the community and floor clubs for some of the projects; they have assisted police per-

sonnel at elementary, upper grade centers and high schools; helped locate missing children; obtained Red Cross assistance for families displaced by fires; distributed food to the hungry and have organized and advertised Police Community Relation Workshops.

In addition to the above duties, several Community Service Centers have instituted the following special projects:

1. Community Service Centers have prepared tables of crime statistics, by beat, time of day and type of crime, and aid heretofore unavailable at the district level on a day-to-day basis. These tables are used to prepare team patrol assignments.

2. Aides have been assigned to work with the courts in an effort designed to reduce the number of repeater "drunk and disorderly" cases coming before that court. Familiar with the full range of city services, the aides are able to make referrals to the proper agency offering opportunities for rehabilitation.

3. During the summer of 1970, Aides of a Community Service Center chaperoned approximately 120 youngsters on four camping trips to Camp Malibu in Illinois. Several of the center's aides had worked long hours preparing the necessary proposals which had to be presented to the Department of Human Resources Leisure Time Committee. The preparation and presentation of the Camp Malibu proposal to this committee was necessary to obtain the funding for the trip. After funding was approved, neighborhood groups were contacted to provide names of deserving youngsters for the trips. These outings proved very successful, and it is hoped that funding can be allocated for similar trips in the future.

4. Aides from another Community Service Center held "splash parties" on numerous blocks in the target area. This assignment involved having a team of aides turn on fire hydrants equipped with sprinkler attachments for several hours each day. The streets were blocked off at either end and the owners of automobiles in close proximity to the hydrants were notified of the splash party. The aides remained at the hydrant to supervise the children's activity. This assignment was intended to decrease the number of hydrants being opened by unauthorized persons and then left to hamper traffic, overload sewers, and cause a police officer to leave more important duties and turn the hydrant off to the dismay of the neighborhood's youngsters. The 10th District program has alleviated these problems to some extent.

5. Several of the aides were enrolled in a 10 week course on Consumer Fraud. The valuable lessons learned by the aides will then be presented to the general public at Community Workshops meetings organized by the Community Service Aides.

6. Acting pursuant to an indicated need in one of the target areas, sworn personnel and their aides have initiated a tutoring program for youngsters from 7 to 14 years of age. Thus far, approximately 150 students have enrolled in the program which is designed to improve reading and writing skills. Aside from removing any fears of the police the children have prior to enrolling, the program hopes to decrease the number of slow-learning school age persons who conceivably may drop out when they reach the high school level.

There are however some duties the Community Service Aides are not permitted to perform. The Community Service Aides do not:

1. make arrests.
2. work in detention facilities.
3. take case reports on crimes.
4. drive Department vehicles.
5. work in building maintenance.

SUPPORTIVE SERVICES

The Police Department Model Cities budget provided for two sedans and 12 station wagons to assist the police personnel in carrying out their duties. The station wagons are used to transport the Community Service Aides to their various assignments and are used by the team patrol officer as a means to widen his span of control.

PREVENTIVE PROGRAMS DIVISION COMMUNITY SERVICE AIDES PROJECT

To: Ms. Junerous M. Cook, Director of Evaluation and Urban Studies, Model Cities/CCUO, 640 North LaSalle Street, Chicago, Ill.

From: Captain John T. Kelly, Project Director, Community Service Aides Project, 1020 South Wabash Avenue, Room 201, Chicago, Ill.

Subject: Project Evaluation—In compliance with contractual requirements, attached hereto is the Project Evaluation of Year Two, encompassing the dates of 1 June 1971 to 1 September 1972.

JOHN T. KELLEY,
Project Director, Community Service Aides Project.

Approved: Samuel W. Nolan, Deputy Superintendent, Bureau of Community Services.

PROJECT EVALUATION

I. PROGRAM DESCRIPTION

The Community Service Aides Project was initiated to accomplish the task of:
A. reducing the incidence of crime in the designated Model Cities Target Areas.
B. improving police-community relations.
C. improving the quality of life in these areas, and
D. allowing the police patrol force in the neighborhood to spend more time on crime prevention.

The Administrative Headquarters for the Project is located at 1020 South Wabash Avenue. The administrative staff consists of: 1 captain, 1 sergeant, 1 patrolman, 5 civilian personnel.

Six Community Service Centers are established and operating at the following locations:

1327 East 63rd Street (Mid South Woodlawn).
542 East 47th Street (Near South Grand Boulevard).
1038 East 47th Street (Near South Grand Boulevard).
3150 West Ogden Avenue (West North Lawndale).
2945 West Harrison (West North Lawndale).
4552 North Broadway (Uptown).

The Mid South Center was moved into the new location because of a fire at their prior location at 871 East 63rd Street. West North Lawndale Center facility was moved to its present location at 3150 West Ogden Avenue from 1309 South Pulaski because the building on Pulaski Road was sold.

The Community Service Centers are staffed by the following police personnel: 6 lieutenants, 22 sergeants, 40 patrolmen.

All sworn Chicago Police Department personnel assigned to the project are volunteers with a minimum of 4 years experience and an overall average of 15 years with the Police Department. All personnel, with the exception of the Director of the Preventive Programs Division, devote 100% of their time to the Project.

The Community Service Aides Project was designed to produce employment for 422 residents of the target area communities. The average monthly employment of aides during Year Two was 355.

The Community Service Aides receive approximately 250 hours of In-Service Training yearly conducted by sworn police personnel assigned to the center from the Criminal Investigation Division, etc. In addition, they receive counselling from professionals with emphasis placed on education who are assigned to the center.

The project coordinated its activities with many public and private agencies. In resolving most non-police related complaints and requests for service the project dealt closely with the Mayor's Office of Inquiry and Information.

The Illinois State Employment Service provided valuable services in the recruitment and testing of aide applicants. The Public Service Institute and the Civil Service Commission provided professional services in the aide education program. The project headquarters maintained continuous liaison with a host of public agencies. Project personnel have established rapport with numerous community and church sponsored organizations which operate in the areas serviced by the Community Service Centers.

II. PROJECT OBJECTIVES AND METHODS FOR ACCOMPLISHMENT

A. *Enable police to increase preventive patrolling and enforcement activities.*—The Community Service Aides accomplished this objective by locating 8,238 abandoned autos, submitting reports on 2,790 abandoned buildings, and reporting and following up street and sanitation conditions; thereby releasing the beat patrol officer from acting upon such conditions so that he could concentrate on effective preventive patrol and enforcement.

B. *Provide the community with increased access to Police Services.*—The presence of the six centers in the community enabled residents to maintain a closer and more personal relationship with the Police Department. To cite an example—arrest at 550–011 on 27 March 1972 wherein six Community Aides observed a strong arm robbery in progress involving three offenders and one victim. The aides ran to aid the victim. Two of the offenders were chased and caught by the aides who effected the arrest with the assistance of an 11th District Tactical Team. Many residents find it much easier to relate to persons who are members of their community. Most aides know or have formed acquaintances with the residents, thus the problems of the residents were more readily understood by the aides. Coordinating the efforts of the aides with those of the Neighborhood Relations Sergeant gave the residents greater access to services of the Police Department.

C. *Improve cooperation between the community and the police.*—Community Aides were able to encourage the residents to attend Police-Community Workshops and other related meetings. Through personal encounter and literature prepared at the centers and Police Headquarters, the aides made residents more aware of the police role in the community. This was evidenced by the increased attendance and participation in a number of community projects.

D. *Employment of local residents as Community Service Aides.*—The Community Service Aides Project produced and continues employment for residents of the target area communities thereby raising resident income and funnelling salaries into communities for people who would otherwise be unemployed.

E. *Improving housing and environment.*—The Community Aide as part of his daily activity communicated with residents and landlords. He was instrumental in forming block clubs and encouraged landlords to maintain their properties. We have found that after a block club is formed by a Community Aide that if we do not remain active within the club they cease to operate. He constantly observed, reported and followed up on the condition of streets, alleys, lighting, and attractive nuisances that presented a deteriorating affect on the community.

F. *Provide training for 422 Model Cities Target Area residents.*—Place emphasis on potential careers with the Police Department and other public and private agencies.

Fifty-nine (59) Community Aides completed requirements for GED certification. Most of these aides continued their education through enrollment in college programs. Presently there are 120 aides enrolled in college level prgrams. Aides have been urged to take examinations for Civil Service positions. Classes were held at all centers for aides and residents of the community for the Policewoman, Senior Public Safety Aide, and Patrolman examinations. Four (4) Community Service Aides passed the Patrolman examination. Eleven (11) Community Service Aides passed the written portion of the Policewoman's examination and out of the 340 persons passing the Public Safety Aide examination, 276 were Community Service Aides. The fact that the first 123 persons on the list were Community Service Aides is a good indication of the value of training the aides received in this program. Numerous Community Service Aides have gone into career fields of employment, such as police officers, airline stewardesses, Merchant Marines, and self employment.

III. COMMUNITY SERVICE AIDES PROGRAMS—CRIME RELATED

In its objective to reduce the incidence of crime in the Model Cities Target Areas, the Community Service Aides Project pursued the following programs:

A. *Protect life and property in the Model Cities Neighborhood.*—The Community Service Aides have been instrumental in the arrest of criminal offenders. Numerous examples of their diligent performances at fires and in administering first aid have been cited. See exhibit 1.

B. *Located and caused to be recovered stolen vehicles.*—Intensified training and execution of a program to detect and report stolen autos has been initiated. Training Bulletins, vehicle identification hand cards, and roll call visits by auto theft investigators were included. Training was on a professional level and included discussions on alley garage auto stripping operations, popped ignitions and slampullers.

Project records indicate that community service aides recovered 216 reported stolen vehicles from 1 January to 1 September 1972. Total reported stolen vehicles recovered from 1 January through 31 December 1971 numbered 87.

C. *Located abandoned vehicles and caused their removal.*—Community Service Aides located and reported all abandoned vehicles observed in their patrol areas.

This information was forwarded to the District Abandoned Auto Officer who has the responsibility to have the vehicle removed. Aides further followed these reports up to determine if or when action was taken. When the vehicle was removed, they closed our suspense file. Abandoned cars present a problem to district commanders. The action taken by CSAs in having abandoned cars removed saves the commander from using a number of sworn personnel in eliminating this problem.

D. *The centers assign aides daily to regular foot patrol beats in the target areas.*—Two or more aides under the supervision of a sworn supervisor comprise a patrol team. Seventy-seven (77) foot patrol beats are manned daily.

IV. COMMUNITY SERVICE AIDES PROGRAMS—POLICE SERVICE RELATED

To enable the police to spend more time on crime prevention the Community Service Aides undertook the following:

A. *Conducted follow-up investigations of missing person cases.*—Community Aides followed up on 138 missing persons investigations from 1 June 1971 through 1 September 1972. Community Service Special Order 71–1 and Youth Division Special Order 71–12 were issued on 22 March 1971, implementing the Adult Missing Person Investigations Procedures. Effective 1 April 1971 the Community Service Aides were authorized to conduct investigations of missing persons. These investigations were previously conducted by youth officers who now with the implementation of the aides are afforded more time with youth related incidents.

B. *Conduct a Bicycle Registration Program.*—District centers established a Bicycle Registration Program. They obtained the cooperation of private and public agencies to encourage and urge youths of the community to register their bicycles. All Community Service Aides while on patrol carry and have available at all times a supply of bicycle registration cards. The aides also distributed the little red booklet, "*10 Little Bike Rides*" which covers the rules and regulations of bicycle riding.

C. *Conducted a canvass to update emergency listings for businesses.*—The Community Service Aides continued to canvass the target areas of businesses in the area to update the businesses listings and made note of complaints and/or suggestions the businessmen voiced. The centers maintained and furnished to the district stations a current file of addresses and phone numbers where merchants could be reached during emergencies, thus reducing police details at these locations. This service was formerly a police function. Current card files are used by district police to notify owners of fires in buildings, crimes, etc. Prompt response by property owners, release the assignment of beat cars stationed at the location, making them available for patrol duty.

V. COMMUNITY SERVICE AIDES PROGRAMS—NON-ENFORCEMENT

Board of Health

Sickle Cell Anemia and Lead Testing Programs

The Community Service Aides performed an excellent job in connection with this program. The program was operated in schools in the Grand Boulevard Target Area with the cooperation of the Board of Education and the Board of Health. Tests were conducted from January to May 30, 1972 in nine schools, and at Community Service Aide Centers where 3,479 children were tested, and 282 were found to be positive. See exhibit 2. Tests were also conducted on street corners in the Uptown Target Area using mobile units. Since May 1972, a total of 15 separate locations were used. A total of 748 children were tested, 647 for lead poisoning and 137 for Sickle Cell Anemia. See exhibit 3.

In connection with the testing program, it was necessary to secure the consent of the parents who were required to sign consent forms. Aides did this work by visiting the children's homes in advance of the testing. When the children did not appear at the mobile unit for a test the aides went to their homes and with the consent of the parents escorted the children to and from the mobile unit. We are again attempting to secure the mobile unit service citywide for 1973.

Rabies Control Program

Conducted initial and follow up surveys of animal owners to educate and encourage compliance with lawful requirements for licensing dogs and administering rabies inoculations. Community Aides have followed up on 557 dog bite investigations from 1 June 1971 through 1 September 1972.

Department of Water and Sewers

Educational programs and supervision regarding the city wide use of open fire hydrant sprinkling was engaged in by Community Service Aides in cooperation with the Department of Water and Sewers' Summertime Control Program. See exhibit 5.

Department of Streets and Sanitation—Department of Buildings. The aides have reported 30,543 irregularities or service requests between 1 June 1971 and 1 September 1972, which were registered by the residents or observed by the aides. These service requests/irregularity reports include abandoned autos, abandoned buildings, holes in streets, uncollected garbage, rodent control, exposed wire, heating complaints, and etc. The performance of the aide in this phase of his activity relieves police personnel to answer many more calls of a criminal nature. See exhibit 2.

COOPERATION WITH OTHER AGENCIES

Aides were deployed to schools where harassment of children was a problem; to the Mayor's Reach Out Program as coaches and supervisors; to the milk center for distribution of milk; to neighborhood relations sergeants in district stations for their community related programs; to the Youth Foundation, the American Indian Center, and the Uptown Youth Correction Center as counselors.

EXHIBIT NO. 1

(1) Community Aides Algernun Ballard, Willa Mae Emory, Dorothy Hunter, Marva Jaker, Willow Dean Jane and Charles Byrdo, while in the performance of routine patrol duty observed a strong arm robbery in progress involving three offenders and one victim. The Aides ran to the assistance of the victim. Two of the offenders were chased and caught by the Aides and were arrested by an 11th District Tactical Unit that was nearby. The 3rd offender escaped but was subsequently apprehended and identified.

(2) On 7 June 1972, Community Service Aides Ramsey and Hendrick observed some youths in what they thought to be a stolen vehicle. After ascertaining the validity of the steal, they called for a Patrol Car. The Aides were able to furnish the responding Beat car, not only with a description, but the names and addresses of the offenders. The officers were able to effect an immediate arrest.

(3) On 28 April, 1972, several Aides and a sworn member were in the Area of S11—15 East 43rd Street, where they observed a fire. The Aides went into the burning building and notified residents of the fire. They came upon a 78 year old woman suffering with crippling arthritis. They removed her and transported her to Michael Reese Hospital. Aides aided in relocation of families.

On 28 April 1972 at 1830 hours a 3–11 alarm fire occured at 4402 Greenwood. Several aides were dispatched to the scene and assisted in removing children and adults from the burning building. Further Aides aided in relocation of families.

(4) On 29 June 1972, Community Service Aide Ford while engaged in patrol duties, observed a man lying on the street suffering from multiple stab wounds of the face and head. Community Service Aide Ford administered first aid to the victim until the arrival of the police and was able to supply the police with the name of the offender.

(5) An unidentified woman ran into the 502 Center and related that a man had another man down across the street robbing him. Sgt. Hawkin and Lt. Brown immediately ran to the aid of the victim and arrested the offender. The offender in turn had passed the gun to a passing friend, this was detected and Officer Bratton arrested this offender, robbery case pending in court.

The following is a total of people tested from the 2nd District Center and in School District #23: Total number of students tested 3,497. Total number positive to test 282. Total number who received oltrophoresis 150. Total number of S.C. Traits 70, and total number of S.C. disease 5. Total number of Educational Counseling, film strip, inservice, classroom and etc.: Faculty 212, children 800, Parents 102 and Auxiliary Staff 54.

ANIMAL CONTROL PROGRAM

The following procedures are designed to reduce the number of man-hours presently being spent by beat personnel in handling animal bite cases. The Community Service Aides concentrate their activities in five basic areas of involvement in the Model Cities Target Areas:

A. An educational program has been developed designed to acquaint citizens with their lawful responsibilities with respect to ownership of animals. A brochure explaining the various laws regarding animals has been prepared. This brochure is distributed to all animal owners along with a dog license application for their assistance in licensing their animals. Aides that encounter owners of unlicensed dogs make prompt notification so that a summons may be issued. Movies depicting the citizens role in a rabies control program are shown at workshops and various meetings in the neighborhoods to acquaint the citizens with the importance of rabies control program.

B. In the event a person has been bitten by an animal and the Animal Care Section, or the beat officer, knows the name of the owner but has not been able to contact him. Aides are assigned to personally contact the owner. The Aide presents the owner with a Notice to Animal Owner form (CPD–11.186) which lists instructions and requirements.

C. In the case of a person bitten by an animal and the ownership of the animal has been established, but only verbal contact via telephone has been accomplished, Aides are assigned to follow-up the verbal instructions by contacting the owner with written instructions.

D. In the case of a person bitten by an animal and the animal has not been located or impounded, Aides are assigned to the general vicinity of the incident for the purpose of locating the animal. If the animal is located, the Aides do not attempt to catch the animal, but will keep it under surveillance and notify the Animal Care Section or beat vehicle.

E. All Community Service Aides, while on routine patrol, are alert for stray dogs roaming the streets, particularly in the vicinity of schools and parks. These animals are reported to the Animal Care Section via telephone.

OPEN FIRE HYDRANTS

In an effort to assist the Police Department in combating the problem of unauthorized open fire hydrants, the following procedures have been implemented by the Community Service Aides Project:

A. Each Community Service Aides Center has been supplied with ten (10) sprinkler caps and wrenches for affixing the caps to fire hydrants.

B. On those days when the temperature is exceptionally high, Unit Commanders will inspect, or cause to be inspected, their entire Target Area on a periodic basis.

C. If this inspection reveals a fire hydrant that has been opened and children are playing in the water, a spray cap will be attached to this hydrant, and two Community Service Aides left in attendance.

D. If this inspection reveals a fire hydrant that has been opened and children are NOT playing in the water, the hydrant will be turned off.

E. In all instances where a spray cap has been attached, the spray cap will be taken off not later than the conclusion of the second watch (2000 hours) on the day that the spray cap was attached. At the conclusion of the second watch of each day, each Community Service Center should have ten (10) spray caps in the Center.

F. In all cases where a spray cap is attached, great care and consideration should be given to vehicular traffic. Spray caps should not be attached where there is danger of vehicular accidents being caused or danger of a child being struck by a vehicle.

The foregoing procedures have been issued as guidelines governing the Project's initial plan of operation in this problem area. These procedures will be adjusted as experience dictates.

Chairman PEPPER. The committee will recess until 2 o'clock this afternoon when, in this room, we hear further witnesses.

I believe Chief Wilson of the District of Columbia Police Department will be the first witness.

Without objection, we will at this time receive for the record a statement from Hon. Tom Railsback of Illinois.

[Whereupon, at 12:25 p.m. the hearing was recessed until 2 p.m. this day.]

PREPARED STATEMENT BY HON. TOM RAILSBACK, A U.S. REPRESENTATIVE FROM THE STATE OF ILLINOIS

Mr. Chairman, Distinguished Members of the Committee, I commend you for holding hearings "Crime in the Streets", and thank you for providing me with the opportunity to discuss an aspect of crime which particularly concerns me—the involvement of so many of our young people.

If we are to substantially reduce the overall crime rate in our country, we must first solve the youth crime problem. We must distinguish the factors which could turn a young person to crime, and—before he actually commits his first criminal act—we must direct his energies toward a constructive life. For the individual who has already run afoul of the law, we must successfully *rehabilitate* him. I emphasize rehabilitate. As a result of touring numerous institutions as a member of the Judiciary subcommittee on prison reform, I am convinced we cannot simply put young people into institutions and assume that by some miracle they will become well-adjusted, law-abiding citizens at the end of their term.

Let me break down the problem of juvenile crime as I see it.

First, There has been a rapid rise in juvenile delinquency and crime. From 1960 to 1970, the juvenile arrest rate of individuals under 18 increased almost seven times faster than the total adult arrest rate. Just as startling is the fact that during this same period, arrests of persons under 18 for violent crime increased about three times as fast as the arrest rates for those over 18. And, even though drug arrests skyrocketed for all age groups in the 1960s, the increase exceeded 3,000% for juveniles under 18 years of age.

In 1971, nationally, persons under 15 accounted for 10% of the total police arrests; those under 18 accounted for 26%; those under 21, 40%; and those under age 25 were responsible for 54% of all police arrests.

Second, Over half of the serious crimes in the United States are committed by young people. In 1970, 63% of all serious crimes were committed by persons under age 21. And, in both 1970 and 1971, at least 50% of the arrests for such crimes were of persons under the age of 18.

Third, Youthful offenders have the highest recidivism rates. An FBI study conducted in 1965–1969 showed that of the offenders under 20 who were released in 1965, almost three-fourths of them were re-arrested by the end of the study.

In 1971, over half of the offenders under 20 years of age who were arrested were repeat offenders. And the repeat offenders under 20 were rearrested more frequently than any other age group.

It is clear that young people account for a disproportionate amount of all crimes—even serious crimes—and the younger the age at the time of the first arrest, the higher the recidivism rate. Further, and certainly as disturbing, when young people are rearrested it is more likely than not for an increasingly serious offense. Whatever we have done in the past to prevent delinquency and to rehabilitate juvenile offenders has just not worked!

In large part, I am convinced our failure can be attributed to insufficient training of those who work most closely with young people—lack of any real in-depth research in the area of juvenile crime and delinquency—and little coordination and communication by the various agencies dealing with juvenile justice. It is for these reasons I have introduced legislation which would set up an independent Institute to provide training, conduct research, and disseminate information. The research function was developed after a great deal of assistance from the Chairman of this Committee. The bill, H.R. 45, was passed by the House last year, and I am optimistic it will be enacted in the 93rd Congress.

We must initiate programs that are designed to cut down our crime rate by stamping out juvenile crime. For the sake of our youth and America's future, I encourage you to continue your deliberations and present some alternatives

for reducing juvenile crime ad delinquency to the full House membership at the earliest possible date.

Thank you.

AFTERNOON SESSION

Chairman PEPPER. The committee will come to order, please.

Chief, I am sorry we are a little late. The other members are on the floor and there are several committee meetings going on, one of which is a meeting of the Rules Committee of which I am a member. We have an important bill on the floor, so I might be called any time to leave. We don't want to take any more of your time and, of course, your testimony will be recorded for the information of the other members of this committee.

We thank you very much for coming this afternoon.

As you know, what we are doing is bringing here for presentation to the Congress and to the country the most innovative, imaginative, and effective programs that we can find anywhere in the country in the police area in respect to the reduction of the occurrence of crime, particularly violent crime.

We already have had a number of outstanding programs presented to the committee of new techniques, new manners of police methods which have reduced crimes in various cities of the country.

We are very pleased to have you here to tell what you have been able to do to bring about a significant reduction of violent crime in the District of Columbia. We would appreciate it very much if you would give us that story.

STATEMENT OF JERRY V. WILSON, CHIEF, METROPOLITAN POLICE DEPARTMENT, WASHINGTON, D.C., ACCOMPANIED BY GEOFFREY M. ALPRIN, GENERAL COUNSEL

Mr. WILSON. Thank you, Mr. Chairman.

It is a real pleasure to be here and I can certainly be here at the convenience of you and your committee, so don't be concerned if you need to leave.

As I think you perhaps know from your past interest, crime in the District of Columbia increased almost continuously from 1957 through 1969. This increase was attributed to a variety of causes: Economic and social ills of society, and processes of urbanization, the erosion of police authority through court decisions, the increased complexity of criminal trials, the backlogs which resulted in the courts and eventually, in the late 1960's, the increased use of hard narcotics. Crime in the District in terms of crime index offenses doubled from 1962 to 1966, and doubled again from 1966 to 1969.

In 1969, at the peak, there were 60,000 crime index offenses as compared with 15,000 in 1962. As I think you also know, in 1969 the Federal Government, the Nixon administration, established a priority of reducing crime in the District of Columbia and indeed it was a campaign issue; and one of the first issues addressed in the District of Columbia was the establishment of the reduction of crime in the city as a primary, first priority of the government.

And, of course, this was done in the face of recognized competing priorities and problems of housing and transportation and health care

and sanitation, and a variety of other items that face most of the urban areas of America.

But President Nixon unequivocably established the reduction of crime as the priority of the District government. This was approached in several ways in late 1969. It was a major increase in the police force to 5,100 men and about a thousand civilians, which made it, of course, the largest per capita police agency in America.

This, I would interject, had a side benefit in that the great increase in the police force improved our black recruiting and it allowed us also to use women in additional ways in the police force so that over a period of the next couple of years we were able to soften the image of the police force as an occupation force of the city.

A second program was in the U.S. Attorney's Office, which was increased in size, the prosecutor's staff was increased by 50 percent, and the clerical assistance to the prosecutor's staff was doubled. There was a coordinated effort instituted between the police department and the U.S. Attorney to give special attention to offenders committing major crimes. And major in the sense, meaning robberies and major burglaries.

There also has been increased emphasis in both the police department and the prosecutor's office of computerization of data in order to make it available to police on the street and in order to make it possible for the prosecutor to assign priorities in criminal cases in scheduling.

There was instituted in 1970 a major narcotics treatment program employing primarily methadone maintenance, and also some abstinence programs built in.

There were several changes in narcotics enforcement by the police. We trained our street patrolmen, our uniformed officers, in the 3-day Bureau of Narcotics and Dangerous Drugs course to deal with the street peddler. We increased the size of the headquarters narcotics unit by quadrupling it and shifting its emphasis to major violators and the consequence of this was narcotics arrests were increased from 1,000 in 1968 to 6,000 in 1971.

I would add that there has been a decline in 1972, primarily because the narcotics simply are not on the street for supply and arrest any longer. There was, of course, administrative priorities to the changes in law which particularly effected results in the reorganization and expansion of the court system which was enacted by the Congress in 1970.

The last of the measurable major city programs was a major street lighting program. I would add one measurably major ingredient, these ought to be done primarily by the government, but a major ingredient of our success in reducing crime in Washington as well, has been real support for law enforcement, which has been, I think, seen both in the community and in government leaders since 1969. It has just been a long time since we have heard any substantial community leader aver that he did not support the police and support law enforcement or did not want the police in this community.

The consequence of these major programs has been a great deal of success in reducing crime. Crime has been downward in just about every month since November 1969. We had a couple of seasonal upturns but we have been succesful in reducing the crime index rate from a peak of 202 crime index offenses daily in November 1969 to an

average of 89 per day for the last quarter, for the quarter ending last month.

Indeed, for March we had only 85 crime index offenses per day on the average, which was the lowest mark since 1966.

There have been some other programs within the department that I think may be of interest. They are not as broad as those I have discussed earlier, but there are programs such as the use of scooters to give mobility to foot patrolmen, a program which was begun in the middle 1960's under an LEAA grant, and has been since expanded to 360 scooters. It gives us the ability of essentially having an officer on a sort of foot patrol but with much more mobility, giving him more effectiveness than the ordinary footman.

We have instituted the neighborhood scout car program, which is aimed at trying to keep the scout car officer assigned continuously to the same area and getting him acquainted with the residents and the businessmen in the neighborhoods.

We have instituted a program of requiring officers to report their business checks, requiring them to go into businesses and talk with business owners, simply to insure that they get acquainted with businessmen and the police presence is reemphasized.

We have had some success with the auto interceptor units working on the problem of stolen automobiles and also with a special burglary alarm system which we use on a tactical basis in business places in order to cope with holdups.

The helicopter program which is used in many cities, of course, was instituted under an LEAA grant and showed significant success. We had a lot of success, Mr. Chairman, with tactical units, both mobile uniformed patrol officers operating tactically and also with casual clothes personnel working in tactical units, although we are presently experimenting with phasing those out with an emphasis on getting them back into uniformed street patrol on assigned foot beats, which I think is something that we will be successful in.

Tactical units have been used off and on in the United States since the middle 1950's and used here off and on since 1966. They were very successful but I think many programs tend to become a part of the bureaucracy and I presently see it as advantageous to move back toward more uniformed patrolmen assigned to beats permanently so they will know the residents.

Three other programs that I think may be of interest to you are in terms of trying to apprehend criminals and make cases which will stand up in court, which is one of the great problems, I think, in many of the urban areas, at least the problem of apprehending criminals, closing cases, and presenting cases to court which are prosecutable.

There is a great loss between the arrest and the cases which eventually get to court and result in a conviction.

We have done three things in this area: One is the use of crime scene search officers. In 1968 we had 12 men assigned to fingerprinting, and searching, and evidence gathering at crime scenes. The consequence of that was we had great backlogs of persons who were burgalized or had other crimes committed who were unable to use the premises until we could get a search man in.

We have increased that through training of men in the patrol districts who are normally on patrol, but are available for crime scene

search. We now have 125 men assigned capable of that function and have increased the number of cases closed primarily through latent fingerprints from 146 in 1968 to 720 in 1972.

We also last year, early last year, instituted a special case review section in coordination with the U.S. attorney's office in order to review the cases that are dropped by the prosecutor to ascertain the reasons for it, so we can train our men in making cases better and also bring to the attention of the supervisors and the prosecutor's offices those cases which we felt should have gone forward.

The third aspect of our investigative processes which I think had some effect is the devising of a modern lineup room and establishment of procedures which are in conformity with the 1968 court rules on lineups.

And the fourth aspect I would mention is the increasing use of guidelines, issuance of guidelines to the force, in order to strengthen the department in those cases which otherwise would be lost by the exclusionary rule.

On these last four things, if I could, I would like to have Mr. Alprin, my general counsel, speak on that because he worked closely with these programs and could give you some insight into them.

Chairman PEPPER. We would be glad to have you.

Mr. ALPRIN. Thank you, Mr. Chairman.

Mr. Chairman, I think the most important function of my particular job is to assure wherever I can that arrests that members of the department make, where possible, result in successful court prosecutions.

As Chief Wilson pointed out, there is a great lag and there always has been between arrests we make and convictions at the other end of the whole process.

In 1968, as you know, the Supreme Court decided three cases involving lineups. The result of that—irrespective of whether the decisions were right or wrong—was a very high priority being placed on the lineup process. We came to find out over a period of a few years that many witnesses who had made identifications from photographs in robbery cases, for example, were failing to identify the offenders, the defendants, in actual lineup proceedings because of the fear factor.

They were there in the same room with a group of men, one of which presumably was the defendant, and they were, in many cases, quite afraid that the defendant who was presumably, out on bond at that time or personal recognizance, would retaliate in some way.

So in August of 1971 we instituted a new lineup room. The major feature of the room was the installation of one-way glass. So that all defendants or all persons standing in the line, standing on one side of the line, would not be able to see through that glass, although the witness on the other side would, of course, be able to see through the glass.

Also, one other feature was that the place where the defendants or the people in the lineup would stand would be soundproof.

We kept statistics for 1971 and 1972 and we have noted a 12-percent increase in the number of positive identifications that have been made since installation in August of 1971 of the one-way glass.

In addition, I might point out that all of our lineups in the court order are counseled; lawyers appear for defendants in all of them. All of them are tape recorded, photographs of all of the lineups are made and presented to the court at the appropriate time.

In almost all of the cases that I have knowledge of our lineup procedures have been sustained since the middle of 1971.

If I may move on to the case review section: We instituted that in April of 1972 because we knew a lot of the arrests we were making were resulting in these being dropped by the prosecutor the first day they were brought to the court.

In other words, we would make an arrest and we would bring the case to the court the next morning and the prosecutor would drop the case or no paper, which is our own peculiar term of art for dropping a case in the District of Columbia.

We decided that it was time we took a look at all of those cases. So far as we knew at that time, perhaps at this time, no other police department in the country and no one in the country, on a systematic basis was looking at that whole category of cases that was dropped initially by the prosecutor.

So, under orders of Chief Wilson, the case review section was instituted in April of 1972. One of its purposes was that we knew that there had to be some areas in which our own performance, police performance, could be improved to perhaps save some cases. We required that wherever we found a case in which a police officer had made an error of some kind that his prosecution report after the case had been dropped would be returned to his commanding officer, who then would be required to reinstruct him or to have him reinstructed and counseled in what he did wrong; hopefully, so that the same kind of problem would not occur again and result in another case being dropped at a later time.

When we first started maintaining the unit in April, for the first 3 months: April, May, and June of 1972, we found that approximately 30 percent of all cases that we presented to the U.S. attorney in the superior court were dropped immediately on the first day. This struck us as a high figure, but my own judgment, from talking with various administrators around the country it is no higher, and perhaps even lower, than a lot of major cities which have a serious crime situation and backlogged courts.

In any case, through the reinstruction process and also through putting pressure and discussing matters with the U.S. attorney, and with the court, in many areas that don't involve police performance at all but result in no papered cases, we have succeeded in lowering the rate approximately 7 percentage points so that the average rate for all of the months since 1972 until the present is approximately 23.5 percent.

Now, that still, in my judgment, is not nearly as good as it should be and it is still approximately one out of four cases we make being dropped which is not a good thing and we hope we will be able to lower the rates even further.

Chairman Pepper. Excuse me. Does the prosecuting attorney give you the reason, in writing, why the cases were dropped?

Mr. Alprin. He certainly does. The unit couldn't work without that, Mr. Chairman. Since it began, the experiment has been conducted with the cooperation of the U.S. attorney, who makes available to us his prosecutors' jackets in each of the no-papered cases, and the reasons which we catalog and keep statistics of are his reasons most of the time.

I would point out that we have found that for the last 10 or 11 months of the survey, only approximately 10 percent of all of the cases

that are no papered result from a police, what we call a police, problem—a police misperformance or nonperformance of some kind.

Almost everything else results from systemic problems within the system. For example: witness problems and intra family assaults, of which we have many in the District of Columbia and which account perhaps for 50 to 60 percent of all no-papered cases.

With regard to intrafamily or intrapersonal assaults, normally there is no desire on anyone's part to prosecute.

Chairman PEPPER. Excuse me. In most of those cases, what was the reason given?

Mr. ALPRIN. In most of the cases, the reason that was given was the complaining witness did not want to prosecute the defendant. The complaining witness in many cases would be the wife, the girl friend, the boy friend, a friend of some other kind, who was assaulted in some way, perhaps injured, perhaps taken to the hospital, and an arrest was made.

The case went down to the U.S. attorney the next morning and, by that time, everybody was calm again and the complaining witness did not want to prosecute so the U.S. attorney dropped those cases.

But certainly there is no police nonperformance or fault involved in those cases, and that is a great number of cases.

Also, we have a lot of cases in which in other kinds of situations witnesses do not appear the next morning; complaining witnesses or other identifying witnesses. They just don't appear and can't be found and if they don't appear and can't be found the case can't be made and those cases are dropped.

The point I am making is although the rate is high and although it has come down since we have been running this experiment, most of it—perhaps 80 to 90 percent of it—results from factors which really don't have anything to do with police performance.

Chairman PEPPER. Justice Tom Clark was telling me a few days ago about a practice by a certain prosecuting attorney who, rather than waiting until the case was called for trial, would take a look at what the evidence was. He would, at the very time of the arraignment of the defendant get his lawyer, or the court-appointed lawyer, to meet with him and he would run down the list of the defenses this man would make that would indicate what the defense was going to be.

In the case the Justice put, he was in a certain place at a certain time and could prove it by a certain witness. "Do you think that is going to be your defense?" "Yes, sir; that is going to be my defense." "Well, let's check up on that."

And he would have that checked out and if it did appear that he really did have a valid alibi that he could probably adapt then the prosecuting attorney might dismiss the case without holding him in jail, having him make bond, or waiting until they were set and ready.

Does the prosecuting attorney here follow any procedure like that at all?

Mr. ALPRIN. Do you mean, Mr. Chairman, with defense counsel?

Chairman PEPPER. Yes.

Mr. ALPRIN. Yes. I think the local prosecutor would like to do that in as many cases as he could. But my own experience as a prosecutor for 3 years has been to the effect that defense counsel won't tell you what their defense is, or might be, at the time of trial. I can recall

many cases in which I said to defense counsel, when I was an assistant U.S. attorney, "Here's my file, you can have it, read it all, all of it, if I can look at yours and read all of it," and not one of them ever took me up on this.

Chairman PEPPER. That is one thing we are going into. The courts ought to have authority to have something akin to what we call a pretrial conference in civil cases. And you know, attorneys are required to come before the court before a case is brought to trial.

I think the court could require a defendant at a reasonable time after his arrest and arraignment, as soon as he can get a lawyer, a reasonable time at least after he gets a lawyer, to be required to disclose what his defense is going to be. There is no reason to wait until he gets right up to the trial and has the police there and witnesses all there, the delay, the expense, and everything. The public has some interest, too, in the expedition of this trial.

Mr. ALPRIN. I think so, definitely. I would like to see that happen. There is in the local district court, a notice of alibi rule which does, upon proper motion by the prosecutor, require the defense counsel to notify the prosecutor if he is going to use the alibi defense, and that does occur at the present time.

Chairman PEPPER. I think we will have the prosecuting attorney and maybe one of the more senior judges to testify here and we will go into that to see whether or not something like that could be done.

Mr. ALPRIN. One other important area I think that we have been involved in for the last several years is the promulgation of written guidelines for police officers in legally connected areas, in the form of orders, general orders of the department, rather than training bulletins to which the men are not necessarily held accountable. We have done this at the present time in two areas: In the area of eyewitness identification, and also in the area of automobile searches. We have promulgated strict rules the policemen must follow in connection with returning suspects to the scene for identification purposes about which the Supreme Court and other courts have written, and with regard to that order which came out approximately 2 years ago, it has been noted with approval by the local U.S. Court of Appeals on a number of occasions.

We are planning for this year to promulgate orders in the area of "stop and frisk" authority, and searches of persons and places without warrants.

I think that it is very important to the man on the street, the policeman on the street, to know what you as an administrator expect of him rather than leaving everything to his discretion and judgment. You have to tell him what you want him to do and if he doesn't do it then there is a reason to be unhappy with his performance.

That really concludes about what I have to say, sir.

Chairman PEPPER. Chief, do you have a further statement to make?

Mr. WILSON. No, Mr. Chairman. That was essentially what I had as an opening statement.

Chairman PEPPER. Mr. Lynch, would you like to inquire?

Mr. LYNCH. Yes, sir; thank you, Mr. Chairman.

Chief Wilson, would it be fair to say your Department has been substantially reorganized since 1966?

Mr. Wilson. The Department was totally reorganized in 1967, January 1967, and there have been some refinements in that organization. But it is essentially the organization of 1967.

Mr. Lynch. Could you very briefly describe what the major elements of that reorganization were, sir?

Mr. Wilson. Well, inasmuch as it grew out of the IACP survey which had 534 recommendations, it is hard to pick out any principal ones. It was essentially a complete reorganization. Prior to 1967 there were about, I think by varying counts, 25 to 30 different divisions reporting directly to the chief or his executive officer. These have been consolidated into four bureaus, plus the General Council's Office, which report directly to the chief of police. Beyond that, we have consolidated the 14 precincts in the city into seven police districts. There was a complete reorganization of the Detective Operation which, incidentally, we tried and did not like and we reverted to a system somewhat like the one we had prior to 1967.

There was establishment of several new bureaus, a planning and development division, a field inspection division. At the time of the reorganization, we were in the process of instituting a data processing division. So it was a complete overhaul of the Department of 1967.

Mr. Lynch. Would your judgment be that the reorganization has at least indirectly, aided the Department insofar as the efficiency of its operations and therefore, indirectly as a crime reducing agent.

Mr. Wilson. Well, I don't want to talk down the reorganization because I think the reorganization was good, but the reorganization took place in 1967, and the crime almost doubled between then and 1969. So you can't really come up with a cause and effect. But, of course, I realize that future benefits often are purchased after problems.

For example, we had a great deal of difficulty with the consolidation of the precincts into districts, primarily, because we were in a state of crime crisis at the time we did it. I was chief when we did it and I thought we should go ahead and do it. And in the long run, I am not sure I wouldn't rather have done it in more stable times. My answer is, I think the reorganization was good for the Department, but I don't know that the reorganization is fundamental to achieving reductions in crime. I think the Department can achieve reductions in crimes without massive reorganization.

Mr. Lynch. The LACP survey you mentioned was, in fact, commissioned by the President's Commission on Crime in the District of Columbia.

Mr. Wilson. That is right.

Mr. Lynch. That Commission was promulgated by the Johnson administration; is that correct?

Mr. Wilson. Right.

Mr. Lynch. Since 1968 or 1969, I believe, the size of your Department has approximately doubled. I think it is 78 percent.

Mr. Wilson. Not really doubled. The Department, as I recall, was at about 3,000 men in 1966, 3,000 police plus 700-odd civilians. The force was increased to 4,100, I believe, in 1968, 1969, and then the authorization was increased to 5,100. So, it has not doubled but it has increased substantially.

Mr. Lynch. The FBI UCR Section has advised us that you have approximately 7.6 police employees, including civilians, per thousand

population. I think, however, that is a metropolitan figure and not one confined to the geographic limits of the District. Do you know, approximately, what your police-citizen ratio is per thousand?

Mr. Wilson. It is a little less than that now because they are taking it at the peak of 5,100 and, of course, because of budget limitation we are down to 4,950 as an operating strength now; so that is a little high. It is probably in the neighborhood of seven per thousand population.

Mr. Lynch. Yesterday afternoon Chief Winston Churchill of the Indianapolis Department testified before this committee. He has a police-citizen ratio of 1.7, which, incidentally, is the lowest of all of the 12 cities which are presenting information before this committee.

He has reduced crime by 26 percent or thereabouts, which is approximately the same as your 1971–72 reduction, I believe. I think it is 26.9 or 29.6. It is in the same ballpark. He gave an unequivocable "no" to a question as to whether or not he needed more policemen. I realize it is difficult to make comparisons, but how would you explain how a chief of police, with no increase in personnel and with an incredibly low ratio of police to citizens, could achieve that kind of reduction?

Mr. Wilson. I think it is possible. Of course, one of the problems of comparing the District of Columbia with Indianapolis is you have to recognize that the District of Columbia is the core city of a metropolitan area of some 3.5 million people and has a population of its own of 736,000, more or less. But it is the core city and it is the core which houses most of the problems of the area. And it is at the center of a major metropolitan area; whereas Indianapolis, on the other hand, which has a population of about the same, is the entire metropolitan area. Which means somewhere within that 750,000 they have a much smaller core than the District of Columbia.

Mr. Lynch. Excuse me. That is not quite accurate. He is at the core of a metropolitan area of 1.123 million people, according to 1971 data.

Mr. Wilson. Okay.

Mr. Lynch. But his population is much less than yours.

Mr. Wilson. The fact is he is substantially the metropolitan area, whereas we are not.

Mr. Lynch. Right.

Mr. Wilson. And, of course, beyond that, I admit we have a heavy police force in the District of Columbia. There is no point in denying it.

Mr. Lynch. Do you need more?

Mr. Wilson. No.

Mr. Lynch. In addition, Chief, to the 5,000 members of your own Department, this city also has the advantage, it seems to me, of having a number of other police agencies who are performing some kind of street level enforcement duties. Are you familiar with those figures? Could you give us a rundown? We have for instance, the Capitol Police——

Mr. Wilson. Of course, the Capitol Police—on the order of a thousand policemen—are confined to the Capitol Grounds only and do no service within the city. The Executive Protective Service does some service in the streets in terms of Embassies. The Park Police has some—frankly, I don't know the numbers they have that actually are working on the streets.

Mr. Lynch. Do they materially, in your judgment, add to your capabilities as the chief of police here?

Mr. WILSON. The Executive Protective Service certainly has been of assistance in reducing crime because they are a patrol force on the streets of the city. The Park Police are on the streets but they are a relatively small force in comparison and, of course, the Capitol Police, quite frankly, are confined only to the Capitol grounds and are not that substantially a part of the city, itself.

Mr. LYNCH. So at least to an undetermined extent the 7.6 figure or thereabouts per capita could be slightly increased by adding those people who, while they don't perform full-time enforcement function on the streets, do contribute.

Mr. WILSON. That is possible. Of course, that is typical in many cities where there are special park authority police or transit police or industrial police. There are other industrial-type police here, in terms of the General Services Administration police.

Mr. LYNCH. As I recall, Chief Wilson, the motor scooter patrol which you have used for a number of years was initially the result of an Office of Law Enforcement Assistance grant.

Mr. WILSON. That is correct.

Mr. LYNCH. I believe in 1966.

Mr. WILSON. About that time, yes.

Mr. LYNCH. Could you tell us approximately how much LEAA funding your Department has received since that legislation was enacted in June of 1968?

Mr. WILSON. No, I could not. I, frankly, do not have the figure off the top of my head.

Mr. LYNCH. Could you give us an idea as to what programs a substantial amount of LEAA funds were used?

Mr. WILSON. We obtained a substantial amount of LEAA funds. The biggest part of the funds that came to us since 1968, would have been in 1969–70, with regard to bolsters of the uniformed patrol force. It was a substantial grant at that time. There have been other grants, which are not all that substantial, in terms of money for improved training and for technological assistance.

Mr. LYNCH. Are you indicating that at least a substantial portion of LEAA funding went to pay salaries of policemen in this jurisdiction?

Mr. WILSON. It went to the support of the increased police force in this jurisdiction in 1970; that is correct. A substantial part of the money that came to the Metropolitan Police Department, not the District of Columbia funds, as a total.

Mr. LYNCH. I understand that. They went to the Metropolitan Police Department. And there is, is there not, a general LEAA guideline regarding the amount of support that the LEAA is supposed to give any city, or any municipality, or any kind of law enforcement agency that is supposed to go to salaries?

Mr. WILSON. I am quite sure our grants were in accordance with the law.

[For the information requested above concerning LEAA funds and programs, see letter received for the record, dated May 3, 1973, at the end of Mr. Wilson's testimony.]

Mr. LYNCH. You have, I believe, worked closely with the Narcotics Administration here. Is it your judgment that that agency has materially contributed to your success in reducing the rate of crime in this city?

Mr. WILSON. I would judge that it probably has. Now, it is difficult to say. The reduction in crime began in November 1969, the agency became effective in June, but I think that as well as a lot of other things contributed as well: for example, the revitalized court system and street lighting. I would say, yes, it was an indispensable part of the program which President Nixon initiated to deal with the crime here.

Mr. LYNCH. As the chief police administrator in your jurisdiction, how do you view the present narcotics and dangerous drugs situations? Is it getting better or is it getting worse?

Mr. WILSON. It is substantially improved.

The problem of narcotics, of course, is that unlike other crime—even with other crimes there are problems with the statistical data available, but in narcotics there is practically no data that is solid, so we often don't know we have a problem until it almost is a crisis. But, on the basis of what we have been able to tell in the last year, or perhaps in the last 6 months, it would be more accurate, there has been a significant improvement in the problem of heroin, at least. The use of heroin seems to have dropped off substantially and the traffic in heroin seems to have dropped off substantially.

It is difficult to ascertain exactly why this is. It is possibly a combination of enforcement efforts. It may be the reduction of troop strength in Vietnam. It may be the political impact in overseas countries which were producing heroin. But, in any event, there is a notable reduction in the heroin traffic in this city, beginning last summer, and an apparent reduction in the general use of heroin.

In terms of marihuana usage, it seems to be up. In terms of other drugs, it is much more difficult to tell. None of them are serious enough to be the crisis which heroin use was.

Mr. LYNCH. Have your narcotic squad officers indicated in any way to you whether there has been a marked increase in barbiturate and amphetamine use?

Mr. WILSON. There has been but not to the point I would characterize it as a crisis. And, of course, as a side benefit, the use in barbiturates and amphetamines does not have the broader law enforcement implications heroin does inasmuch as that usage usually does not require the user to commit crimes to support their habits.

Mr. LYNCH. Chief, it is my understanding, at least, for a certain percentage of all persons arrested for serious crime in the District, there is now a program administered at the jail requiring, or asking, those people to submit to your urinalysis examination. And if that examination shows positively they are taking heroin and/or other dangerous narcotics or drugs, they are then referred to an NTA counselor. Do you participate in that program?

Mr. WILSON. We do not. That is after they have been arraigned and are in the custody of the court and correctional authorities.

Mr. LYNCH. Have you acted in cooperation with that program? How do you regard it? Is it a good thing?

Mr. WILSON. I think it is a good thing. We are not actively involved in it. The liaison between my agency and the Narcotic Treatment Administration is through my narcotics division and we do keep in close contact with them, but we are not actively involved in this treatment program.

Mr. LYNCH. Chief Wilson, of the 5,000 or so policemen—is that an accurate figure, 5,000?

Mr. WILSON. No. We presently are about 4,900.

Mr. LYNCH. Of those 4,900 policemen, I wonder if you could tell the committee how many you might have on the streets performing street-level enforcement functions at any given time, especially during the high-crime period of the day?

Mr. WILSON. I didn't bring statistics with me. I will be glad to furnish them, but I don't have any offhand statistics with me. In a general time, I would judge at a peak crime period in terms of patrol, about 600. But that varies from day to day and from time to time, depending on what other activities are going on in the city in terms of demonstrations or other details.

[For the information requested above, see letter dated May 3, 1973, at the end of Mr. Wilson's testimony.]

Mr. LYNCH. Let's use that figure of 600 a day. If you would be kind enough to supply us with that data it would be most helpful. Of that approximate number of 600, how many would be in motorized patrol?

Mr. WILSON. I would have to provide the data. I, frankly, couldn't off the top of my head.

Mr. LYNCH. Do you have a substantial number of uniformed officers who perform foot patrol in the District?

Mr. WILSON. We have a substantial combination of foot patrol, scooter patrol, and tactical patrol. Our emphasis during the last year has been on tactical use.

Mr. LYNCH. What would that be?

Mr. WILSON. Scooter patrol men in casual clothes. Or in essence, nondescript clothing, and now we are shifting to one of men on foot patrol, which I would also characterize as a combination of foot-scooter patrol.

Mr. LYNCH. Tactical men would be used on a saturation basis?

Mr. WILSON. Saturation basis rather than assigned to a permanent area within a permanent beat of their own.

Mr. LYNCH. They would be designed to respond to a particular crime problem in a particular area?

Mr. WILSON. Right.

Mr. LYNCH. Chief, as you know, in 1966 the President's Commission on Crime in the District of Columbia indicated in a rather protracted statistical analysis that an overwhelming percentage of crime in this jurisdiction was committed by young males, and because of the particular racial balance in this community it happened to be young black males. Is that still the case?

Mr. WILSON. That is still the case. It is substantially the case. I think with some variations, depending upon the proportion of blacks in the total population, that seems to be the case across the country that most crime is committed by males between 15 and 24 years of age.

Mr. LYNCH. You have a juvenile division in the Department? What does that division do; how large is it?

Mr. WILSON. The juvenile division in our Department has two functions: One is essentially a liaison with the juvenile court in terms of processing through individuals who are arrested into the juvenile court and providing liaison service to the court. We do not any longer

hold specific disposition, make disposition of cases ourselves, at least, in serious cases.

The juvenile division also encompasses our Police Boys Club, which is a unit of about 60 men who are engaged in running athletic programs for police rapport with youth in the age range from 6 to 18. About 25,000 is the current membership of youngsters.

Mr. LYNCH. Do you have a crime prevention bureau, Chief?

Mr. WILSON. We do not.

Mr. LYNCH. Have you considered establishing one?

Mr. WILSON. I have considered and rejected it.

Mr. LYNCH. What is your objection about those bureaus?

Mr. WILSON. I considered it and decided in terms of the general use. We do some of the functions through other units of the Department and through the Boys Club, through the community relations division which engages in programs such as identification, operation identification, and in terms of advising citizens on locks. But, in terms of a crime prevention bureau, no. I have decided not to organize one.

Mr. LYNCH. Could you describe what you referred to as "operation identification."

Mr. WILSON. It is a fairly common practice in the United States now of the police department, or some other agency, sponsored in conjunction with the police department providing electric etching tools and encouraging citizens to mark their television sets, hi-fi's, other things susceptible to burglary and theft, with their social security number so they are identifiable in the event they are stolen.

Mr. LYNCH. Is there any way to judge whether that has an impact?

Mr. WILSON. There is really not. Our judgment is that it probably does have an impact. A part of the program is stickers are issued by individuals to place on their windows, indicating their material within the household has been so identified, and we do not have any solid statistical information that would indicate whether or not it is successful. Burglaries are declining, so is crime, generally, so whether it helps or not it is difficult to say. It is a fairly inexpensive program in terms of investment so it is worth undertaking on the assumption it may be helpful.

Chairman PEPPER. Chief Wilson, you have the highest number of police per thousand population of any city in the country?

Mr. WILSON. We do.

Chairman PEPPER. And you have had a reorganization of the Department, which is commendable; and you have had an increase in personnel in the area of prosecution. Definite progress has been made.

Mr. WILSON. Yes, sir.

Chairman PEPPER. And you had an increase in the number of judges, and attention has been paid to speeding up disposition of cases in the courts.

Mr. WILSON. Yes, sir.

Chairman PEPPER. And you had an increase in the drug treatment and rehabilitation program and the number of addicts that are being treated in that program. All of those things have been contributing factors to the reduction of crime in the District of Columbia, I am sure.

Mr. WILSON. Yes, sir; certainly.

Chairman PEPPER. All of which are desirable. Anything which would make an effort to reduce crime is significant.

May I ask you about juvenile delinquency. Have you had any improvement in that area?

Mr. WILSON. The improvement that we have had, Mr. Chairman, appears to be a part of the general downward trend in crime. The answer is "Yes." There is, I would judge, a significant improvement in the problem of juveniles. We do not see any longer, as we did 3 years ago, very young juveniles committing on a frequent basis. We had a number of holdupmen who were 13 and 14 years of age. We had a serious problem with juveniles in 1969. We had some serious problems in the school system in 1969. All of which, while they are not completely eradicated, are certainly ameliorated by now.

And there is some improvement.

Chairman PEPPER. Do you have more juvenile judges appointed?

Mr. WILSON. Yes, sir; as a part of the court reorganization the juvenile court was reorganized into the superior court system. Additionally, provision was made for juveniles of the age of 16 and 17 who are charged with crimes such as robbery to be tried as adults, if in the judgment of the U.S. attorney they should be. So there have been some changes.

Chairman PEPPER. Do you offhand recall the figures as to participation of young people in commission of serious crime?

Mr. WILSON. I couldn't give you a specific, Mr. Chairman, but my recollection is that in terms of crime index offenses, youngsters, at the peak, were running on the order of 35- to 40-percent of serious crimes. Juveniles were on the order of 35- to 40-percent of serious crimes, including robbery.

Chairman PEPPER. I believe, if I recall correctly, in a conversation with you one time that you mentioned something to the effect that about two-thirds of the serious crimes were committed by males under 28 years of age.

Mr. WILSON. That is absolutely correct, Mr. Chairman; yes, sir.

Chairman PEPPER. So you regard the process by which we deal with juveniles or young adults who commit crimes, as a very critical area in the crime process?

Mr. WILSON. Mr. Chairman, if we could solve the problems of juveniles and young adults who commit serious crimes we could stand what the rest of the people do.

Chairman PEPPER. In other words, that is the input into the criminal system?

Mr. WILSON. That is the input into the criminal system—and much of the criminal system.

Chairman PEPPER. And that is one of the subjects we are particularly going into during these hearings. We are going to try to get the best thought and wisdom in the country with respect to how best to deal with juvenile crime. We share your view that is one of the critical areas in dealing with the crime problem.

Chief, as much as we commend you for all that you have done—and it is very noteworthy—nevertheless, one of our distinguished Senators was shot down on the street in front of his home. We read in the paper every day about the commission of violent crime, and I believe if the figures I have before me are correct, that there has been an increase in the District of Columbia in homicides and rapes in the relatively recent past. The other categories have gone down except for grand larceny.

But I believe, according to an article I have here from the New York Times quoting figures about the District, there has been some increase in homicide and rape.

Mr. WILSON. Well, every category of crime, Mr. Chairman, in 1972 was down from its peak period. Homicide in 1972 was down from 287 in 1969 to 245 in 1972. Rape was down from 776 in 1969, to 714 in 1972. The problem with offenses, particularly offenses such as homicide and rape which are not affected all that greatly by police activity and which constitute a small number of offenses, is, it depends on where you take your measure from. There is no category of crime I know of in the District that is not down from its peak. Maybe a temporary upsurge.

Chairman PEPPER. This was for 1 month, I am advised.

Chief WILSON. Yes, sir; those things do occur and that, of course, is one of the problems with measuring on a monthly basis. There is reason to be concerned in both of those categories, I would hasten to add.

Chairman PEPPER. The last question I want to ask you is this: In spite of all that has been done, the people of the District of Columbia, I think, still do not feel that they have secured safety on the streets and in their homes and in their places of business, and many violent crimes against a person are committed every day in the District.

If you didn't have to concern yourself with money, what could you do if the President of the United States called you and said:

I am proud of what you have done but we very simply have got to make the streets and homes and working places, recreation places of the people who frequent the District of Columbia, relatively safer. What more can we do than we are now doing?

Mr. WILSON. Mr. Chairman, the President of the United States has done just that. And let me make the point that neither I, nor the mayor, nor the President is happy with the crime in the District of Columbia. While we have substantially cut crime a little bit more than half since 1969; we are still at the level of 1966, you know. You have to recognize that crime did double from 1966 to 1969. We are now at the level of 1966, which was twice the level of 1962. And in 1965 crime was so serious the President, at that time, felt it necessary to appoint a crime commission to find ways to deal with the problem.

So there is certainly ample reason for us to consider the fact that citizens still are concerned.

Mr. LYNCH. Chief, I wonder if I could interrupt for a moment on that. I have some statistics—and with your indulgence, Mr. Chairman—which show that in 1966 there were 7.7 homicides in the Washington SMSA, as compared with 12.3 in 1971. In 1966, there were 15.5 rapes as opposed to 36.5 in 1971. In 1966 the robbery rate was 189.4 as opposed to 510 in 1971. In 1966, aggravated assault was 198.5 as opposed to 237.1 in 1971.

Mr. WILSON. I am not talking about 1971, Mr. Lynch, I am talking about 1972; and there was a 27-percent decrease in crime from 1971 to 1972. I think you cut into all of those categories of crime.

Chairman PEPPER. Excuse me just a minute, Chief, and Counsel. The bell has rung and I will have to go. What I wanted to ask you is this: Are the people of this country and this District, this city, going to have to accept the fact that we have got to live with the volume of crime we now have? Can't we do more to bring about a significant reduc-

tion in the amount, at least of violent crime, we have in the country today; and, if so, how can we do it?

Mr. WILSON. Mr. Chairman, they are not going to have to, and I don't think they are going to be satisfied with crime in this Nation. The January Gallup poll showed crime is viewed by most Americans as being the primary urban problem. I think in the District of Columbia we have demonstrated that crime, as a very serious situation, can be substantially reduced. I think we are on the road in terms of doing more here. I think we have to continue doing some of these things we are doing now. We still have to maintain a very large police force; we have to continue with the court reorganization. I think these things are going to have to reduce crime to the point we can reduce the police force. I think in other cities much the same is going to have to be done, although there is reason for optimism in that 32 of the 50 larger cities had reductions in crime last year and, as I recall, there were 10 cities in the Nation——

Chairman PEPPER. Excuse me just a minute. I didn't ask you about the correctional system.

Mr. WILSON. We had some substantial problems with that over the last few years, although I have the belief that has been improved in the last year. But it does need close attention, certainly.

Chairman PEPPER. The basic reason we are holding these hearings is not only to bring before the Congress and the country the best things being done in all of the critical areas that deal with crime, but to try to tackle the problem with the best brains we have in the country, and discover what more can we do than we are now doing?

Mr. LYNCH. Chief Wilson, is there any question in your mind that a very substantial proportion of serious crime is committed by recidivists?

Mr. WILSON. It is hazardous, Mr. Lynch, to talk in terms of percentages, in terms of what is serious crime. One of the problems that is inherent in crime statistics is—if you take any category such as burglary, for example, and say burglary is a serious crime—an awful lot of burglaries are sort of trashy little cases you can't characterize as serious crime. If you take serious burglaries, a lot are recidivists. If you characterize robbery as a serious crime and assume that purse snatching or pickpocketing is robbery, you have one thing. But if you take holdups, there is no question holdups are committed mainly by recidivists. Our indication is that upward of 70 percent of holdups are committed by individuals who are rearrested indeed for that crime. So there is a heavy problem in terms of particularly holdups and sometimes burglaries and rapes, as an example, with repeat offenders.

Mr. LYNCH. Taking for a moment, holdups or armed robbery, Chief, you did indicate that is a crime committed at least in some heavy proportion by people who have done the same thing in the past.

Mr. WILSON. That is correct.

Mr. LYNCH. Are there a significant number of robberies committed in this jurisdiction by people who are out on bail or who are otherwise pending adjudication for a prior, similar charge?

Mr. WILSON. There are. Figures vary from month to month, but it runs on the order of 60 to 70 percent of individuals who are either on bail, probation, or parole; with bail being, I would say, the greatest proportion of those.

Mr. LYNCH. What in your judgment can the criminal justice system, as a system, do to remedy that problem?

Mr. WILSON. I believe that we need to do a lot more work and are doing work on it. I think we are coming closer to the solution. You have to recognize the superior court reorganization only assumed responsibility for holdups last August, and now have the full responsibility for that. I think the continued reduction in types of crime, plus the identification of major offenders by the U.S. attorneys, which is now being done through LEAA financed computerization of offender records, will serve to assist with the problem.

I have given up any hope of a workable change in the bail law, quite frankly. I think that is what is needed, but the last attempt at a change did not work out and I have given up much hope we are going to achieve a change in the bail law which will have a substantial effect.

Mr. LYNCH. You say you have given up hope on the bail law? Would your judgment be that speedy trial legislation would be at least half a loaf?

Mr. WILSON. I have some concern that speedy trial legislation may become a tool for the defense rather than for the Government, so I have some reservations about that. I don't know if it is really going to solve the problem. It may if properly constructed to place sufficient constraints on defense to go to trial.

Mr. LYNCH. Chief, the recent March 28, 1973, preliminary crime data released by the FBI—and I am sure you have more current data for your own jurisdiction—indicated all major categories of crime, with the exception of rape, were down in the District of Columbia. Aggravated assault was down a pittance, homicide was down somewhat substantially, robbery was down by a very substantial amount, rape was slightly up. That is the 1971–72 data. You probably have more recent data. On a nationwide basis that same information indicated that index crime was down.

However, violent crime across the Nation was up, and after one analyzed the data it was apparent that it was up from 2 to 13 percent in all suburban, all rural, and all urban areas of 500,000 or less population. Usually, the index crimes, as you know, are regarded by the FBI and by law enforcement experts as a good index of how much crime we have. How would you account for the general reduction in property crimes but a general increase in crimes of violence?

Mr. WILSON. Well, first, I would dispute there was a general increase in the crimes of violence nationwide. My recollection is there was a 1-percent decrease in violent crime, if you took your urban areas.

Mr. LYNCH. Excuse me. The FBI indicated there was a 1-percent increase in violent crime.

Mr. WILSON. I beg your pardon. During the last 3 months of the year, my understanding is, the index was down by 8 percent and violent crime down by 3 percent, which is one of the problems with annual data. Changes frequently occur in the middle of the year and trends are concealed by the annual data.

I think that our own experience here has been that it is far easier to cut into property crime than violent crime, simply because things such as auto theft, for example, have been cut by the auto lock, for one thing, and also it is fairly easy cut into by aggressive police intercept patrol and by computerization, for example, which cuts into auto theft

simply because it makes it possible for the man out on the street to know when a car is stolen or not, whereas he could not in the past. The same is true with regard to burglary. These are crimes which are generally much easier to cut into than even the crime of robbery.

The crime of rape and murder, of course, are very difficult for the police to cut into, since frequently they most often occur off the street, out of police patrol, and it is something that has to be cut in through apprehension and effective dealing with the individual through the rest of the system.

But I think much of the statement was our experience in the District of Columbia; we were able, first, to cut into property crime and it has only been in the first year, 1970, for example, when we achieved our first reductions in crime. My recollection is we did poorly in terms of robbery reduction. Robbery was the later offense to move down.

I see a lot of room for optimism in the national crime statistics. I think that the decrease, although it was not all that substantial during 1972, indicates a turning. I think the turning was indicated even earlier than that—in 1971—by the fact there was a leveling off in crime. And we showed about the same effect here. When you look at the annual data you get a leveling effect instead of a decrease. I can't say specifically why violent crime doesn't move as rapidly. I think it is largely that property crime is just more susceptible to police control. Aggravated assault, for example, is almost an entirely off-the-street offense.

Mr. KEATING. Chief, may I ask a couple of questions, please?

I would like to be specific on one particular topic, and that is, the rape that occurred, or the assault that occurred, at George Washington University campus. Two girls were involved. My first question is: Immediately after the acquittal, was there any increase or decrease in reported rapes to your department?

Mr. WILSON. I frankly don't know, Mr. Keating. Rape is such a small, relatively small number, that if you take it on a monthly basis I doubt you could make a statistical inference. I will be glad to see what it showed, but I, frankly, don't know.

Mr. KEATING. Rape has increased across the Nation. We talked to some of the other police departments and there is some indication they are concerned about the element of proof necessary, and the difficulty if a girl submits to a boy's violence upon her, then there seems to be a presumption that she submitted voluntarily and, therefore, there is no crime committed.

Are there any efforts being made by your department to change that at all to make it easier for a conviction or, at least, to protect the women more in our society today?

Mr. WILSON. The city council is presently engaging in, or arranging hearings to ascertain what changes in the law can be made. That problem is recognized primarily as an outgrowth of the George Washington University incident. There is no question the law is grossly unfair to women and, of course, it is not reflected only in rape, but I guess that probably is the worst example of all of the crimes. And, of course, a lot of concern, more concern from the police point of view for persons probably guilty than for victims. I think rape is probably the one example which needs the attention most.

Mr. KEATING. That case has caused quite a bit of controversy around here locally, as I understand it.

Mr. WILSON. Yes, sir; very much.

Mr. KEATING. Because of the role played, or allegedly played, by different people involved. But it is not unique to this area to have a lot of acquittals and I am wondering if you feel that people who have been assaulted in this manner are reporting as often as they should in the light of the difficulty of obtaining a conviction; what they have to go through.

Mr. WILSON. My feeling is they are not. There is a theory which probably has some basis in fact that part of the increasing crime in recent years has been the increasing willingness of women to talk about sex offenses than was true in the past. It has long been known that many rapes come to police attention on the basis of confessions of rapists: that rape is a grossly underreported crime in terms of the reports made by victims. It is confessions of rapists. We have known many unreported rapes that have occurred.

So there is no question it is underreported and there is no question a lot of it goes, first, out of the embarrassment of the incident to the victim and, also, by the knowledge that the victim may essentially end up on trial if the case does go to court.

Mr. KEATING. I only heard your previous comment that you felt speedy trial legislation might develop another advantage for the defense. I would submit that the way the system is now, there is an advantage for the defense in the long delays that are occasioned by the lawyers, not necessarily for the defendant himself because he might be languishing in jail. But isn't it to the advantage of law enforcement generally to have a quick, speedy trial and obtain either a conviction or acquittal?

Mr. WILSON. There is no question of that. I think that the improved situation with regard to trial in the District of Columbia has had a lot to do with the success that has been achieved in reducing crime. There is no question that quick trial and quick disposition of the case is far to the benefit of law enforcement.

Mr. KEATING. One of the difficulties in achieving a speedy trial is what kind of teeth in enforcement are you going to have getting it tried within 60 days, which would be the optimum. About the only thing can be dismissal of the charges, and my comment on that is that if a prosecutor permits that to happen, or a judge permits that to happen in his court, and it is a pretty violent crime, he is not going to be on that court very long or not going to be prosecuting very long. You are going to give the incentives for the judge who is presiding in the criminal court to say, "OK, fellows, you are going to trial in a week." Do that and enforce it. But some way we have to put some teeth into getting this job done.

Mr. LYNCH. Mr. Keating, I wonder if we could ask Mr. Alprin if, in his judgment as general counsel of the Department, whether that defect might not possibly be cured by the institution of a major offender bureau? Would that assist?

Mr. ALPRIN. Something like that, Mr. Lynch.

You see, Congressman, that 60 days would be the optimum. I think it could be substantially less than that for certain categories of offenses. Substantially, less than that.

The problem with the dismissal after 60 days is that it creates an assumption that it is the prosecutor—at least here, which is the system I know about—who is causing the delay most of the time. I don't believe that is true. The delays are caused by a lot of factors, many of which the prosecutor has really no control over.

I would like to see teeth—maybe that would be one possible alternative—to enforce speedy trial for certain categories of offenses. But teeth also directed at defense counsel, absconding defendants, or what have you, any of the many factors which cause delays in the system.

Mr. KEATING. Let's explore that for the moment. What teeth can you put in it? We can continue as we are with delays and so on, and there is a lot of human element involved in consenting to another continuance for one more time.

Mr. ALPRIN. I have done it myself.

Mr. KEATING. And the judge really has a primary responsibility to control it. But what other alternative do you really have? You can't say that if we don't try within 60 days, and if the defendant doesn't come in, he can be convicted. There is no way under our system of laws you can do that.

Mr. ALPRIN. No, you can't. But if the defendant can't be found, if the trial is delayed for a long time and——

Mr. KEATING. I am not suggesting it can be dismissed if he skipped town or if he has forfeited his bond. I am suggesting that if he is sitting in the jurisdiction and he is not physically incapable, nor are the witnesses, that is whether he is a victim or not, there is no reason he shouldn't be tried in 60 days.

Mr. ALPRIN. If I were the judge, I would order him, the prosecutor, and defense counsel, to go to trial in 30 days and if they didn't I would hold whoever was at fault in contempt.

Mr. KEATING. The judges are doing that and I am suggesting that might be one way. The jurist faces the public wrath because you know, justice delayed—that old adage—is justice denied for everybody. Not only for the defendant, the victim, the witnesses who have to constantly appear, the policeman who made the arrest because he may have to come back six times which takes time away from that policeman being on the beat or wherever he is supposed to be, but justice is denied for everybody. And I submit that, and very strongly that one of the greatest deterrents to crime we could have is bringing the defendant or accused to the bar of justice at the earliest possible date and dispose of that either by criminal conviction at the earliest possible date—and then the punishment to follow shortly thereafter so that he knows he is being punished for that crime, not 2 or 3 years down the road—or acquittal. It is fresh in the minds of everyone.

Mr. ALPRIN. But you understand we put 1,200 cases through the superior court every month. And while I agree with every word you said, sir, and it is obviously true, there have to be priorities. Obviously, a robbery is more important than petty larceny or grand larceny which is a felony. I think the whole system ought to put priorities on the kinds of crimes we are concerned with and require those to go to trial very quickly.

Mr. KEATING. But you are also saying that the misdemeanant might have to sit in jail for a longer period of time because he didn't commit a more serious offense.

Mr. ALPRIN. Almost every alleged misdemeanant in the District of Columbia is released on his personal recognizance or released under certain conditions, at the present time. So, I don't really think that is a problem most of the time. There are exceptions.

Mr. KEATING. Well, it seems to me that if my experience is correct, and it is at least in my jurisdiction, there are many days the courtroom is vacant and some days when you have a lot of trials and can't get enough jurors together. I imagine a lot of these things would come into most other jurisdictions. There must be some way, through a modernized computer system, of putting all of the people together so defense counsel can't come in with the excuse, "I have to be in Federal court or be in superior court or city court and, therefore, I need a continuance." There has to be a great deal of pressure to get each case tried and I think possibly the defense counsel is no more orderly about continuances in this whole equation. That still doesn't make it right. We have got to get these matters to trial because it is going to help the citizen.

Mr. ALPRIN. We have come a long way in the court reorganization. The last statistics I saw a month or two ago showed between the indictment and trial for felonies the average delay now in the superior court is 72 days; 2 years ago it was a year or a year and a half in the district court.

Mr. KEATING. I guess while I am pressing so hard, I should also take the time to commend you because the District has done a good job. They do an increasingly good job. I am saying also we can't be satisfied until we have tried in a much shorter period of time. You have done a tremendous job and the crime rate here has been decreasing, generally, and we have used those statistics often. So I think you are certainly to be commended. But I have this thing about speedy trials because it is extremely important to all concerned and I am searching for a way to put more teeth into it.

I recognize the peril of the dismissal of the charge, but I have yet to be able to find another way of doing it that will put pressure on those involved. If you have a suggestion, I would love to hear it, other than the dismissal within that period of time.

Mr. LYNCH. If I may, Mr. Keating?

Mr. Alprin, from the police point of view, it is your judgment that there, at least, is not enough priority attention presently being given to serious and/or major criminals.

Mr. ALPRIN. That is my belief, sir.

Mr. LYNCH. Thank you.

Mr. KEATING. I see there are some other members present. I will yield back, Mr. Chairman, so others may ask some questions.

Mr. RANGEL. Chief, recently there was an article in the Washington Post which talked about a 15-block area which had the highest crime rate in the District and perhaps in the general area. Could you elaborate on the facts and circumstances surrounding that story?

Mr. WILSON. Not with regard to that specific story, Mr. Rangel. I read the story but I didn't follow through on that. We have the Carney block system in the District of Columbia defining areas in which we measure our crime, and at the time this story was written I believed that happened to be the highest. It is in the general area of what is essentially the third district which has been consistently our high crime area over a period of many years, actually. That particular one is in

the lower part of the fourth district but the general area has been a high crime area over a period of many years.

It is reducing. I don't believe there is any Carney block in the city that hasn't had a reduction in the last couple of years. But it is in the very center of the city, it is a problem area, an area of some problem. Although I would elaborate by saying a couple of citizen leaders in the area called my community relations division and complained they weren't nearly as afraid as the reporter would have led people to believe.

Mr. RANGEL. I suppose no one likes his neighborhood being the subject of such open criticism, but the story did say it was a high crime area.

Mr. WILSON. It is that.

Mr. RANGEL. We are all really trying to find out how we can apply the progress that is made in the District to similar type metropolitan areas throughout the country. I sit on this committee. I sit on the House Judiciary Committee, and I sit on the District of Columbia Committee, on its Subcommittee on the Judiciary. What I am trying to find out exactly is how you have been able to get a decline in crime while most major cities have been on the uprise. Have any specific studies been made as to the causes of crimes in an area such as described by the Post?

Mr. WILSON. I would say yes, as a generalization. The causes of crime in that particular area and, indeed, in the generalized area surrounding that are pretty self-evident. It is the core of the city, it is a congested area, it is an area of high poverty, it is along one of the 1968 riot corridors. It is an area where there are a lot of vacant buildings, a lot of poor people living in the area. It is an area that suffers from the worst of the social ills of the city.

Mr. RANGEL. I thought your testimony said that you do find some decreases?

Mr. WILSON. There were decreases indeed in the early years; our best decreases were in the high crime areas because it was in the high crime areas, and still is, where we concentrate most of our manpower. And since there is a great deal of crime there, it is much easier to reduce where you have a great deal of crime than in some Carney block.

Mr. RANGEL. Could you tell us what manner or what method you have used? To what do you attribute the decrease? Was it because of something different that the police department was doing?

Mr. WILSON. I don't know that it was anything all that different, Mr. Rangel. It was largely traditional things. The vastly increased police force here, as was discussed earlier, the largest per capita police force in the country. We increased the recruitment of blacks, we have increased the use of scooters, which get foot patrolmen effectively out and in the community. We have increased the street lighting, particularly in that area along the 14th Street corridor. We have concentrated high-intensity lighting in that area and throughout the city, there has been a major impact on narcotic drug use which was a particular problem in that area.

Mr. RANGEL. Most of us on the District of Columbia Committee really don't believe that we have the answers to the problems that the District faces, but we are hopeful that since this is the Nation's Capital perhaps we could institute programs that would serve as a model for the rest of the country and we could gain from all the experi-

ences here, not only in the area of antisocial behavior but in meeting all major city problems.

I assume the President of the United States has expressed a like concern as to the Nation's Capital being what most of us would want it to be. Has the President had the opportunity to discuss crime in the area with you?

Mr. WILSON. In the District of Columbia?

Mr. RANGEL. Right.

Mr. WILSON. Yes, sir. On several occasions, as discussed earlier. Beginning in late 1969, there was no question the President had, as I testified earlier this afternoon, established the reduction of crime in the District of Columbia as really the first priority of the city government for a couple of years and still maintains it as a high priority and still is very dissatisfied with the fact we have far more crime than we should have.

While we have been successful in substantially reducing the crime rates since 1969, as I indicated earlier, we are still double the 1962 rate, and certainly that is a goal which I think we all would strive to achieve. When we get to the 1962 level, we may be at a point where we will have to sit back, I think, and question the priority then with regard to crime. But at the point we are now, we are certainly not at the point anyone can sit back and say the job is done.

But there is no question the President is interested in further reductions in crime and is going to insist the city government achieve further reductions in crime before he will be satisfied with this situation. As I judge his mood and the rest of the Nation, he sees crime as does most of the citizenry of America, as a major urban problem that needs to be dealt with. And while naturally there were some improvements last year, certainly the President sees that as just the slight improvement on the top of a peak of crime which has to be reduced to a level where people feel free again.

I am very much concerned as I go around the city and see taxicabs here and, of course it is true in other cities, you can't get change for your money and you can't get on a bus without change and you ride around Capitol Hill and see all sorts of homes with grilles on the windows. There is no question that we still—in this city and many other American cities—have people living in fear and really have a lot of people imprisoned in their own way.

Mr. RANGEL. In describing not only this 15-block area we talked about, I would suppose it was your testimony in these general high-crime areas, that you described them as being of high-density populaties, a high-poverty level, and probably unemployment. I assume that if these conditions were alleviated that it certainly might make your job a lot better.

Mr. WILSON. Oh, there is no question that if it were possible to alleviate the social causes of crime it would make the police problem a great deal better. I am always hesitant about saying that because, while I believe it, I sometimes wonder if—I don't want to make the problem so large, that nothing gets done about anything and I think you can do something about crime without saying that we have to deal with social problems, first. Although I think it would be desirable to do that. I think we need to do both.

Mr. RANGEL. But you do believe these factors are contributing factors?

Mr. WILSON. There is no question of it. You just absolutely cannot deny they are contributing, and heavily contributing, factors.

Mr. RANGEL. Does the President share your belief that these are the factors that contribute heavily to crime?

Mr. WILSON. I frankly could not say. I don't know. I would assume so but I, frankly, could not say that. I have not sat down with him and discussed that with him, so I could not say that.

Mr. RANGEL. In your conversations with the President—and believe me, when privilege starts, you can let go—I am concerned——

Mr. WILSON. I will have to call the Attorney General on that.

Mr. RANGEL. Call anybody else but him.

But I am concerned, recognizing the President's concern not only about the crime in the District of Columbia, but in all other major cities, that when he deals with you it necessarily has to be as a professional and he has to tell you what tools will be made available to you if he expects appreciable change in terms of crime in the District. He does ask you what are your problems and what tools do you need to deal with them, for probably you have the same budgetary problems as most police chiefs in major cities. So my question is, if you believe that your highest areas of crime are caused by certain social factors, regardless of what they are, the tourist trade, demonstrators, whatever it is, I assume the President would be concerned with that, too?

Mr. WILSON. I would assume so, Mr. Rangel. Although I think I have to repeat, perhaps more emphatically, what I said before. While I don't have any doubt in my mind that root social causes are what lead to crime I am not one who believes that I would recommend we attack root social causes as a way of eliminating crime because I, frankly, think that root social causes are perhaps too complex a problem.

Mr. RANGEL. Let's not talk about eliminating crime, because I am convinced wealth certainly does not preclude one from committing crime.

Mr. WILSON. I guess what we are really talking about is reducing crime to a tolerable level, and I think we all recognize, even when we talk about crime index offenses, that we are only talking about a very small proportion of total crime, if you think of what crime is.

Mr. RANGEL. If, in this political subdivision, there are certain factors which in your expert opinion contribute toward crime, certainly your Department would be concerned about alleviating those conditions and starting to attack the root causes of the crime?

Mr. WILSON. I have not seen attacks on root causes which have had substantial impact on crime. I am sure it is possible, but I, frankly, do not see that. I do not feel we should—as has been suggested in the past—do nothing about crime until we deal with the root causes. I don't think so.

Mr. RANGEL. I am sure I agree. I think you could say one way to eliminate crime is to eliminate people, but we wouldn't suggest that.

Mr. WILSON. There is very little crime in the desert of Arizona.

Mr. RANGEL. But, certainly, with your background and experience, you recognize there are many things outside of the control of the police department, directly, that certainly could make our job a heck of a lot easier if other agencies were just as concerned about the things they are supposed to do. If we are talking about any given demonstration day, certainly you have nothing to do about the buses that come

into the District of Columbia and yet that certainly makes your problems more difficult.

Mr. WILSON. Yes, sir.

Mr. RANGEL. So you wouldn't have to really ban buses to say you are doing your job, but you would consider this a factor and you would deal with it; you would do whatever you do in terms of assignment of your men to deal with that problem. And recognizing that this is the Nation's Capital and recognizing that you can find certain areas which are measurably high-crime areas—in other words, I am willing to do with you what I know New York City is not willing to tackle, because we don't have the President as the mayor. If he wants to eliminate, alleviate or reduce crime in the area, and you are able to look at your crime charts—I assume you have charts measuring crimes of violence and crimes against property by neighborhoods?

Mr. WILSON. Yes, sir.

Mr. RANGEL. You probably know over the years just where you have most of your major problems. Now, the reasons that you have given for these real rough areas have been poverty, unemployment, and deprivation. I am not asking you to assume the responsibilities of the Human Resources Administration, but I would just like to believe that if the Chief Executive tells you to make this the type of city that all Americans can be proud of, the factors that create crime are also discussed.

Mr. WILSON. Well, he didn't ask me to be the mayor; he only asked me to be the chief of police. And I think from my point of view that crime can be reduced. In fact, I agree we have demonstrated crime can be reduced with what has been done. I am not sure these other problems are not being dealt with to some extent; they certainly have not been dealt with totally successfully. I don't think, insofar as I am aware of the history of America, they have been dealt with successfully. That is, in terms of elimination of root causes.

Those are the things that need to be dealt with, but I don't consider them things that are priority items, from my point of view, to achieve reduction in crime. I think crime can be reduced with or without elimination of root causes. I think from a humanitarian point of view I would perfer to see the root causes eliminated as well.

Mr. RANGEL. I think if we do understand each other, your testimony has been a little different from the police chiefs that we have heard testify from New York City, from Indianapolis, from Chicago, where more and more they concern themselves, not just with the manpower and patrolling the streets, but in dealing with the root causes of criminal activity. Some of the ideas they had were absolutely amazing to me because of my biases against cities like Chicago, coming from New York. All of their testimony this morning was not humanitarian but in dealing with high crime areas, they were talking about employing the person with the propensity for crime, to have them involved with law enforcement and other social services. They were talking about people who looked like policemen being involved in lead poisoning and showing people where services are available so they could improve the quality of their lives, so the frustrations they had would not be taken out against their fellow citizens or against the person wearing the uniform.

I am certain they didn't hold themselves up to be the mayors of the

towns, but it just seems to me that they felt in communities such as this 15-block area in the District of Columbia, they had to deal with people and their problems in order to be effective in reducing the crime rate. They were pretty proud of themselves when they achieved a decrease.

Mr. WILSON. That is an interesting viewpoint. I don't really think I share that, though.

Mr. RANGEL. I don't suppose you are prepared to say the President shares your professional opinion about this. I really hope he doesn't.

Mr. WILSON. I testified earlier I haven't discussed that with him so I, frankly, can't say what his view is.

Mr. RANGEL. I don't want to prolong it because I don't really believe you have to be—you are not hired as—a humanitarian, but let's assume you are concerned about people, and certainly your record as police chief would indicate that you have a concern. It just seems to me that if you are in love with this city as much as most people are, that in order for you to be effective in your professional area of law enforcement, this would not be playing the mayor, you would involve the unemployed or concern yourself with the problems of the deprived and the poor.

Mr. WILSON. I don't think I said I was unconcerned about the problems of the poor. I said I do not really see that as a viable approach from the point of view of the chief of police to reduce crime. I said those are things the city needs to do, but I did not say I need to be doing it.

Mr. RANGEL. These things would not be agreeable to you? If some program were developed in this area, so dense and so unemployed and so poverty stricken, to have these people help themselves and show they have the can-do spirit and they do become employed, would you professionally forsee a decrease in crime in this area?

Mr. WILSON. I think so. I would have to see the program. As a hypothetical answer, yes, certainly. I have testified that social improvement of the area undoubtedly would improve crime.

Mr. RANGEL. Wouldn't that be considered as good law enforcement to suggest programs that would put people in a position where they would not have this propensity to commit crimes, without converting you into a social worker? That would not detract from your office as police chief?

Mr. WILSON. I simply don't see that as my function in the organization of the government, Mr. Rangel.

Mr. RANGEL. Even though it is a contributing factor to crime?

Mr. WILSON. Even though it is a contributing factor to crime. I see education as a problem to crime, but I don't see taking over the educational system as my function as chief of police. There are a lot of contributing factors to crime, which——

Mr. RANGEL. I don't know, Chief. I assume the District of Columbia still has its narcotic addiction problem?

Mr. WILSON. It has substantially improved in recent times, and it does have still a narcotic addiction problem. But it has substantially improved.

Mr. RANGEL. And I would like to believe there must be a lot of testimony given by you, on or off-the-record, that educating children against the dangers of narcotics has been considered a part of your official responsibility?

Mr. WILSON. That is correct. No, I have not considered it as part of my official responsibility, but I have certainly supported the narcotic treatment agency and, to some, we have done some lecturing in terms of narcotics.

Mr. RANGEL. In your official capacity, I assume you support the Narcotics Treatment Administration?

Mr. WILSON. That is right.

Mr. RANGEL. How do you jibe that as being within your official responsibility and not being able to concern yourself with——

Mr. WILSON. I think you are misstating what I said. I did not say I was not concerned with the problems.

Mr. RANGEL. I mean officially.

Mr. WILSON. I said officially. I do not see it as my responsibility to go up and talk with the President about employment in the high-crime area as something I should do.

Mr. RANGEL. I didn't mean to include the Presidency in all of my questions to you.

Mr. WILSON. I am sorry; that is the way they were coming to me.

Mr. RANGEL. Then perhaps it was because I misframed the question. Then you do discuss the social ills of the community and the high-crime rate with the Mayor?

Mr. WILSON. Yes. Absolutely.

Mr. RANGEL. And you are involved with programs to alleviate the conditions that cause crime?

Mr. WILSON. Involved, yes. I am not running programs to alleviate conditions, aside from my police force.

Mr. RANGEL. I assume in your conferences, as the police chief, you would have to have some input, even though it had nothing to do with patrol?

Mr. WILSON. Absolutely. I am sorry. I thought you were asking me whether I had discussed it with the President.

Mr. RANGEL. Now, let me go back to that.

Mr. WILSON. I am not going to, either.

Mr. RANGEL. You have officially discussed the social ills of——

Mr. WILSON. I have discussed the social ills of that specific area with the Mayor.

Mr. RANGEL. In an official capacity?

Mr. WILSON. Absolutely.

Mr. RANGEL. As a measure of crime and lack of crime?

Mr. WILSON. And as it relates to the general area we were referring to, as a matter of fact.

Mr. RANGEL. This would be especially true in narcotic rehabilitation, and seeing crime as it relates to the increase of narcotic addiction you might be in a better position than a doctor or social worker to give some advice regarding where clinics should be located or, certainly, where those who need the clinics are?

Mr. WILSON. With regard to the general program, yes. I have not discussed these matters with the President.

Mr. RANGEL. When he gives his mandate to you to decrease crime, it seems to me he should have given it to the Mayor.

Mr. WILSON. I am sure he has discussed crime reduction in the District of Columbia with the Mayor as well as with me. I, perhaps,

misled you. He has discussed it with the Mayor individually, with me individually, and discussed it with both of us together.

Mr. RANGEL. But he doesn't go to the causes of it. He just talks about how he wants to see conditions improved?

Mr. WILSON. He has not discussed the causes of crime with me. That is what I have to say.

Mr. RANGEL. Thank you, Mr. Chairman.

Chairman PEPPER. Chief, following somewhat the line of questioning of Mr. Rangel, I know Mayor Washington is a man of compassion and concern for his fellowmen. He would like to see a lot of conditions in the District of Columbia improved. I happened to own some property in an area which has become a high crime area and that property has very greatly decreased in value, and I suspect that same thing has happened to a lot of other property owners all over the District. I suspect the reason Mayor Washington has not been able to get improvement in this high crime area, of which Mr. Rangel was speaking, is because he hasn't had the money to do it. And in these hearings I am anxious to find out just where the responsibility really lies.

If it lies on the failure of Congress to appropriate enough money to clean up the ghettos, to put the people in decent housing, to try to provide better schooling so the children will not be school dropouts, to provide jobs, then the fault is not Chief Wilson's and his police department, but the Congress or whoever it is who is responsible for providing revenue in that area.

I suspect that, basically, that is the problem all over the country. Other chiefs of police would like very well to be able to have the high ratio of police you have. A little revenue, I suppose, comes from the Federal Government. Most of these other chiefs don't have that strong source of revenue. And I suspect that, basically, the Congress and the State legislatures, the municipal authorities, and the people generally, have not yet owned up to being willing to pay the price of really bringing crime down to a minimum level, what you might call a tolerable level.

To me, if we really determine to do it: this country is powerful enough and rich enough and does have the know-how about it to reduce crime down to a minimum level so that there will be relative safety all over the country.

Would you care to make any comment on that?

Mr. WILSON. I think that is certainly true, Mr. Chairman. I think crime can be reduced. While I agree with Congressman Rangel that social problems need to be dealt with, I, frankly, just do not see that priority on social problems as the way to reduce crime. I think that crime can be reduced by putting emphasis——

Chairman PEPPER. Not the only way?

Mr. WILSON. I am not even sure it is a practical way. I think it is probably a too-long-term solution to be achievable in the situation in which we currently find ourselves, where citizens across America are very much afraid, and rightfully so, of crime and much more so than they were 10 years ago. I think that crime can be reduced through priorities to direct law enforcement programs, on increased police, on court systems, and there, of course, is a great problem, as I gather, in most of your urban areas, although I certainly don't have direct

knowledge of other urban areas, but I have the impression that many urban areas have much the same problems we had in the District of Columbia before court reorganization with diffuse court systems, with badly backlogged court systems, with not bringing individuals to trial, with so great a fallout of persons arrested that the law enforcement process is just practically unworkable. I think these sort of things need to be dealt with on a priority basis. I think they can be.

Now, concurrently, I think that it is certainly desirable from the standpoint of achieving in America—we would all like to see problems of poverty overcome. But we have had poverty for many years, for centuries, and we did not have as much crime for centuries as we have had in the last few years in this country.

Chairman PEPPER. Chief, I think we all agree poverty is no excuse or justification for the commission of crime. And, yet, if you walk through the prisons of this country, as nearly all of us have done, you will generally see something that I was told by one of the staff of this committee, in the early days of this committee, that was gleaned from some of the Presidential Commission reports, as to the type of person in those prisons. And this is what that man said. He said that the typical inmate of our penal institution is a white male, about 24 years of age, a school dropout, unemployed, who previously had been in prison.

Now, if that is even substantially true, that tells a lot about the environment from which that man comes.

Now, I know it to be considerably true on your part, and no doubt many would want to refute you for doing it, but if you were to go before the school board or school authorities of the District, and say, "Ladies and gentlemen, I hope you will not consider me an intruder here in your council today, but the people of this area want crime reduced. And one of the serious causes of crime in this area is school dropouts. I could give you the figures, the figures that would sustain that statement. I am not telling you how to run the school. I am just telling you that I, as chief of police, have to deal with the problem of these dropouts. They want things that others of their age and general characteristics have; they can't earn enough money ordinarily to buy them; they dropped out of school way back in the 7th, 8th, 9th, 10th grade, along there somewhere. They don't have any skills, they are headed to the juvenile court, and the juvenile judges have told us that about half of those who get in juvenile court for a serious crime wind up eventually in penal institutions."

I think you would be justified in making an appeal, as chief of police not as an intruder to that school board. And if you went before the chamber of commerce and said:

Gentlemen, I appreciate the confidence you all extend to me, the encouragement that you have given me, but as chief of police trying to do a job for you, to save you and your family from harm in the District of Columbia, I want to tell you some problems that might well need your attention, some social problems in our area.

As I said, probably a lot of them will say:

Chief Wilson better attend to his own business. We are running these things.

And yet you would be entirely justified as chief of police, trying to help the people of the District to be safer. You would be entirely justified to try and encourage these people to do a lot of things that would remove a lot of these factors from the environment.

Mr. Wilson. The problem is much more complex than that. While it is undoubtedly true—I accept it is true I don't know, but it is probably true—that a high proportion of persons in prison are school dropouts, there are still an awful lot of school dropouts in America who are not in prison and never commit a crime.

I think we have the unfortunate tendency of taking an identification stigma, if you will, of a person and saying that person is likely to be a criminal because he is a school dropout or because he is black. The Crime Commission pointed out in the District that most of the persons arrested for crime were black. But, on the other hand, when you start comparing, it is only about 2 percent of the population arrested anyhow.

So it is a problem, I think, when you start saying being poor or being a school dropout or being deprived is a contributor to crime. Maybe it is and maybe it isn't. It may come out the same personality that makes the criminal has made the person drop out of school or has made him poor in the first place. I am not sure, and sociologists have been trying for about 165 years to define what makes crime and have been trying through all sorts of statistical processes to say these conditions create crime, and they really have not been able to do it.

I think we know there are areas in the centers of cities, and the cities generally, where most of the poor, most of these school dropouts, and most of the social ills are, but there are a lot of people living in these areas who never commit crimes and never become involved in crimes; and, by far, that is the majority of those individuals.

That is why I am afraid of going to root causes as a way of reducing crime.

It is much the same problem we had when we had a real epidemic of narcotics in 1969. We found something on the order of 35 percent of persons arrested for crime index offenses had used narcotics, on the basis of some urine sampling we did in the central cellblock. That tells us something but it doesn't tell us that to eliminate heroin is going to eliminate that 35 percent, because it is a safe guess 25 percent of those would have committed crimes whether using heroin or not. We don't really know the percentage.

But the problem of attaching crime to root causes, in my judgment, is that all of the persons who are suffering from root causes are not committing crimes. I think it is a great mistake for us to say if we cure poverty we are going to cure crime. I am not sure we can. I am not sure about curing school dropouts. What we have done universally on these school education problems, one theory holds that we have taken the school dropout who used to quit school and go out and go to work somewhere, and kept him in school where he is unhappy and moved to crime in schools, and there is some indication of that in recent years.

Mr. Rangel. Mr. Chairman?

You are using some social work terms that I am familiar with. Root causes just sounds like if you eliminate that you have it made, and I don't want to make that contention. But you can say that employment, those youngsters who are employed, do less mugging than those who are unemployed. That wouldn't put you into difficulty.

Mr. Wilson. I think you can say that.

Mr. Rangel. I would say most drug addicts smoke pot, and you could say most drug addicts start off drinking milk.

Mr. WILSON. I am not going to say that.

Mr. RANGEL. But if police chiefs can work with other people in attempting to deal with the employment of the youth—I am not talking about giveaway programs or putting a couple of dollars in their pocket and having them idle, because it could very well be that even with money in their pocket they would commit crime if they had nothing to do with their time—it would not infringe upon your professionalism to say in areas where youngsters are employed, that you would suspect that this is not the person that is most prone to physically attack people in the street?

Mr. WILSON. I think that is true. But I would not invest any crime prevention money in employment of youth, and I guess that is where you and I probably disagree. Maybe we don't.

Mr. RANGEL. I don't want any person in charge of any agency to invest any of those funds from other peoples' work. I wouldn't ask you to do it. With those police chiefs who have testified here, I think it was made abundantly clear to us, those funds did come from other sources even though they wrote the programs. They were the sponsors of the programs and they asked businessmen and other concerned citizens to give a kid a job. I guess the District of Columbia Committee will have to get together with you to ask your advice regarding some of the programs that this Congress may be prepared to fund without jeopardizing your budget. I hope you can walk that one step with us to begin to talk about some of the factors that underlie crime and not the core, or the term you used, because I am not prepared to deal with that.

But if you did find as a result of your statistical data that all of those factors that contribute to crime, and if we would rely upon your expertise as a criminologist and ask what can we do to help, certainly we would not ask you to come with a program that would——

Mr. WILSON. I am not a criminologist. I am a high school dropout.

Mr. RANGEL. I am, too. So we should be able to use the same type of language; one dropout should be able to understand another. You know, if it was to surface, a lot of them survived.

Mr. WILSON. Me, too.

Mr. RANGEL. I am suggesting people really don't have to volunteer to go into the Army to avoid the temptation out on the streets. If you could support the type of programs, in my community the Neighborhood Youth Corps, and whether or not you differ with Pat Murphy, I could depend on him to support the application of Neighborhood Youth Corps, the application of neighborhood police stations, the application of a whole lot of things that had nothing to do with increased police manpower, or increased squad cars, and I am certain that all of them attribute an interest in these other programs as being partly responsible for the decrease of crime in these areas. As a matter of fact, I know you probably wouldn't suggest it, some of them even have policemen trained in psychology to deal with that family that gets into a fight every weekend.

Mr. WILSON. I am familiar with the program. I don't think those programs are viable for other reasons.

Mr. RANGEL. I gathered you wouldn't. But a lot of chiefs do.

Mr. WILSON. For other reasons, I do not think they are practical. I would predict those programs will not be existing 5 years from now.

Let me make that as a prediction, because I don't think they are practical.

Mr. RANGEL. I just want to assure you of my political support on the District of Columbia Committee to try to give you the tools that you need to work with and reduce crime, and from time to time I may call you to give me a little support on the social programs that you and I agree could be a contributing factor to reducing criminal activity.

Mr. WILSON. Thank you.

Chairman PEPPER. Chief, I just want to ask you one other question. I believe you said you didn't want any more police. If what we have now done, and what you have done, and what has been done in the other areas that have to do with curbing crime, has been responsible for a decrease of 26.9 percent of serious crime in the District in 1972, and I believe a decrease in other forms of crime, except for a 16-percent increase in rapes, if what we have done has brought about nearly a 27-percent decrease, why can't we do some more and bring about a 50-percent or 75-percent decrease in crime? You are aware, the people who dwell in the District of Columbia are still very much concerned about the volume of serious and violent crime we have in the District.

Mr. WILSON. Mr. Chairman, coming back essentially to what Mr. Rangel is saying, it is a matter of priorities. There are other things to be done in the District. I think one could argue for increasing the police force even further. One could argue even for maintaining our authorization ceiling of 5,100 men, which we are not doing. We are, as I think I indicated earlier, down to a 4,950 ceiling as a budgetary matter.

Chairman PEPPER. How much did you have at the maximum?

Mr. WILSON. 5,100.

Chairman PEPPER. You are down to 4,900?

Mr. WILSON. 4,900 now and our average ceiling for this fiscal year is 4,950. And, of course, this reflects a reduction. There are other things that have to be done in this city. I guess that is what it amounts to. And while we are still maintaining a high priority on crime reduction here, I think when we had a 25-percent reduction last year, when we had a reduction during the first quarter of this year on the order of 10 percent, as I recall from the last quarter, and are projecting at least a 10-percent reduction, this really makes sense to me.

Chairman PEPPER. If we are willing to accept a relatively small percentage of decrease in crime, here you are telling us you have already cut 200 men from your police force, from 5,100 to 4,900. In other words, they have been willing to give you enough money to make the progress you have made, but they have not been willing to give you enough money to make substantially more progress than you have made. Now you are beginning to reduce your personnel.

Mr. WILSON. I think, Mr. Chairman, we still have a priority on crime reduction. We have, as you stated, a 27-percent decrease last year, down from 202 offenses daily in 1969 to 85 a day in March. This is better than half and it, frankly, seems to make sense to me, in terms of the other problems of the city.

Chairman PEPPER. Do you think Senator Stennis, whose life has been in serious jeopardy and who has been out in Walter Reed Hospital for over a month now, finds any solace in the fact that crime has decreased generally in the District of Columbia by 26 percent?

Mr. WILSON. No, Senator, I do not; but if crime in the District of Columbia is reduced to 15,000 offenses a year, which we had in 1962, I still can't guarantee that you won't walk out on the street and get shot by a holdup man. People were shot on the street in 1957 when crime was at an all-time low. And it was no satisfaction to the man who literally had his eyes kicked out on Capitol Hill in 1957 that crime was then at an all-time low. But those kinds of incidents are not the things by which I think we can sensibly measure crime and establish priorities on the basis of. I am sorry to say that.

Chairman PEPPER. With all of the things to do, and the decisions to be made by the public authorities and the people, do we really want to substantially get rid of crime as a priority, or do we just want to consider that one of the major priorities with which we deal, comparable to building the subway, et cetera?

Mr. WILSON. I think in the District of Columbia it is still the major priority. I understand that the desire of the President is that crime in this city be reduced to the 1962 level, which means it has to be reduced to about half again; and I think we are on the road to doing that.

Chairman PEPPER. Thank you.

Mr. Winn?

Mr. WINN. Yes, Mr. Chairman. Thank you very much.

Chief Wilson, I want to apologize for not being here for most of your testimony. I have been checking with counsel to see if some of the questions I had in mind were covered. One of them was on LEAA funds. I have been informed that you will submit for the record how those funds were used and in what amounts.

Mr. WILSON. Yes, sir.

[See letter received for the record, dated May 3, 1973, at the end of Mr. Wilson's testimony.]

Mr. WINN. I want to commend you for the 26- or 27-percent decrease. It seems to be a trend around the Nation, though, that crime is dropping. I think your record is very commendable and made under some very trying circumstances.

Yesterday we were urged by one of the other police chiefs to take the opportunity to ride in patrol cars. And, as you know, when I served on the District of Columbia Committee I was one of the members of that committee that did accept an invitation from the police chief at that time to ride in the cars and see the many problems your patrolmen face.

Let me ask a question that dawned on me when I first came to Congress in 1967. We had a very high rate of crime at that time in the District of Columbia. Around the Capitol, itself, other than the dome of the Capitol, we had a very poor lighting system in this area. I inquired and found out that—I don't mean to be stepping on any toes, and I don't know the exact name of the commission, but it has got something to do with the beautification of the Capital and the Capitol, itself; in order that all of the buildings look beautiful at night they light those, but the entire surrounding area is dark.

I think some of that opposition to additional lighting has been overcome, but at the same time we had muggings and assaults and things like that. As a matter of fact, two people in my office were assaulted when walking to their cars in this area.

I wondered if this is the problem in other places in the city, that they won't let them even approve additional lighting because they want to keep it so beautiful?

Mr. WILSON. It is not a problem, Mr. Winn. We have instituted a significant street-lighting program throughout most of the city, or at least throughout the high-crime areas of the city. And perhaps you notice that east of the Capitol Grounds themselves there is a major program of lighting. In the early years we had some problems, some objections, I think, from the Fine Arts Commission with regard to Georgetown but that is some time ago, and it has not been a problem in recent times.

Mr. WINN. Is additional lighting a deterrent to crime?

Mr. WILSON. No question.

Mr. WINN. You have proven facts on it?

Mr. WILSON. It is a deterrent to crime in any high crime area. Of course, like many crime reduction programs, it loses its cost effectiveness as you get into lower crime areas, but in any high crime area it is certainly a deterrent to crime.

Mr. WINN. Chairman Pepper referred to Senator Stennis. We certainly feel, all of us, badly about those circumstances. I want to point out also that it is my understanding that a young man who worked on the Hill until recently for Senator Vance Hartke was shot the other night. Is that true?

Mr. WILSON. I am not familiar with that.

Mr. WINN. There was an article carried in the Roll Call magazine. I didn't get all of the details. If you are not familiar with the case, we will skip it.

Mr. WILSON. I am not familiar with the incident.

Mr. WINN. But, as you say, you can't guarantee we won't walk out of a restaurant tonight, lighted or poorly lighted, and have somebody try to rob us or shoot us.

Mr. WILSON. We are never going to be able to guarantee that under the best of circumstances.

I would hasten to add a lot of improvement can be achieved. We still have far too much robbery in the city, as in most cities. But my point is as a practical matter, we can't judge crime by spectacular events.

Mr. WINN. In your opinion—this has possibly been asked by the other members—how can we cut down on the number of people in the District of Columbia that are carrying illegal weapons—guns?

Mr. WILSON. I have recommended legislation for mandatory jail sentences for persons carrying guns.

Mr. WINN. Where do we put them? We are loaded now.

Mr. WILSON. The population of the jail is down from its peak, though.

Mr. WINN. You have got some room?

Mr. WILSON. I don't advocate necessarily long sentences in the sense of a year or two; but our experience is that individuals who are arrested for carrying guns in the District of Columbia virtually never get any time in jail, any time at all. All we are recommending is 6 months minimum—I would be happy with a 30-day minimum.

Mr. WINN. There used to be a joke on the District of Columbia Committee that they would check them when they were arrested for

carrying a gun; they check them in and write their name down on the blotter and spank them and make them stand in the corner for 30 seconds and send them out the back door, because they didn't have any place to put them.

If there is some room down there, maybe we ought to try to fill it up with some of these guys, because they are the same ones shooting Senator Stennis and whoever it might be tonight or the next night.

Did they ask you if you have a rape division?

Mr. WILSON. They did not. We do have a sex unit in our criminal investigation, which primarily deals with rape.

Mr. WINN. Are women involved?

Mr. WILSON. Yes. Women police officers are involved.

Mr. WINN. We had very interesting testimony from Lieutenant Tucker of the New York City Police Department.

By the way, Mr. Chairman, she was on the "Today Show" the next morning discussing the same thing she did with this committee; of how she felt that the policemen in many cases lacked the sensitivity to discuss the details with women that had been raped.

I was just wondering whether you had found this was a problem, because we read in the Washington papers about every other day a rape occurs in Washington.

Mr. WILSON. They occur more frequently than every other day. It is about two a day.

Mr. WINN. The percentage of rapes is up?

Mr. WILSON. The number of rapes is up, not from the peak, but it is up substantially over the years. We find that it is useful to have women to interview women, although our sex squad officers are pretty good individuals in terms of interviewing. But I think there is a lot of desirability to have women police officers doing that work.

Mr. WINN. Have those officers in that division been trained, or are they taking courses from psychiatrists, or anything like that?

Mr. WILSON. Not psychiatrists. We have a school we send the officers through for both sex and homicide.

Mr. WINN. What kind of training?

Mr. WILSON. Primarily investigative techniques, rather than psychiatric; not psychiatric techniques.

Mr. WINN. Lieutenant Tucker tried to describe to the committee some of the types of men that are raping women, and we sort of got into people with psychiatric problems.

Mr. WILSON. Well, that, I think, is probably a generalization. It is typical that the rapist is probably a person with psychiatric problems.

Mr. WINN. The Indianapolis police chief gave us, I thought, some very good information, Mr. Chairman, on some precautionary plans and programs. You might want to refer to the record and see what they are doing; how they are trying to take care of the rape problem in Indianapolis by these programs, by watching certain individuals in advance that they think are heading that way. They seem to have a pretty good record of spotting these guys who are heading for trouble because of certain patterns they follow.

Mr. WILSON. That is interesting.

Chairman PEPPER. If my colleague would yield.

Mr. WINN. Yes.

Chairman PEPPER. I believe he said, the rapist starts as a prowler in the neighborhood and then a peeping tom indicating proclivity toward that sort of thing, and then some ladies' underwear is stolen from the clothesline, just petty larceny, but it has some significance with respect to that individual.

Mr. WINN. And indecent exposure.

Chairman PEPPER. Indecent exposure would be another phase. When a man begins to be involved in those things, I don't know just what you could do about it. There is no way of preventing it that I know of, but those are indicative signs that he might later on be involved in a rape.

Mr. WILSON. That is probably true. I am not sure how one identifies those symptoms from a police standpoint on a practical basis, because with many of our rapists we learn of them only when they commit a crime and are apprehended.

Mr. WINN. As I remember, he had a lot of help from the community and they worked very closely. Their street policemen work very closely with the community and get a lot of tips in this direction.

I have no more questions.

Chairman PEPPER. Mr. Nolde, our chief counsel, has a few questions.

Mr. NOLDE. What is your position regarding legalization of gambling?

Mr. WILSON. Well, I don't have a specific position on it. There is a gambling commission which is supposed to issue a report within 2 years, I believe, which is to study the problem of gambling nationally and come up with some comprehensive national program. I think it is something that is going to have to be approached on a national basis to avoid most cities, or areas, becoming centers for gambling.

I haven't really made a thorough examination of the problem. It is a difficult problem to us and not a problem of high priority to the police. It is a problem which is one of the great influences in corrupting police officers. So, from a police point of view, it is something that certainly needs study; but I don't have a position of my own.

Mr. NOLDE. I understand there was a recent survey of District of Columbia police officers in which 88 percent favored legalization.

Mr. WILSON. I saw that reported in the paper. I am not surprised.

Mr. NOLDE. And I understood that, according to that report, you had indicated that you would be in favor of a legal lottery in the District, but you thought it would not greatly affect widespread illegal gambling.

Mr. WILSON. That was a clipping, an inaccurate report from an earlier inaccurate report, which was a question: "If the Mayor wanted to have a legal lottery would I object," and I said, "no." I have no role; I am not an advocate for change.

My impression is, and again let me say my knowledge of what legal lotteries have accomplished is sketchy, but my impression is government-run lotteries have not eliminated the nongovernment lotteries and, therefore, have not eliminated the police enforcement problem or eliminated the problem of corruption of police. I have no strong objection to a government-run lottery but I don't think that is an answer to the problem from a police point of view. My impression is that those jurisdictions which have the lotteries still have the underground numbers game which is able to better operate since they are

private enterprise and are able to serve the customer much better and, besides that, you don't have to pay tax on your money.

Mr. NOLDE. It is reported that 80 percent of the officers believe that present enforcement of gambling laws is uneven, unfair, and misdirected. Why would they feel that way?

Mr. WILSON. I frankly don't know. I don't recall what the questionnaire was and, of course, how the questionnaire was instructed and what it says. I, frankly, don't know what would be the basis for that, because within the District gambling is enforced against both the numbers and against these sports-betting figures. We encourage enforcement of gambling against all levels, so I am not aware of any substantial amount of commercialized gambling in the District of Columbia. I am not aware of any gambling in the District going on. I don't doubt there is some gambling, which, incidentally, the U.S. attorney won't prosecute anyhow, but I am not aware of any commercial gambling going on in the District not receiving enforcement attention.

On a sketchy basis, quite frankly, gambling enforcement is not a high priority in the Department or in the District. It is something we keep up on because it is a violation of law, it is widespread, and it does finance other problems, such as narcotics.

Mr. NOLDE. Should there be any priority in terms of the so-called victimless crimes, such as gambling and maybe some of the others? Shouldn't we concentrate our police resources on curbing the more violent types of crime, and free up some of the other areas which account for substantial amounts of police effort?

Mr. WILSON. We do concentrate our efforts on other crimes. We certainly aren't concentrating our efforts on gambling. The term of what is victimless crime is subject to question. There is a commission study of gambling, and I think it deserves study. I don't know what it will be. I haven't studied it sufficiently in terms of what happens in cases where there is gambling. There are a lot of myths, perhaps, about gambling which I am not in a position to analyze and, frankly, inasmuch as this is a study appointed jointly by the President and Congress, I have not seen it as something I thought I should undertake.

Mr. NOLDE. What I am getting at is, according to last year's total arrest figures for the country, approximately 2 million arrests were for so-called victimless crimes such as prostitution, gambling, marihuana possession, drunkenness. And that is one-third of the 6 million arrests made in the prior year. So, it would seem if we could reduce police effort in this area, we might be able to better concentrate on the crimes that are more bothersome to the public.

Mr. WILSON. Well, I would suppose of the 2 million arrests for so-called victimless crimes, a large proportion were for drunkenness which is not a violation of law in the District of Columbia. And it was for long a factor, a heavy factor, in the arrests in the District of Columbia and certainly was using resources unwisely. The problem is, when you talk about victimless crimes you include in that narcotic users. Many people use heroin, so heroin traffic is a victimless crime and that is subject to some question.

Mr. NOLDE. I am not including hard drug traffic.

Mr. WILSON. Well, I am not sure that prostitution is a victimless crime.

Mr. NOLDE. Maybe the prostitute is the victim.

Mr. WILSON. It also is a heavy cause of robberies in areas that Mr. Rangel an I were discussing. Prostitution is a heavy cause of robberies. It is a cause of robberies in the sense that it attracts to the area a lot of individuals who are targets for holdupmen.

Mr. NOLDE. It wouldn't necessarily be if it were legalized.

Mr. WILSON. It may or may not. It depends on how one deals with it. It is also a problem to the community. When I became chief of police—and not lately, because we try to enforce the prostitution regulation, as well as we can without the vagrancy statute—one of the most persistent complaints I got in the central city was from people trying to raise their families at 14th and W Streets, and they couldn't go to the grocery store, the women couldn't, without being propositioned by some individual who was up there looking for a prostitute. They are raising their children in those areas. I am not sure I would characterize prostitution in its present mode as a victimless crime. Perhaps you can do what was done in France, prewar, and zone it. That may be a way of doing it. In its present mode, I would not characterize it as a victimless crime because, frankly, I think society is the victim.

Mr. NOLDE. Getting back to these crime statistics. I believe you have agreed they can be manipulated. But, as you said in answer to the skeptics, how could 100 crimes a day in the District simply disappear? They just can't be hidden. What about the audit which found that over 1,000 thefts of more than $50 were downgraded to under $50?

Mr. WILSON. You asked me about a report I haven't looked at in 6 months, but my recollection is that the Ernst and Ernst report indicated that overall there were some faults in our preliminary reporting at the peak period. We underwent a major reorganization of the record system in 1969, and they estimated the crime reduction was actually greater than we thought. It was one of the substantial findings, that crime was higher in 1969 than we thought, and that it was greater than we thought.

The devaluation of property, of course, has been a persistent problem since it was interjected as the measurement of what we were doing to the crime index in 1957, and the result of that is, beginning this year, beginning with the 1973 data, all larcenies will be in the crime index regardless of valuation of property. In the District of Columbia, whether you include all larcenies or exclude those under $50, the crime reduction is still about 40 percent. The points of variation are so insignificant as not to be a matter of great concern.

Mr. NOLDE. You don't think that would indicate a problem in reporting?

Mr. WILSON. No, I do not. It is indicative of a problem of reporting. Valuation is a reporting problem. It is a problem because the victim tends to overvaluate. It is a problem because the officer has no decent guidelines, and you can't construct good guidelines. I don't think it is indicative of a gross problem. You run a survey of crime by any mode and there is a reduction, no matter how you measure it.

Mr. NOLDE. What about the Princeton study finding that the District of Columbia policemen tend not to record crimes where they believe they have little or no chance of solving them?

Mr. WILSON. That was not what the Princeton study showed.

The Princeton study, I believe—if you are referring to the recent one—was a criticism of the process by which we dispatch cars and not

requiring a report on every offense. This was one of the points made by the Ernst & Ernst survey, that the UCR guidelines literally require the police, for every telephone call, to make a report and then find appropriate evidence of a crime. There is no city in the United States of any size, including the cities which are represented by members of UCR committee, which follows that guideline, however. Maybe some other study.

Mr. NOLDE. You don't think there is any tendency on the part of the officers to not record crimes where they don't think they will be solved?

Mr. WILSON. No. In this city, no; I do not.

Mr. NOLDE. That was my understanding of the study.

Mr. WILSON. I am not familiar with that study.

Mr. NOLDE. Returning to the President's position on crime, did it really help the cause of law enforcement when he held the well-publicized White House Conference last year on police killings and failed to invite Chief Patrick Murphy? Do you think that helped?

Mr. WILSON. Whether he invites Patrick Murphy to the White House is not a concern of mine. I think the Conference on Police Killings helped law enforcement. I think the purpose of the meeting was clearly to show, as the President has shown several times during his first administration and, obviously intends to show several times in his second administration, he is concerned about crime in America, he is concerned about achieving reduction in crime, and he is concerned with assuring this support for police officers in America.

Mr. NOLDE. But when he fails to invite one of the most innovative and outstanding police chiefs in the country to such a conference, I don't see how that could do anything but hurt the cause of law enforcement.

Mr. WILSON. I didn't make up the guest list. I don't have to have any executive privilege on that because I wasn't asked.

Mr. NOLDE. Unlike the Watergate people. Thank you, Chief Wilson.

Chairman PEPPER. Chief Wilson, we certainly do thank you and Mr. Alprin for coming here today and giving us this very interesting and very helpful testimony.

Mr. WILSON. Thank you, Mr. Chairman.

[The following letter was received for the record:]

GOVERNMENT OF THE DISTRICT OF COLUMBIA,
METROPOLITAN POLICE DEPARTMENT,
Washington, D.C., May 3, 1973.

SELECT COMMITTEE ON CRIME,
Cannon House Office Building.
Washington, D.C.

DEAR SIR: In response to your request, attached is a listing of L.E.A.A. grants awarded to the Metropolitan Police Department.

The daily average number of men on patrol was 664 during the 4:00 p.m. to midnight shift for the month of March 1970. This was the month during which the department attained an actual strength of 4,100 police officers, and was during the high-crime period.

I trust this information will be helpful to your Committee.

Sincerely,

JERRY V. WILSON, *Chief of Police.*

[3] $43,750 of this money came from fiscal year 1971 funds.

Chairman PEPPER. The committee will meet tomorrow morning at 10 a.m., in room 311 of the Cannon House Office Building.

Let me state that the chief of police of Miami, whom we esteem very highly, was to have been a witness today to tell what he has been doing in Miami to reduce the rate of crime. Chief Garmire was unavoidably prevented from being here this afternoon, but he sent up a prepared statement which goes thoroughly into the procedures he employs.

Without objection, I ask that the statement of Chief Garmire appear in the record at this point in the hearing.

[Chief Garmire's prepared statement follows:]

PREPARED STATEMENT OF BERNARD L. GARMIRE, CHIEF OF POLICE, POLICE DEPARTMENT, MIAMI, FLA.

THE HIGH PRESSURE SODIUM VAPOR STREET LIGHTING PROGRAM IN THE CITY OF MIAMI

In 1971, on a visit to Washington, D.C., Miami City Manager, M. L. Reese, was greatly impressed with the effectiveness of their High Pressure Sodium Vapor (HPSV) street lighting. Upon his return to Miami, he instructed that a

member of the City Department of Public Works and a representative of the Florida Power and Light Company visit Washington, D.C. to view the installation and get certain information from officials there.

This investigation was made, and upon their return, it was agreed to install a HPSV pilot lighting installation in Miami. The Public Works Department was to be responsible for the implementation of the program with close liaison with the Police Department. The Florida Power and Light Company would incur all costs of installation and maintenance, and the City of Miami would utilize the lights on a lease basis. The decisions on installations were based on discussions held between Public Works, Police, and Florida Power and Light Company; however, the brand of lighting to be used was determined by the Florida Power and Light Company. The particular brand they chose was General Electric. (brochures attached). Incidentally, there are several other brands on the market; Westinghouse and Sylvania, to name two.

In order to place this lighting where it would be the greatest deterrent to nighttime crime, police records of nighttime crime activities were used. The intensity of nighttime Part I crime. (Murder, Rape, Robbery, Assaults, Larceny, and Auto Theft), was calculated for all areas of the City. This nighttime crime intensity of nighttime Part I crime. (Murder, Rape, Robbery, Assaults, Larceny, system.

Coincidentally, other programs were being initiated during this same time period to combat the rising serious crimes. "Operation Impact" was a manpower allocation program which utilized all available personnel in the high crime areas with Street Crime as its main objective. (Copy of "Operation Impact" attached).

For the HPSV pilot program, a one-third square mile high crime area was selected in that portion of the City generally referred to as the "Garment District". This area consists mainly of warehouses and small manufacturing plants, plus some residences. Installation took place during August, 1971, and police deployment was changed to coincide with the installation. The existing lighting had been 140 watt Mercury Vapor with an average spacing of 150 feet. This lighting was replaced, one for one, using 400 watt HPSV in the commercial areas and 250 watt HPSV in the residential areas. (Since then, the City has established a standard of using the 400 watt lighting in both commercial and residential areas.) HPSV lighting gives much more light per watt than does Mercury Vapor. Therefore, the resulting light level was up to ten times the previous light level.

Upon completion of the installation, nighttime evaluations were made, both visual and instrumental. The comparison was startling. Vision was unobstructed for blocks, and due in part to the high degree of reflection from the light colored buildings, the lighting was virtually shadowless. The average light readings on the street ranged from 3 to 5 foot-candles.[1] National standards for a well lighted arterial street is 1 to 2 foot-candles, and ½ foot-candle for residential areas.

Four months after the installation of the pilot program and redeployment of police personnel, a crime analysis revealed that nighttime Part I crime in the Garment District was reduced by 48 percent. One year after installation, Part I crimes maintained a 30 percent reduction. The lighting was regarded as something more than a success, and it was decided that the 400 watt High Pressure Sodium Vapor light would be adopted into the City's standards to be used in high crime areas, spacing, of course, being dependent upon the individual circumstances; but except in very rare instances, spacing not to exceed 150 feet, so that an average level of not less than 3 to 4 foot-candles can be achieved.

Plans were made for extension of the High Pressure Sodium Vapor lighting into additional high crime areas. Discussions at the managerial level were held between City and County. Dade County agreed to install such lighting on the Metropolitan arterial streets within these areas, the lighting of such arterials being a County responsibility. The City, of course, would light all the other streets.

The City immediately undertook a program to extend the areas lighted with this new high intensity lighting. To date, approximately 3,000 of these lights have been installed and the installation of an additional 6,000 has been programmed. This will include about one-third of the City. (It is presently anticipated that an extension of this program will be carried into next year's budget. This will, of course, be predicated upon decisions to be made by the Administration and City Commission.)

---

[1] Foot-candle: The illumination of a standard candle on a surface one foot away.

In addition to streets, the City has also extended this type of lighting into the City's parks in some of these critical areas. Bayfront Park, which is located in the downtown area, had HPSV lighting installed in March, 1972. Through the end of 1972, a satisfying reduction of 36 percent was maintained in crimes of violence (Murder, Rape, Robbery, Aggravated Assaults). In addition to the street lighting program, the City has also taken steps to light potentially dangerous off-street areas. This was in the form of an ordinance requiring all off-street parking areas to be lighted to a minimum intensity of one foot-candle (two foot-candles in the Downtown Business District). A copy of this ordinance and descriptive brochure are attached.

The City's present street lighting expenditures are at a rate of approximately one and one-half million dollars ($1,500,000) or thirty seven thousand dollars ($37,000) per mile annually. Based upon its estimated population of 350,000 persons, this equals about $4.25 per capita. This cost does not include the lighting of arterial streets and expressways within the City which are administered and financed at the County level. It is estimated that the cost of this lighting approaches an additional one-half million dollars ($500,000) annually.

OPERATION "IMPACT"—A REPORT DELIVERED BEFORE THE COMMISSION OF THE CITY OF MIAMI AT THE MIAMI CITY HALL, MIAMI, FLA., ON JULY 22, 1971

(Intensified Mobilization for Patrol Against the Crime Threat)

On July 14, 1971, you requested that I appear before you on July 22, 1971, and present to you concrete proposals concerning the assignment of additional police officers to the high-crime areas of the City of Miami. As a direct response to your request, I am submitting a proposal entitled "Operation IMPACT."

Operation Impact can be summarized as follows:

1. 40 police personnel have been transferred from their regular units to the Patrol and street duty.

2. 107 police personnel, as the result of extensive reassignments and transfers, have been allotted to supplemental units which will be deployed as a patrol strike force against street crimes.[1] The 107 police personnel are allocated as follows:

(A) 30 police personnel are assigned to the three-wheel motorcycle supplemental unit. They will be the first group to experiment with the 10-hour a day, 4 days a week schedule, often referred to as the "10 plan." The 10 plan affords maximum coverage during peak hours of criminal activity.

(B) 14 police personnel will be assigned to 9 personalized beats to provide intensive police patrol and presence in the most volatile high-crime locations.

(C) 56 police personnel will be assigned to the Tactical Operations Platoon which will be targeted against street crime in 6 high-crime areas.

(D) 7 police personnel will serve as field inspectors to report on the progress and problems of Operation Impact.

3. 24 recruits will be used one day a week to personally contact merchants and citizens in designated areas to solicit information on crime and report on problems in the area.

4. 6 areas of the community have been identified on the basis of crime statistics to receive priority police attention: Allapattah, Central-Downtown Business District, Coconut Grove, Latin Area, Liberty City, and Little River-Edison Center.

5. Responsiveness will be the key principle in the assignment of supplemental patrol units. Wherever the crime problem is the worst, that is where major police emphasis will be placed.

6. Community Relations personnel will intensify their efforts to encourage citizen reporting of crime, and then follow-up on the police response to those reports.

7. Internal Security personnel will increase their efforts to be available to groups in the community to hear grievances, and to promptly investigate citizen complaints.

8. The entire Police Department will be immediately placed on a virtual emergency status concentrating its energies upon combating street crime.

9. Operation Impact is scheduled to begin Sunday, July 25, 1971, and continue for approximately 90 to 100 days. After that period of time the manpower prob-

[1] It must be remembered that due to days off, vacation, illness, and in the fall the opening of school, not all personnel will be available all the time.

lems due to vacancies, vacations and military leave will have eased, and two recruit classes will probably have been graduated.

Before I discuss the details of Operation Impact, I think it would be beneficial to establish a perspective from which to view the Operation. Street crime is the target of Operation Impact; but, as you well know, the crime problem in Miami is not a recent development. In fact, crime in Miami has been increasing dramatically during the past ten years.

Serious crimes, as depicted on the comparison chart, such as murder, robbery, rape, aggravated assault, burglary, larceny over $50, and auto theft, have increased from 8,539 crimes in 1961 to 16,202 in 1966, and to 23,903 in 1970.[2]

Crime, however, is but one aspect of the perspective against which Operation Impact should be viewed. Other aspects are:

1. The police budget which increased from $5.36 million in 1961, to $6.34 million in 1966, to $10.2 million in 1970.

2. The population of the City of Miami which increased from approximately 295,000 in 1961, to 316,000 in 1966, to 335,000 in 1970.[3]

3. The number of sworn personnel—police officers—which increased from 619 in 1961, to 664 in 1966, to 719 in 1970.

A more startling picture is revealed if we compare these various aspects in the more manageable terms of percentages. Population increase in the 10-year period amounted to 13.5%. The number of police officers increased 16.2%. The police budget, however, reflecting the factors of 100 more officers plus inflation and pay raises, increased 89.4%. But, the increase in crime completely outstripped population, police, and budget increases. Crime from 1961 through 1970 increased 180%: or, 13 times as much as the population, 11 times that of the police strength, and 2 times that of the police budget.

Although Miami has undergone a tremendous increase in crime since 1961, this experience is not unique within the United States. As the United States crime and population chart indicates, crime has increased 148% from 1960 through 1969—the last year for which FBI crime statistics are available.[4] However, population increased only 13%; or crime increased 11 times that of the population increase. Therefore, Miami's experience is not unique; in fact, it parallels that of the Country at large because both the Nation and Miami reflected a growth in crime 11 to 13 times that of the population growth.

Unfortunately, Miami is still contending with an increase in crime. During the first three months of 1971, serious crimes increased 15% over the same period in 1970. However, I think it only fair to note that:

1. As reported in the local press, the increase in serious crime in the unincorporated area of Dade County for the same three month period was 23%—half again as much as the increase in Miami;[5] hence the experience in the City of Miami is not really an isolated phenomenon.

2. The increase in serious crime in Miami for the first six months of 1971 over the same period in 1970, showed some signs of leveling off—the increase was only 7.2%—12,554 serious crimes in 1971 versus 11,685 serious crimes in 1970.

Admittedly, these statistics make for a rather somber view of the crime picture in Miami as well as the Nation. But, I believe it is essential that we have a realistic grasp of the problem which confronts us, if we are to establish reasonable expectations for what Operation Impact can accomplish. If we expect Operation Impact to result in a major decrease in crime, we may be deluding ourselves. If, on the other hand, we expect Operation Impact to have a significant effect upon crime—perhaps even a *deceleration* of the crime increase rate—then we have a reasonable chance of having our expectations fulfilled.

If we harbor the illusion that the police can singlehandedly engage the crime problem and overcome it, we are destined to hear not the cries of victory, but instead the bitter recriminations of defeat. Crime is the product of a myriad of social, economic, and political factors, and until the *root* causes of crime are resolutely and effectively dealt with, our society will be driven by crime and its attendant violence. In short, the police have been, and are now, only capable of dealing with the symptoms of that social pathology known as crime; they cannot deal with the disease itself.

---

[4] See Appendix B for the United States Crime and Population Chart.

[5] Miami Herald, July 1, 1971, p. 2c.

Lest I be misunderstood, may I make one point very clear: I am not trying to avoid my responsibility as a police administrator to address the problem of crime and violence. I am, however, trying to demonstrate that crime has been sharply increasing in the past 10 years in Miami, and in the Nation.

In fact, I have discussed the rising crime rates in at least 10 major addresses before various public forums. Furthermore, even though the police have been given additional resources, they still have not been able to successfully cope with crime and violence. Finally, I am trying to suggest, just as countless other police administrators, appointed and elected officials, scholars, and citizens have suggested, that the police alone cannot solve the crime problem of a community or a Nation. Therefore, Operation Impact should be viewed as a temporary expedient—a stop-gap measure—to attack, as was pointed out two weeks ago, the short range problems, while we are preparing middle and long range responses to the crime threat. With this as a background, we now can proceed to discuss, in detail, our plans.

Operation Impact, which will provide 40 additional men for street duty in Patrol, is scheduled to commence Sunday, July 25, 1971. The operation will continue as an emergency measure for approximately the next 90 to 100 days. By that time, hopefully, we will have graduated two recruit classes and placed 50 additional men on the street. We can then de-escalate from the emergency status of Operation Impact.

Forty additional men, who are normally assigned to units and functions other than street patrol, have been temporarily transferred to the Patrol Section to be utilized in supplemental units to be specifically deployed against street crime—robbery, assault, mugging, purse snatching, etc. These men (actually 38 men and 2 women), were freed for patrol duties at the expense of other units and to the detriment of their effectiveness.

The personnel transfers are as follows:

From the Criminal Investigation Section with an actual strength of 107 sworn personnel, 20 go to street duty.

From the Community Relations Section with an actual strength of 18 sworn personnel, 8 go to street duty.

From the Resource Development Section (Planning, Training, Computer Operations), with an actual strength of 17 sworn personnel, 7 go to street duty.

From the Services Section with an actual strength of 4 sworn personnel, 2 go to street duty.

From the Office of the Chief of Police with an actual strength of 2 sworn personnel, 1 goes to street duty.

And, 2 men are reassigned from the Patrol Office to street duty for a total of 40 personnel reassigned to street duty.[6]

The Special Investigations Section did not provide any personnel for Operation Impact because that Section has a major responsibility in the battle against narcotic and vice activities. Not only will they continue their efforts to combat this problem, but their efforts will be supplemented by some of the activities planned for Operation Impact.

The Internal Review Section which is responsible for the inspection of police operations and the investigation of citizen complaints, will expand its efforts in these areas. Therefore, a reduction in manpower is not feasible.

The Traffic Section will have an even greater burden to bear because the overwhelming demands placed upon Patrol to concentrate on street crime and answer citizen calls for service, will curtail their efforts in traffic law enforcement. Hence, a reduction in this Section is not feasible.

In addition to the personnel reassignments just discussed, internal adjustments in the Patrol Section have been made to release men for assignment to supplemental units. The end result of these reassignments is the creation of a Patrol Strike Force consisting of 4 supplemental units all of which will be targeted against street crime.

Before we specifically discuss the individual supplemental units and their responsibilities, it might be appropriate to describe the basic strategies upon which these units will be deployed.

The first strategy is that the units will be deployed on the basis of need. The need is determined by the kind and amount of crime that occurs by geographical location in the community and the time of occurrence. In other words, deployment is the product of the volume of crime divided by time and location.

---

[6] For complete personnel statistics see Appendix C.

The second strategy is that the units will be target-oriented. That is, when the units are deployed, each unit will be assigned targets or specific tasks which they will be expected to work against. The target can be a known criminal, or groups of criminals, or a specific location where the incidence of crime is high, or a set of circumstances or conditions which are conducive to or productive of crime. An example of the target-oriented strategy could be a situation wherein a gang of five armed robbers is known to operate in the northwest part of the City. A team of officers would be assigned to engage in constant surveillance, stake-outs, patrol, and investigation of the gang until the robbers are apprehended in the act, tracked down after a robbery, or arrested for other crimes uncovered in the investigations. In short, the target strategy is the assignment of officers to a criminal target for the express purpose of legally eliminating it—period!

The third strategy is a logical product of the first two in that this strategy is one of mobility and flexibility. Crime is not constant in terms of time and location. The incidence of crime shifts from area to area, time to time. For two weeks there may be a rash of robberies and muggings in one area. Then due to increased police attention, or to other factors, the crime activity suddenly shifts to another area. Obviously, the police must respond to these shifts in criminal activity, or they will be standing in one place while crime occurs in another. Because of this factor, it is extremely poor practice to permanently assign police officers to a fixed post for a fixed period of time.

In connection with the point just discussed, the phenomenon of "crime displacement" should be mentioned. It has often been noted that when the police concentrate their resources in one area against a specific crime problem, the incidence of crime in that area markedly decreases. But, very quickly, crime goes up in another area. The image, of course, is one of a checker board, with a series of moves and countermoves by the police and the criminal element, with the police too often being one move behind. Because the police do not have the resources to occupy all the squares, the problem merely shifts around on the community checker board; and, of course, the *total* crime activity continues to increase.

The police could completely saturate one area of the community and suppress its crime activity. But, due to the phenomenon of "crime displacement" it simply increases in another area much to the dismay of the residents of that area. Not only does the second area suffer the ill effects of the displacement of crime from the first area, but they have less police protection in the first instance because men have been withdrawn from their area to saturate the first area. This simple fact illustrates the futility—in fact, the gross unfairness—of favoring one area of the community over another. The only equitable distribution of manpower is the *proportional* allocation of available manpower according to need as reflected by the crime statistics.

The fourth strategy is one of high police visibility and mobile presence. This is commonly referred to as the principle of police omnipresence. Formerly, because of tactical considerations, the Tactical Operations Platoon often worked in plainclothes. During Operation Impact they will work in uniform, as will nearly all the supplemental units. Even those few people who are left in headquarters will, to the extent practicable, wear uniforms. The only persons who will *not* be wearing uniforms while working on the streets in the supplemental units will be certain detective personnel who, according to Civil Service regulations, cannot be required to wear uniforms.

It is anticipated that the high visibility that results from the deliberate display of uniformed police will serve as a deterrent to crime and, even more importantly, provide a sense of security to the residents to counteract the climate of fear which presently exists. In short, this strategy is simply an effort "to see and be seen."

To this point, we have discussed: (1) the crime problem in Miami; (2) the personnel resources that make up Operation Impact; and, (3) the basic strategies by which Operation Impact will deploy those resources against street crimes. I will now describe each unit involved in Operation Impact to include its manpower, schedule assignments, tactics, and missions.

TACTICAL OPERATIONS PLATOON

The Tactical Operations Platoon (TOP) is a completely target-oriented group whose mission is to combat street crime through arrest and aggressive patrol. It is the hard-core, crime fighting team of the Department.

The Tactical Operations Platoon will be increased from its present strength of 36 to 56; and it will be composed of 2 sections:

The first section will be comprised of five teams of 6 uniformed officers plus a sergeant. The second section will be composed of 20 detective personnel in plainclothes who will supplement the uniformed teams, and be especially deployed to take advantage of the flexibility and anonymity that plainclothes provide.

The Tactical Operations Platoon will be deployed in the high crime areas of the City which we previously identified as Allapattah, Central-Downtown Business District, Coconut Grove, Latin Area, Liberty City, and Little River-Edison Center. Within these areas they will be targeted to specific subareas as the crime problem dictates, e.g. Garment District, Central District, Coconut Grove Business District, etc. They will be flexibly deployed not only by location but by time—one day they may work in the afternoon, the next day in the morning, and the following day late in the evening. Generally, there will be one team in one of the areas virtually every day. But, should the need arise, three, four, or even five teams, could be assigned to one area for two or three days to combat a particularly severe problem. In short, the Tactical Operations Platoon will be where the crime occurs, when it occurs.

THREE-WHEEL MOTORCYCLES

Thirty men will be assigned to three-wheel motorcycles to provide 20 hour a day coverage, 7 days a week, to specially selected target areas where there is heavy pedestrian movement, numerous businesses, youth gangs, and a high incidence of robberies and muggings. The three-wheel officer has the combined advantages of being readily accessible to residents as well as being highly mobile.

The three-wheel motorcycle supplemental unit will be the first group to work under a new work schedule—the 10 plan. The officers will work 10 hours a day, 4 days a week, and then be off 3 days. Other cities have experimented with this schedule with generally favorable results. Not only does the officer benefit by having a three-day weekend, but the Department benefits because the two 10 hour shifts a day will cover the period of greatest demand for police service—10:00 a.m. in the morning until 6:00 a.m., the next morning. The experience we gain with the 10 plan during Operation Impact will assist us in determining if we should expand this plan to include other units.

PERSONALIZED BEATS

Fourteen police officers will be assigned to 9 special beats, 5 of which are walking beats. Because of the limited coverage walking officers can provide, this form of patrol is extremely expensive. Therefore, the walking teams will be assigned to the most critical points in the six areas we have previously identified—primarily those points where there are youth gangs operating, known trouble spots such as certain bars and pool halls, and generally a high density of population and a high incidence of street crime. In short, the walking beat provides a very intensive police coverage but in a very limited geographical area.

The personalized beats are so named because each man assigned will try to establish a personal knowledge of the area and personal rapport with the residents and merchants along his beat, whether he is walking or riding in a car. Supplementing the 5 two-man walking teams will be 3 one-man cars and 1 three-wheel motorcycle. Although these men are mobile, they will be expected to park their vehicles and spend a good deal of time contacting people.

REGULAR PATROL, PLATOONS A, B, AND C

The basic patrol service for the City of Miami is provided by Platoons A, B, and C, or as otherwise known, the patrol shifts. The basic patrol shifts are: Shift 1, 7:00 a.m., to 3:00 p.m.; Shift 2, 3:00 p.m. to 11:00 p.m.; and Shift 3, 11:00 p.m. to 7:00 a.m.

The City is divided geographically into six sectors known as 10, 20, 30, 40, 50 and 60 Sectors as depicted on the Sector Chart.[7] Each Sector is further subdivided into zones, each zone being covered by a one-man or a two-man car. The number of sectors and their boundaries generally remain constant, whereas the number of zones in each sector—usually 4 or 5—changes according to shifts based on the varying needs for police service and protection.

---

[7] See Appendix D for Sector and Zone Maps.

The sectors and the zones within them are not arbitrarily designed: rather, they are the result of extensive computations based on the amount of major and minor crime activity, traffic problems, non-criminal calls for police service, population, business-residential characteristics, geographical size, major streets, and physical barriers such as expressways and rivers, etc. Periodically, the zones are redrawn to reflect the physical and social changes that have occurred in certain geographical areas.

The officers assigned to the zones ride in one or two-man cars depending upon past experience with the areas in terms of the hazards confronting the officers, e.g. resistance to arrest, assaults upon officers, and high incidence of violent crime.

The number of police officers assigned to a sector, as I previously stated, is based on need. The two primary factors which predominate in the assessment of the need are: (1) the incidence of crime; and, (2) the total citizen calls for service. These calls may be either criminal or non-criminal in nature; e.g. a call to respond to a robbery scene versus a call to assist a sick person. I might note at this point that a 25% sample of all the calls for service in 1970, disclosed that 61% of the calls did NOT involve either serious or minor crimes, i.e. they were calls wherein a citizen wanted some kind of service not related to crime per se. This, incidentally, is a conservative figure. Other studies in our City as well as other cities, indicate that up to 80, or even 90% of a police officer's time is spent in handling non-criminal matters.

The following table reflects the rank order of various areas of the City in terms of actual crime and demand for services—citizen calls for police service: [8]

Sector and area	Rank order by criminal calls for service	Rank order by noncriminal calls for service
Central and downtown business district (40 sector)	1	1
Little River-Edison Center (20 sector)	2	4
Latin area (50 sector)	3	5
Coconut Grove area (60 sector)	4	3
Allapattah area (30 sector)	5	6
Liberty City area (10 sector)	6	2

When the rankings are combined, the following order is established:

1. Central and Downtown Business District (Sector 40).
2. Little River-Edison Center (Sector 20).
3. Coconut Grove (Sector 60).
4. Liberty City (Sector 10).
5. Latin Area (Sector 50).
6. Allapattah Area (Sector 30).

The resources of Operation Impact were carefully distributed to proportionately meet the needs for police service according to available manpower. For example, the patrol services, exclusive of the Tactical Operations Platoon which moves from area to area, were so distributed that the Central and Downtown Business District, which ranks first in need for police service, receives the most police service; and, Coconut Grove which ranks third, receives the third greatest amount of police service. The assignment of personnel to other areas is also closely proportionate to their needs for police service.

Finally, it should be noted that the regular patrol officer answers all calls for police service. He is the generalist who is concerned with crime, traffic, and non-criminal calls for service. Regular patrol is truly the backbone of any police department. All other units are supplemental, which is precisely why we labeled the Tactical Operations Platoon, three-wheel motorcycle officers, and the personalized beats as supplemental units. The supplemental units in this case are more specialized in nature—target-oriented; and, it is these units which will devote the majority of their time to combating street crime. The regular or shift units, because of their other responsibilities, can spend only part of their time on street crime.

The following material depicts the amount and kind of police service—regular and supplemental—assigned to each sector by shift.

[8] Table is based on a 25% sampling of criminal and noncriminal calls for service for the first six months of 1971. Statistics apply to the entire Sector.

10. SECTOR

This Sector includes the area bounded by the City Limits on the North and West, the Airport Expressway on the south, and the North-South Expressway (I–95) on the east. Basic patrol coverage on all 3 Shifts will consist of 1 sergeant and 8 officers, with the officers being assigned to 4 two-man units. Although there is a continual demand for police services in this area, it is one of extremely high personal hazard to the officers, necessitating the assignment of two men to each squad car.

Beginning at 10:00 a.m., 2 additional officers on three-wheel motorcycles are assigned in the Liberty City and Edison Center areas. These officers are deployed along arterial streets where there is a heavy concentration of businesses and pedestrian activity. The 2 three-wheel motorcycle beats will be continued in the business areas and along the arterial streets until 6:00 a.m. (with a personnel changeover at 8:00 p.m. since these men will be working a 10-hour day).

At 11:00 a.m., 2 other officers report to the vicinity of N.W. 62nd Street between 15th and 17th Avenues, which is considered to be the heart of Liberty City and has been the scene of much street violence. This team, referred to as the personalized beat, is assigned according to particular problems which are not amenable to other forms of patrol, such as gang activity which requires constant surveillance and attention. Their hours and actual area of assignment will remain completely flexible to conform with the target. The personalized beat will go off duty at 7:00 p.m.

The area outlined in green—from N.W. 54th to 71st Streets and the North-South Expressway to the West City Limits—is a target area for the Tactical Operations Platoon, and will have 1 such team consisting of 1 sergeant and 6 men assigned varying hours to combat street crime.

A 5th two-man car unit will be deployed during the 3:00–11:00 shift and assigned to ride the sector-at-large, acting as a back-up unit to the regular zone vehicles or concentrating on a particular problem area as may be directed by the supervisor. Beginning at 11:00 p.m., when manpower permits, we will continue the use of the two-man unit at large.

10 SECTOR—SUPPLEMENTAL

Shift	Regular	3 wheels	Mounted	Personalized	T.O.P. (as needed)	K–9
1	1 Sergeant and 8 men	2 (10–3)	None	1- to 2-man team (11–3).	1 Sergeant and 6 men	1 man.
2	do.	2 (3–11)	None	1- to 2-man team (3–7).	do.	Do.
3	do.	2 (11–6)	None	None	do.	Do.

[1] 1 more 2-man unit to ride sector at large, if available.

20 SECTOR

The Sector includes the area bounded by the City Limits on the north, the North-South Expressway (I–95) on the west, N.W. 20th Street on the south, and Biscayne Bay on the east. Basic patrol coverage of all 3 shifts will consist of 1 sergeant and 6 men, with 4 of the men being assigned to one-man units, and the other 2 assigned to one car. This area is large and presents several police problems calling for varied methods of deployment.

Beginning at 8:00 a.m., a mounted officer is assigned to the Biscayne Shopping Plaza area at Biscayne Boulevard and 79th Street to provide close attention to the high concentration of business and pedestrian activity. The mounted officer continues on duty until 6:00 p.m.

At 10:00 a.m., 3 more men are deployed riding three-wheel motorcycles—one in the Little River Business District; the second in the Edison High School and Edison Park area; and the third in the Garment District. The Three-Wheel officer assigned in the Edison School and Park area is relieved at 8:00 p.m., while the other 2 three-wheel motorcycle beats in Little River and the Garment District continue until 6:00 a.m. (with a personnel changeover at 8:00 p.m., since these men will be working a 10-hour day.)

At 11:00 a.m. one personalized beat team consisting of 2 officers, is added in Little River to help combat the increased complaints of attacks against persons and property. This beat continues until 7:00 p.m.

Due to increased robberies and street crimes, a Tactical Operations Platoon will also be working in the area from N.W. 36th Street to the North City Limits. Their hours will vary according to the situation.

Another two-man car unit will be deployed in this Sector during the 3:00–11:00 shift, when manpower permits. This unit will ride the Sector-at-large, acting as a backup unit to the regular zone vehicles or concentrating on a particular problem area as directed by the supervisor.

20 SECTOR—SUPPLEMENTAL

Shift	Regular	3 wheels	Mounted	Personalized	T.O.P. (as needed)	K-9
1	1 sergeant and 6 men	3 (10–3)	1 (8–3)	1- to 2-man team (11–3).	1 sergeant and 6 men	1 man.
2	do.[1]	2 (3–11) 1 (3–8)	1 (3–6)	1- to 2-man team (3–7).	do	Do.
3	do	2 (11–6)	None	None	do	Do.

[1] 1 more 2-man unit to ride sector-at-large, when available.

30 SECTOR

This Sector includes the area bounded on the north by the Airport Expressway and North City Limits, the West City Limits on the west, the Miami River on the south, and the North-South Expressway (I–95) on the east. This is the smallest subdivision of police deployment, and its boundaries present actual physical barriers restricting the area of coverage. Basic patrol coverage on all 3 shifts will consist of 1 sergeant and 5 men, with 3 of the men being assigned to one-man units, and the other 2 assigned to one car in Zone 34 due to the high hazard factor, and its nearness to the Central District. The Allapattah Business District lies in the northern portion of this area, adjacent to the Airport Expressway.

Beginning at 8:00 a.m., a mounted officer is assigned to the Allapattah business district to provide further coverage of businesses and pedestrian activities. He stays on duty until 6:00 p.m.

At 8:00 p.m., 1 three-wheel motorcycle officer also reports to this Sector and remains on duty until 6:00 a.m. to provide extra coverage for the protection of property and against street crime attacks.

At 11:00 a.m., a one-man personalized beat is also deployed to assist the zone man with continuing problems emanating from Jackson High School. This beat is continued until 7:00 p.m.

Although there is no Tactical Operations Platoon assigned to this Sector, one will be called in if conditions warrant such action.

30 SECTOR—SUPPLEMENTAL

Shift	Regular	3 wheels	Mounted	Personalized	T.O.P. (as needed)	K-9
1	1 sergeant and 5 men	None	1 (8–3)	1- to 1-man (11–3)	None[1]	1 man.
2	do	1 (8–11)	1 (3–6)	1- to 1-man (3–7)	do.[1]	Do.
3	do	1 (11–6)	None	None	do.[1]	Do.

[1] A tactical operations platoon will be sent to this sector if needed.

40 SECTOR

This Sector includes the area bounded on the north by N. W. 20th Street, on the west by the North-South Expressway (I–95), on the south by the Miami River, and on the east by Biscayne Bay. It encompasses the extremely populated areas of the Central District and the Downtown Business area, and demands the most police attention. Basic patrol coverage on all 3 Shifts will consist of 1 sergeant and 10 men, with 1 extra man being added on Shift 3. Four men are assigned to one-man units, and 6 men are assigned to two-man units due to the officer safety factor.

Beginning at 10:00 a.m., 3 additional patrol beats using three-wheel motorcycles are deployed—2 in the downtown area and 1 between N. W. 8th Street and 11th Terrace from N. W. 2nd to 3rd Avenues. The two beats in the downtown

area are continued until 6:00 a.m. (with a personnel changeover at 8:00 p.m.) while the other three-wheel beat is relieved at 8:00 p.m.

Also at 10:00 a.m., a personalized beat consisting of 2 officers is employed as previously described in 10 Sector. This beat continues until 6:00. At 10:00 p.m. a second personalized beat of 2 men will report to duty in the downtown area to eliminate undesirable conditions which are amenable to preventative patrol, in the area of E. Flagler Street, N. E. 1st and 2nd Streets, between 2nd Avenue and Biscayne Boulevard, centering their activities on eliminating the undesirable conditions around the bus station and YMCA. This team will remain on duty until 6:00 a.m. the following morning.

Because of the high rate of attacks against persons and property, 2 Tactical Operations Platoons are assigned to this Section—one to the Central District and the other to the downtown business area. These squads represent 2 sergeants and 12 men working varying hours, remaining completely flexible to criminal activity.

During Shift 1, there are a total of 15 police officers assigned to this area, excluding supervisors and officers from specialized units such as point control, solo motorcycles, accident investigation, and criminal investigators.

When manpower is available, an 8th two-man patrol unit is added to serve the sector at large. Also an additional officer is assigned in Zone 44 on Shift 3, because of the police hazards prevalent.

40 SECTOR—SUPPLEMENTAL

Shift	Regular	3 wheels	Mounted	Personalized	T.O.P. (as needed)	K-9
1	1 sergeant and 10 men	3 (10–3)	None	1- to 2-man team (10–3).	2 sergeants and 12 men.	1 man.
2	do.[1]	1 (3–8) 2 (3–11)	None	1- to 2-man team (3–6); 1- to 2-man team (10–11).	do	Do.
3	1 sergeant and 11 men.[2]	2 (11–6)	None	1- to 2-man team (11–6).	do	Do.

[1] 1 more 2-man unit to ride sector-at-large, when available.
[2] 1 more man added to sector 44 on shift 3.

50 SECTOR

This Sector includes the area bounded by the Miami River and the North City Limits to their joining with S.W. 8th Street, the South City Limits and S.W. 8th Street and the North South Expressway (I–95) on the east. Basic patrol coverage on all 3 Shifts will consist of 1 sergeant and 5 men, with all 5 men being assigned to individual cars.

A supplemental three-wheel motorcycle beat is deployed in a strip from the river west to 17th Avenue on Flagler and S.E. 1st Streets. This beat starts at 10:00 a.m. and continues until 8:00 p.m.

Beginning at 3:00 p.m., an additional one-man personalized beat is also deployed, and is continued until 11:00 p.m.

It should be noted that although no Tactical Operations Platoon is designated to this area, should the need dictate, one would be deployed.

50 SECTOR—SUPPLEMENTAL

Shift	Regular	3 wheels	Mounted	Personalized	T.O.P. (as needed)	K-9
1	1 sergeant and 5 men	1 (10–3)	None	None	None[1]	1 man.
2	do	1 (3–8)	None	1- to 2-man unit (3–11)	do.[1]	Do.
3	do	None	None	None	do.[1]	Do.

[1] A tactical operations platoon will be sent to this sector should conditions warrant.

60 SECTOR

This Sector includes the area bounded by S. W. 8th Street and the Miami River on the north, the West City Limits, the South City Limits, and Biscayne Bay. Basic patrol coverage on all 3 Shifts will consist of 1 sergeant and 6 men during Shift 1, and 1 sergeant and 7 men during Shifts 2 and 3. During the first shift,

4 men are assigned to individual units, with 1 two-man unit. During the other two shifts, there are 3 one-man units, and 2 units of two men each.

Beginning at 8:00 a.m., a mounted beat is also added to supplement coverage in the park area and along Main Highway in Coconut Grove, and continues until 6:00 p.m.

At 10:00 a.m., 2 additional beats are deployed in the Coconut Grove area using the three-wheel motorcycles. These 2 beats are continued until 6:00 a.m. the following morning, (with a personnel changeover at 8:00 p.m.)

Starting at 4:00 p.m., one personalized beat consisting of 2 men is also added to maintain further coverage in the residential area of Coconut Grove. This is continued until midnight.

Target areas have always been identified within the 60 Sector and a Tactical Operations Platoon has been deployed in this Sector on a "when and where needed" basis. The deployment will continue.

Minimum police coverage on a 24-hour basis consists of 1 sergeant and 9 men, with the number being increased at certain times of the day and night. When manpower is available, one more two-man patrol unit is added to serve the sector-at-large, on the second shift.

60 SECTOR—SUPPLEMENTAL

Shift	Regular	3 wheels	Mounted	Personalized	T.O.P. (as needed)	K-9
1	1 sergeant and 6 men	2 (10-3)	1 (8-3)	None	1 sergeant and 6 men	1 man.
2	1 sergeant and 7 men[1]	2 (3-11)	1 (3-6)	1- to 2-man team (4-11)	do	Do.
3	do	2 (11-6)	None	1- to 2-man team (11-12).	do	Do.

[1] 1 more 2-man unit to ride the sector-at-large, when available.

FIELD INSPECTION TEAM

It is obvious, I believe, that Operation Impact is a complex program which requires close coordination, effective supervision, and above all, good communications if it is to succeed. Communications will be necessary not only among all the units in the Department, but also between the community and the police. Therefore, a field inspection unit of 6 sergeants and 1 lieutenant will be given an inspection and communications assignment. One sergeant will be assigned to each Sector, and particularly to the target areas within each Sector.

The field inspectors will be in the field to observe the progress and problems of Operation Impact and to report their findings to the shift commander and Patrol commander and thence to me. Additionally, they will seek out merchants and residents in the area to solicit their assistance in identifying crime problems in the area, and to obtain grass roots evaluation of the strengths and weaknesses of Operation Impact.

The field inspectors should provide a valuable link both between headquarters and the line personnel, and between the citizens in the community and headquarters. The development of such a linkage should prove invaluable in keeping the administrative staff in tune with what is really happening. Too often, because of the tendency toward isolation, the administrative staff believes a program to be functioning well when in reality, as any resident or merchant could tell them, it is not. This is one pitfall we must avoid if Operation Impact is to be successful.

At this juncture, I have described in detail how the patrol force has been supplemented, assigned, and deployed to combat crime and violence in the streets. But, other units in the Department will also play a role.

THE TRAINING UNIT

The police academy will deploy 24 recruits one day a week into various areas of the community in a combined training and citizen contact program. The recruits, in their khaki uniforms but without weapons, and supervised by the academy staff, will *walk* the streets of the various neighborhoods in the community—Black, Anglo, and Latin. We anticipate that the program will be beneficial for both the recruits and the citizens because:

1. They will communicate with each other on a face-to-face basis. The community will get a first hand look at the caliber of men who are striving to become police officers; and, the recruits will come to know the citizens whose rights, lives, and property they are destined to protect.

2. The recruits will be able to provide some basic information to the citizens about the police department; but, more importantly, the residents and merchants will be able to tell the recruits what they expect of the police, the crime problems they are facing, and the services they need. Each recruit will be required to report on which he has learned, and on the requests for service he has received.

3. The recruits will actively seek to identify young men who may themselves wish to become police officers. Who better could tell a young man what it is like to be a police recruit, and why he should choose to become a police officer, than a recruit himself. Given the number of police vacancies, and the difficulty in attracting *qualified* men to join the Miami Police Department, our recruits could indeed provide a valuable service by assisting in the recruitment effort.

4. The recruits will provide a valuable addition to our efforts to create and maintain a high-visibility police presence.

CRIMINAL INVESTIGATION SECTION

Even though the Criminal Investigation Section provided 20 personnel for Operation Impact, they will still be asked through the Criminal Information Center to provide additional assistance. This unit will be expected to act as a clearing house and an analysis unit for the information generated by Operation Impact. The Criminal Information Center will also have the responsibility of identifying the targets against which the patrol supplemental units will be directed. In essence, this unit will be the nerve center of Operation Impact.

COMMUNITY RELATIONS SECTION

Community Relations personnel will emphasize those programs which encourage citizen reporting of crime and identification of criminal suspects. They will be particularly concerned with disseminating information on Operation Impact so that people in the community will know how they can assist us in the campaign against street crime.

INTERNAL REVIEW SECTION

Internal Review personnel will increase their availability to those in the community who have grievances and complaints; hence adopting an activist policy in seeking out problems and deficiencies. Internal Review personnel are riding in the field now to observe and inspect; and, within manpower limitations, they will expand their efforts in this area.

With regard to citizen complaints, may I state again that the policy of the Miami Police Department is to investigate citizen complaints; and, if they are substantiated, the appropriate action will be taken and the results relayed to them. However, both citizens of the community and Miami police officers must know that if the complaints are not leased in fact the officers will be exonerated and the Department will stand behind them.

SPECIAL INVESTIGATIONS SECTION

This Section has a major, but *not* exclusive, responsibility for the suppression of vice and the apprehension of the purveyors of vice; and, it has done an outstanding job in terms of its responsibility. I can say without fear of contradiction that never before in the history of the Miami Police Department has there been such a sustained, intense campaign against vice. The following table of statistics provides an indication of the commitment of the men and women of this unit to their job; furthermore, these officers can be counted among those

personnel in the department who ask—not what they *have* to do, but instead what *can* they do:

	1968	1969	1970
Prostitution	84	110	145
Liquor	190	140	181
Narcotics	82	159	284
Gambling	54	65	101
Miscellaneous	114	195	362
Total	524	669	1,073

These statistics reflect a tremendous increase in total vice arrests: 524 arrests in 1968 versus 1,073 arrests in 1970, an increase of 549 arrests or a jump of 105%! With respect to prostitution, the increase from 1968 to 1970 was 73%. During the first six months of 1971, the number of arrests for prostitution has continued to increase.

Operation Impact will definitely be concerned with the suppression of street vice. Special efforts will be directed against vice, particularly prostitution. Additionally, it is my official policy that the patrol officer is responsible for the suppression of liquor, gambling, drugs and prostitution activities—in his area of patrol. Vice is not something to be left to the vice unit any more than robbery is to be left to the robbery unit. To the extent that it is practicable, the patrol officer will enforce the laws against vice just as he enforces other laws in his area. Any actions short of this, I will not tolerate.

To summarize, may I offer a simple description of Operation Impact: Total mobilization of police resources to attack one problem—crime in the streets. All else will be secondary.

May I further note in summary of this presentation, that we the members of the Miami Police Department have earnestly attempted to respond, as one of you requested, not with problems but with solutions. Whether or not our proposal—Operation Impact—is truly a solution simply remains to be seen.

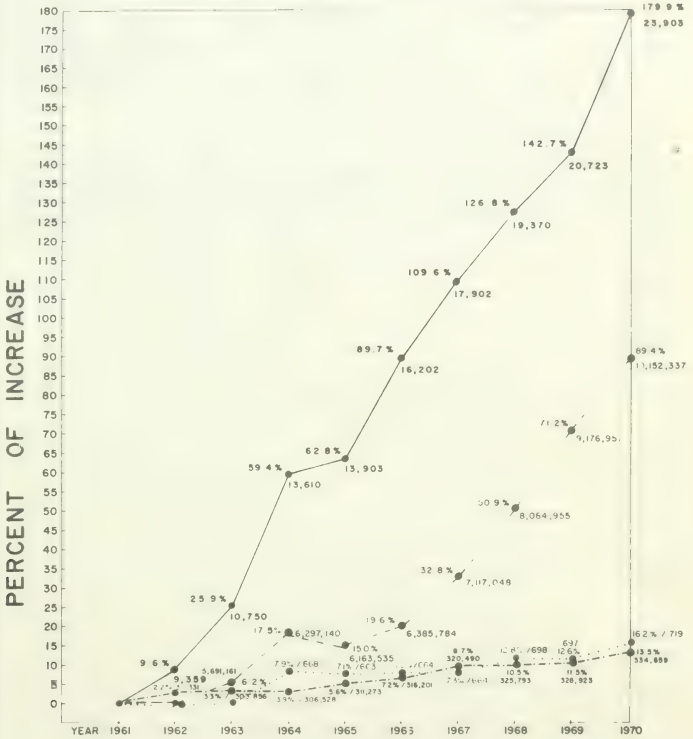
Furthermore, whether or not our program appears to be succeeding or failing, I will insist upon compliance with certain policies:

1. We shall proceed within the limits of the laws which we are empowered to enforce, and within the limits of our authority as it relates to the constitutional rights of persons.

2. We shall proceed not through the intentional use of force and violence but through the intentional use of lawful authority to perform our mission. When force or violence must be employed, it shall be employed, but only as a last resort, and *only* to the *minimum* extent necessary.

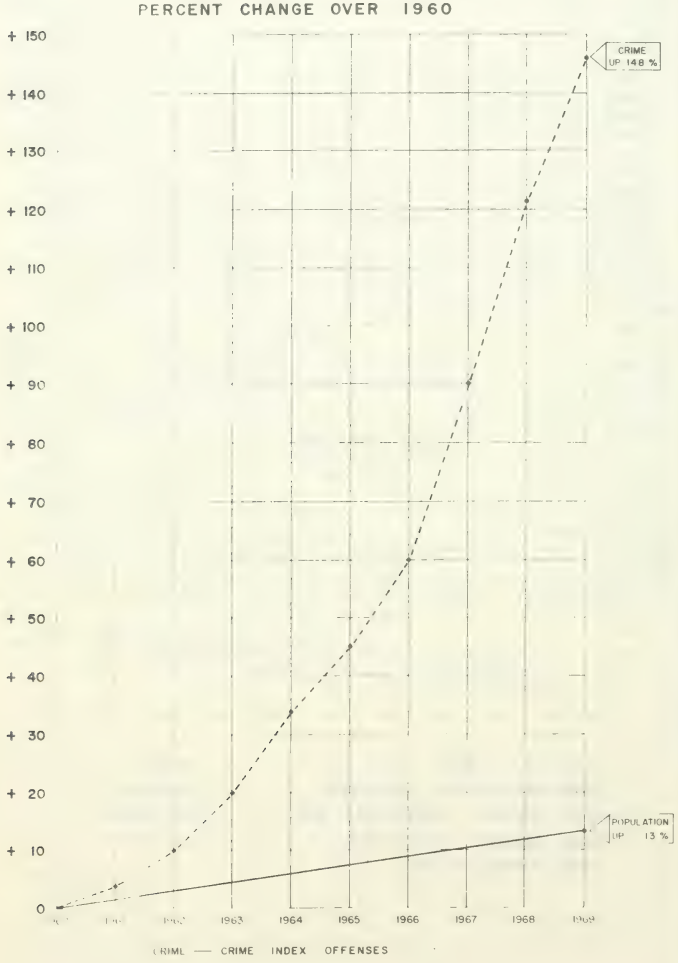
3. We shall proceed not against whites or blacks, but against persons who have violated the law. What matters is not their color, only their conduct.

TEN YEAR COMPARISON OF POLICE RESOURCES, POPULATION, & CRIME



CRIME AND POPULATION

1960 – 1969



APPENDIX "C"

MIAMI POLICE DEPARTMENT SWORN PERSONNEL DISTRIBUTION

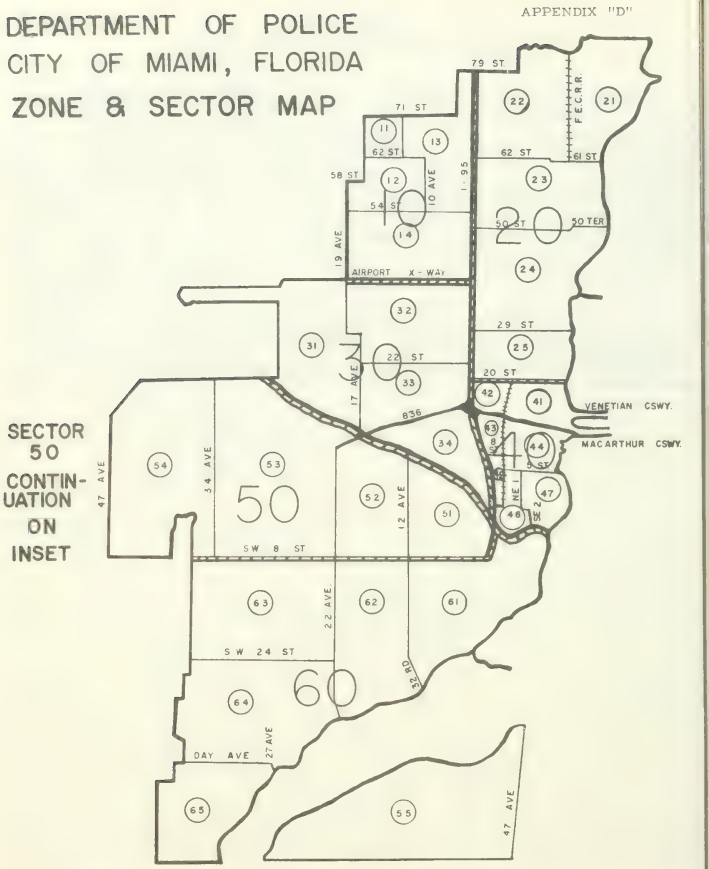
Section and ranks	Budgeted	Actual	Proposed	Plus or minus
Office of chief (1 sergeant)	2	2	1	−1
Community relations (1 lieutenant, 1 sergeant, 6 police officers)	24	18	10	−8
Special investigations	34	33	33	0
Internal review	11	9	9	0
Assistant chief of administration	2	1	1	0
Resource development (4 sergeants, 3 police officers)	16	17	10	−7
Services (1 lieutenant, 1 sergeant)	4	4	2	−2
Assistant chief of operations	3	2	2	0
Criminal investigation (1 captain, 1 lieutenant, 17 sergeants, 1 P.W.	120	107	87	−20
Traffic	89	78	78	0
Patrol	[2] 414	379	417	+38
Total	719	[3] 650	650	

[1] This chart reflects movement of sworn personnel to implement "Operation Impact."

[2] The administrative office of patrol will assign two officers from staff duties to street duties. Therefore, in reality 40 additional officers will be on the street.

[3] The 69 man difference between actual strength and budgeted strength is accounted for by 24 recruits in the academy plus 45 vacancies.

APPENDIX "D"



Chairman Pepper. The committee will adjourn until 10 o'clock tomorrow morning.

(Whereupon, at 4:36 p.m., the hearing adjourned to reconvene Thursday, April 12, 1973, at 10 a.m.)

STREET CRIME IN AMERICA

(The Police Response)

THURSDAY, APRIL 12, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:10 a.m., in room 311, Cannon House Office Building, Hon. Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Rangel, Steiger, Winn, and Keating. Representative John Conyers, Jr., of Michigan was an invited guest and sat with the committee.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

Continuing our week-long series of hearings on law enforcement programs designed to reduce street crime, we will be hearing today from the Detroit Police Department regarding its felony prevention unit which has attracted a great deal of comment.

I will ask one of our distinguished colleagues in the House, whom we have invited to sit with us today, an able Member from the Detroit area of the House of Representatives, the Honorable John Conyers, if he will be good enough to present the next witness.

STATEMENT OF HON. JOHN CONYERS, JR., A U.S. REPRESENTATIVE FROM THE STATE OF MICHIGAN

Mr. CONYERS. Thank you, Mr. Chairman.

This is a double honor for me to be permitted to join the Select Committee for the purpose of these hearings this morning and, of course, I am very pleased to introduce the commissioner of police of the city of Detroit, Commissioner John F. Nichols.

The commissioner is known among law enforcement officers as a policeman's policeman. He has served his entire career in the Detroit Police Department. He has worked on a variety of assignments, and he has now, through dint of perseverance, moved to the top of the Detroit Police Department.

As we know, Mr. Chairman and members of the committee, the job of law enforcement in this Nation, particularly our urban areas, is one of the most trying and demanding challenges that any government official might meet with. I think it is entirely appropriate, based upon the subject that is the concern of this committee, that Commissioner Nichols of Detroit be a witness here this morning.

So I am very pleased and privileged to present him to you and to the committee.

Chairman PEPPER. We are very pleased to have you, Commissioner.

The deputy chief counsel, Mr. Lynch, will proceed.

Mr. LYNCH. Mr. Commissioner, I wonder if you could please introduce to the committee the other members of the panel?

STATEMENT OF JOHN F. NICHOLS, COMMISSIONER, POLICE DEPARTMENT, DETROIT, MICH., ACCOMPANIED BY JAMES BANNON, STRESS UNIT COMMANDER; RONALD H. MARTIN, PATROLMAN; AND JOHN P. RICCI, PATROLMAN

Mr. NICHOLS. Yes, sir; I would.

Gentlemen of Congress, on my right is Comdr. James Bannon, on his left is Patrolman Ronald H. Martin, and on his left is Patrolman John P. Ricci.

Commander Bannon is one of the cocommanders of the STRESS unit; both Patrolman Martin and Patrolman Ricci are active members of the STRESS unit at the present time.

Mr. LYNCH. Mr. Commissioner, if you have a prepared statement, would you please present it at this time.

Mr. NICHOLS. Yes, sir; I do, and I shall.

To begin with STRESS is an acronym which represents the theme: "Stop the Robberies, Enjoy Safe Streets." In one sense it was a totally new development within our department, and from another aspect it was an evolvement from an existing concept. Historically, its birth actually ensued in March 1967, when we created a small unit of a uniformed patrol which was intended to cope with a rash of delivery truck robberies we were experiencing, as well as other robberies.

Their principal mode of operation was the surveillance of possible victims and suspects. This unit was selectively assigned to problem areas and met with some degree of success. They were also used to support precinct personnel when calls for service reached levels above the precinct's capability. But, unlike the regular patrol units, these men could also conduct more extensive preliminary investigations following a crime. Ultimately, precinct support became one of the primary objectives, and the unit was renamed "precinct support unit."

By 1968, crime in Detroit, like in most cities, was on the increase at an acute pace, an accelerating pace. From 1968 to 1970, major crimes in the city increased some 32 percent, but robberies had increased by a monstrous 67 percent. And out of 23,000 robberies during 1970, nearly 18,000 of them occurred on the streets. More brutal was the fact that 85 people were murdered at the hands of robbers in that single year.

Almost immediately following my appointment, my staff studied the problem of street crime to attempt to find some reasonable answers. An analysis of the facts revealed many interesting aspects which we used to construct a profile of the typical robbery incident.

We found that the victim was usually male, not young, nonwhite, and living in or near the neighborhood in which the robbery took place. The criminal was usually young, nonwhite, and armed. One factor was salient, however, in contrast to what one would believe most robberies were not being carried out covertly. They occurred openly

and in full view of other citizens and potential witnesses on the street.

It was apparent that the criminal felt safe in carrying out his act in front of others. He obviously believed that large segments of the community were either so apathetic or intimidated that they would not interfere. His only concern then was to assure himself that there were no police in the area. If a robber sees a potential victim, he can make an instant decision whether or not to act. If a policeman or a police car is near, he simply waits for a more opportune moment.

If he thinks it is safe, it takes him but a few seconds to commit his act and flee the immediate area. More often than not his intended victim is aged, intoxicated, or a woman—those least likely to offer resistance. Those who are confused, shocked, and fearful, if not hurt, would be least likely to identify and prosecute.

What was needed, then, was obviously a method to have police personnel on the scene of the crime as it was happening. While the presence of uniformed policemen simply caused the thugs to move elsewhere, the presence of other citizens, however, did not seem to deter them.

In retrospect, the answer seems too obvious, a zero visibility patrol. The concept of placing nonuniformed personnel on the street as if they belonged there, letting them dress in street clothes, placing them in unmarked old cars, new cars, on buses, in taxicabs, in delivery trucks, campers, bicycles, and on foot; let the police personnel blend into the neighborhood and become part of it.

The basic premise is obviously not new. The whole concept of plainclothes officers is not new, but never on a large scale had we attempted to perfectly blend men into the environment.

With this concept in mind a pattern of operation was set up using the computer data regarding times, locations; the unit was expected to be responsible. And the plan became operational in January 1971, using the precinct support unit. During those first few days some of the men had a hard time adjusting to their new role. At the end of one shift a delegation of policemen who had been dressed as women approached Commander Bannon and told him, "Inspector, no one tried to rob us today, but we got six lewd proposals." They were viewed not as potential victims, but as hookers, hustlers, or to be more genteel, "ladies of the evening."

After becoming more accustomed to the new roles, however, the unit soon started showing results. In addition to arrests for robbery, the men were making arrests for burglary, car theft, rape, murder, and arson. They obviously were successful in assuming the appearance of neighborhood citizens.

STRESS crews operate in varying numbers and in varying patterns. Geographically, a crew may be assigned to an area covering two to four precincts. While the normal precinct cars are patrolling their scout car territories, the STRESS plainclothes officers in unmarked vehicles are checking the specific streets in neighborhoods showing a high current rate of crime.

Depending on street activity—observation of the number of kinds of individuals on the street in a neighborhood at a given time—the STRESS crew may decide to "drop off a target"; that is, place one of its members on foot in the street situation. Cover is provided by

other members of the crew either on foot, in vehicles, or a combination thereof.

Incidentally, there have been instances in which the covering officers, themselves, have been "rousted" while the intended victim has gone unmolested.

Many arrests have resulted from this type operation.

However, far more apprehensions have resulted from the presence of officers on or near the scene of the crime, operating as surveillance units, unrecognized by the criminal. In an instance or two, one of our officers has been surprised to receive a friendly warning from "street people" that the "man," meaning the police, was in the area.

In one incident, which I think bears repeating, a white STRESS officer was approached by a black man who asked, "You got any money?" The officer's nerves bunches as he prepared to respond to the assault he believed was coming. He replied, "No." His assailant reached into his pockets, the officer tensed even more because he thought at that point in time a robbery was about to occur.

Then the man pulled out a dollar and said, "Here, take this. You shouldn't walk around here—it's a bad area."

This indication of concern among our black citizens is not unique.

Mr. CONYERS. That proves it was not an assailant, doesn't it, Commissioner?

Mr. NICHOLS. Did I say assailant? I thought I said accoster.

Mr. CONYERS. Was it an accoster?

Mr. NICHOLS. I was saying it was accosting in the sense the officer was approached, not accosting and soliciting, Mr. Conyers. Just an individual stopping another individual. If I conveyed that premise of assailant, I am terribly sorry, I do not intend to. I don't read well, apparently.

This indication of concern among our black citizens is not unique. In one incident involving the shooting of two black youths who had just committed a robbery, the STRESS program came under great attack in the news media.

At the same time, we were in the process of receiving what eventually totaled more than 5,000 pieces of mail. Fewer than a dozen were against STRESS.

A sizable proportion of these letters were from black citizens, many of whom stated they had been victims of street crime themselves.

One statistic that should be mentioned is for robbery in 1971—the first full year of STRESS operation. Robberies showed a decrease of 9.9 percent for the year. Only 2 months had increased over corresponding months in 1970.

This decline in robberies was the first such downturn in a decade.

In 1972, in addition to the drop of last year, robberies were down an additional 18.7 percent over 1971.

Comparing this with the 1970 figures, we have eliminated 6,000 robbery incidents a year—this is a most significant figure.

In 1971, STRESS unit officers made 2,496 felony arrests and 300 misdemeanor arrests. In addition, 160 juveniles were detained and some 600 guns were seized.

In 1972, the first full year of operation, officers made 2,984 felony arrests, and 300 misdemeanor arrests. Over 1,000 guns were seized and

innumerable quantities of narcotics and other contraband were confiscated.

I should like to add here that despite the claims of academicians, the excessive cost of heroin to an otherwise unemployed individual demands that the funds to support his habit be violently obtained. Therefore, claims that heroin use and the occurrence of crime have not been proven are illogical. One must suspect the motives of those who persist in failure to see correlation.

Although the primary mission of the STRESS units was directed against street robberies, the officers have also effected arrests along the full scale of criminal offenses.

Since the unit was created, 3 officers have been killed, 18 wounded, and about 70 assaulted.

There is an old maxim in police work that the rapidity and certainty of apprehension and prosecution is a most effective deterrent to crime.

This factor of certainty of apprehension is the principal deterrent in street crime. This is how he estimates his risk—how he determines if it is worth the chance. As a quotation—that was sent to me, allegedly from the New York Times—states, "Crime will not decrease until being a criminal becomes more dangerous than being a victim."

By utilizing police officers to stand in place of potential victims, the department has increased that risk to the criminal—both in apprehension and in conviction in court.

He no longer can be certain that the man changing the tire, or the old lady with the purse, is an easy mark. He must take into consideration the fact that his easy mark may be a fully armed, fully trained policeman.

In conventional methods, the uniformed police officer is always at a disadvantage. He is conspicuous. The criminal has no difficulty spotting him or even making a target of him.

In the reverse, however, the officer stares into a mass of people and can rarely spot a criminal until he acts; at which time it is usually too late to protect a victim. With STRESS, the criminal must fear the potential victim. It is the criminal who must worry whether the man rummaging through the trash, the woman waiting for the light to change, the man getting off the bus, the driver of the next car, or even the victim, himself, might be a police officer.

Another decided advantage of arrests by the unit is that when a police officer has been the object of the criminal, prosecution is much simpler in the sense that the complainant is a trained observer, always willing to prosecute, and certainly not subject to intimidation.

We are now considering some new techniques using our tactical mobile unit, a high visibility patrol, and the STRESS unit in concerted efforts. While we are only in the discussion stages, we are proceeding on the premise that the tactical mobile unit deters a considerable amount of street crime. When I say deter, I mean that many street crimes are either postponed by the presence of uniformed officers or perhaps displaced; that is, the criminal simply moves to another location and finds a new victim.

If we can predict in which direction the criminal will move we can be waiting for him. In some cases, because of geographical composition, this may not be too difficult. If a criminal is deterred in a given area, he will most likely move away from that area and back into his

own environment. To this degree there is some chance of predictability. In his own environment, a preponderance of uniform patrols will most likely only delay the crime in point of time. Theoretically, then, the withdrawal of a high visibility unit and the simultaneous activation of a zero visibility unit may increase the apprehension rate.

In concluding, I would like to point out that the unit has come under sharp criticism from time to time. But I think any new method employed must invariably face critics from all dimensions. However, the accomplishments of the unit stand as their own defense. As in the case of most police criticism, the noise comes from a vocal minority. But as administrators, it is our responsibility to accurately measure both the criticism and support. And as long as the support significantly outweighs the criticism we must continue to utilize our most effective methods, whatever they may be. Our considered evaluation is that the program has contributed significantly to the overall crime drop of some 15 percent in the city of Detroit, particularly in the crimes of robbery.

Thank you.

Mr. RANGEL [presiding]. Mr. Nichols, the committee notices a substantial deviation from the statement dated December 31, 1972, that was given to us and the one you just read. Are they in fact two separate statements?

Mr. NICHOLS. Yes, sir.

Mr. RANGEL. Would you offer the statement received by the committee?

Mr. NICHOLS. We have brought additional copies. What we tried to do was update the statement. I also have several other documents. One is a statement of December 31, 1972, which you have been furnished.

Mr. RANGEL. Let's move the December 31, 1972, document go into the record.

[The above-mentioned statement appears at the end of Mr. Nichols' testimony.]

Mr. RANGEL. Counsel may inquire.

Mr. LYNCH. Thank you, Mr. Chairman.

Commissioner Nichols, how many policemen operate in the STRESS operation?

Mr. NICHOLS. We have never divulged the number. I would prefer not to do that. I will say it is less than 100.

Mr. LYNCH. Mr. Commissioner, as you may know, Commissioner Murphy in New York has a similar unit called the citywide anticrime section. His policy is to give that unit all the publicity possible, because it is his philosophy, according to testimony we had from him on Monday before this committee, that publicizing it acts as a deterrent, and at various times the New York papers have widely advertised or publicized the fact that it is comprised of 200 men and 6 women.

If I understand you correctly, your department classifies the exact number of STRESS officers. Would you tell us why you pursue that policy?

Mr. NICHOLS. Certainly. Because we do not have the massive amounts of manpower that the New York Police Department has. In contrast to 32,000 officers in New York, we have about 5,600, sir.

Mr. LYNCH. But if I understand your testimony, you are saying it is less than a hundred. I will be more than happy to defer to your wishes and not press on the point. I take it, however, that means somewhere in the neighborhood of 100 which, in fact, is only half the size of Commissioner Murphy's unit. He has 200 of his men in the unit, and, of course, a much larger city to police.

I notice in your December 31 statement, sir, you indicate that only nine of the officers assigned to STRESS at that time, or approximately nine, were black. In the light of your statement that a heavy proportion of the robberies, which in fact encouraged you to form STRESS, were committed by blacks upon blacks; why is it that only nine members of this unit are black?

Mr. NICHOLS. I don't know.

Are there still only nine black?

Statement of James Bannon

Mr. BANNON. No; that was a temporary figure. Frankly, they won't give them to me.

Mr. LYNCH. Is that classified, too?

Mr. BANNON. No; it is not. I keep behind the desk asking for more black officers and the other commanders won't give them up.

Mr. LYNCH. As a matter of policy, wouldn't it be highly advantageous to have a high proportion of blacks, since they have to operate in predominantly black neighborhoods? Or would it be fair to say they do operate in predominantly black neighborhoods?

Mr. NICHOLS. Not entirely. They operate where the crime pattern would indicate there is a need for this type of operation.

Mr. LYNCH. They are employed as a tactical force, as it were?

Mr. NICHOLS. As the crime pattern becomes apparent, then so moves the STRESS unit.

Mr. RANGEL. Excuse me, counsel. Is there something in the 1972 statement which indicates that some 80 percent of your criminals are black?

Mr. NICHOLS. Pardon?

Mr. RANGEL. There is some statistical data in the 1972 statement which indicates that over 80 percent—here it is on page 8 of the 1972 statement: "Police robbery figures for the year indicate that 89.8 percent of the known perpetrators were black, 5 to 6 percent white, and the rest unknown."

Mr. NICHOLS. That is perpetrators.

Mr. RANGEL. It has nothing to do with your high crime areas?

Mr. NICHOLS. I fail to see the correlation between perpetrators and the number of black officers assigned.

Mr. RANGEL. My question, Chief, is directed to the high crime area and perhaps to the ethnic composition of those areas.

Mr. NICHOLS. It would not necessarily follow if I may point out. The fact the perpetrator of the crime was black would not necessarily mean it would have to take place in the predominantly black neighborhood. It might take place in an integrated neighborhood or a white neighborhood.

Mr. RANGEL. I think counsel is trying to find out what is the ethnic composition of the areas in Detroit that you would consider to be high crime communities, high crime areas.

Mr. NICHOLS. We have about 8 of our 13 precincts that are fairly high crime areas and they range from predominantly black to predominantly white, and through the various ranges and stages of grade, so to speak, because the crime element does not necessarily confine itself to the black areas. It confines itself generally to the areas of social blight, to areas where the social problems have an environment in which crime seems to thrive, and sometimes it might be an Appalachian white neighborhood, sometimes it might be a fairly opulent neighborhood on the outskirts of town where these things do occur. We can't erase them, and I never attempted to postulate that all crime takes place in any given neighborhood or in any given precinct. I think the officers here on STRESS can attest to that as well.

Mr. RANGEL. Chief, do you have any statistical data to indicate the ethnic backgrounds of the victims of most of your crimes? Any percentages in that area?

Mr. NICHOLS. I don't have the statistical data, but we do know that preponderantly the victim is more likely to be black, more likely to be poor and black.

Mr. RANGEL. So your perpetrators are more likely to be black, the victims more likely to be black; and so counsel can continue his questioning in connection with that composition of STRESS.

Mr. CONYERS. Mr. Chairman, would you yield for a moment?

Mr. RANGEL. Yes.

Mr. CONYERS. Do you believe that suggests what might be happening in neighborhoods or parts of the city that might have a predominance of black residents? Or is that an inescapable conclusion?

Mr. RANGEL. By just asking my last question, we would assume counsel's questions made a lot of sense, but obviously, the commissioner wants to indicate that it is interracial.

Mr. NICHOLS. It is certainly an interracial thing, and Mr. Conyers is familiar enough with Detroit to know the Cass Corridor is not a predominantly black neighborhood, and it is a high crime area. It is populated by groups of people from several racial derivations, most of them in extremely low economic status; and the area is generally a very high crime area. It is not particularly black, nor is it particularly white. It is a mixture.

Mr. RANGEL. In a report of June 1972 called "The Police Chief" there is a statement attributed to you that the victim's profile was typically middle-aged or older, there were twice as many male victims as female victims, the victims usually lived in or near the neighborhood where the robbery took place, and in three-quarters of the cases he was a black.

Mr. NICHOLS. True.

Mr. RANGEL. Commissioner, obviously, I am not framing my questions correctly, so I wish counsel would continue to inquire.

Mr. LYNCH. Commissioner, based on that statement in your earlier testimony—and I think your testimony was clear—that in a high proportion of cases the victims of robbery are black and the crime is perpetrated by blacks, my only point was that with that understanding would it not seem reasonable that a concerted effort be made in this kind of operation to employ the services of more black officers? I think Captain Bannon has already indicated that efforts are being made and that he wishes he had more black officers on the STRESS unit.

Mr. NICHOLS. The fact of the matter, gentleman, is I am not sure there are only just nine black officers. And I am not certain enough to attempt to answer a question until I have the data made available.

Mr. STEIGER. Commissioner, is it difficult to recruit the black officers for this particular detail because of the criticism from the black community? Is that a problem?

Mr. NICHOLS. Not particularly. I think we have restricted ourselves to volunteer types of operations and I would presume this might have some impact, although I think the most difficult thing for me to do would be to answer that question. I would suggest Patrolman Martin, who is possibly more knowledgeable as to the outlook of young black officers on STRESS, would be a great deal more astute in that area than I.

Mr. STEIGER. Would the chairman permit Mr. Martin to respond?

Mr. RANGEL. Yes; and I hope he might keep in consideration this December 1972 statement, which is signed by John Nichols. It indicated at that time there were nine assigned STRESS officers that were black.

Mr. NICHOLS. That was in December of 1972, sir. I don't deny that in December of 1972; I would buy that. It is now April of 1973, and I do not know whether there are yet nine, less than nine, or more than eight, sir.

Mr. CONYERS. How can we find out?

Mr. RANGEL. With the undercover nature of the operation, I can see why.

Mr. STEIGER. Mr. Martin, is there a feeling among black officers that there is a stigma attached to being in this unit because of some criticism from the black community?

Statement of Ronald H. Martin

Mr. MARTIN. Well, my experience about that is that in the City of Detroit, over the last couple of years, quite a few policemen, mostly uniformed policemen, were wounded and killed. And that is wearing the uniform, with a brightly colored police car, a shiny badge, and it is doubly hard to work in plainclothes in the street and try to blend in with the community and not get shot. This might drive a lot of them away. I can't say what is in their minds, but that could be one of the reasons.

Mr. STEIGER. If I may, is your response to me—is it the difficulty of the job itself and not the attitude of the community that makes it difficult to recruit any officers?

Mr. MARTIN. That is my opinion.

Mr. STEIGER. I mean, in your opinion.

Mr. MARTIN. Yes.

Mr. RANGEL. Could you offer an opinion regarding how many blacks are presently working with the STRESS program?

Mr. MARTIN. With my crew, we have five. We have one car. I can't say for the other shift because we never see the other shift.

Mr. RANGEL. Is it safe to say the operation is so undercover the police commissioner and the member of STRESS are not aware of who each other are?

Mr. MARTIN. No, I don't say that. It is just that we try to keep it out of the limelight as much as possible.

Mr. RANGEL. I know; but from each other and the police chief?

Mr. MARTIN. Well, we don't discuss it because it is not—we know who we are.

Mr. RANGEL. Can you distinguish a black police officer from a white police officer in your normal course of operation?

Mr. MARTIN. Yes.

Mr. RANGEL. I don't want to know overall how many are involved, but is anyone here representing the Detroit Police Department prepared to say how many blacks are involved in the STRESS operation?

Mr. BANNON. To date, 10 black officers.

Mr. RANGEL. To date. Would you go along with that?

Mr. NICHOLS. He is in command of the organization. Certainly I go along with it.

Mr. RANGEL. I am sorry we wasted so much time. That is the question I thought I asked originally.

Mr. NICHOLS. I would like to publicly state I do not have the statistics for the composition of every unit at my fingertips.

Mr. RANGEL. We thought that we would be discussing the STRESS operation and in view of the comments made by the newspapers in Detroit, and in view of all of the criticism from the black community indicated in your document, I assumed you would think this was a logical question I might ask.

Mr. NICHOLS. I didn't look at it that way. Apparently my assumptions do not run along similar lines. I assumed this was a congressional hearing.

Mr. RANGEL. And therefore we should not concern ourselves with a question of race?

Mr. NICHOLS. I assumed you would certainly ask those questions, and if I could answer them I would be happy to, and if I could not I would be permitted, as I have in other congressional hearings, to get the validated data and return it to you in proper form.

Mr. RANGEL. Please, Commissioner, feel free to consult with anyone that you brought here, if you find yourself unable to answer questions.

Mr. NICHOLS. Yes, sir, I shall avail myself.

Mr. RANGEL. Counsel, would you continue.

Mr. LYNCH. Commissioner Nichols, could you explain for us how you go about selecting officers for participation in STRESS. What special qualifications, what special selection criteria there are, what kind of special training, if any, follows selection as a STRESS officer?

Mr. NICHOLS. To begin with, the STRESS officers are volunteers. Second, their service records are screened for a good work record, for an absence of disciplinary indication, for an absence of citizen's complaints, for ability to get along with their fellow workers. We try to avoid picking individuals who have shown a disinclination to relate to other individuals. We put them through a psychological evaluation and the unit commander, Commander Bannon, set up a STRESS training program in which the techniques of surveillance, which additional range training and which continuing reinforcement of the proper applications and the circumstances under which force can be used, are given. These are reinforced periodically, I believe. At what interval, I do not know.

How often do you reinforce the training program?

Mr. BANNON. On a daily basis.

Mr. LYNCH. Commissioner, I wonder if Commander Bannon could describe for us the training program as it is presently operating.

Mr. BANNON. The training program as it presently operates, because of the fact there is not a structured training program in terms of a classroom context because of the fact the men are brought in as replacements only and I am not allowed to get a dozen at a time or something like that. So we get replacements for those men promoted, or transferred, or for some reason leave the outfit, are shot or something happens to them.

There is an indoctrination period of about 2 weeks by the supervisors of the unit, which includes review of the State's law on entrapment and other issues of search and seizure. There is indepth "shoot, no shoot" training presentation. There is a great deal of on-the-job training.

Mr. LYNCH. Would you describe for the committee what you mean by the "shoot, no shoot" training?

Mr. BANNON. This is a slide presentation which is a pictorial representation of the crisis situations presented to the officer through the medium of a projector. He must make a decision as to whether or not he should fire to save his own life or somebody else's, and his situation is often not as he understood it to be. Perhaps if he decides to fire, on second view of the slide he sees his partner was getting in the way, or a woman holding a child in her arms, or something of that nature. It is a decisionmaking process training, which seems to be somewhat effective.

Mr. LYNCH. How many STRESS officers have been shot or otherwise wounded in line of duty; do you know, sir?

Mr. BANNON. Seventeen. That is wounded or shot, yes.

Mr. LYNCH. How many of those officers were killed in line of duty?

Mr. BANNON. Three.

Mr. LYNCH. Is that a high rate, Commander?

Mr. BANNON. One would be a high rate as far as I am concerned as an individual. It is, I think, the nature of our job, the nature of the depths of the problems at an acceptable level of risk, because we have that commitment to protect our people, to protect our community; that is what we are hired to do. It is an acceptable level: I don't like it, wouldn't like it if it was only one.

Mr. STEIGER. Commander, in the interest of clarification, on page 8 of the December 31 statement, we talked about the three officers who have been killed and you have the figure of 100 wounded or injured.

Mr. BANNON. Seventeen wounded.

Mr. STEIGER. You make a distinction between the wounded and injured?

Mr. BANNON. Yes. The injured are injured in making the arrest. Perhaps they are assaulted by arrestee or something like that. It is a relatively minor type—it could be major, but it usually isn't.

Mr. STEIGER. It isn't a gun or a knife?

Mr. NICHOLS. It is an assault and battery or an aggravated assault, assault with something other than a weapon.

Mr. STEIGER. I understand.

Mr. RANGEL. Mr. Bannon, did you testify earlier that your department was presently trying to recruit blacks for STRESS?

Mr. BANNON. As a matter of fact, I have a waiting list of black officers who want to come into STRESS, but I can't convince the other commanders to give them up. Black officers are a high priority item for many other functions within the police department, including vice, narcotics, and other units. We have to take our place in that priority system to get these individual officers even though they have volunteered to come into the unit.

Mr. RANGEL. Well, Commissioner, is there presently a recruiting drive to get blacks on the police force?

Mr. NICHOLS. There is a massive recruiting drive; a drive which has been reasonably successful. The number of black officers on the Detroit Police Department—and I would be subject to an error of three to five—is somewhere in the neighborhood of 737. And as the commander points out, we are hard pressed as to where to deploy these individuals to get the maximum benefit from their expertise and the maximum benefit of their presence in the community.

We have equally the same problem, gentlemen, with our black supervisors. We are torn between the need to have black supervisors in plainclothes, and we are torn between the need to have a high degree of black supervision in the precinct where a preponderant number of young black officers are.

We are attempting to remedy that situation; again, by our recruiting drive. But I think we have to recognize that the need is far greater than our ability to commit. And what Commander Bannon says is exactly true.

Mr. RANGEL. Blacks are a premium not only to STRESS but in the department?

Mr. NICHOLS. Across the entire face of the department.

Mr. RANGEL. If you did have blacks available, based on how you deal with STRESS, you could not really put them on anyway, since I understood your response to counsel was that you only replace a STRESS agent?

Mr. BANNON. That is not necessarily so. The replacement thing goes on all of the time, and if I could replace with a black officer rather than a white, I would.

I think, though, I would like to say this in response to some of these questions. I think you are overemphasizing, sir, the decoy phase which would infer needing a black officer for decoy, if you save the black victim. What we are saying is the decoy phase of STRESS is about 20 percent of the time factor, and the surveillance doesn't necessarily require a black officer to be effective. I think if you take that into consideration you will see there is some justification for the putting them out there even though they are white.

Mr. RANGEL. Does not surveillance mean observing the conduct of a suspect by a police officer from a reasonable distance?

Mr. BANNON. The survey neighborhood. We are operating on a pattern. We only commit the STRESS group based on a pattern of prior crime. So we know, basically, what we are looking for in terms of the general appearance of the culprits and so on. So we surveil a neighborhood. We go in there as insurance salesmen or busdrivers, or truckdrivers, or cabdrivers. All of these different modes. So we are surveying, looking for the potential robber. That doesn't necessarily imply to me you need a black officer to do that.

Mr. Lynch. Mr. Chairman, if I may I would like to take issue with the commander. It seems to me that in the earlier testimony we were not given numbers, nor are they publicly made available. I think one reason is the commissioner feels that he does not want to divulge the number of officers in STRESS so as to keep this force more invisible.

It seems to me to make only good sense that invisibility has something to do with race and certain high crime areas of Detroit, so the committee is not solely concerned with the decoy operation. That was the only point.

Mr. Bannon. Mr. Lynch, perhaps you are not familiar with Detroit. It is not a ghettoized, racial community. The racial makeup of most of the areas of Detroit is pretty much heterogeneous, and you seem to be implying that there are all black communities in Detroit in which a white face stands out.

Mr. Lynch. I am quite familiar with Detroit. I lived in the Detroit area a number of years and practiced law there, and there are indeed a number of racial enclaves, although not the kind we might find in some other cities. But the only point is that it would, it seems to me, assist the department in creating further invisibility by having more substantial proportions of blacks on this unit; and I take it you are not quarreling with that?

Mr. Nichols. No.

Mr. Lynch. Mr. Chairman, may I continue?

Mr. Rangel. Yes.

Mr. Lynch. You were discussing the training and the commissioner mentioned that there is some continuing inservice training. I wonder if you could describe that for us, please.

Mr. Bannon. The continuing inservice training may involve what the rest of the department is exposed to in terms of new issues in search and seizure and other new matters. It may involve a new surveillance technique we develop for a given type of crime or specific type of problem. We may reorient the entire unit for a given period of time. We may have a rapist operating in a certain section of the city and want to reorient the STRESS unit. To the extent they are reoriented, they are no longer STRESS, they are not working on street robbery. We reorient the entire unit or major portions of it to work with hijackings of tires on railroad cars, on major narcotics problems.

Mr. Nichols. Or riding the freight trains being ripped off while moving from one section of the city, of the section to the other. One whole segment of our operation went into that, where the men adopted the guise and bandannas of railroad workmen and rode the area of the Pennsylvania line, commonly known in the trade as "Ho Chi Minh Trail." So they are committed to different types of operations, and the racial makeup doesn't mean they cannot be effectively used in this area.

Mr. Lynch. STRESS officers usually operate in teams; is that correct? They are rarely, if ever, used singly?

Mr. Bannon. They will be occasionally loaned out singly to act as a pigeon or target in extortion plots, but normally I think they always do work in teams; yes.

Mr. LYNCH. What kind of communications equipment would the STRESS officer carry on his person?

Mr. BANNON. He normally carries the Prep radio, which in our view is a very good instrument for general communication. We have on order, unfortunately technology hasn't caught up with the need, open mike transfers from the decoy phase of the operation. We do have them on order, but we haven't gotten them as yet.

Mr. LYNCH. That would enable someone to transmit without holding something up to his face?

Mr. BANNON. Without the physical act of pressing the transmitter button and thereby alerting the robber.

Mr. LYNCH. A STRESS officer who is on decoy detail or a STRESS officer who is working with a team, walking down the street in a high crime area, can he communicate with the precinct station or your base station and with other foot undercover patrolmen in the area?

Mr. NICHOLS. Why don't we let the officers answer them? We brought them here for these kind of intimate questions.

Mr. LYNCH. Would one of you gentlemen answer that, please?

Statement of John P. Ricci

Mr. RICCI. It has been my experience and that of colleagues I work with that on a target-type operation, where one man is set up as, if you will allow, to be used as the target we usually do not equip him with communication per se in the form of a Prep radio because, of course, this radio is on—police calls are coming over that and it may disrupt the operation. However, his cover and surveillance by his fellow officers is maintained in a very close proximity. In the event something should take place, the officers can respond within a matter of seconds.

Mr. LYNCH. So you have line-sight observation of someone?

Mr. RICCI. At all times.

Mr. LYNCH. Do each of you, however, normally carry some kind of walkie-talkie transceiver? What is the Prep? You call it a "Prep radio."

Mr. RICCI. Yes, sir.

Mr. LYNCH. Would you describe what that is?

Mr. RICCI. I could briefly describe it as a very small version of the old military walkie-talkie. I would like to state that those officers who are covering the intended target are equipped with a Prep radio, and we also have the officer in sight. They can at any time notify patrol units, specific areas such as the precinct of operation, and also our base. They are within communication at all times.

Mr. LYNCH. What kind of protective gear, if any, do you wear when on STRESS operation, Officer Ricci?

Mr. RICCI. We have been very fortunate to have issued to each officer and to all crews what they refer to as the "second chance" armored vest. It is composed of a fiberglas-type material. It fits over the shoulders and it is held by means of a strap which is secured by some other fiber.

Mr. BANNON. We would like to say that has saved about four officers' lives.

Mr. LYNCH. Would you describe how that happened, what they were shot with?

Mr. BANNON. They were shot with .38-caliber weapons.

Mr. LYNCH. Were they injured?

Mr. BANNON. No.

Mr. NICHOLS. Bruised, but no blood drawn.

Mr. RANGEL. Officer Ricci, you were talking about surveillance and keeping the so-called target under cover. Do you find in the black community that having these officers be black, or in a white community having the surveillance officers be white, might improve the quality of your police work?

Mr. RICCI. Sir, I would like to state this, as my commander had previously stated, that the STRESS operation in itself operates strictly on each separate type of crime. In other words, the crime situation that we are trying to remedy or eradicate from our area, or our city, dictates the type of procedure and the type of personnel we will use. In other words, if I may use the Cass Corridor as an example, which is a smattering of different nationalities, Chicanos, Spanish, Italian, Jewish, Polish, Negro, so on and so forth, we will use the type of personnel who will fit in that area.

Now, we have an analytical section which computes all the crimes which happen on a day-to-day basis, and that in turn, prior to our going out on the streets, informs us of these specific hard hit crime areas.

Mr. RANGEL. That makes a lot of sense, officer. I hope the stenographer would read my question back.

[Question read by the reporter.] Officer Ricci, you were talking about surveillance and keeping the so-called target under cover. Do you find in the black community that having these officers be black, or a white community having the surveillance officers be white, might improve the quality of your police work?

Mr. RANGEL. That was my question.

Mr. RICCI. I was attempting to answer that. Each situation will dictate the type of personnel we need.

Mr. RANGEL. I assumed that. I am giving you a specific situation, an all-black community. I don't know whether you have such a community in Detroit, but I am just assuming from what I read that you do have pockets of blacks and pockets of whites. My question has nothing to do with the Corridor, which I assume is interracial in flavor. But I am just asking, "Would it protect your police officer a little more, or make your operation a little more successful, if the police officers that were surveying the target blended with the particular community in which he was operating?"

Mr. RICCI. Yes, sir; definitely.

Mr. RANGEL. Thank you.

Counsel, you may continue.

Mr. LYNCH. Thank you, Mr. Chairman.

Officer Ricci, I wonder if you could tell us how long you have been a member of STRESS?

Mr. RICCI. I have been a member of STRESS ever since its inception.

Mr. LYNCH. Could you approximate how many felony arrests you have made, sir, since being a member of this unit?

Mr. RICCI. I would say on an average basis, approximately 30 to 45 felony arrests per month.

Mr. LYNCH. Per month?

Mr. RICCI. Yes, sir.

Mr. LYNCH. Individually?

Mr. RICCI. Specifically what do you mean?

Mr. LYNCH. Those were your arrests or arrests made by your team?

Mr. RICCI. By my team, sir.

Mr. LYNCH. Your team would be composed of approximately how many officers?

Mr. RICCI. Approximately four men per team.

Mr. LYNCH. How would that relate to the number of arrests that might be made by a four-man uniformed patrol team if you had such teams? Is it high, is it low, or average?

Mr. RICCI. I think that would be extremely high in comparison to their arrests.

Mr. LYNCH. And I believe I asked whether these would be arrests for felonies, major felonies. I am talking specifically about aggravated assault on the streets, murder attempts, armed robberies, muggings.

Are those the kinds of things that we are talking about?

Mr. RICCI. Yes, sir.

Mr. LYNCH. When you patrol as a STRESS team do you concentrate on particular kinds of crimes and let others go unnoticed, or not make arrests for them? Do you concentrate on trying to catch armed robbers? How do you operate?

Mr. RICCI. Well, first of all, as a law-enforcement officer, it is my duty to make an arrest.

Mr. LYNCH. I understand. I think we all do.

Mr. RICCI. I wanted to just clear that up, when you said do I overlook other things.

Mr. LYNCH. Perhaps that is a bad choice of words. It is not an issue of overlooking. I am wondering whether you concentrate and go on details at various times with various goals in mind, such as suppressing robberies in a particular neighborhood.

Mr. NICHOLS. I think this was answered by Commander Bannon and myself. The concentration of the unit and crime—the picture dictates the crime they would be addressing themselves to primarily, but not to the exclusion of all others.

Mr. STEIGER. Counsel, excuse me.

I think it is a good question. As a layman, I think I understand the question. If there is a woman hustling, do you in the normal course of your activity pick her up? If you see a guy dealing in numbers would you pick him up or would you advise somebody else and go on about your primary mission? I think that was the thrust of the question.

Mr. RICCI. That is correct. I would make every attempt to have the unit specifically trained for that type of crime. You use prostitution as an example. We have vice squads on the street and we usually don't like to get involved with their operations.

Mr. RANGEL. Counsel, Chairman Pepper has invited the distinguished gentleman from Detroit, Congressman Conyers, to participate with this committee because of his knowledge of the area of Detroit. And so if you could hold your questions and allow him to inquire, then the chair would recognize Mr. Conyers.

Mr. LYNCH. I would be delighted to yield.

Mr. CONYERS. Thank you, Mr. Chairman.

I would like to ask your Detroit commissioner of police how he has responded to public inquiries about the operation of the STRESS unit.

Mr. NICHOLS. In what particular area, sir?

Mr. CONYERS. In all particular areas. What I was getting at is, do you feel that this is a rather controversial part of the Detroit police force?

Mr. NICHOLS. I think that would be a very valid statement. It certainly raised a great deal of inquiry, attracted a great deal of publicity in the press. I think part of it is due to the nature of the operation, which may not have been an ideal one but which in retrospect we can do little about.

Yes; it has been controversial; and yes; I have attempted to respond to this as honestly and candidly as I can.

Mr. CONYERS. Thank you. In other words, you meet with the public and you are aware of the number of investigations that STRESS is under?

Mr. NICHOLS. The number of investigations that STRESS is involved in, or the number of investigations concerning STRESS operations?

Mr. CONYERS. Well, either or both.

Mr. NICHOLS. Well, maybe I don't quite understand your question, sir. I don't know the number of investigations in which STRESS men are conducting. I have no knowledge of that.

Mr. RANGEL. He means that STRESS is the subject of.

Mr. NICHOLS. Yes; I am aware of them.

Mr. CONYERS. There are a number of them going on?

Mr. NICHOLS. Yes, sir.

Mr. CONYERS. Could you tell us which ones are going on that you know about?

Mr. NICHOLS. There is a massive investigation concerning that manhunt for the individuals who were involved in the shooting of six STRESS officers during a period last winter. Of that there were 26 complaints lodged against, primarily against STRESS officers, although I am not certain they all were STRESS but they purported to be STRESS. That situation has been brought before our common council; the initial investigation has been reviewed; they have been sent back with interrogatories from the council members; they are still under investigation. Some of them have been resolved, some of them have not been resolved. One individual from STRESS is currently under indictment on a charge of homicide.

Mr. CONYERS. Is that police officer Raymond Peterson?

Mr. NICHOLS. It is indeed.

Mr. CONYERS. Charged with murder and involved in six killings?

Mr. NICHOLS. He was charged with murder and one killing, sir, in which the evidence was sufficient to present it to the prosecutor and a warrant issued. And the other killings, the evidence was likewise reported to the prosecutor.

Mr. CONYERS. This grew out of the fact that a departmental investigation disclosed that the knife found on the body of a person killed by him actually belonged to the police officer?

Mr. NICHOLS. Yes, it did. The investigation was initiated by the department. The evidence was analyzed by the department and I should also like to add, gentlemen, the individual was off duty at the

time. He was acting on a folly of his own and not while he was in any kind of a STRESS situation.

Mr. RANGEL. Would the gentleman yield?

Mr. CONYERS. Surely.

Mr. RANGEL. Does the police department's civil service regulations differ from other cities? When a police officer is not actually assigned to a post, is he off duty?

Mr. NICHOLS. In the sense of being responsive to recall, he is off duty; yes, sir.

Mr. RANGEL. So, a police officer has no obligation to enforce the law during his leisure?

Mr. NICHOLS. He has an obligation. He has a moral obligation. But at that particular time he was not under direct supervision of his commander, or sergeant, or lieutenant in the STRESS operation.

Mr. RANGEL. We all have a moral obligation. I am talking about a legal operation. Is not your police force on duty 24 hours a day?

Mr. NICHOLS. Technically, yes, sir.

Mr. RANGEL. So the fact he was not specifically assigned to the command is irrelevant; he was acting as a Detroit peace officer?

Mr. NICHOLS. I am not attempting to deny he was a Detroit police officer.

Mr. RANGEL. I just misunderstood you when you said he was off duty. In fact, unless he is suspended he is always on duty.

Mr. NICHOLS. It is a question of semantics. An individual works 8 hours a day. He gets paid for 8 hours a day. And in one terminology if he is not getting paid for that work, I would say he is off duty in that sense.

Mr. RANGEL. Your pay schedule does not take into account that a police officer is a police officer 24 hours a day?

Mr. NICHOLS. No, sir; it does not. It takes into account officers work 40 hours a week for which they get paid. If they do overtime work and it is documented, contractual provisions provide for that. He does not get paid for going home and going to work.

Mr. RANGEL. If a police officer is off duty and saw a crime, a felony committed, he would only have a moral obligation to arrest?

Mr. NICHOLS. I don't think any commander would take him to task for a judgment if he failed to take action if his estimation of the situation did not require it at that time.

Mr. RANGEL. I am not making myself clear?

Mr. NICHOLS. Apparently not.

Mr. RANGEL. I am asking if a police officer of the city of Detroit is technically off duty and he sees a felony or a series of felonies being committed in his presence, does he only have a moral obligation to attempt to arrest the perpetrator?

Mr. NICHOLS. And I am answering it by saying I don't think it would be supportable to charge him with a violation of the department rules if he failed to do so, if he felt it was not within his discretionary powers at that time to do it. If it was a question of cowardice or being paid off or something else, then certainly there would be ramifications of disciplinary action. That is all I am trying to say.

Mr. RANGEL. You are saying that if crimes are being committed in front of Detroit police officers and they are not on their regular shift

they have the discretion as to whether or not they would enforce the law?

Mr. NICHOLS. Certainly. In fact, in many instances we advise them not to enforce the law. We admonish our officers not to get involved in neighborhood disputes, for example, by direct order.

Mr. RANGEL. I am surprised by the differences between your regulations and those which govern police conduct in New York City.

Mr. CONYERS. Well, Mr. Commissioner, are you certain about the remarks you just made to the acting chairman?

Mr. NICHOLS. I think I am. I might be uncertain in the way they were interpreted, but I am certain about what I said.

Mr. CONYERS. I just wanted to make certain because it seemed a little unusual to me. But let's continue with my question of how many investigations are being conducted concerning the STRESS unit and officers which lead into questions such as violations of the constitutional rights of citizens.

Mr. NICHOLS. To the best of my knowledge there is that investigation conducted by the common council; there is an independent investigation being conducted by an ad hoc committee of which we have no knowledge; there have been applications made to the Federal Bureau of Investigation. I do not know what status that investigation is in, if in fact it is being conducted. I would assume that there are isolated complaints of other STRESS offices under investigation by our citizens complaint bureau, and possibly by the commanders of STRESS itself.

Mr. CONYERS. Now, how many citizens have been killed as a result of the STRESS unit?

Mr. NICHOLS. Since when, sir?

Mr. CONYERS. How long has STRESS been in existence?

Mr. NICHOLS. Since January of 1971. I think about 15, I am not certain.

Mr. CONYERS. Would 18 possibly be a correct number?

Mr. NICHOLS. Eighteen might be a valid number of individuals who have been killed by officers assigned to STRESS, but not necessarily on the STRESS operation. That would include the matter under which we have just had the discussion, which was not a STRESS operation. That was the only point I was trying to make.

Mr. CONYERS. Are you aware—and perhaps I should direct this to Officer Martin—that even associations of Detroit policemen have voiced some criticism of the operation of STRESS?

Mr. MARTIN. The association?

Mr. CONYERS. I said some associations of Detroit policemen have voiced criticism of the way STRESS has operated.

Mr. MARTIN. If you are talking about the Guardians of Michigan, in which the membership is primarily suburban departments, black officers of suburban departments, which there is very few number of Detroit policemen working, which I don't belong to, they may voice their opinions against STRESS. But the majority of those policemen are not Detroit policemen.

Mr. CONYERS. When you say suburban departments of the police department, what do you mean?

Mr. MARTIN. Inkster, Royal Oak, places like that.

Mr. CONYERS. Well, the Guardians is one of the units that I was referring to, and it is composed primarily of black police officers.

Mr. MARTIN. That is correct, sir.

Mr. CONYERS. And it is your suggestion, that most of them are suburban police officers?

Mr. MARTIN. Yes, sir. When I say surburban, outside of the city of Detroit, plus Wayne County sheriff's deputies, which most of those belong to.

Mr. CONYERS. Do you have any idea how many of them are Detroit police officers?

Mr. MARTIN. I have no idea; sir; but I have come in contact with most Detroit police officers who stated they don't belong to them. But I can't give an accurate number.

Mr. CONYERS. Well, let me ask you about one of the incidents that created a great deal of unfavorable publicity relating to STRESS in which you were involved. This is in connection with a shootout between the Wayne County Sheriff's Department deputies and STRESS officers. I presume you recall that incident?

Mr. MARTIN. Yes, sir.

Mr. CONYERS. It resulted in the death of a sheriff's deputy and the injury of several others?

Mr. MARTIN. Yes, sir.

Mr. CONYERS. It was the result of a mistake on the part of STRESS unit's officers?

Mr. MARTIN. No, sir. I beg your pardon, sir?

Mr. CONYERS. It was intentional?

Mr. MARTIN. No, it was not intentional. It was an accident and it was a mistake.

Mr. CONYERS. Correct. You agree that it did create a great deal of unfavorable publicity?

Mr. MARTIN. Yes, sir; it did.

Mr. CONYERS. And there are a number of other incidents from which citizens complaints have arisen including illegal breaking and entering into homes with less than the proper legal credentials?

Mr. MARTIN. You are asking me another question?

Mr. CONYERS. Yes, I am.

Mr. MARTIN. There have been many complaints, sir. There has been a lot of adverse publicity, but if these complaints are substantiated that is another question.

Mr. NICHOLS. May I be permitted to complicate the question, sir?

Mr. CONYERS. By all means.

Mr. NICHOLS. I think at the point in time these complaints were made, the Michigan State law specifically defined the right of an officer to enter a place where he believed an individual for whom he held a felony warrant resided or lived or may have been in hiding, after having announced himself, gave him the right to break the door. This was on this premise that many of these complaints and allegations were raised.

A later circuit court decision said, in essence, that the department should have gotten a search warrant. This case is still up for appeal and I submit that we have to objectively view the officer plus his conduct in terms of what the law appeared to be at that particular time, sir.

Mr. CONYERS. Thank you. Now, of course, a police department's reputation cannot stand too many fatal errors, can it, Officer Martin? For

example, the one in which Wayne County and Detroit law enforcement agencies had a shootout between each other?

Mr. MARTIN. You are correct on that, sir; but we didn't start that shootout.

Mr. CONYERS. I see. Can you describe to us the circumstances under which this very tragic mistake took place?

You don't have to look to the commissioner. You know more about it than he does.

Mr. MARTIN. It is a matter of record.

Mr. NICHOLS. It has been tried in court. I think the members of the committee should know this. The officer has been to court. He has been tried by a jury. Every facet of the case has been explored. We have no aversion at all if the officer cares to detail it in great detail.

Mr. RANGEL. Thank you so much, Commissioner.

Mr. NICHOLS. You would like to hear it?

Mr. CONYERS. No; I don't want to retry the case. These are not adversary proceedings. What we are trying to do is find out how efficient or effective the STRESS unit is in comparison with other anticrime units that are conducted in urban police forces across the Nation. This kind of tragedy, which has no equal in other similar units inside police departments that we know of, certainly requires some discussion while you are here before this committee.

Mr. MARTIN. That night, sir; the crew I was working with was not on a STRESS detail. We were doing routine undercover plainclothes police work. At approximately 12:05 a.m., of March 9, my crew, which was three of us in the car at that particular time, observed a black male in an alley. We turned the corner and pulled up a little closer to the man and observed this man was wearing plain clothes and was carrying a nickel-plated revolver in his hand.

We had an obligation to the occupants of that building and to the city of Detroit and our department to try to get to that individual.

We stopped our car. We watched the man climb the flight of iron stairs to the second floor, a motel-type building. He entered the apartment at the top of the stairs. We didn't think to apprehend him on the stairs or on the porch because we were on the lower level, which would give him an advantage over us.

We reached the top flight of the stairs and glanced in. I glanced in as I passed the door and saw this man in the living room with this gun in his hand. I saw several other individuals in the living room, which was just a glance as I passed the door. My partner immediately was following me, behind me, coming up the stairs.

I stepped to the left of the door and my partner opened the door and announced himself as a police officer. He had his badge and his gun in his hand.

This door was a storm door—glass—and the wooden door was ajar, we could see.

At that point, shots rang out, my partner backed out, down the stairs. I ran to my left, which was the end of the porch, which at that time I thought it was an apartment at the end, but there was a door to an enclosed stairwell. I thought I was trapped on the porch. This man, or a man, which I never could identify, came to the door, fired out into the courtyard.

I fired one shot from, not a service revolver, but my privately owned Cougar, and the type of ammunition I was using jammed after the

first shot. The man then made a quick step onto the porch, fired two shots at me, one shot ricocheting off the brick about 5 inches from my head and the other shot going through my legs and embedding in the door behind me.

I fired more shots.

The driver of our car at that time was radioing on the radio that a police officer was shot. He then ran to the top of the stairs. He saw me, and at the top of the stairs is the door to the apartment. He glanced in and heard a commotion. He yelled, "They are going out the back." My partner opened the door.

I know a man just fired out that door at me and into the courtyard. I had to cover my partner.

Mr. CONYERS. So, it was a terrible series of mistakes.

Mr. RANGEL. May I inquire? Would you yield?

Mr. CONYERS. Yes, Mr. Chairman.

Mr. RANGEL. This person you are talking about with this pistol, was he walking the street with the pistol in his hand?

Mr. MARTIN. When we saw him he was in the alley in the rear of the apartment building. We assumed he just got out of the car. The car was parked in the rear there. We had no idea that he was a deputy; we had no idea what his intentions were, other than the fact he may have been going up there to rob individuals.

Mr. RANGEL. I can understand that; but my question is, "Did this deputy have a silver-coated or silver-plated pistol in his hand in the alley?"

Mr. MARTIN. Yes, sir.

Mr. RANGEL. Could you describe what he was doing with it in the alley?

Mr. MARTIN. He was walking with it in his hand, sir. And if I was a law enforcement officer on foot, by myself, in an alley, in that neighborhood, I would also carry my gun in my hand. But I didn't know he was a law enforcement officer.

Mr. RANGEL. It never entered your mind?

Mr. MARTIN. Not the way he was dressed, sir.

Mr. RANGEL. Were you dressed as a law enforcement officer?

Mr. MARTIN. I was dressed in plainclothes but I was with a police car.

Mr. RANGEL. But if you were in the alley, you wouldn't have looked like a police officer to him.

Mr. MARTIN. That is correct.

Mr. RANGEL. Was he black?

Mr. MARTIN. He was black.

Mr. CONYERS. Now, out of this tragedy, Commissioner Nichols, have we learned anything that can assure our citizens that this will not occur again and further corrode the reputation of the STRESS unit?

Mr. NICHOLS. We have learned, I think, Congressman Conyers, a great deal. We have made a great many modifications and a great many changes in the STRESS operation, based first upon our own continuing evaluation, and, second, upon input and citizen concern.

I think the fact that the acting chairman raised brought about another change in the STRESS operation, in the rephotographing of all of our officers and a specific reflectorized identification card, so if an

individual who does appear with a heavy beard and in clothes other than conventional clothes presents a badge, he then has a specific card picturing himself in that particular attire and in that particular facial-hair configuration, so an individual would then know he is in fact a police officer.

We recognize the problem of identification is a serious one.

Mr. RANGEL. That wouldn't help the deputy, though.

Mr. NICHOLS. Not at that particular point in time. But it does help in a lot of situations where an individual who is an officer is stopped by an officer and displays a badge, and the uniformed officer says, "I don't believe you are a policeman, show me something." The photograph may not match the individual's configuration at that time, so to correct this we have issued every one of our plain clothes units a different colored coded card.

Mr. RANGEL. But so far no STRESS officer has shot another officer because of lack of identification?

Mr. NICHOLS. No, sir; but we have had near misses, and I think if the truth were known other cities have had near misses, too.

Mr. RANGEL. The truth is that a black police officer off duty in the city of New York was shot dead by brother officers when the victim attempted to arrest the perpetrator.

Mr. NICHOLS. I think to amplify the intenseness, seriousness, and tension under which we live, one of our officers in full uniform was shot by two of his brothers in full uniform in the same kind of confrontation.

Mr. RANGEL. We are not here to criticize, for we do not know the circumstances under which you work.We only are attempting to compare what other cities are doing with yours and share that information with you.

Mr. NICHOLS. Do you want me to answer the rest of the question?

Mr. CONYERS. Yes.

Mr. NICHOLS. Fine.

We have also increased the size of the unit, added more supervision to the unit, increased the training of the unit, added psychological testing after the first problems that we had. We rotate our personnel. We attempt to get the best individuals that we can and we investigate with complete thoroughness any allegations made in an effort, again, to bring out anything which is causing that kind of friction in the community.

I think in all sincerity we must recognize that it has been, and will continue to be, a political issue.

Mr. CONYERS. What is political about it?

Mr. NICHOLS. Do you really want me to tell you?

Mr. CONYERS. You didn't come all the way to Washington not to tell us; did you?

Mr. NICHOLS. I think there certainly is in the mayorality race going on in the city of Detroit. Some of the candidates have already expressed pleasure or displeasure with STRESS. One of the candidates at one time was a judge and the STRESS case in front of him.

If it is the truth you want, I think we have to recognize this in its total concept, too, gentlemen. And it does make good copy. We have to recognize this.

Mr. CONYERS. Are you suggesting now that the politics of the elec-

tion of the city of Detroit in connection with the mayor's race is one of the fueling or motivating forces behind much of the criticism that arises out of STRESS?

Mr. NICHOLS. Not at all. I am merely suggesting that is one of the reasons why it is constantly in the papers and the media. Not that it is one of the motivating factors for citizens' complaint, but merely the fact it has become, as you well know and all of us well know in Detroit, a cause celebre. It is good newspaper copy. Any time an officer is involved in anything, if he is assigned to STRESS it gets first priority in the news, even if it is only a divorce case.

Mr. CONYERS. I yield at this point, Mr. Chairman.

Mr. STEIGER. Gentlemen, I am impressed that STRESS has had its problems, as I wasn't aware of that prior to our meeting. I also come to the inescapable conclusion, from the testimony of the men before us that make up the force, that in spite of the criticism the project is worth the continued effort, because it is clear the simple thing to do would be to abandon it and that way avoid criticism.

Is that a fair condition?

Mr. NICHOLS. That is as fair a conclusion as I can say. Yes, sir; it is.

Mr. STEIGER. Then I would ask this: Is there, as a result of the criticism, Mr. Ricci, a morale problem among the troops?

Mr. RICCI. None whatsoever.

Mr. STEIGER. Mr. Martin, would you concur with that?

Mr. MARTIN. Yes, sir; I would.

Mr. STEIGER. So, obviously, in the face of this kind of criticism if there is not a morale problem, there must be a very good morale climate to combat that. I don't want to make these conclusions, but is that a fair assumption?

Mr. MARTIN. We are like one family. Whatever happens to one of us, happens to all of us.

Mr. STEIGER. I gather from the commissioner's and the commander's report that there are 13 precincts in the city of Detroit, and that most of the activity is in five to eight of these precincts?

Mr. NICHOLS. Yes.

Mr. STEIGER. The people who "work the streets" in those precincts where you have had operations, are they aware now they have a problem?

Mr. MARTIN. Yes.

Mr. STEIGER. Do you feel that your presence has had some kind of inhibiting effect on the general activity on those beats?

Mr. MARTIN. Yes, sir.

Mr. RICCI. Yes, sir.

Mr. MARTIN. I feel that the person out there that is bent on committing a crime will think twice, because he doesn't know who the STRESS officer is.

Mr. STEIGER. In other words, the STRESS operation is well enough known on the street. They know that now they can't just look for a uniform, but they also have to look and see if they can spot "the man" in civilian clothes?

Mr. MARTIN. Yes, sir.

Mr. RICCI. I would like to reinforce that statement by relating a little episode that took place that I was involved in. We were conducting a target-type operation and I actually had a bar owner come out on

the street and he walked right up to my Chevrolet and to myself and told us, "Thank you very much. I can at least keep my door open now and I don't have to have a buzzer on it."

So it is this public sentiment that also keeps us going.

Mr. STEIGER. How do you maintain your cover? I gather there is no concern about exposure, otherwise you obviously wouldn't be here. How long before you are spotted in a given area? Have any of the members of the STRESS teams had their cover blown to the point they are not effective in a given neighborhood?

Mr. MARTIN. If we work an area too much, we are recognized. If you are using a department unmarked car, but if you are in what we call a funny car, which could be a 1952 Chevrolet convertible, you might be spotted as a police officer, but they would think you are off duty. And a lot of people think because you are off duty that they can do just what they are going to do even though they are working.

Mr. RANGEL. Isn't that what the commissioner just said?

Mr. MARTIN. I say they think we are off duty, but we are actually on duty.

Mr. RANGEL. You work 8 hours a day?

Mr. MARTIN. Yes, sir. But I am saying we might be riding around in what we call a "funny car." It could be a van. I used the other day a Chevrolet convertible.

Mr. RANGEL. But you were on duty?

Mr. MARTIN. I was on duty, but the people on the street recognized me as a police officer. But they say, "There goes so-and-so," because he is off duty.

Mr. RANGEL. And they would be right, because you would not be enforcing the law if you were off duty otherwise?

Mr. MARTIN. What the commissioner was talking about was something left up to the individual.

Mr. RANGEL. You would make the decision.

Mr. CONYERS. Are you sure, commissioner and all officers of the Detroit Police Department, that that conforms with your own police department regulations?

Mr. NICHOLS. I am reasonably sure, Congressman; the areas of discretion for an officer are never abrogated. There is not an order in the Detroit Police Department that tells him he must continually walk into the face of a gun or something else, or draw his gun, or take police action in a crime when in his own judgment it may not be the proper thing to do. That is the only way I answered the Congressman and that is exactly what I said then and that is exactly what I mean now.

We consider for the purposes of administration an officer's on-duty time is that time he is paid for. This is by virtue of a union contract. We must consider those periods when he is not being paid in terms of "off duty." He has the authority and the right to enforce the law but it is not mandated he do that if, in effect, his own discretion tells him better.

Mr. CONYERS. Would the gentleman yield?

Mr. STEIGER. Yes.

Mr. CONYERS. What is the doctrine governing this subject matter in the Detroit Police Department?

Mr. NICHOLS. I would presume it would be covered in the rules and regulations of the department.

Mr. Conyers. Do you consider that the statements that you made here this morning are consistent with the rules of the subject in that document?

Mr. Nichols. I would consider they would be consistent with my interpretation of those rules; yes, sir.

Mr. Rangel. Mr. Steiger.

Mr. Steiger. I would like to ask the commander a question. We heard testimony from your comparable force in New York City that they learned very quickly the high-crime hours as well as the high-crime areas. Their high-crime hours, I believe, were from dusk to 1 a.m., 2 a.m. Do you find that you deploy your people normally on a high-crime hour density as well as an area density?

Mr. Bannon. We are responding to our analysis of the street robbery on a 2-hour basis. It is broken down into 2-hour patterns and we operate strictly on the pattern of prior robberies there. So the officers may be assigned to a given area from 6 to 8 p.m. That is a high-pattern area and transferred into another area that runs from 10 to 12, or something of that nature. So it is not on a shift basis, but on a 2-hour cycle.

Mr. Steiger. In other words the answer is yes; you do equate, not only the area but also the hour?

Mr. Bannon. Absolutely. But we also have found out, much to our surprise, that many of these robberies are taking place in broad daylight. So that you say a high-crime time to include all crimes, you may have that afternoon shift syndrome. But if you select only robberies you may find they are spread out over a large segment of time.

Mr. Steiger. As a result of 2 years of this kind of activity, do you find a shift in the high-crime area which would indicate a response to the tactical force? What I am asking is, If a neighborhood normally had a problem from 6 to 8, as you indicate, as a result of your penetration of that problem time and problem neighborhood has there been a shift in the problem?

Mr. Bannon. Yes. I think that I have to be a little more specific. Since we are working on a pattern created by an individual, or group of individuals, perpetrating robberies day after day, when we do something that arrests that activity of those individuals that pattern then stops, so we are no longer interested in that specific neighborhood. So we move on.

So what you are saying about forcing a shift would be true if in fact you did nothing about the people who were creating the pattern. But if you do make the arrest, which we often do, either through decoy phase or surveillance phase the pattern goes away until somebody starts on another pattern.

Mr. Steiger. That was the basis of my reasoning that there would be a demonstration of success of your mission if you had a change in the pattern.

Mr. Bannon. You recognize, I am sure, Congressman, and so we do, that we are not so naive we don't believe when you harden up one target—and in essence we have hardened up the typical citizen-victim street roberry—you do soften up other targets; and we have to look to that.

Mr. Steiger. That has happened right in the District of Columbia. We are not doing away with the crime; we are shifting it around.

Have you found a significant pattern followed by habitual offenders in street crimes, as you do in pushers, or numbers dealers, or is street crime more of an impulse sort of thing?

Mr. BANNON. Essentially, we found an extremely high correlation between street robbery and heroin addiction. We found not only can we pattern people on the basis of crime, but we also draw a zone around the narcotic activity. So you do have a repetition there and you do have a high recidivism rate; yes.

Mr. NICHOLS. I would think, too, sir; the pattern of robbery is not one that calls for a long, in-depth evaluation of the man for his intended target or his intended place of business. Most of the time it is a crime of opportunity. An individual or group of individuals will get a gun and start cruising and say, "That looks like a good spot," and that is the only kind of prior planning that goes into it. So it is very difficult other than to statisticize the effect that might have on one area.

The arrest, they could be policing several different areas at several different times.

Mr. RANGEL. Mr. Winn?

Mr. WINN. Thank you, Mr. Chairman.

Commissioner, I think you can probably verify this statement here on page 7. It says: "STRESS members have arrested a number of fugitives sought by the Detroit Police Department and other agencies." That is part of your statement, is it not?

Mr. NICHOLS. Yes.

Mr. WINN. In other words, they work very closely with other members of the police department?

Mr. NICHOLS. They work very, very closely with members of our criminal investigation section. Very often, the local detective detachment will advise STRESS officers of individuals for whom they hold warrants and for whom they are looking, because the STRESS officers are on the street most of their time. They have very little administrative function and they do have a street capability in greater numbers for that type of operation than uniformed police would have because they are not being committed to the radio response.

One of the major problems with uniformed patrols is you don't get the proper concentration because scout cars are constantly being called to take on-site crime reports and many other things. These units are dedicated to a specific mission and can devote themselves to that mission.

Mr. WINN. You also have policemen walking the beat in the same target areas that STRESS is working?

Mr. NICHOLS. Very often.

Mr. WINN. You don't change that operation at all?

Mr. NICHOLS. No, sir.

Mr. WINN. Do you enforce it when STRESS personnel move into a target area? Do you put more foot patrolmen in?

Mr. NICHOLS. No, sir. We attempt to leave the patrol patterns exactly the same way they were. In some instances, if there is a widespread problem, we may use a tactical force at one end of the area and STRESS at the other end and interchange them. But by and large we attempt to maintain the status quo.

Mr. WINN. You say you have fewer than 100 men. I am a little intrigued as to why. You keep the number of men assigned to STRESS such a secret. I would think from a public relations standpoint, if the people in these areas were led to believe you had thousands of men it would be better.

Mr. NICHOLS. I will be completely candid with you. I think part of the impact of STRESS is, as one of you gentlemen developed a few minutes ago, a psychological impact. I think if the average person knew exactly how few officers there were out there we would be depriving ourselves of the major effect, which is a deterrent effect.

I may not be right, but this is the way I view this.

Mr. WINN. I don't know whether you are right or wrong, but I was in the public relations field for several years, and I believe I would lead the public to believe I had thousands of officers out there.

Mr. NICHOLS. That is what we are attempting to do by not divulging the number. We are attempting to avoid statisticizing that particular thing. It is a relatively small unit, numerically speaking.

Mr. WINN. I understand your approach. I just think we view it differently.,

According to your testimony STRESS officers made 633 arrests for felony crimes during the period from the program's inception through December 31, 1972. So you are getting some work done.

Mr. NICHOLS. We are getting a great deal of work done and we are also getting a high percentage of warrants per arrests than other normal units arrive at. This, primarily, is because very often the officers are in position to witness the crime and reinforce the complainants' statements.

Mr. WINN. Well, the main idea of these hearings has been to bring police departments before this committee to testify on the constructive programs that are being installed in the departments across the country, so we can see what is good about the police departments and what they are doing constructively.

I am very disappointed that we, for some reason, got most of our time off on what I feel is dirty linen—it may be political, I don't know that—about the Detroit Police Department. Could there be some element of the Detroit area that would prefer not to have STRESS among their people?

Mr. NICHOLS. I think that is probably the understatement of the year. Certainly, there are those elements. They are very vociferous.

Mr. WINN. And this proves it could not be political.

Nr. NICHOLS. Yes, sir.

Mr. WINN. It doesn't necessarily have to tie in with any elections.

Mr. NICHOLS. It doesn't have to, but you asked me for an honest opinion, and my honest opinion is it has been accentuated by that.

Mr. WINN. I appreciate your honest opinions. I don't think there is anyone up here that came here this morning to try to crucify you, or trick you in your testimony. I think there is definite concern on the part of every Member of Congress that sits up here this morning, and also the other Members that are not here. We do have a job. We have crime increasing in many areas across the Nation.

We are hoping to pick your brains, and those of your officers and of your undercover agents, to see if we can present to the public a better system of law enforcement for the Nation. I appreciate your being

here. You are very candid with the committee. I am sure not only Detroit, but other cities have their own problems. I am glad to hear that the two STRESS officers accompanying you feel the morale is good. I am sure that they are dedicated men as far as what they think their own job within STRESS and within the department might be.

Commissioner, do you pay the officers any additional pay for serving on the STRESS units?

Mr. NICHOLS. No, sir. The only extra duty pay that is afforded any officer in the Detroit Police Department is the communications officers. Officers in STRESS, narcotics, or any other special assignment, including our night details, are given no extra pay allowances or special privileges.

Mr. WINN. How many years have you been in law enforcement?

Mr. NICHOLS. Thirty-one years and 3 months.

Mr. WINN. With 31 years and 3 months' experience, do you think STRESS is doing the job you hoped it would do, and do you expect it to continue?

Mr. NICHOLS. Yes. I will tell this honorable committee exactly what I have told our public. STRESS appears to be contributing to a reduction in the crime, for which it was put together to address itself. So long as that crime is there, so long as the unit functions within the law, so long as the crime appears to be responsive to it, then I would see no reason to disband it.

I will say this in all candor, that there have been changes made in the past and I would envision there may be changes in the future based upon the demography as we see it at the particular time. I am not adamant in my position; I merely say I believe STRESS has been a viable force to combat that crime that is most heinous, most fearful, and leaves the victim with the greatest amount of trauma. Yes, sir; I do.

Mr. WINN. You go along with that, Mr. Martin? His answer is that it is doing the job.

Mr. MARTIN. I think it is doing a good job, sir.

Mr. WINN. And you would keep STRESS in operation?

Mr. MARTIN. And I think, also, if there is any new innovations that could help us, that we would adopt them.

Mr. WINN. Do you go along with that?

Mr. RICCI. Yes; I do, sir.

Mr. WINN. As officers, do you have any meetings with other men from time to time, not only your teams, but the other men? You made the statement that you don't get to see the other team of officers of STRESS. Another team of four men, as I understand it.

Mr. MARTIN. We occasionally have social affairs among ourselves.

Mr. WINN. Do you have official meetings, where you can have input into the commissioner's office and the higher echelon, of what changes you think should be made?

Mr. MARTIN. The commissioner's door is always open to all of his police officers—always.

Mr. WINN. Do the fellows go in and talk to him?

Mr. MARTIN. I have gone in and seen the commissioner a number of times.

My crew chief, Virgil Starkey, has been razing me quite a bit about my association with Commander Bannon. And every day when I go to work, he says, "Have you had a phone call from Jim?" And he

usually says, he makes it sound like a phone rang, "Ron? Jim. Jim? Ron. Are you coming over for lunch? How is John, Ron?" That sort of thing. Things on a first-name basis.

Mr. WINN. So the morale sounds like it is very good.

Mr. MARTIN. It is, sir.

Mr. WINN. Does criticism from organizations or the press have a tendency to disturb the morale of the officers?

Mr. MARTIN. No, sir; we just get a little closer.

Mr. WINN. It sounds like some of the soldiers in the war.

Mr. MARTIN. Better; like the Marines. Even better, sir.

Mr. WINN. Any of you might want to answer this, particularly the commissioner. Why do you think, other than the accidental episode with the sheriff's deputies, your relationship with the press is so bad? Don't you have a public relations officer with the police department?

Mr. NICHOLS. I really don't think the relationship with the press is so bad. What I do see is the fact that STRESS has become a, I guess it would be safe in saying, nationwide symbol now. And any time anything happens the press will seize on it. In many instances, it is good; in some instances it is not good.

I think what we have is a situation where the press is capitalizing on something that is of news value. Most of the articles, I think, if you can wade your way into them, are fairly objective. But it is the headline that does the trick, "STRESS Officer Involved." And I think most people are headline readers.

Mr. WINN. I don't think there is any doubt about that. But as a former member of the press I know they jump into the glamorous things. But usually, there is an out-and-out attempt made by the department to get together with the press and say, "Look, we need your help in this case. You are right and we were wrong," or whatever the situation might be. If this is done I think you find they will work with you. I think you badly need the press in the Detroit area.

Sure, people read headlines basically. I would like to make the suggestion you might try to work out some kind of situation where you could sit down with those that cover the news stories—it is pretty hard to sit down with the headline writers because that is an entirely different bunch of people—and discuss the situation, because you need the press to do the job. You need the community to do the job.

Mr. Chairman, we are running out of time. I yield the balance of my time.

Mr. RANGEL. We will conclude the examination of this panel with some final questions from Congressman Conyers and counsel, keeping in mind the committee has a distinguished panel of police officers from St. Louis which it intends to hear before luncheon recess.

Congressman Conyers.

Mr. CONYERS. Thank you, Mr. Chairman.

Everyone who complains about the operation of STRESS is not necessarily politically motivated. I presume we can begin without even discussing that. And they may not always be vocal elements; there may be a lot of quiet people who do not like STRESS.

Mr. NICHOLS. Absolutely. There may also be a lot of quiet people who do, sir.

Mr. CONYERS. I am willing to agree with that. You wouldn't call the Wolverine Bar Association a vocal element in the community, would you?

Mr. NICHOLS. A vocal element, yes. They are vocal.

Mr. CONYERS. They are a good bunch of lawyers?

Mr. NICHOLS. Let's define the terms, Mr. Conyers, if I may. When I say "vocal element," I mean those individuals who have sufficient horsepower and sufficient access to the press to say something and have it listened to. That is what I mean by vocal. I am not impugning their motives nor anything else, nor their capability as attorneys or judges, whoever they may be.

Mr. CONYERS. You are using "vocal elements" in a derogatory sense?

Mr. NICHOLS. I didn't intend it to be derogatory. I don't think there necessarily has to be that connotation. I would consider myself a vocal element of the police profession.

Mr. CONYERS. It is not one of the vocal elements in the derogatory sense, but they have been critical of some of the operations conducted by STRESS.

Mr. NICHOLS. They have been critical of specific areas in the use of fatal force. Their criticality directs itself primarily to the fact their argument basically is with the law as personified by the STRESS operation.

Mr. CONYERS. That is a pretty valid observation on the part of members of the bar, wouldn't you think?

Mr. NICHOLS. I cannot answer for members of the bar. I am not an attorney, sir.

Mr. CONYERS. Then the Michigan Commission on Civil Rights, a State organization, has been critical of STRESS?

Mr. NICHOLS. They have been critical of areas of STRESS and we have corrected those areas where their criticality has been expressed.

Mr. CONYERS. So, we can understand why the media may sometimes write articles that may not always be favorable to the conduct of officers in the STRESS units?

Mr. NICHOLS. Certainly, we understand it, and I accept it.

Mr. CONYERS. And you can understand why a State judge held the breaking and entering into houses by STRESS officers unconstitutional, since it did not conform to the law. You can understand that, too, can't you?

Mr. NICHOLS. I can understand that is his prerogative as a judge. I may not agree with it, as also a fellow individual who must live within the law.

Mr. CONYERS. So, given those circumstances, you can see where a great number of citizens might be very seriously concerned about the legality and validity of the operation of STRESS in the Detroit community, and whether it is operating within the law? Since it has been in the courts, it has been criticized by State governmental units, its members have been arrested and charged with murder, bar associations are critical, and this does not really mean that they are trying to wipe out STRESS. It means they have some criticism about whether they are getting more safety for their dollar, or danger and possibly death. Would you agree with that, Commissioner?

Mr. NICHOLS. Not necessarily; no, sir.

Mr. CONYERS. Where do you disagree with it?

Mr. NICHOLS. I disagree with the point of view; and I would say each individual under our democracy is entitled to his point of view, but I do not say I must subscribe to it.

Mr. Conyers. What point of view do you disagree with?

Mr. Nichols. I disagree with the point of view they are not getting their dollar value. I disagree with the point of view it was illegal entry. I disagree with the point of view the operation involves itself with illegal tactics. I disagree with the point of view that the decoy operation is in effect entrapment. Those are the points of view I disagree with.

Mr. Conyers. So you disagree with the courts and bar associations, civil rights units, and other civil rights organizations as a matter of exercising your rights?

Mr. Nichols. As a matter of looking at the thing as a police officer and, yes, in a manner of speaking, within my rights.

Mr. Conyers. Let me just finalize this, Mr. Chairman. I know time is running out.

We were talking about the reduction of crime by 15 percent in Detroit as a result of STRESS.

Mr. Nichols. Roughly, 15 percent. It is slightly under 15.

Mr. Conyers. How do we establish any causal connection between its alleged reduction in crime and the operation of the STRESS unit? Do you have some way of doing that?

Mr. Nichols. Yes; I think we can extrapolate a certain amount of credibility to the statistics. Statistics show something like this: There were 23,000 robberies, there are now 17,000 robberies. During the period of STRESS we have reduced that crime about 6,000. Numerically speaking it was one of the most predominant crimes. So I think that when we take those facts we can reasonably assume STRESS has had a fair impact. I will not deny the fact that our sophistication in the area of narcotics enforcement certainly has had an impact.

I would not deny the fact that increased public support may not have had an impact. I will not deny the fact, in deference to Mr. Winn, that the newspapers may not have had an impact. But I think as long as we are dealing in theory, we can reasonably say that STRESS has had a profound effect on it.

Mr. Conyers. Hasn't the murder rate gone up in Detroit?

Mr. Nichols. Yes, the murder rate has gone up in Detroit.

I don't see what that has to do with STRESS, Mr. Conyers.

Mr. Conyers. Well, doesn't it have something to do with the reduction of crime?

Mr. Nichols. It has something to do with the fact that we have a syndrome in which the average murder takes place in the confines of a home, or some private place, that the individuals are generally killed with the handgun, that the individuals are generally killed at the peak of an emotional charge, and that handgun violations, we do not believe as police officers, are treated with the same degree of seriousness that they should be. And I still fail to see what this has to do with the crimes that are preventable by police.

My officers cannot alter the makeup of the human mind. And when you have an individual at the peak of that emotion and the means of snuffing out a life easily and readily accessible, I submit we will have that.

Mr. Conyers. In the first 3 months of 1973, nine Detroit citizens died at the hands of their police department. This figure represents 6.5 deaths per 1,000 Detroit police officers. Is that a little high to you?

Mr. NICHOLS. I don't know because I never made any attempt to view statistics from other cities.

Mr. CONYERS. I want you to know it is the highest rate in the United States of America.

Mr. NICHOLS. Would the good Congressman tell me what the rate of policemen shot in comparison to other cities is?

Mr. CONYERS. No; I do not have statistics on that.

Mr. NICHOLS. I would like to submit this same correlation might be true there.

Mr. CONYERS. Do you have statistics to submit?

Mr. NICHOLS. No, sir; I don't.

Mr. CONYERS. When you do, and if you do, why don't you send them in to this committee and we will incorporate them and the conclusions you draw from it, Commissioner, into the record.

Mr. NICHOLS. I would be delighted to do just that.

[The information requested was not received.]

Mr. CONYERS. Mr. Chairman, I was not here during your previous hearings, in which you had the New York police chief in to discuss the comparable STRESS unit in New York. But I think that the testimony showed that no one has been killed by that unit, that no one has even been wounded, and that they do not have nearly the degree of controversy raging among the citizens of New York over that unit. It would seem to me, somehow, that this committee ought to be able to correlate this drastic difference of operations and see if it can perhaps find out what other cities are doing. I do not know if that is part of your purposes here.

Mr. RANGEL. This committee does intend to compare the testimony with other law enforcement agencies.

Mr. CONYERS. Do you believe that gives you some cause to review STRESS performance with Commissioner Murphy, who, incidentally, was one of your predecessors in the Detroit Police Department, as you well know? Do you believe that suggests that there may be a great deal of validity to some of the concerns by the so-called vocal elements in Detroit and around Michigan, in and out of the law enforcement business, about some of the tactics and procedures used by STRESS?

Mr. NICHOLS. It would influence me to ascertain if there are several other variables that are anywhere close. I think that to make a broad statement like that with as little information as I have available—possibly the good Congressman may have more—demography enters into it, State law enters into it, the number of men available, the number of guns in the community enter into it. A great many factors should be considered. But I assure you we have continually corresponded with other cities who are using a concept close to this and we will continue to do this.

As I said before, we are not adamant, we are not attempting to sell the concept to anybody. We merely appear here to tell you exactly what we have done and what we think the results are.

Mr. CONYERS. Mr. Chairman, I want to thank you very much for allowing me to participate in this hearing. I also want to thank our commissioner of police and his top officers who joined us here this morning.

We obviously could not be dispositive of the subject in this short time. This would require a number of hearings and far more time

spent on individual urban police departments than your committee can allow.

I also add my thanks to Commissioner Nichols and all of the men who have joined him here, because I think these kind of public hearings are vital to insure the support of the community. Although it has not been mentioned here, Mr. Chairman, I think we need to remember that 5,000 policemen can never effectively control the crime situation in the high crime urban community of Detroit in 1973, with 1.6 million people, unless you are receiving community support.

I think these kind of discussions that are open, free, and unfettered will lead the Detroit Police Department to investigations and greater understanding of the New York anticrime unit and others, and will result in continuing modifications and, hopefully, improvements in their operation.

So I say, sincere thanks to Commissioner Nichols for the way he has conducted himself with such candor this morning.

Mr. NICHOLS. Thank you, sir.

Mr. RANGEL. Thank you, Congressman Conyers, for taking time to sit with us.

Mr. Winn?

Mr. WINN. Mr. Chairman, I just want to ask one question.

With the criticism you received from the Wolverine group and the newspapers, have any of these organizations asked you to drop STRESS, throw it out of the program?

Mr. NICHOLS. I think most of them by their rhetoric would indicate they would be much happier if we did. We have been invested by petitions to drop STRESS, but in all fairness we also have stacks and stacks and stacks of petitions in support of STRESS, Mr. Winn.

Mr. WINN. Have they asked to meet with you and discuss the problems?

Mr. NICHOLS. We have met periodically with various elements of the community in candid discussions of STRESS in those periods of time when there was not a STRESS trial before a judge. We necessarily had a moratorium during the period in time when Officer Martin was before the courts. We had a period of silence when the entire STRESS concept was being tested in front of a court. And this was only to protect the integrity of the cases.

We have been as candid with the public as we have here and I would like to say, if I may, to respond to Congressman Conyers' remarks, that we have atempted to be candid. We appeared with Officer Martin because we didn't want it to appear we had anything we were attempting to hide. We believe we are doing right. We believe our officers on the STRESS program are much of the same cut of the two gentlemen you see here, fine young examples of good, honest policemen.

And I would submit that if I have said anything to which anybody took offense, please accept my apologies.

Mr. WINN. Mr. Bannon, did you have something to add?

Mr. BANNON. Just this, Congressman. Many of the things that have been raised here—I am with MCCR, Mayor's Commission on Civil Rights—many of the issues Mr. Conyers was referring to, go back to the inception of STRESS, which was much more violent than it has been after the changes made by the unit, the organizations that you allude to. I think there has been a dialog, it has been a successful dialog,

because we have made structural changes responsive to those criticisms. I don't think we should leave you with the impression we have the same organization today that we had when those criticisms were laid.

Mr. WINN. Thank you, Mr. Chairman.

Mr. RANGEL. Congressman Steiger.

Mr. STEIGER. No questions.

Mr. RANGEL. Counsel may proceed to conclude the inquiry.

Mr. LYNCH. Thank you, Mr. Chairman.

Mr. Commissioner, earlier this week, Chief Winston Churchill of the Indianapolis Police Department indicated before this committee, that in his judgment as a police administrator the public perhaps played as important a part in controlling crime as the police department. Could you comment on that?

Mr. NICHOLS. I would certainly say that any police administrator of any city, large or small, who does not recognize, as what was so eloquently put by Congressman Conyers, that the public is the most important element in the entire police relationship and ability of the department to control crime, certainly has not got it together.

Because without that public support, without the public approbation, without the public appearances in court, without them no police department, however large, could ever hopefully manage a metropolitan area.

Mr. LYNCH. So your position, the position to continue STRESS, is not one you have lightly taken without consideration of what implications it may have on continued public support within Detroit?

Mr. NICHOLS. Not at all, because I am the recipient and I would be glad to send the Congress hundreds of such letters if it wants to see them, that come from the very individuals who are in the areas heavily hit by crime. Their stories tell me an entirely different one. I recognize there can be probably no progress without a certain amount of conflict, and we have attempted to minimize that conflict. We have attempted to modify, as Bannon said, many of the areas where we felt the concept should be modified.

But by and large we feel the public does support it, and that is the several publics we serve, including, we believe, a majority of the black public.

Mr. LYNCH. Mr. Commissioner, certainly the testimony you gave earlier indicating that 85 murders of citizens were committed during 1 year, presumably in the act of robbery, was a factor in the establishment of this unit. Since it has been established, according to your testimony, 18 citizens or residents of Detroit have been killed by police officers, again, presumably, in the act of committing serious crimes or felonies, and a number of Detroit police officers have been killed. I think there is a general concern about the levels of violence associated with this operation.

Commissioner Murphy, incidentally, did testify at length about his citywide anticrime section. Detroit does have a lower crime rate than the city of New York. In New York the robbery rate, for your information, is one of the highest in the country. It is 790 per 100,000. The rate in 1971 in Detroit was 605 per 100,000. Detroit, of course, is much smaller. Commissioner Murphy has 4.5 policemen per 1,000 inhabitants. I wonder if you have a comparable figure at hand?

Mr. NICHOLAS. No, sir; we do not. We have 322 police officers per 100,000, which by my mathematics would be 3.2 police per 1,000 inhabitants.

Mr. LYNCH. It was the commissioner's testimony that his citywide anticrime section, within the period of 1 year, 1972, had effected more than 3,600 arrests. Service revolvers, I believe his testimony indicated, were not fired by his officers, although they may have been drawn; 83 percent of those arrests were for felonies, 750 for armed robbery, 450 of them for various gun charges. There is a stark comparison to be drawn.

I only have one other comment, Commissioner. We have been informed by the chief legal adviser of the International Association of Chiefs of Police that while there is not a definite policy, it is their understanding that policemen in most cities in this country are considered to be on duty 24 hours a day and that if the only reason for not taking action by an off-duty officer is that he has considered himself to be off duty, he would, in their judgment, be subject to disciplinary action and especially so if the matter concerned were a felony.

I wonder if you could be kind enough to have your police legal adviser, or someone in your office, send to this committee Detroit's definite policy in that regard, sir?

Mr. NICHOLS. I will say again what I said before, that the interpretation is a question of semantics. When an officer is off duty, it means he is not being paid. It means that he does not have any mandate to perform that act, that he has the same element of discretion that he would have at any other time, and that in that configuration, he cannot be considered as an instrumentality of the unit to which he is assigned.

That is what I attempted to convey and that is what I say again.

Mr. RANGEL. Commissioner, we fully appreciate your answer. I think what we are trying to do is get a copy of the regulations to see whether it is in line with other major cities.

[The regulations referred to above were not received in time for printing.]

Mr. NICHOLS. Fine.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Mr. RANGEL. We will conclude this inquiry by thanking you, Commissioner Nichols, and Commander Bannon, and the officers that were brought here. I do hope you were not misunderstood. Commissioner. We hope you understand that the point of the questions was to bring out some of the problems you have, as well as the degree of success, so that you might share this with other Members of Congress.

I thank you very much on behalf of Chairman Pepper and the rest of the members of the committee and Congress for taking time out to share your views and your program with us.

Thank you very much.

[The document dated December 31, 1972, previously mentioned, follows:]

Detroit (Mich.) Police Department Analysis of STRESS, Submitted by John F. Nichols, Commissioner

(Statistics including December 31, 1972)

BACKGROUND

One of the major elements in the overall increase in crime in Detroit in recent years has been the felony known as robbery, in which the criminal confronts the victim with violence or the threat of violence.

While all major crimes in the city increased 32 percent from 1968 to 1970, robberies increased 67 percent. Of the seven major crime categories (murder, rape, robbery, assault, burglary, larceny, and auto theft), Robbery alone accounted for 24 percent of the overall increase between 1968 and 1970.

In actual numbers of crimes committed in Detroit, robbery ranks third behind burglary and larceny, and first among crimes in which force or the threat of force is involved.

To deal with this most prevalent of the crimes of violence, a special operation was devised and announced with the Detroit Police Department on January 13, 1971. Its mission was stated succinctly in its acronymic code name, "STRESS," meaning "Stop The Robberies—Enjoy Safe Streets."

The nature of the mission was to operate in plain clothes in such a way as to "merge" with the environment, and to appear to be the type of person that a thug seeking a victim would be likely to confront. Officers would be expected to work in teams. One member of the team on occasion might be expected to pose as a prospective robbery victim.

January 18, 1971, the first arrest was made by one of the earliest volunteers. April 5, STRESS operation results were reported publicly for the first time.

RECRUITING

Initially, officers assigned to the STRESS operation were selected primarily from the precinct support unit (PSU), one of three special task forces within the department's patrol division. As its names suggested, the PSU of about 80 men, reinforces the precincts on response and patrol assignments when the work load is exceptionally high, or pays particular attention to certain types of high-incidence crimes.

Men are assigned to the PSU itself on a volunteer basis. As experience with the STRESS operation increased and its use was expanded, men volunteering specifically for STRESS have gradually filled the entire complement of the PSU, so that to all intents and purposes, the precinct support unit and the STRESS task force are one and the same.

To launch the program, a description of the new operation and its objectives and risks are circulated throughout the department, and those interested were encouraged to seek a transfer to STRESS. As transfer requests were received, each volunteer's record was carefully studied.

Elements of the record of special interest were the volume of arrests, the number of arrests resulting in eventual prosecution, the types of duty previously performed, any citations, disciplinary action or citizens' complaints, physical health, and service rating, particularly in the categories of quality of work, attitude, initiative, judgment, cooperation with fellow officers, and community contacts.

The volunteer's immediate supervisors and the men he has worked with are interviewed. Finally, STRESS supervisors interview the candidate and make their decision as to his suitability for the assignment. In addition, each applicant is given a psychological examination and is personally evaluated. About one-fourth of the applicants are accepted.

Since the operation was announced, about 800 officers from various units have volunteered for STRESS. About one-half of that total have been screened. Of those screened about one-fourth are accepted. A considerable waiting list of applicants remains. Some STRESS officers have been promoted out of the operation, while others have voluntarily transferred out or been reassigned by the STRESS command after an evaluation of their on-the-job performance.

[At present, nine of the assigned STRESS officers are black. This figure fluctuates widely due to varying physical needs.]

The principal source of personnel has been the precinct support unit, however, there are applicants from many other units in the department.

Of the present complement, about 60 percent have from 5 years to 17 years experience and the remaining 40 percent have from 2 to 5 years.

Of the approximately 4,000 patrolmen in the entire department, the experience level runs: 55 percent with 5 or more years, 33 percent between 1 and 5 years, and 12 percent less than a year.

TRAINING

Officers are briefed by STRESS supervisors on a variety of functions: posing as potential robbery victims, response to "silent sentinel" alarm systems installed in selected businesses in high crime areas, plainclothes mobile and foot patrol, and uniformed duty in backup cars. Although the name STRESS has been popularly associated exclusively with the so-called target operation, officers in the program rotate through the other assignments.

In preparation for "target" operations, they are briefed on the specific types of crimes and the types of victims most frequently accosted in the areas they are to patrol. STRESS officers have posed as pedestrians, indigenous to the neighborhood—and all that implies as to dress and appearance—cabdrivers, deliverymen, bill collectors, newsboys, and just plain citizens. A few have donned wigs and dresses to walk in areas where purse snatching has been running high.

After general briefing on overall operations, including warnings on alertness and personal safety, and refresher briefing on the law and department policy affecting police use of weapons, volunteers are assigned to work on specific teams with more experienced officers.

The work of new volunteers, in particular, is watched closely and evaluated by supervision. Critiques are held at daily rollcall. Briefings for a specific day's mission include the latest crime reports, updated daily by computer and plotted on patrol area maps as to location and time of occurence.

OPERATIONS

The "target" phase of STRESS operations is conducted by plainclothes crews, some in unmarked cars and some in civilian-type vehicles—trucks, cabs, and cars of a model and body style not usually associated with police duty.

The crews may be two, three, or four men, depending on the mission and availability of personnel. The most experienced officer is designated as the crew chief. The most popular operating periods are between 9 a.m. and 5 p.m., and 8 p.m. to 4 a.m., although different work spans may be assigned, depending on the nature of the particular crime problem being attacked.

Geographically, a crew will be assigned to a district covering two to four precincts. While the normal precinct scout cars are patrolling their scout car territories, the STRESS unmarked cars are checking the specific streets or neighborhoods showing a high current rate of street crimes.

Depending upon street "activity"—observation of the number and kinds of individuals on the street in a neighborhood at a given time—the STRESS crew, at its own discretion, may decide to "drop off a target," that is, place one of its members on foot in the street situation, in an appropriate disguise. Cover is provided by other members of the crew, on foot or in cars.

To make the operation effective, covering officers have to remain far enough away from the crew's target member to avoid exposure.

This heightens the element of risk, not only for the officer posing as a victim, but also for any teammates covering on foot. There have been instances in which the covering officer, also in disguise, has been accosted while the intended victim has been unmolested.

Depending on the time of day and ethnic characteristics of the neighborhood, the race of the officer may give him away, so this is an important consideration in team composition. At times, even a black and white pair of officers might attract attention. In some predominantly black neighborhoods, even a black officer might be conspicuous in certain disguises at certain times.

Many STRESS arrests have resulted from criminal response to this kind of operation. However, far more apprehensions have resulted from the presence of officers on or near the scene of the crime, operating as surveillance units, unrecognized by the criminal. Occasionally, prospective attackers seemingly recognized something unusual about the disguised officers and avoided contact. In an instance or two, a disguised police officer has been surprised to receive a friendly warning from "street people" that the "man" was in the area, or "watch out, he looks like a STRESS copper."

RESULTS

Since STRESS officers were first assigned to the street, they have witnessed or been the target of on-the-spot street crimes in more than 70 separate cases. Each case involving anywhere from one to five perpetrators.

In addition, the officers have observed and made arrests in numerous other "off-street" crimes, including residential and business burglaries, possession of stolen property, auto thefts, arson, murder, carrying concealed weapons, narcotic sale and possession, and a variety of misdemeanors and traffic offenses.

They have arrested a number of fugitives sought by the Detroit Police Department and other agencies. They also have obtained search warrants and conducted narcotic raids based on information developed from street activity.

STRESS officers have made 5,633 arrests for felonies or misdemeanors during the period the program has been in operation through December 31, 1972. These resulted in 1,635 felony warrants and 413 misdemeanor warrants. Others are pending. Of those arrested, 503 previously had outstanding warrants against them, a total of 372 juveniles were detained, and 1,491 guns were confiscated, 1,253 of which were handguns.

Of the total arrests, over 2,551 have been referred to court or other crimial justice agencies, many more have been turned over to other law enforcement agencies and Federal, State, and local parole or probation authorities, and others have been cited to traffic and ordinance courts.

Since the inception of STRESS in January 1971, robberies for the subsequent 11 months decreased 10 of the months and showed an overall decrease of 9.9 percent. The percentage of decrease for the year 1972 was 17.3.

Robberies in January 1973 were 9.9 percent fewer than the same month a year ago, and for the entire year to date are down 17.3 percent. This compares with a 67 percent increase from 1968 to 1970, a marked improvement.

In the course of the STRESS operation, two white officers and one black officer have been killed and some 100 other members were wounded or injured.

Sixteen criminals—15 black and 1 white—were shot to death by STRESS officers and 58 were injured. This includes those who jumped out of cars, windows, etc.

Coincidently, police robbery figures for the year indicate that 89.8 percent of the known perpetrators were black, 5 to 6 percent white, and the rest unknown.

Let no one have any illusions about the violence of the mugger, the strong-arm artist, the armed bandit, who elect often as their victims, the weak, the drunken, the aged—those least likely to offer resistance.

Let no one have any illusions as to the wave of misery and injury left in their wake—almost 500 injured, many elderly victims sentenced for life to a wheelchair or hospital bed.

Already 112 victims are known to have been killed by criminals in the course of robberies in the year 1972.

USE OF FIREARMS BY POLICE

The policy of the Detroit Police Department on use of firearms by police officers is derived from State law, section 71, Michigan Criminal Law and Procedure—amount and use of force says: "an officer may use such force as seems to him to be necessary in forcibly arresting an offender, or in preventing his escape after arrest. Both officers and private persons seeking to prevent a felon's escape must exercise reasonable care to prevent his escape without doing personal violence, and it is only when killing is necessary to prevent his escape that the killing is justified."

The Detroit Police Manual (ch. 4, sec. 28, "Use of Firearms in Police Action") instructs Detroit police officers as follows:

"Revolvers are issued to insure that each officer has the best means of protecting himself from death or serious bodily harm while performing the duties of a law enforcement officer.

"There can be no question concerning its use for these purposes. What the officer may do for his own protection or defense he is authorized and required to do for a fellow officer, a citizen, or a prisoner.

"Firing the revolver to prevent the escape of persons known to have committed the crime of murder, rape, robbery, burglary, and arson is justified when, in the sound discretion of the officer, it appears to be the only means of preventing the felon's escape.

"However, under such circumstances, just as the law recognizes degrees of severity in crimes by providing a minimum and maximum sentence for a par-

tic-tac crime, the officer about to fire his revolver should carefully plan this action and recognize its severity and possible consequences, particularly in those cases where the crime committed did not result in personal injury.

"Firing the revolver cannot be justified when used as a warning device, nor can it be justified when used for apprehending persons suspected of committing a crime or persons fleeing from the scene of crimes other than murder, rape, robbery, burglary, arson, or the like."

Department Training and Information Bulletin 53, April 30, 1968, interprets both the State law and department policy as follows:

". . . The use of the revolver is confined only to those crimes of extremely serious nature—murder, rape, robbery, burglary, and arson, or the like. Here the criterion is clearly indicated: there should be no doubt in the officer's mind as to the guilt of the fleeing felon. Even then, the officer must give some consideration to the severity of the crime, and the danger of injuring an innocent person.

"Before firing a shot, an officer must consider the fact that regardless of what a man has done—multimurder or what have you—the State of Michigan has no capital punishment. The stresses of our environment at the present time demand that a continuing emphasis be placed on the seriousness of taking a life.

"Michigan State law clearly states that every effort should be made to effect the arrest by peaceful means whenever possible. Aggression on the part of the felon to resist arrest, or to escape from custody, will justify the use of force by an officer, only in sufficient quantity to effectively overcome the resistance. Under these circumstances, the officer would be justified in using his firearm when confronted with an armed resistance, or when he is threatened with serious body injury. The law does not justify the use of force when no resistance has been offered, and when no intention to escape has been indicated."

It is apropos at this time to deal with the subject of entrapment, which has been offered as an argument against STRESS.

"To constitute entrapment, an officer, by law, must instigate a criminal act which would not have occurred to the perpetrator except for the actions of the officer. To hold that police officers in civilian style of dress constitute entrapment is to take the ludicrous position that all victims of crime are guilty of entrapment, because if they hadn't been there the crime would not have occurred." This is a quotation from a letter written by an executive of the Detroit Police Department to the Public Letter Box.

In response, Justice Eugene F. Black, of the State supreme court, wrote the author, "Your statement of the law of entrapment is precise and accurate in every way."

It would appear, then, that the element of entrapment does not exist in the STRESS operation.

CITIZEN RESPONSE

The most visible citizen response to STRESS operations has been organized protest of some groups that followed the shooting death of two teenagers, who assaulted and robbed a STRESS officer on September 17, 1971. Unorganized response has been overwhelmingly favorable.

Prior to that date, such mail that reached the police department dealing with the STRESS operation, without exception, praised the operation and, in many cases, asked for its expansion.

In the 10 days following the shooting incident of September 17, when public attention was at a peak, the commissioner's office received 138 letters or cards from citizens, 11 wires, and dozens of phone calls. All but two of the letter writers supported STRESS (98.5 percent), including 19 citizens who specifically identified themselves as black.

Of the wires, nine were in support and two were opposed. Of all the phone calls, only one was in opposition.

Comments from black citizens included the following:

"We are a group of black people who support rights over wrong, not color. We support this program 100 percent."

"Keep the STRESS units intact, and rest assured that you do have a lot of silent support, like me. We ordinary black citizens fear reprisals and do not ofttimes express our true sentiments."

"I am black and have come very close to being another one of your police statistics—at the hands of black youths. I do not favor the abolition of STRESS. And any black who does, evidently has not been a victim of their brothers. It is true the young men killed recently were leaving the scene of the crime

and no longer a threat to the officers; but they were still a threat to me or any other individual they would decide to rob or attack."

"I am black and am no law and order man of the ilk of Vice President Agnew, but I am no thief and robber either. Many other blacks are glad to have policemen around regardless of their race, but for them to say so publicly leaves them open for much criticism and harassment."

"It's time we started thinking about the victims of these assaults rather than the criminal."

Two letter writers with personal experience of victimization wrote:

"My husband is still suffering from the results of his encounter almost a year later. He has no sense of smell or taste and has had to have an operation. Fortunately, however, he is still alive."

"* * * I was attacked, very near the parking lot in Palmer Park, by a group of about eight to 10 Negro boys, and was being beaten until rescued by an officer of the STRESS unit. There is no way for me to thank this officer for his very resourceful and efficient handling of the incident in a way which saved me from serious injury."

Finally, a black minister submitted to the police department the results of a poll he took of citizens in his area, including 704 adults and 440 teenagers. Of 1,144 people, 818, or 71.5 percent, supported STRESS and 326 opposed it.

Of the adults, 699 or 99.2 percent supported it, and 5 opposed it.

Of the teenagers, 119 were in support and 321, or 72.9 percent, were opposed.

AN EVALUATION

There is an old maxim in police work that the rapidity and certainty of apprehension, and a speedy and fair adjudication in a court of law, is the most effective deterrent to crime.

In spite of the best intentions in the world on the part of concerned citizens, judges, attorneys, police officers, lawmakers, and others of good conscience in the criminal justice system, the various statistics of law enforcement suggest that this concept of deterrence becomes less and less "certain" over the years.

This factor of the certainty of apprehension is the principal external deterrent to the criminal. This is how he measures his risk, the odds he faces when he gambles on a criminal career.

As mentioned before, this is why today's robbery opportunist picks on easy marks—the elderly, the infirmed, the vulnerable. They are not only less physically capable of resisting him, but they are more apt to fail to appear or to make confused and uncertain witnesses in a court case, so that even when apprehended and charged, he stands a good chance of avoiding conviction.

By utilizing police officer volunteers to stand in place of potential victims, the department has increased the degree of risk to the criminal, both as to apprehension and final conviction in court.

STRESS has, to some degree, increased the certainty of apprehension for the crime it is aimed against. This, combined with the public attention focused on the operation, should make many a potential robber more reluctant to take the crime risk than he would be if there were not such operation.

The use of fatal force in some arrests is a tragic necessity which neither the department nor individual police officers take lightly. The department's rules and guidelines could hardly be more explicit. Nevertheless, there is always the element of final discretion in a street situation.

Once the officer is actually confronted with the visible or hidden threat of a gun, a knife, or a physical attack, he has not time for conscious and deliberate evaluation of the suspect's age, race, sex, or emotional condition, or the abstract conceptualization of comparative punishments.

He has to operate on the evidence instantly apparent to him.

All his conditioning is directed to restraint in the use of firearms—to use only as a last resort. But when this moment of last resort has arrived, the police officer in such a situation knows that the difference between life and death for himself or the person he confronts may be simply a matter of split-second timing. He also must and should consider the danger and menace to life to which the next victim of the fleeing felon might be subjected.

Make no mistake, it is the criminal, not the police officer, who has named the game; that is, made the choice that has created the kind of macabre situation in which everybody's life is, or seems to be, on the line—criminal, victim, and police officer.

In pursuit situations, the officer has clear guidelines as to the nature of his authority and responsibility.

STRESS officers would run less risks, and possibly supporting police would be able to move faster to make arrests, if officers on STRESS assignments were equipped with tiny, invisible radio transmitters. Such transmiters, concealed in the clothing, would be kept open and monitored by support crews. Such equipment is available, but the Detroit Police Department does not have a supply for street use, nor the funding with which to acquire them.

There is no simplistic solution to the problem of protecting the police or the citizenry from injury as the result of street activities. We in the department, have experimented extensively in the area of body armor, which carries with it the difficulty to maneuver, and does not protect with sufficient certainty.

We have also explored the possibility of mid-range weaponry. Technology has failed to provide for police departments, a weapon which can be utilized to immobilize or to halt a fleeing individual without the possibility of great physical injury or death.

Perhaps the future holds better things, but to date, such weaponry is not adaptable to the type of operations most police officers find themselves involved in on a day-to-day basis. Such weapons were designed for adaption to situations of mass confrontation and disorder and are far too bulky, cumbersome, and uncertain for normal usage.

Thank you.

Mr. RANGEL. The committee will recess until 1:30.

[Whereupon, at 12:15 p.m., the committee recessed, to reconvene at 1:30 p.m., this same day.]

Afternoon Session

Mr. STEIGER (presiding). In the absence of the chairman, we will declare the afternoon session open and ask that counsel proceed with the examination.

Mr. LYNCH. Thank you, Mr. Chairman.

Members of the committee, I am happy to introduce to you at this time, Col. Eugene J. Camp, chief of police of the St. Louis Police Department. Chief Camp has been in his present capacity for 3 years and has 36 years of service with the St. Louis Police Department. He has been a member of the Missouri Law Enforcement Assistance Council, the State planning agency under LEAA, and he holds a bachelor of science degree from St. Louis University.

Colonel Camp, if you have a prepared statement, would you please deliver it at this time.

STATEMENT OF EUGENE J. CAMP, CHIEF OF POLICE, ST. LOUIS, MO., POLICE DEPARTMENT, ACCOMPANIED BY WILLIAM ARMSTRONG, SERGEANT, LABORATORY DIVISION; AND CHARLES MUELLER, SERGEANT, JUVENILE DIVISION

Mr. LYNCH. Do you have prepared remarks you would like to address to the committee?

Mr. CAMP. Yes, Mr. Lynch.

Mr. LYNCH. Please proceed.

Mr. CAMP. The program that I have here is the same you have. We were asked to discuss our police laboratory technician program, the evidence technician unit, and a program we have in the juvenile field, the teenage counseling for delinquents.

I was permitted to bring the people who supervise those programs. On the evidence technician, I have Sgt. William Armstrong; and the counseling program, I have Sgt. Charles Mueller.

I think it is best that I let these people describe their programs. They work with them. And then I will be glad to comment on them afterward, if you care to.

Mr. LYNCH. That would be fine.

Mr. CAMP. I think the evidence technician program will be first and Sergeant Armstrong will tell you about that.

Statement of William Armstrong

Mr. ARMSTRONG. Mr. Congressmen, Mr. Lynch: The evidence technician program was designed with two specific goals in mind. The first goal was to cover by crime scene processing a greater number of crime scenes than had been processed before, and at the same time process them in depth by trained, competent crime scene examiners.

The second goal that we had set for ourselves was to save patrol time by having the evidence technician process the scene which had been relinquished to him by the investigator and thereby putting the investigating officer back into service on the street where he can do the most good.

As an adjunct to that, we also save the patrol force time in that the investigating officer no longer is required to collect evidence at the scene; is no longer required to leave his assigned area and take whatever evidence he has collected to the laboratory, to the ID bureau or wherever it might be necessary.

The unit was set up, of course, in the face of a national response, or a national demand I should say, for better evidence presentation in trials. As you all know, Justice Goldberg in the *Escobedo* decision, stated, as a result of that decision, that prosecutors must rely primarily on material evidence, and this, of course, was what we were committed to do.

Now, within the framework of this organization, we had selected 20 officers who received some 80 hours of classroom time, which covered such diverse subjects as photography, the searching for and lifting of latent fingerprints, and how to recognize and collect physical evidence at scenes of crime.

These men were trained with a curriculum that was designed by the FBI. They were trained by local agents of our FBI office and staff members of the police laboratory and identification bureau of our department.

At the conclusion of their 80-hour training they were sent in to assigned areas, and there they received 1 week of what you might call

on-the-job training, which merely involved the presence of both a qualified identification man and a photographer, who were able to resolve whatever technical difficulties they may have gotten into while they were on their first day's work.

Subsequently, you might say they had a full 3 weeks of training. They were assigned in four vans which were purchased, by the way, with LEAA money. The vans were fully equipped to allow these officers to have all of the facilities necessary to properly process crime scenes. The organization has met its goals, one of which was to increase the number of crime scenes visited, and at least we met the goal of the first impact funding by increasing the number of crime scenes visited by some 20 percent.

At the present time, we are running about 30 percent over what was examined prior to this.

Statistically, we examined some 35 percent of all index crimes that occur within the city of St. Louis. This is an increase over the past 6 months of some 8 percent from the 27 percent that we had originally been searching.

Mr. LYNCH. If I might interrupt at that point.

Have you any data to enable you to make a judgment as to whether or not that is a higher percentage than might be the case in other cities?

Mr. ARMSTRONG. We have no definitive information on this, but a fast check that we made after we received your call showed that about 1 percent of crime scenes are examined for physical evidence on a national basis.

Mr. LYNCH. How did you make that check?

Mr. ARMSTRONG. Primarily, by calling various organizations.

Mr. LYNCH. Calling other police agencies?

Mr. ARMSTRONG. Right.

Mr. LYNCH. Thank you.

Mr. STEIGER. Excuse me. Are you saying only 1 percent of crime scenes are examined for physical evidence by other than the officer on the scene?

Mr. ARMSTRONG. That is correct.

Mr. STEIGER. You don't mean the officer on the scene didn't collect evidence?

Mr. ARMSTRONG. In no way. We are talking about technical personnel.

Mr. STEIGER. Yes. Thank you.

Mr. ARMSTRONG. Now, the other goal we have satisfied, of course, is in saving the department personnel time on the street. We have reduced response time of our unit to an average of 22 minutes per assignment, which for all practical purposes means the investigating officer can get back into service and be available for added duties much more rapidly than in the past.

Mr. LYNCH. You have how many of these vans, Sergeant?

Mr. ARMSTRONG. The original grant was awarded in 1970. At that time we purchased four vans. Three of these were assigned to areas and the fourth was held as a replacement or supernumerary vehicle.

In January of this year we received delivery of two additional vans, purchased again with impact fund money. These have allowed us to field five units, 16 hours of the day, on a 7-day basis.

Mr. LYNCH. How many men man one of these vans?

Mr. ARMSTRONG. Basically, it is a one-man operation, although we do have one van with two men in it that we primarily reserve for infamous-type crimes.

Mr. LYNCH. And you have trained 20 St. Louis police officers as evidence technicians. They are the people who man these vehicles; is that correct?

Mr. ARMSTRONG. That is correct.

Mr. LYNCH. And they were regular patrolmen within your department prior to this assignment?

Mr. ARMSTRONG. Yes, sir; they were.

Mr. LYNCH. I notice that the copy of the photo you gave me has a map of the city, indicating in various sectors or precincts, or at least police subdivisions, how many incidents are processed by the evidence technician unit. I notice in one precinct it is up to 65 percent. What precinct is that? Are you familiar with that?

Mr. ARMSTRONG. Yes, sir. That is the second district.

Mr. LYNCH. Is that a high-crime area?

Mr. ARMSTRONG. No, sir.

Mr. LYNCH. Why is it that there is a higher percentage made there? There is one down here, I don't see a designation, but it shows 19.8 percent.

Mr. ARMSTRONG. Is this down in the lower central part?

Mr. LYNCH. Lower middle portion, yes.

Mr. ARMSTRONG. This is our downtown area where we have our business area, things of this nature.

Now, I don't know why there is such a disparity between the two areas. You have to remember that we are contacted by radio. Few of these calls are self-initiated. We are only responding to calls for services by the district officers.

Mr. LYNCH. I see. And, according to your testimony, the number of the index crime scenes which now receive the technical assistance of an evidence technician has increased significantly; is that correct?

Mr. ARMSTRONG. That is correct.

Mr. LYNCH. What impact has that had on the criminal justice system in your city?

Mr. ARMSTRONG. For instance, fingerprint identifications have increased about 75 percent. This, of course, takes these criminals off the streets. There is another figure behind this one. When a man is identified as having committed a crime he will frequently then confess to a number of other crimes he may have been involved in.

Mr. LYNCH. You mean when he is identified and when there is physical evidence to link him to that crime?

Mr. ARMSTRONG. Whether physical evidence links him to the second, or third, or succeeding crimes or not.

Mr. LYNCH. No; when you said a man is identified as having committed a crime, you mean identified through the services of the evidence technician unit?

Mr. ARMSTRONG. Correct.

Mr. LYNCH. Has there been an increase in the number of good cases your department has been able to make and has there been an increase in the number of convictions as a result of the increase in crime-scene technician services?

Mr. ARMSTRONG. Right. Well, right now, Mr. Lynch, we are not able to say positively; however, as part of our next grant we are going to make a study of just this issue. We are going to attempt to determine the position that physical evidence plays in the conviction rate in our courts.

Mr. LYNCH. Who performed this service prior to the time you organized the evidence technician unit?

Mr. ARMSTRONG. Prior to this, the services were provided by three individual functions of the police department. If you wanted a scene searched for fingerprints you called the identification bureau; if you wanted that scene photographed, for instance, you had to call the photo lab; if you wanted technical assistance at a crime scene to search for physical evidence, then you called the laboratory division. This was, of course, both a cumbersome and time-consuming process.

Mr. LYNCH. How much does this program cost the department each year?

Mr. ARMSTRONG. Well——

Mr. LYNCH. What is its finding, in other words? How much money do you receive? Do you get this from LEAA?

Mr. ARMSTRONG. Salaries, of course, are borne by the department and they amount to some $225,000 a year plus fringes. Supplies, equipmentwise, it is a relatively small amount. The unit, the vans and equipment, have been bought through Government money and, to this date, we have spent some $48,000 in that area for all of the equipment, all of the vans, that we have used.

Mr. LYNCH. Colonel Camp, what is your goal as to the number of index crime scenes that will eventually be visited by the evidence technician unit? Are you satisfied with the 35 percent?

Mr. CAMP. It is higher than that now and it is increasing, and I am satisfied with the acceptance by the rank and file of the program and the benefits that we derive. Just about all index crime scenes will be processed.

Mr. LYNCH. When do you plan to have that capability?

Mr. CAMP. I thought right now; every time we get a call we respond. Every one.

The main category you can't do anything about is stealing over $50. Thieves leave no evidence; everything is gone. That takes a big share of the crime right off the bat. We try to process as many stolen automobiles as we can.

Mr. LYNCH. I assume you send evidence technicians to the scene of all homicides?

Mr. CAMP. Yes, sir.

Mr. LYNCH. I assume you send them to the scene where rapes have occurred?

Mr. CAMP. The evidence recovered in rape cases is usually brought to the lab.

Mr. LYNCH. I assume you send them to the scenes of armed robberies, especially when they are in a locale that lends itself to this kind of analysis?

Mr. CAMP. If it is a bank or supermarket, where the man might have placed his hand or fired a shot, it will go to that scene. Beyond the index crimes they go to fires, arson cases, serious auto accidents, whether it is critical or death cases.

Mr. LYNCH. What percentage of stolen autos in your city would be dusted for prints?

Mr. CAMP. The sergeant tells me about 30 percent. And the reason for that is perhaps maybe the car has been fouled up in the weather, or burned, or something of that nature, and there is nothing you can do about it. It is useless.

Mr. LYNCH. It would be your testimony, then, sir, that certainly for the most serious index crimes evidence technician units respond to most of those cases?

Mr. CAMP. Right. They would respond to every one. If, in their judgment it wouldn't be necessary, it would be useless, a waste of time to come, they have that discretion to tell the radio dispatcher they won't respond. But they go to all burglaries, all murders, and many of the auto thefts.

Mr. LYNCH. Colonel, Sergeant Armstrong indicated as a result of an informal telephone survey of other law enforcement agencies, his opinion was that on a nationwide basis less than, or I think he said about, 1 percent of all index crime offenses received a service similar to yours. In your judgment as a police administrator is this a program which ought to be adopted in other law enforcement agencies?

Mr. CAMP. Yes. Our experience has been, just from a public relations standpoint—and I am not selling anything. I am just telling what the experience has been—that there is often the criticism of the police that if this happened in a more affluent neighborhood they would get the full treatment. Everyone gets the same treatment here.

I invite you to look at our files, particularly homicide cases; whether it is a nondescript person or civic leader they are all treated equally. And this same evidence procedure is followed.

People today are accustomed to crime-scene searches. They are educated through TV, the comic strips, and magazine articles. Every victim of a crime feels that his crime is as serious as the next and he wants to be treated that way; and this does answer your serious criticism.

Mr. LYNCH. Is this an expensive program?

Mr. CAMP. I think it is a very inexpensive program. In fact, we recover the patrol time, which is a costly item. Manpower is our biggest cost. And if you can get the evidence technician unit there in 20 minutes, which they have been doing, that man is freed immediately. He goes on his regular patrol tour of duty.

If it were another case and he would be held there for overtime reasons, we have to compensate him in compensatory time. You don't pay him for comp time. It is an economy in that sense alone.

Mr. LYNCH. What kind of feedback have you had, if any, from the prosecutor's office about the evidence which you have developed through the use of this unit?

Mr. CAMP. Mr. Lynch, I have a note here, "Prosecutors are complimentary." I wanted to mention that particularly. In court, as you lawyers know, the physical evidence is often unassailable and it is accepted quicker than a witness testifying. We are happy when we can

show irrefutable proof by lab analysis what we have found and that is the best evidence as far as I am concerned.

Mr. LYNCH. From everything you said it appears to me this program is one which should be easy for most police departments to implement: is that correct?

Mr. CAMP. I recommend it to any department: yes, sir.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Mr. STEIGER. I would just advise the colonel and gentleman that we just had a message from Mrs. Sullivan, who planned to be here and welcome you. She is at a meeting of the Rules Committee and extends to you her warmest welcome and her assurance she is aware of your good work.

Mr. CAMP. Thank you very much.

Mr. STEIGER. Colonel, I am impressed with this because it sounds very innovative. I just wondered, perhaps Sergeant Armstrong would be the best to respond, if the funding were not a factor would you feel it would require more units than you now have available?

Mr. ARMSTRONG. At the present time we have funding that allows us to pay the present personnel overtime pay to work on their holidays, recreation days, and vacation days, to establish an overlay watch that allows us to field two additional vans on each of two watches daily. This personnel cost would have to be picked up by the department to maintain the present level of effectiveness.

Mr. STEIGER. I understand that. But what I really want to know is if the number of units that you now have, the number of people, are adequate to do the job.

Mr. ARMSTRONG. Yes, I think so. By the way, if I might interject a thought here, the original grant was awarded in 1970 and terminated in 1971. The department picked up this expense until the receipt of the impact funds in August of last year. So they have accepted the expense of this unit.

Mr. STEIGER. Do you know of any other communities that have adopted this particular program?

Mr. ARMSTRONG. Washington, D.C., has a program much like this.

Mr. STEIGER. I didn't realize that. Very good.

Colonel, what is the size of your police force?

Mr. CAMP. About 2,200 or 2,300 sworn personnel.

Mr. STEIGER. What is the population of St. Louis?

Mr. CAMP. It has dropped to about 623,000. And then we have just near 700 civilian employees in addition to the sworn personnel.

Mr. STEIGER. So we are talking about almost 3,000 people?

Mr. CAMP. About 3,000 people.

Mr. STEIGER. As a rule of thumb, at least for your purposes, the 20 trained personnel and the four units are sufficient for that size force, for the kind of activity you are faced with?

Mr. ARMSTRONG. Yes, under the present situation. I would like to bring up another thought. It was mentioned about the processing of 100 percent of the crime scenes. We have two observations to make here.

No. 1, it is not necessary to process 100 percent of the crime scenes. Second, along with this idea of the effectiveness of physical evidence, or the research in this area, we are also going to research the question of, "What is the optimum number of crime scenes to be examined with-

in our city?" so that we properly may be able to establish a manning level for this unit.

Mr. STEIGER. That is a good point. I also have to believe it is not a quantitative result and I have to believe there is some effect on the accused in knowing there is that kind of unit available and that kind of evidence, at least. If the guy knows he did it and he knows your unit was on the field, even if you missed it, he is liable to be more apt to cop out.

Mr. ARMSTRONG. May I tell a story?

Mr. STEIGER. I wish you would.

Mr. ARMSTRONG. Last week there was a fatal shooting in a local go-go establishment. Our evidence technicians went to the scene and took swabs of three individuals' hands for powder residue tests. After we left the scene, we got a telephone call from a waitress employed in the establishment whose hand had been swabbed. Her statement was, "Well, you are going to find out I shot that guy, so I will admit it now."

So this is the degree of effectiveness, the type of effect you have mentioned.

Mr. STEIGER. I have to believe that is a very valid observation. I have no further questions.

Mr. Winn?

Mr. WINN. Thank you, Mr. Chairman.

I am sorry I missed the earlier part of your testimony, Colonel. But I have been reading the information here about the vans and it is similar to what I was talking to the gentleman from Detroit about, as far as the deterring asset it has, as far as public relations with the community.

Of course not only the efficiency, and I think you have that well named, but the speed with which you can process and make your tests. Do you have any idea how many man-hours it might save over the normal process of calling a man out from headquarters, or separate crews?

Mr. CAMP. Just to give a random figure would be pure guesswork, but I can show you by example: An officer goes out on the 7 a.m. tour of duty. At 7:30 he gets a call of a burglary; he gets there; looks the scene over; knows it is an assignment for the ETU men. Prior to this he would have to wait for various ones, maybe a fingerprintman, someone from the lab.

We didn't have so much from the lab unless it was of some magnitude. They waited for the fingerprintman and photo force.

Mr. WINN. These men are trained to take photographs?

Mr. CAMP. Yes.

Mr. WINN. As a part of their training?

Mr. CAMP. Speed-graphic-type cameras, and well trained in the use of cameras.

Mr. WINN. Do they come from the ranks, usually?

Mr. CAMP. Yes, sir.

Mr. WINN. Always?

Mr. CAMP. Always. These were volunteers. They were not just on a volunteer basis. There were roughly 80 that responded to the questionnaire, and they were given aptitude tests and they settled on these 20 people for training.

Mr. WINN. Do they get additional pay for serving on this efficiency van?

Mr. CAMP. No, sir. It is just diversity of assignment as part of the job. They all like to try something different. It broadens their experience. They don't intend to be typed in there for life, but they could go from there to homicide, a better unit. They become better known.

Mr. WINN. You have no women serving in the unit?

Mr. CAMP. No; but I can see the time for women because we picked two women for the next class.

Mr. WINN. Would there be any benefit in having women serve because of the tests and the interviews with women that have been raped, that you might do a better and more efficient job with women than you would with men?

Mr. CAMP. Mr. Winn, that was one consideration in picking these two female applicants for the force.

Mr. WINN. They are not on the force at the present time?

Mr. CAMP. They will be on there Monday. They will be sworn in. But we have approximately 15 policewomen that have been with us for many years. And through attrition, they reached that number. I think we had as high as 25.

Mr. WINN. I am not really trying to figure out how many women you have on the force. I am trying to relate to a program we heard about earlier in the week, where in many cases there is an insensitivity by a patrolman when talking to a rape victim and that the women will talk to another woman more candidly and probably more efficiently than they would with a man.

Mr. CAMP. Mr. Winn, there are a couple of women that formed an organization, and three of them came to my office last week with that very idea. They feel the victim to be more likely, or more at ease, to talk to a female officer and that is one of the considerations for this new unit.

Mr. WINN. New York seems to have a program which is relatively new that is receiving a lot of publicity. And the young lady in charge of that, Lieutenant Tucker, was before this committee earlier in the week.

She seems to think, in her personal testimony, that this might be a better job of really getting to the facts on rapes. She made the statement, which kind of surprised me but maybe it is again because I am a man and not a woman, that she felt—and I am not quoting her—women could better identify a rapist, his mannerisms and things like that, when being interviewed by a female officer than a male officer.

That was kind of interesting and that is why I asked you if you had women. Do you think if you had women on these vans it would cause any problems in any way? The men wear uniforms?

Mr. CAMP. Yes.

Mr. WINN. And the women would be in uniform, too?

Mr. CAMP. Yes.

Mr. WINN. And people are getting used to seeing policewomen in the various cities these days?

Mr. CAMP. I think they are; yes. I am not fully convinced that we would use them on the van at this time. There are assignments where

they could be used, but these assignments are in high-crime areas and often they would be alone.

Mr. WINN. They would be alone?

Mr. CAMP. Most of our evidence technicians do work alone.

Mr. WINN. The van drivers are alone? I thought they traveled in teams of two.

Mr. CAMP. Only on some of the murder cases where there may be a big area that is searched for a limited time. A lot of employees will be coming in and we want to give it a thorough, quick search.

Mr. WINN. Vans really are not pertinent in the basic or broad context of these hearings, which is preventive methods, as much as they are an efficient operation, and timesaving for your patrolmen.

Mr. CAMP. There is a side effect. The recovery of man-hours. These men are returned to patrol, and with the added visibility, or heightened visibility, of these police cars, that is where the benefit comes in.

Mr. WINN. From the community psychology, seeing the vans, knowing that they are there and on the job?

Mr. CAMP. It is another police vehicle in the neighborhood.

Mr. WINN. Yes. And it leaves more men available rather than pulling them in in headquarters, or off other divisions, or leaves them on the street in their basic assignments.

Mr. CAMP. That is right.

Mr. WINN. Have you touched on your delinquency program?

Mr. CAMP. No.

Mr. WINN. That is next?

Mr. CAMP. Just to mention the man who has conducted this program is here and he will testify.

Mr. WINN. We have a copy of a letter from the National Clearing house for Criminal Justice, Managing and Architecture, complimenting Sergeant Mueller, so we will wait until we get to that.

Thank you, Mr. Chairman.

[The letter referred to was retained in the committee files.]

Mr. STEIGER. Counsel, would you proceed.

Mr. LYNCH. Thank you, Mr. Chairman.

Colonel Camp, we have heard testimony from several chiefs of police that high levels of violent crime continue to be perpetrated by very youthful offenders. Here in the District of Columbia it has been true for a number of years that a very, very substantial proportion of index offenses are committed by young people.

Your department has recently instituted a special program for counseling hardcore delinquents. I wonder if you could have Sergeant Mueller describe, first, what you define as a hardcore delinquent; and, second, what you have tried to do to counsel those people.

Sergeant Mueller?

Statement of Charles Mueller

Mr. MUELLER. Thank you.

Mr. Chairman, a hardcore delinquent for the purpose of the original grant was any youth under the age of 17 who had eight arrests or more. A recidivist naturally is one who has more than one arrest; but for hardcore, we took it up with the court and they decided that for identification of "hardcore" they would decide on eight felony arrests or more as the criteria.

In our original grant we reached out and we gathered together 125 youths who shared 850 arrests among them.

Now the unique feature of this particular program of team counseling is that from experience we have found the motivation, the capability, and the probability of crime occurring among young people on the street, is not individually motivated, but peer motivated. These 125 individuals constituted about 40 groups.

In other words, any one member of a peer group had to have eight arrests or more.

Sometimes an individual had 25 arrests. The two individuals that were with them, perhaps had five, one had three. But they were a part of the peer group. So our purpose was to gather these groups off the street at times of high-area crime, between 6 and 10 p.m.

Mr. WINN. Excuse me just a minute. These are organized groups? Do they go by names?

Mr. MUELLER. No. This is the feature. This is why we don't call them gangs. They are groups. If I may read the type indicated right here:

One group, 369419. Individual 16 years of age, has arrests for rape, assault, burglary, larceny, and auto theft.

No. 2 man in that group is 16 years old and he has had an arrest for rape.

No. 3 in the same group has arrests for burglary, auto theft, and vandalism.

No. 4, this boy is only 15 years of age and he has a record of rape, robbery, assault, burglary, and larceny.

No. 5, this boy is 18, he has no record. This particular boy, the last one, is age 15, and he has no record. But this is the type of behavior that is out on the street.

Mr. LYNCH. Excuse me, sir. I am not sure I understand what the two youngsters with no records are doing in that group.

Mr. MUELLER. They are part of this group. They are a peer group. For the purpose of this contact, this encounter, they had no record as far as we know.

Mr. WINN. But they are kind of heading for trouble with the company they are keeping?

Mr. MUELLER. This is why we keep them.

Mr. WINN. Aren't they both 15, the last two?

Mr. MUELLER. No. The last one was 15 and the other 18. There was only one over age, that was 18. But all the rest were below juvenile age, or at juvenile age, and you heard the record they have.

This is the type of group we went after, to identify ourselves with them and them with us. Does that give you the idea of the 125 boys we reached out for?

Our purpose in "reaching out for," is to change the direction and the behavior pattern of these groups that heretofore had been constantly involved with the type of offenses I just read off. If allowed, and no effort was made to try to change their behavior or change their direction, we had every reason to believe it would continue. So this was the purpose of the program, to reach out, identify these particular groups—of which some years back, we identified that there were 500 boys with 8 arrests or more in the community of St. Louis.

These 500 were within a perimeter of about 125 groups, so we knew that the problem was there.

Now, what to do about it? We reached out to try to identify the boy with the department and the department with the boy.

We did that by trying to open up three centers in high-crime areas—recreation centers. We did not try to make it a police department pro-

gram per se, nobody but police. We reached into the community and saw to it that we had police officers, recreational leaders, and juvenile court personnel who operate as counsel under secondary employment. We take no manpower away from the police department. We selected juvenile officers who constantly work with children, anyway.

We took juvenile court probation officers who, as probation officers, were practically with them anyway. They are already under their counseling services at the office. We then provided a recreation leader who could fill in the gaps we needed to keep them constructively entertained while we talked with them.

I could just keep on going and going.

Mr. LYNCH. I would like you to describe, if you would, what a typical counseling session consists of; what kinds of counseling do you give the youngster who has been in this kind of trouble? Those were rather extensive records you read off a moment ago. What effect has counseling had on their subsequent recidivism rate?

Mr. MUELLER. We never have less than two counseling sessions a week, Tuesday and Thursday. Some places it is Monday and Wednesday. But these three counselors I spoke of, they personally care for the behavior patterns and the conduct of 10 individuals. Each officer or each counselor has 10. So there is 30 to a unit, 30 to a center. This officer must account for the boys' attendance or nonattendance and report back to our office. So we constantly know whether this boy's attendance is varying or not. And he makes home visits if he doesn't attend regularly.

His counseling, more or less, occurs as they meet as a group. They sit down and ask what would you like to do? We have them occupied; at least, we have them. They are off the street, we have them in a center that, if I can digress for a minute, many times they have been thrown out of. In fact, some of our counselors were thrown out along with them, when they first attempted to meet in these centers.

They threw the boys out and the counselors along with them, and we had to persuade them that this was a better situation and now they were under good control. I hasten to add we have had no bad result. We have had no one complain or say that our boys were not under good control.

Mr. WINN. Who pays the counselors?

Mr. MUELLER. The LEAA grant. And they pay them $5 an hour. At this particular time, they work 14 hours a week.

Now, the counseling session, to get back to the question, consists of first meeting with the boys, discussing what their likes are, what they don't like. We have pool tables, ping-pong tables. We have a bumper pool table and we engage them in different types of activities.

We have basketball courts available. We know this type of boy has a very short span of attention. He cannot play in recreation programs per se. I would like to make that clear. These boys don't engage in a full athletic program because they don't understand what a full athletic program is. They have never been a part of one.

So counseling is a very important part to get him to know what society really is like. We call our counseling and our program similar to the opening of windows and opening of doors to life. If they want to go bowling, we provide it. LEAA provides us the means by which we can take 30 boys bowling along with 10 counselors. Prior to going

bowling they will counsel with the boys and tell them what this was all about.

We had children who had never been in a bowling alley. They counsel with them on what they expect to see, what is the purpose of responsibility, what are the purposes of behavior. In other words, you don't roam around a building when someone else is bowling. What is the reason for that? What is a foul line? And we try to get over to them measures by which they can understand that there is discipline in all areas of life.

This is it, basically. And then we have occasions when we sit down and the boys will actually unburden themselves, but not immediately. It will take 3 months or more.

We had an unusual experience just recently where one of our new centers opened and a boy who stood in the background and our counselors were trying to get our boys to open up a little bit, and because it was a new center they were very reluctant. This individual is 16, he stepped forward and said to the boys, "That is how I got out of Boonville, by participating in counseling."

They have a peer counseling session up in Boonville, which is the reformatory, and he led the class and he brought our kids into the program of counseling, which was very interesting to us. It showed us what it does mean and how these kids can actually help themselves.

We find that in the meantime the community is benefiting from the fact that instead of being on the street without supervision they are now under good supervision, recreation, and control.

Mr. LYNCH. That is for only a few hours a week they are under someone's supervision. What happens to them the remainder of the week? I must say that a good deal of what you have been saying sounds like this is a recreational program. I understand there is more to it than that, and I wonder if you could go into that. How have you been able, if at all, to redirect their attitudes?

Mr. MUELLER. I told you we had 125 boys who shared 850 arrests. And during that first-year period, 11 months, 60 percent of these boys who had these long extensive records were not arrested in that entire year.

Not only were they not arrested, but they did not receive any truancy notices and they didn't receive any curfew notices.

Mr. WINN. They were back in school?

Mr. MUELLER. This program is not as extensive as all of that, sir. In other words, this is a supplemental program to the effect they are actually being counseled by juvenile court in the meantime.

Mr. WINN. Some of them go to school?

Mr. MUELLER. Oh, yes. Many of them. I would say we have had occasions when we learned they were not going to school. We were called by the parents and asked if they could get them back in the school.

Mr. WINN. I think counsel was trying to find out if other than the time you spend with them at the centers there is a lot of other time unaccounted for. This is what most of us have been led to believe was the time when most youths get into trouble.

Mr. MUELLER. This is why I brought out the subject, 60 percent—we can't watch them 24 hours, I know you know that, and while we had 14 hours a week with them, some way or another, on the basis of our experience, and also on the basis of two tests that were given by Dr.

William Harvey—he provided tests at the beginning of the program—psychological tests. This was given and paid for by LEAA. He conducted another test at the end, and his reports are on your desk.

Mr. LYNCH. Sergeant, 60 percent of 125 youngsters is 75 youngsters. Of that 75 who were not rearrested, how many of these had no criminal record to begin with? Do you know that?

Mr. MUELLER. No. But I would say this would require further investigation.

Mr. LYNCH. Let me ask you this: Of the remaining 40 percent, or 50 youngsters, in the program how many times were those 50 rearrested during the year?

Mr. MUELLER. This is significant. We could have researched it, but I would say—and I have the figures right here, they are laying on your desk—I believe five were arrested twice during the year and the balance were arrested one time. Which could be a measurable difference in their previous records if we wanted to take the time to research it. We went by the report of Dr. Clement Mihanovich, who said there was a significant reduction in his delinquency proneness, and Dr. Harvey stated the same thing. That was his report, together with the records of the police department, which showed that.

This is encouraging.

Mr. WINN. You said you could research it. Let me urge you to research it, and I think you could do it with no expenditure of LEAA funds or anybody else's funds. I think you can get some of the psychology classes at St. Louis University or some of the rest of the universities in your area to do that for you as an assignment with credits; and it would probably be very constructive for them, too.

Maybe you have done that. I don't have that record in front of me.

Mr. MUELLER. Under the present operation, an extended operation, it will all be computerized. Everything will be computerized. Then, at any time, not just at certain times, you can call for a computer printout. All the information will be in there.

Mr. WINN. That is fine. Let me ask you another question I overlooked a minute ago. We heard quite a bit of talk about blacks and whites and racial implications this morning. With the counselors—and you have a group of 10—if they are all white boys do you use a white counselor, or do you pay any attention to that at all?

Mr. MUELLER. No attention is paid to that at all.

Mr. WINN. So five of the fellows may be black and five may be white; or they may be white, black, Mexican, et cetera.

Mr. MUELLER. I will say this. In all honesty and fairness, we have 10 centers in operation and 9 of them are completely black and 1 of them, the Cherokee Center, is all white. No effort is made to put only white boys in there, but it is all white.

Mr. WINN. But you are not going out of your way in the predominantly black areas to put only black counselors?

Mr. MUELLER. We have never done that. We are taking our enrollment from juvenile court. In other words, it is as juvenile court gives it to us. You are all acquainted with the term "overlay," I am sure. Our program merely takes the juvenile justice system of the city of St. Louis, our juvenile court. It has branch offices and we just furnish an overlay program of two centers to each juvenile center.

So that the juvenile center—the juvenile court center—gives us our input of recommendations of whom they would want in the program, and Judge Gartner has banged the gavel on many a child. We went through the team counseling program rather than go to Missouri Hill.

But we have one rule, if he bangs the gavel on Joe Smith, we take Joe Smith in the program. Now we are down to four arrests as hard-core, under the terminology requested by the court, not by us. The court said that we had a pretty high rate there of eight and would we bring it down to four. So at their suggestion, we brought it down to four, but Joe Smith or whatever his name is, let's bring his peers with him.

Mr. LYNCH. Wouldn't it be desirable, Sergeant, to get it down to one arrest?

Mr. MUELLER. Well, I don't know that I would say that—this would not then be a hard-core program. I feel a boy that has only one arrest—and I will take your side on this, there is a lot of confusion about the boy who has one arrest. If you look very closely and research it, as Mr. Winn said, you will find that he got his one arrest because he was with peers who had five.

Mr. LYNCH. Or because he may have been let go three or four times before he had the one arrest?

Mr. MUELLER. We have boys within our program with one arrest, but they are members of a peer group. We have boys in our program with no arrest, but who have shown by their inclinations that they want to be with these peers who have given the department trouble.

Mr. WINN. What brings them together? What brings a group anywhere from 18 to 15 years old together?

Mr. MUELLER. What brings them together?

Mr. WINN. Yes.

Mr. MUELLER. Mutual problems.

Mr. WINN. Neighborhood problems, family problems?

Mr. CAMP. School, neighborhood, hangout.

Mr. WINN. Dropouts?

Mr. CAMP. Hangouts around poolrooms, and places youngsters gather, contemporaries. They are brought together that way.

Mr. WINN. What if a bad egg enjoys his counseling and he has got a horrible record and he knows another guy that has a horrible record but is not on the books right now and he wants to bring him in and make him No. 11 in this class?

Mr. MUELLER. Whatever we do we are fluid. I say we don't have any real hard, fast rules, but we do take our job seriously. We have a contract with LEAA to keep an accurate account of what we did with these boys. We stay with these particular ones, we really emphasize and concentrate on them.

Mr. WINN. Can he bring a buddy?

Mr. MUELLER. He can bring a buddy in.

Mr. WINN. Do they do it?

Mr. MUELLER. We don't reject it.

Mr. WINN. Do they do it?

Mr. MUELLER. Yes, we are constantly besieged by not only the boys but the court to bring more boys in. We would be happy to do it if we were equipped to do it, but what we do is we sort of underplay it; play at low key.

Mr. LYNCH. Do parents refer boys to you?

Mr. MUELLER. No. We get our input from the juvenile court and from the juvenile division of the police department. Anyone in law enforcement who can indicate to us that the thing here is a real problem area.

Mr. LYNCH. You have a lad for 2 or 3 hours a week?

Mr. MUELLER. No. We have him twice a week, for between 3 and 4 hours, 2 nights a week; about 8 hours.

Mr. LYNCH. You have them under your supervision for that time. Are any of the people in your program under the continuing supervision of the juvenile court?

Mr. MUELLER. Oh, yes.

Mr. LYNCH. They are?

Mr. MUELLER. Yes.

Mr. LYNCH. Are they reporting to juvenile probation officers?

Mr. MUELLER. Yes.

Mr. LYNCH. So there is other supervision in addition to your own?

Mr. MUELLER. That is right.

This is the supplemental thing. In other words—this is very important to me so I hope you don't mind if I throw this in here—the general philosophy of all probation and parole is the 1-to-1 concept. I deal with you and you deal with me, this is a mutual thing we do together. And the minute the boy leaves the court after being counseled with on a 1-to-1 basis, he comes under the influence of his peer group and the 1-to-1 counseling just received is eroded and the group washes away the value of the counseling session he received in court. By helping to contain the action of this boy's peer group we make his 1-to-1 concept just a little bit better and stronger.

Mr. LYNCH. How expensive is this program?

Mr. MUELLER. I would like to throw that out. We tried to put a center within five blocks of the boy's home. There is research on this, the boy won't move out of a five-block area. So we have now 10 centers. So that the basis of the 10 centers, we will take any hard-core boy within that locality. If he lives two blocks further away, we will still take him, but it becomes a bigger problem for us. Our counselors go to their homes many times and pick them up, particularly if their absenteeism is beginning to build up. Almost automatically, the counselors always take them home.

Mr. LYNCH. How much does the program cost?

Mr. MUELLER. We started out with a program of three centers with $61,000 for an 11-month period and we got a lot of mileage out of it. We got about 16 months out of that. Then there was a shortage of money. No money was available until somebody discovered a program that wasn't functioning and it had $30,000. So we operated again on a smaller basis of 10 hours counseling, just to maintain our program until we could get a bigger view at the end of the tunnel.

So now we have the impact funds that came along with $50,000 for which we are getting about 6 months mileage. But we opened up 10 centers.

Mr. LYNCH. That would be $100,000 per annum at that rate then?

Mr. MUELLER. At that rate.

Mr. LYNCH. What is the maximum number of young people you can serve with that amount of money?

Mr. MUELLER. We now have 310 children involved in the program. We have 27 girls and 283 boys.

Mr. LYNCH. That strikes me as very inexpensive on a per capita basis compared with any kind of recreational facility.

Mr. MUELLER. It ends up about $325, I believe, which pays for all of his counseling, his counselor, our centers cost us nothing, and we have the programs that we bring the boy to. Many times we go to ball games and things like that. We have a roller skating rink that just opened up for 25 cents.

Mr. LYNCH. Colonel, in your judgment, and again as a police administrator, would you consider this to be a valuable expenditure of Federal anticrime funds?

Mr. CAMP. Yes, sir. In fact, I had to put the final approval on it at the time and each time it was funded I did the same thing. So I have got a lot of confidence in the program.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Mr. WINN. I would like to ask if you have girls or women counselors for the girls in the program?

Mr. MUELLER. Yes, sir. The program is actually conducted right in the juvenile court building and we have two juvenile court probation officers and a recreation leader from another city recreation center who come to the juvenile court. The court has a large gymnasium of its own, it has its own counseling rooms, ping-pong tables, and things like that.

Mr. WINN. Could you enlarge this program and include more of the community—like an acrobatic or gymnastic program, which seems to be catching on with the young people more these days?

Mr. MUELLER. There are many ways in which we would like to enlarge the program. My own experience has shown that in so many instances we are working with the child, and the child is maybe cooperating with us, but the parents are sitting home with their feet up on the chair.

Mr. WINN. That is true, but I don't know how you are going to change that.

Mr. MUELLER. We have some plans on trying to close that cycle, not completely, but piecemeal. We are trying to close this cycle because we have had some experimental contacts with several of the parents.

Mr. WINN. I think that is fine and I hope it works. I suppose that, again, you would run into a problem where some of the parents have probably given up on their children.

Mr. MUELLER. If I can give you their general consensus, of the few parents I talked to, they said, "Well, we sure appreciate what you are doing for our children. We appreciate the fact you even contacted us and found out we have problems. We don't want our children like that, but everybody wants to do for the child, nobody wants to help us."

So this has been our problem.

Mr. WINN (presiding). As a parent of five children I talk and listen to this for days, really, because we have heard similar types of programs on recidivism out in California, where they did a very similar type of thing. The police officers themselves did it more or less on their own, in their spare time, and they started with those who had been arrested 14 times. And you are down to four. So I think the philosophy is great.

I believe Colonel Camp has another phase of the program he would like to present. We also know you have a plane to catch. So would you proceed, sir.

Mr. CAMP. I just wanted to let the committee know what I feel is the latest in police patrol systems, and we are seeking funding on the program. The acronym is FLAIR, meaning "flee locating and information reporting." It is a system whereby you can set up a command control room, look at a map, see a series of lights. These lights can be identified as particular cars. In this way, you have control over every car in your city. You can tell where that man is at every hour of the day. When he is out of the car, the light doesn't go off, it stay on. There is a series of buttons; if he needs help he merely presses a button.

We have looked at this for about 4 months. We had several trial runs in our city. It is probably the most promising thing in technological advancement in police patrol that I can ever recall. To me it rivals the radio in importance.

Mr. WINN. In Kansas City, Kans., this is now within the last year and a half, I helped them secure this type of operation. This is a communication system with every car and every patrolman. You have your foot patrolmen with walkie-talkies.

Mr. CAMP. We have a lot of those; yes.

Mr. WINN. Not on this particular system?

Mr. CAMP. This is altogether different from the radio. It ties in with the computer. You can see, not the car, but the location of that car, right down to the street he is traveling. And you know where he is at all hours of the day and night. You can assure every area of the city being covered. You can get a replay of that after the tour of duty if you want to know where he has traveled.

Mr. WINN. So if the guy goes to a store for a package of cigarettes you will know where he is and where he stops.

Mr. CAMP. Everything. But the feature of this is that you can spread your patrol around, the safety of the officer. It might be a help in the long run, where you have too many cars, you can convert the men in two-men cars to the investigative branch, or maybe not need as many. I am not looking for that but it is a wiser use of manpower.

We have had it in St. Louis several times. It is being developed in Topeka, Kans., where they have the experimental part but they brought it to our city, tried it out in our cars, and our radio technicians worked with them on it. We are seeking a Federal grant fund for this.

Mr. WINN. How much did you ask for?

Mr. CAMP. It is a little less than $4 million.

Mr. WINN. Are these LEAA funds?

Mr. CAMP. That is right. I feel it is worth every bit of it because it will be the prototype. As far back as 1967, one of the Commissions, I believe the President's Commission on Crime, strongly urged the police departments to find a locator system.

Mr. NOLDE. Colonel Camp, I would like to ask you about the special pilot program you put into effect last year, as I understand it, the overtime foot patrol. Would you tell the committee about that program?

Mr. CAMP. Yes. In the area where we put that the crime has been reduced—foot patrol. It has maybe moved into other areas and we

have a small increase in crime. This was done in response to public demand for more foot officers.

Mr. NOLDE. And these are officers working on their own time?

Mr. CAMP. Yes. In other words, we prefer a man, if he wants to take one of his overtime days, he has a day coming to him, he can work on that particular time. You are buying police protection, experienced police protection by the hour. There are many things to commend it. But I don't think a city could operate with the size force you would need for that many footmen. If we ever do away with the likelihood of Federal funding we couldn't operate it. We can't double our police force as you have done in Washington, D.C.

It had its effect in giving reassurance to the people it is safe on the streets at night. We heard from certain neighborhoods where the people are less reluctant to stay inside, they want to get out, they want to shop. And it is complimentary to us to hear the people say that it is so nice to see a police officer around. It is almost a novelty.

But I don't think that is the answer, Mr. Nolde.

Mr. NOLDE. I take it you, in St. Louis, had gotten away from foot patrol quite a number of years ago except in the downtown area.

Mr. CAMP. Just about every city had to get away from foot patrol. It is a luxury you can't afford. A car, a program, if it is followed to the letter, and if you have everything favorable, it is a foot patrolman in a car. That is what it really amounts to. But the workload has increased so much in the last few years, the man goes from assignment to assignment, except perhaps from 3 o'clock on in the morning or 4, no one sees him out when he is out trying the doors. But the workload has increased. Increased so much you can't operate with footmen alone.

Mr. NOLDE. In effect, you say you believe in the benefits of foot patrolmen, substantially; however, you just can't afford it.

Mr. CAMP. We couldn't. I don't know of any other city, outside of Washington where the funding is a little bit different than any other city.

In other words, St. Louis is a city, it is a separate entity, it is not even part of a county. I don't think any city can afford the amount of police protection people feel they should have, and I think the action is going to come in technological advancement, such as what we are experimenting here.

Mr. NOLDE. The pilot program is federally funded?

Mr. CAMP. We hope it will be federally funded.

Mr. NOLDE. It hasn't been so far.

Mr. CAMP. We have a grant in—an application for a grant. We are an impact city, incidentally. That is where we got the manpower for this foot patrol. I recommended the foot patrol and we are getting the mileage out of it. But I have to look down the road to the day when it won't be there.

Mr. LYNCH. In that regard, if I may, Mr. Nolde, how much money has gone to St. Louis under the impact program?

Mr. CAMP. It is apportioned out, $5 million.

Mr. LYNCH. Of the $5 million, how much will be made available to your police department?

Mr. CAMP. Well, as it looks, we will get the lion's share. I am not going to give the total dollar value because it would be a guess. When it first came out, it was for the cities but, naturally, the others in the administration of the justice program—there are the police, prose-

cutors, the courts, and corrections, in that order—will have to have something. If we intensify our efforts, bring in more people, they will have to handle more people, so it is understandable they will all share; but we have been getting the lion's share.

Mr. LYNCH. What is the size of your police department's annual budget?

Mr. CAMP. $34 million.

Mr. LYNCH. Thank you.

Mr. NOLDE. Colonel, what effect has your foot patrol program had in the area in which it is operative? I take it the crime rate has gone down?

Mr. CAMP. It has gone down. But the overall effect is what we are going to be measured on.

Mr. NOLDE. But has it gone down disproportionately more so than the entire city?

Mr. CAMP. It is understandable, sir, it would, when you saturate a neighborhood. They did this in New York years ago with the saturation program under a different name. If you can afford that much of a concentration of manpower, it is bound to go down.

Mr. NOLDE. I see. Thank you very much.

Mr. WINN. I just have two questions and then we are going to let you go.

Do you still have the horse patrol?

Mr. CAMPBELL. We just started the horse patrol. We had it years ago and brought it back.

Mr. WINN. In the parks?

Mr. CAMP. They started out in the parks and the demand for them over the city has been so great that in addition, outside of the high crowd season, or high crowd season in Forest Park, we will move them around. We use them downtown in the shopping area. We have taken them through the Carondelet Park, all of the big parks, and they are very popular. Not only from the standpoint of crime control, but it is from the public relations standpoint. The people feel they are getting more for their money from the police department.

Mr. WINN. I assume in Forest Park they are very impressive.

Do you use a scooter patrol? Do you have a scooter patrol like we have here?

Mr. CAMP. We had the Vesper-type scooter and we used it for a while. The maintenance costs on it were high. We are experimenting with several types of vehicles; the golf cart, it is slow, but has maneuverability.

Mr. WINN. A golf cart?

Mr. CAMP. Yes. We are going to get it. It is not a pursuit vehicle, it is just to give the footmen a greater range. We have used a Jeep because of its maneuverability. It goes over irregular terrain in Forest Park. That is a good vehicle. We hope to try the right-hand drive Jeep as the post office uses, where you can pull it into a filling station for the inspection of the premises. That is still a fundamental of foot patrol.

Mr. WINN. I hope they get there faster than the post office. Was there a problem with safety on the smaller, faster scooters?

Mr. CAMP. We tried them out down there. There was no safety problem; purely a maintenance problem.

Mr. WINN. In some cities they have a problem with the safety of the officer because they were open scooters and offer no protection for the officers at all.

Mr. CAMP. As far as weather and so forth?

Mr. WINN. Weather and cars. They are small enough they can't be seen very well, like a bicycle.

Mr. CAMP. The Cushman scooter the post office uses, and we use them for parking meters. That is a police vehicle that is closed in and it is high enough that it is not a traffic hazard. We are going to try that because we feel it is economic to operate and it is safe. But we are in touch with the Cushman people for that type of scooter.

Mr. WINN. Thank you very much, Colonel. We appreciate your appearing and I hope you have time to make your airplane. It looks like you do.

We will take a brief recess.

[A brief recess was taken.]

[The following material was received for the record:]

THE EVIDENCE TECHNICIAN UNIT, LABORATORY DIVISION, BUREAU OF SERVICES, POLICE DEPARTMENT, ST. LOUIS, MO., SGT. WILLIAM R. ARMSTRONG, ACTING COMMANDER

Prior to October 1970, patrol officers of the St. Louis Police Department were charged with the collection of physical evidence at the scenes of crimes they were investigating. Specialized work such as recovering latent prints or photographing the crime scenes required a special call to the organizations that provided the particular service and frequently a long wait while protecting the crime scene until the specialized units responded.

While this system works fairly well, it is obvious that the crime scenes could yield more evidence and that patrol time, so precious to a busy Department, was being wasted while the patrol officer collected the physical evidence and delivered it to the proper recipient.

Realizing the need for more competent and complete processing of crime scenes, in 1970 the St. Louis Police Department applied for and received a discretionary grant in the amount of $59,500 from the Department of Justice through the Law Enforcement Assistance Administration.

With the approval of this grant, specific steps were taken to form what is known as the "Evidence Technician Unit" or ETU.

The primary goals of the "ETU" were twofold; first, it was expected that properly trained Evidence Technicians could provide a complete and in depth search of crime scenes for physical evidence and producing as an end result more crime clearances; and second, a reduction in the amount of patrol time lost while patrol officers waited at the scenes of crime for members of the specialized units responded to those scenes or while the officers collected and delivered what physical evidence they could to the Laboratory.

Department planners decided the ETU would fulfill the three main functions in the evidence scheme. These three functions were: (1) Search for and recover latent fingerprints; (2) Photograph all crime scenes; and (3) Search for and collect physical evidence. It was also decided that the Evidence Technicians would not perform any examinations on evidence collected but would serve only to collect the evidence which is then turned over to the Laboratory or Identification Divisions staffs for evaluation and examination.

A manning level of twenty officers was established and it was decided these officers would work in uniform in easily recognized vehicles under radio control so the ETU would enjoy a high degree of mobility and visibility both while at a crime scene and while patrolling their assigned areas, thereby serving as a preventive patrol.

Operationally, the ETU was to be an around the clock operation assigned to the Laboratory Division of the Bureau of Services. It was emphasized that the Evidence Technicians would be on the street where they would be readily available when needed.

It was determined that the Unit would have three areas covering three continuous police districts each as their basic assigned areas. However, the dis-

patching supervisor was given the option of calling a unit from one area into another when the situation dictated such a move.

The requested funds enabled this Department to purchase and equip four van type trucks with the necessary equipment and supplies needed to process all crime scenes for physical evidence. Three of these vans were assigned to the operational areas mentioned above and the fourth was held in reserve as a replacement or supernumerary vehicle.

In addition, the funds provided the clerical help needed to staff the Laboratory on a twenty four hour, seven day a week basis to provide for the reception of evidentiary material at any time.

When the formation of the Evidence Technician Unit was announced, seventy-five patrolmen applied for assignment to the Unit. The twenty men finally assigned were selected from the initial group of applicants after a rigid selection process involving an aptitude test administered by a local university, prior experience as an officer and the fields of fingerprinting or photography education, and a personal and departmental background check.

The 20 officers selected for this assignment attended an 80 hour training course conducted by the local office of the Federal Bureau of Investigation and staff personnel of the Laboratory Division and the Identification Bureau of the St. Louis Police Department.

Subjects taught were photography and especially the use of the 4 x 5 press camera, how to search for and collect latent prints, and how to identify and collect physical evidence. At the end of the 80 hour course, the officers were given assignments in predetermined areas and for the first week on the street were accompanied by an experienced Identification man and a photographer who assisted in resolving any difficulties of a technical nature.

On October 19, 1970 the program went operational under radio control. The Evidence Technicians were directed to respond to all major crimes including but not limited to homicides, robberies, burglaries, bombings, arsons and recovered stolen autos. In addition, an interim order establishing the ETU function was distributed to all officers and the Departments micro-wave television system was utilized in explaining the operation to Department personnel.

When investigating officers determine that an ETU is required at a scene, they contact the radio dispatcher by radio or telephone and an ETU is dispatched to the scene.

Upon completing his assignment, the Evidence Technician completes a form report that provides the staff office all the statistical data needed to maintain close control over scheduling variables and work loads. Copies of this report known as the "Evidence Technicians Report" are distributed to all interested agencies and divisions of this Department.

The Evidence Technician's Program has been a positive and valuable addition to the St. Louis Police Department. Statistics indicate substantial improvements in all categories of evidence handled by that Unit. Especially rewarding was the number of crime scenes processed for fingerprints which increased fourfold over the years prior to the inception of the ETU. As a result of this increase, fingerprint identifications have increased 76% and are running at a rate that indicates a much higher increase for 1973.

An important adjunct to the above mentioned statistics is that the average response time for ETU service has decreased as operational and scheduling improvements have been made. In August of 1972, an expansion program financed by High Impact Funds allowed a substantial increase in the number of units on the street by providing overtime payments to present ETU personnel who work on their holidays, recreation and overtime days and vacations. The Impact Funds were also used to purchase, equip and field two additional vans on each of two watches that overlay the existing manning tables.

As a direct result of this expansion, ETU response time has dropped to an average time of twenty two minutes per radio assignment. This in itself represents an impressive savings of patrol time by allowing the patrol officer to return to service upon relinquishing the crime scene to the Evidence Technician.

The expansion of the ETU has also increased the number of crime scenes serviced by this Unit. ETU assignments have increased from an average of 32 daily to a present average of 40. This figure indicates the expanded effort has enabled our Department to competently process 36% of the index crimes that occur daily within the City of St. Louis.

United States Supreme Court decisions of the past decade have caused law enforcement agencies to place greater emphasis on physical evidence collected under legal conditions by competent personnel.

The needs of our modern society for a wide divergence of Police services have placed an imposing task on Police Administrators who, restricted in their efforts by lack of personnel and financial resources, must develop innovative ideas to make what resources they do have stretch to their outer limits.

The Evidence Technician Unit is such an idea. It has amply demonstrated that properly trained personnel given the proper equipment and leadership can increase the recovery of physical evidence and thereby increase crime clearances at the same time they save patrol time by relieving the patrol officers of routine non-patrol related tasks.

EVIDENCE TECHNICIAN UNIT COMPARATIVE STATISTICS, 1970–72

Functions	[1] 1970	1971	1972
Radio assignments	([2])	11,046	11,454
Fingerprint searches	2,104	8,445	8,248
Prints recovered	625	2,087	2,187
Prints identified	193	265	345
Photography (assignments)	3,512	3,943	3,808
Physical evidence (assignments)	[3] 23	4,294	4,776

[1] All functions performed by individual departmental units.
[2] None.
[3] Assignments wherein laboratory personnel are called to crime scenes for technical reasons.

Mr. STEIGER [presiding]. The committee will come to order please. Counsel, call the next witnesses.

Mr. LYNCH. Mr. Chairman, I am pleased to be able to introduce to the committee Edwin D. Heath, Jr., who currently serves as director of the criminal justice interface division of the Dallas Police Department. He is the Dallas Police Department's chief legal adviser. Mr. Heath has a bachelor's degree in business administration from SMU, a J.D. degree from South Texas College of Law, and also holds a master's degree and did postgraduate study in criminal law at Southern Methodist University School of Law.

Mr. Heath, if you have a prepared statement would you please present it to the committee at this time.

STATEMENT OF EDWIN D. HEATH, JR., DIRECTOR, CRIMINAL JUSTICE INTERFACE DIVISION, POLICE DEPARTMENT, DALLAS, TEX.; ACCOMPANIED BY ARLYN J. BROWN, DIRECTOR, COMMUNITY SERVICES DIVISION

Mr. HEATH. Mr. Chairman, members of the committee: My name is Edwin D. Heath, Jr. As Mr. Lynch told you, I serve as director of police with the Dallas, Tex., Police Department, where I am presently serving as director of the criminal justice interface division. In this capacity, I act as chief in-house legal adviser to the Dallas Police Department and assist the office of the city attorney in providing counsel to the police department on legal affairs.

My colleague is Arlyn J. Brown. He is also a director of police with the Dallas Police Department and presently commands the community services division. However, he previously commanded the planning and research section. He is going to direct you on our newly completed repeat offender study, which relates a pragmatic study on repeat offenders. I will start the testimony with the description of our legal adviser program.

We are appearing today at the invitation of your chairman and in behalf of Chief of Police Frank Dyson and the Dallas Police Depart-

ment. Your chairman has requested that we provide the committee with testimony relative to two programs of the Dallas Police Department—our legal adviser program and a study in criminal recidivism known as the "Dallas Repeat Offender Study."

[See material received for the record at the end of Mr. Heath's testimony.]

Mr. HEATH. The first subject upon which I have been asked to give testimony is the Dallas Police Department's legal adviser program. I would first like to give the committee some background information concerning the development of the police legal adviser concept.

The first police legal unit was formed in New York City in 1907, and has continued to this date, now being known as the legal division, under the general supervision of a deputy commissioner in charge of legal affairs. The concept grew very slowly, and it was not until 1967 that the President's Commission on Law Enforcement and Administration of Criminal Justice clearly articulated the need for a police legal unit in "Task Force Report: The Police." At that time, there were only 14 cities with legal advisers, and 6 of these were employed part time.

Following the establishment of what is now the Law Enforcement Assistance Administration, Federal funding was made available for the establishment of police legal units. With the impetus of Federal funding the program quickly grew to its present size, with over 174 law enforcement legal units—107 city, 34 county, 4 regional, 19 State, 3 university, and 7 Federal agencies.

The legal adviser program was greatly enhanced by the insight and vision of Prof. Fred Inbau of the Northwestern University School of Law. As a result of his efforts, the Ford Foundation in 1964 established a grant at Northwestern to begin a police legal adviser program. Selected attorneys were given fellowships to study criminal law and serve as interns with police departments. This program was continued until 1970, at which time it was transferred to the auspices of the International Association of Chiefs of Police (IACP).

The IACP established a police legal center, which serves as a clearinghouse for police legal units, published legal periodicals, and conducts annual training courses for newly appointed legal advisers. In 1972, the IACP created a legal officers section within its organization to foster professional development and legal services to police agencies. The legal advisers now meet with the IACP at their annual convention and conduct seminar-type discussions on police legal problems. The Law Enforcement Assistance Administration has just awarded the IACP a $107,204 technical assistance grant to promote training, publication, and development of new programs for police legal units.

The Dallas Police Department's legal unit was established on January 6, 1970, under a 1-year grant from the Law Enforcement Assistance Administration. The unit was originally staffed by two attorneys and a stenographer. The mission was threefold:

(1) To provide consultative legal advice to the chief of police and the command staff of the department;

(2) To provide liaison legal services to the offices of the city attorney, district attorney, and other criminal justice agencies; and

(3) To provide assistance in inservice and recruit training in legal subjects.

In 1973 the Law Enforcement Assistance Administration awarded the Dallas Police Department $186,000 under the impact program to increase the size of the legal unit to six attorneys and supporting staff. The thrust of the expanded program is to provide legal assistance to all members of the department in order to more effectively reduce street stranger-to-stranger crimes. The principal methods which we are utilizing include:

(1) On-call legal assistance to field personnel in major crime cases.

(2) Increased consultative legal services to all levels of personnel and not just the command and supervisory staff but the patrolmen on the beat.

(3) A review of all criminal case reports—except traffic cases—filed with the district attorney.

We are doing this because it was our observation we were losing approximately 30 percent of our cases through other "no bill," through improper case preparation, and other problems which we want to reduce. We also found following "no bills," we were losing approximately 19 percent of our cases by dismissals, which meant we were losing approximately 49 percent of our cases before they came up for trial.

We are not the only agency that has that problem. Washington, D.C., I might add, is addressing itself to the same type of problem. The main thing we hope to do through this grant is to improve the effectiveness of the prosecution effort through better training, more thorough investigation, and improved case preparation, and assist them in preparing better cases and screening out those cases that should be disposed of by some diversionary method in the criminal justice system.

That is about all I have. I passed out to the committee our "standards of Operating Procedure" which serve somewhat as a model, I hope, for all law enforcement agencies that are interested in the police legal adviser concept.

Director Brown, who is with me, would like to talk about the "Repeat Offender Study," which we have furnished you a copy of.

Mr. LYNCH. Director Heath, your testimony is very, very interesting, especially the fact that heretofore up to 49 percent of the cases that your department was making were lost along the way.

Mr. HEATH. That is right. These are part 1 index crimes.

Mr. LYNCH. Would your judgment be that that is not uncommon in other police agencies?

Mr. HEATH. Yes; I believe this is true. The ones that I have talked to that have kept realistic records find that this to be true. Although there are differences in procedures from one jurisdiction to another I think if they make a close analysis they will find the same thing is true.

Mr. LYNCH. I think that is exceedingly interesting. We have all heard, as you know, in the last several years a hue and cry that the courts are letting the criminals go. It seems to me what you are saying here this afternoon is perhaps sometimes it is not the courts. I think your department is to be commended for taking concerted action to try and prove it. I recognize these are sometimes very difficult issues.

Do you, in the normal course of your duties, sir, give legal training or quasi-legal training to policemen in your department?

Mr. HEATH. Yes, sir, I do. I have not done a lot of teaching in the last few months; however, my legal staff tries to teach the areas where we feel lawyers need to teach police, in police training. Such areas as search and seizure, laws of arrest, the laws of evidence, the Code of Criminal Procedure, this type of thing. We feel a lawyer can provide great assistance in training. Such things as traffic code and some of the municipal codes can be easily handled by an experienced sergeant, but in the areas that we feel are the most fluid we do try to do as much of the teaching and, hopefully, within the next few months, all of the teaching in these areas.

Mr. LYNCH. How large is the Dallas Police Department?

Mr. HEATH. We have personnel authorization for 2,000 sworn men. We are approximately 75 understrength because of an increase. We just newly increased and anticipate making that up soon. We have an additional 500 nonsworn people, some of which are parapolice; that is, people who do semipolice functions such as traffic direction, traffic control, and so forth.

Mr. LYNCH. Your total legal staff, including you, will be six attorneys?

Mr. HEATH. Six attorneys. One thing that is somewhat unique to our system is the fact that one of our division stations operates on somewhat of a precinct station. We have one of our stations as a pilot for a decentralization move within the department. We have one of our attorneys stationed there, and in the first 2 months of his work he is only getting 10 percent loss in his cases. But he is in a position where he works more closely with the officers, both the uniformed officers and the criminal investigators. He is more or less elbow to elbow with them and it is very relaxed, very informal. He is accessible to them.

Mr. LYNCH. I wonder if you could tell the committee something about the "on call" legal assistance program. Is that operational yet?

Mr. HEATH. It became operational this week.

Mr. LYNCH. What would a lawyer do when he goes out to a serious crime scene?

Mr. HEATH. If it is a serious crime scene, first of all, we do not go unless we are requested by a field supervisor and sometimes the type of questions we can ask will be handled over the telephone. Other times it requires we physically go to the scene. I was called in last week to a crime-against-persons case in what we thought at that time was a kidnaping case. They requested that I come in and provide them with some legal assistance.

Mr. LYNCH. Could you tell us what they asked you? What it was they needed to know?

Mr. HEATH. They wanted to know whether the particular type of crime involved was a kidnaping or whether it was in violation of the State law. As it turned out, it was an adoption arrangement, under the table variety, that didn't involve a criminal act. But we had a lot of misinformation and excited grandparents and other things involved. It turned out there was no criminal activity involved.

Mr. LYNCH. As a result of your being consulted no charges were filed?

Mr. HEATH. That is correct. No one was arrested. We brought the parties to the station and by talking with the people and by getting clear insight, having them communicate with one another on what

the problem was, no one was arrested; everybody was taken home by the officers. They might have been technically arrested in the sense they were brought to the station, but no record was made of that.

Mr. LYNCH. How much is the program of which you are director costing your department per annum?

Mr. HEATH. Well, the total grant for the first year is $186,000. A part of this was occasioned by the fact we also have a liaison unit that works with our courts which are composed of experienced police investigators. We have one of these at each one of our felony-level courts.

Mr. LYNCH. Are they under your direction?

Mr. HEATH. Yes, they are.

Mr. LYNCH. I wonder if you can tell the committee why you chose to call this division, or why Chief Dyson chose to call it, the Criminal Justice Interface Division?

Mr. HEATH. Well, sir, the concept was that this division would serve as a means for interfacing the investigative activities of the police agency with other criminal justice activitives: The prosecutors, the courts, the probation and parole people; that we would by some way interface these works together. It is a cumbersome title, and it is misleading in some ways.

Mr. LYNCH. I think it is a very interesting title. It implies a systems approach.

Mr. HEATH. This is what we are trying to do.

Mr. LYNCH. Do you, in fact, act as liaison, or do some of your attorneys act as liaison, with the other criminal justice agencies within your jurisdiction?

Mr. HEATH. Yes, we do. We didn't have an organized program of this as such, but we have a man, one of our attorneys, who meets regularly with the district attorney's office. We meet once a month with them on an informal sort of social basis. They have also provided us with a training course for four of my attorneys, a cooperative training course with the district attorney's office.

Mr. LYNCH. You testified that in the one precinct in the decentralization plan where you have one of your attorneys stationed, he has reduced "no bill" cases and dismissals; he has reduced his loss rate, so to speak, down to 10 percent.

Mr. HEATH. From approximately 30 percent down to 10 percent. We hope this figure will hold; this varies. It is like the weather, but we hope that by the end of the first year, we can have the "no bill" rate down, I hope, to 15 percent instead of 30.

Mr. LYNCH. Can a police department in 1973, in your judgment, function without its own in-house legal counsel responsible to the chief?

Mr. HEATH. Well, sir, it can, of course. Many of them do, but I think the department will operate much better if they can get the right kind of individual who will give them the legal advice, especially in the training area, and a lot of other in-house legal problems.

Mr. LYNCH. Thank you very much.

I have no further questions, Mr. Chairman.

Mr. STEIGER. In looking over your operating procedure I see an implication that one of your charges is to represent officers in the department, to give them legal advice when they request it. I assume that is legal advice, also, other than on police matters?

Mr. HEATH. No, sir, we try to discourage that, sir. We try to hold our legal advice strictly to the scope of employment-type functions. Occasionally, we might informally counsel with somebody that has a personal problem and perhaps direct him to his private attorney—maybe just point him in the right direction—but we make no effort to give in-house, free legal service to employees as a job benefit.

Mr. STEIGER. How about a member of the police personnel charged with a crime in the line of duty? Would you be charged with their defense?

Mr. HEATH. No, sir, I would not. If they were actually charged with criminal violation, their employment would be terminated with the department, in all likelihood. They would have to have their own private counsel. I occasionally do join with the city attorney's office in defending officers in civil cases where this arises within the scope of their employment. I am the only one that does that at this time, because the attorneys I have on the grant I want to be working with the men in the field and working directly on the crime problem. Myself, and one other attorney who is not in the grant, spent a little bit of time on that. This varies from time to time, depending on the type.

Mr. STEIGER. Is the function of the office to defend police personnel who are civilly charged in the line of duty?

Mr. HEATH. I see it as an assistant function that should be provided by the city attorney, the corporation counsel, or something like that. I don't think it should be the legal adviser's job to do this, because I feel that he gets heavily involved in litigation and his priority should be directed more toward the enforcement effort. I think he can provide a lot of expertise and assistance to the corporation counsel or the city attorney or the city solicitor, whatever term you may use in your jurisdiction, in preparing cases for trial. Save them a lot of man-hours in investigation and getting a case ready for trial. And I don't see that as a prime function because I feel like it would too heavily take time that could be better spent in directing more toward the crime effort.

Mr. STEIGER. How long has this been in existence now?

Mr. HEATH. Since January 6, 1970.

Mr. STEIGER. What is the reduction in "no bills" and dismissals; what are the percentages for 1971 and 1972?

Mr. HEATH. Maybe I didn't articulate that clearly. We didn't get into this "no bill" and dismissal review of cases as such until March of this year.

Mr. STEIGER. I see.

Mr. HEATH. Prior to that time it was just a broad consultative-type thing, a liaison function, a training function. We really did the case-review type of things.

Mr. STEIGER. So 49 percent dismissal and "no bills" would be included in the period you were involved?

Mr. HEATH. Right.

Mr. STEIGER. Mr. Winn?

Mr. WINN. Mr. Heath, I am not a lawyer; as a matter of fact, Mr. Steiger and I are the only two on the whole committee that are not lawyers. What types of civil cases were some of your patrolmen involved in?

Mr. HEATH. What would they be involved in? It runs the gamut. We have some that are sued for allegedly false arrest, and others that have been sued for various civil rights violations.

Mr. WINN. Give us some examples.

Mr. HEATH. Give us some examples? All right, sir.

Mr. WINN. What do you have the most of? What are they most accused of, false arrest?

Mr. HEATH. Most of them claim they were mistreated by the officers following arrest, or that they were illegally detained on an improper charge. Fortunately, so far, we have lost none of these.

Mr. WINN. Are the charges brought by individuals, civil rights groups, or who?

Mr. HEATH. A variety; some are brought by civil rights groups, some are brought by individual counsel, some are brought by private counsel.

Mr. WINN. Do you work closely with some of the leading civil rights people as far as meeting and discussing these mutual problems with them?

Mr. HEATH. Well, sir, actually, they don't have any one body that speaks for them, but I have talked to various groups at various times, including some at SMU, and also with the bar association. But, so far, I am willing to meet with anybody any time. Hopefully, we try to learn something out of these suits to improve our training. Some of them, I think, are maybe scurriously brought, I guess, but we do assess the training need out of it; that the officer did reveal something that he shouldn't have done and we try to turn this into our recruit and inservice training program so the thing won't happen again. Occasionally, we will have to write a policy statement, a general order, a special order, a memorandum-type order, to correct the situation where there is a gap we don't have covered.

Mr. WINN. You haven't lost any?

Mr. HEATH. So far we haven't. I don't like to say that——

Mr. WINN. I think that is very commendable. I think it shows your training has made your officers and patrolmen aware of the problems in dealing with the public.

Mr. HEATH. We try to make this. We have a community services program; we have a program where we try to make the officers aware of these things, but it is sometimes difficult when you are on the street.

Mr. WINN. A lot of times they can't always pull out their manual.

Mr. HEATH. This is true.

Mr. WINN. Do you have refresher courses from time to time?

Mr. HEATH. Yes, sir; we do. What we try to do, although we are not always successful in doing it, is give each officer 2 days a year training—one in the fall and one in the spring—in which he goes to the Academy for 8 hours of training in the way of a general refresher. We also have other specialized training programs that go on as we develop new programs. In our tactical or special operations division we have them working on preventive crime programs, which I am a little fuzzy on frankly, but we have put on some special training for newly made supervisors, newly made detectives. We normally try to give them some type of preservice training.

Mr. WINN. When did you get your money from LEAA?

Mr. HEATH. The first year, 1970, partial funding, and 1971 and 1972 on the city budget, and they are partially LEAA, the big part, and then our grant application, the city council as a part of the grant application agreed to continue this program beyond the period of Federal funding, if it proved successful. We made a commitment to that.

Mr. WINN. I was going to ask, if you didn't get the LEAA funds do you think the city would still pick up the tab?

Mr. HEATH. Yes, sir; I do. It was positively written in the grant they would and council approved the grant that way.

Mr. WINN. Thank you very much. No further questions.

Mr. STEIGER. I wouldn't want Mr. Lynch's comment that the 49-percent dismissal of "no bills" were a reflection of some inadequacy in the personnel of the department to go unchallenged. From my lay view, the grounds for dismissal on "no bill" are frequently just as spurious as some of the civil actions to which you referred that are brought against police personnel. While I think the defense against them that you are providing is excellent, I don't think you are ever going to eliminate that kind of activity.

Mr. HEATH. No, sir; you will not.

Mr. STEIGER. It is a fact of life, unfortunately, and it is one that I, as my colleague points out, as a nonmember of the bar, I blame the bar association for condoning the kind of defense activities that are now becoming acceptable practice today across the Nation. The kind of thing that frequently results in "no bill" and dismissals, in which there is no defense on the part of the department.

But I just want the record to reflect my own personal view on that.

I believe Director Brown has an offering for us. If you would proceed with that, Mr. Brown, we would appreciate it.

Statement of Arlyn J. Brown

Mr. BROWN. Thank you, Mr. Chairman.

To begin with, I would like to say we will be discussing this handout. I hope you have them on your desk. This is a policeman's view of what is happening in our criminal justice system.

I would also like to point out to the committee, Mr. Lynch, that it is not a federally funded program in any way. This was an in-house development by my division, planning, and research division, of the police department. Our charge from Chief Dyson was to determine how much crime was being committed in Dallas by repeat offenders. That is a very difficult assignment when you are not arresting all of the people who commit crime.

However, we embarked on it, and what you have before you is the consequence of our efforts. The term "repeat offender" for the purposes of this study differs from a definition of "recidivist" or indeed a definition of "repeat offender" in many instances. We use the term "repeat offender" to mean anyone who had previously been arrested and filed upon by a police agency for a felony or major misdemeanor, and who was subsequently rearrested and charged with another felony or major misdemeanor or offense by the Dallas police.

The methodology used in our research included: (1) A review of the literature; (2) compilation of statistics on jail and prison inmates;

(3) interviews with inmates in the Texas Department of Corrections in Huntsville; and (4) longitudinal tracking of our cases to assess their progress and disposition.

From this study we were able to document the following conclusions:

(1) Almost 60 percent of all Dallas crime is committed by repeat offenders;

(2) Repeat offenders account for a disproportionate number of crime when compared with first offenders. The ratio in our study was 90 to 10 crimes cleared by arrest of repeat offender versus first offender; and

(3) A major crime distribution study revealed quite a number of offsetting repeat offender cases.

For instance, out of our 1,067 whom we chose at random for our longitudinal research we found 49 of them were murderers or were charged with murders. But 57 percent of those were repeat offenders; 40 of those 1,067 were charged with rape and, in this particular instance, less than 50 percent were repeat offenders and that was the only category in the seven index crime. In robbery, 107 of them had been charged with robbery and 6.45 percent were repeat offenders. I will not belabor the point but the rest of the crime categories had more than 50 percent experience in repeat offenders having committed the crime.

Mr. WINN. Were they all 50 percent or more?

Mr. BROWN. Except rape. Rape was the only one, Mr. Winn. Our next conclusion was that the largest fallout of the system occurs between—and I use "fallout" in the system—let me stop a second to explain that. If every report of a crime resulted in a prosecution for that crime you might consider that to be an optimum system and anything that did not might be considered as fallout. Any crime that did not result in an arrest and prosecution might be considered a fallout.

We determined that the major fallout in that system resulted between the reporting of the crime and the arrest and that fallout was somewhere around 70 percent. In other words, 70 percent of the reported crimes never were cleared, and between arrests and case filed. In this instance, we determined our prosecution rate was 49.5 percent of the cases we cleared. We filed a case. I hope the committee is recognizing this is a rather objective study and it takes a pretty good swipe at some of our own practices.

Our next determination was that repeat offenders admitted to—this is selective—55 times as many crimes in Huntsville as first offenders. Repeat offenders often amass huge bonds while continuing their careers in crime. One offender in Dallas, during our research, had $108,000 worth of outstanding bonds.

There was an average of 9 months delay from arrest to trial in felony cases. This is true despite the fact that the courts of Dallas County dispose of more cases annually than any other county in the State.

Information concerning criminal justice as a system is almost impossible to obtain due to antiquated information handling systems.

It turns out that the criminal justice system in our community and possibly many others grew like Topsy from a sheriff or town marshal who kept nondescript-type records to what we now have. It was impossible for my researchers to determine, for instance, what was the

disposition of all of the burglary cases in Dallas County for any given period of time. They are not filed that way. They are only filed by the name of the defendant. Consequently, it took a manual hand search all of the way through the system to develop the information we developed on these 1,067 individual cases.

Our final conclusion was concurrent sentencing; that is, where a man would be arrested and charged with more than one case who would be arrested and allowed to serve his sentences all at the same time for those cases. Concurrent sentencing coupled with bond abuse and long trial delays create a "free crime ethic" in the criminal subculture. In other words, anything he did after the first one was free. And it creates this ethic, or this feeling, or belief, or reality, in the criminal subculture. Indeed, it creates an atmosphere where if a man is arrested and charged with a crime—who may lose his job by virtue of that action, who indeed may incur attorney expenses and bond expenses and other factors, who is allowed to be on the street for 9 months awaiting this criminal action against him—it might be said he is indeed driven to create additional crimes. And certainly, if there is no sanction against him should he commit additional crimes I think that upholds our belief. There is this attitude in the criminal subculture.

Chairman PEPPER. Mr. Brown, unfortunately, I missed the first part of your testimony. You seem to be presenting a most interesting study having to do with recidivism. I would appreciate it if you would summarize what you discovered in this study and what your recommendations are growing out of the study you have made as to how crime could be averted.

Mr. BROWN. Yes, sir. To begin with, our charge, Mr. Pepper, from Chief Dyson, our chief, was to find out how much crime is being committed in Dallas by repeat offenders. Additionally, I pointed out it is very difficult to determine who is committing your crime when you are only clearing 25 percent of those crimes, or roughly, 25 percent of those crimes. So, our research largely has to draw on circumstantial evidence against this repeat offender. However, we documented a number of things that we were able to prove, using random sampling techniques, using 1,067 randomly chosen individual cases filed by the Dallas Police Department, and then tracking them.

It was our overall conclusion that almost 60 percent of the crime in Dallas, is being committed by these repeat offenders, and that they commit a disproportionate number of crimes.

Chairman PEPPER. Did you go back in your study to determine whether or not these repeat offenders had any juvenile delinquency record, or how early in the life of those individuals their dereliction had occurred.

Mr. BROWN. We asked that question. We interviewed 99 inmates from Dallas in the diagnostic center of the department of corrections in Huntsville, and we asked that question. We were unable to track these people through into the juvenile system and did not, indeed, try to do that. But quite a few of those people indicated—and we have the exact number somewhere in this report—they had previously been handled as juveniles.

Chairman PEPPER. I asked that question because I have had a feeling from the testimony that we received from numerous juvenile court judges that a large part, perhaps the majority, if not three-fourths

of the people, who are later found to be in penal institutions as a result of being convicted of crime started their delinquency, their personal conduct, below 20 years of age.

Mr. BROWN. We did not try to carry into the juvenile system, inasmuch as those records quite often are even more difficult to obtain than the records we were searching. Significantly, however, we did note in a study called Delinquency in a Birth Cohort by three gentlemen, Mr. Wolfgang, Mr. Figlio, and Mr. Sellin—and it is in the report here—it was their finding that a very small percent of both cohort—you know, that is anyone who is born during the same year—and it was their finding that they took all of the children born in a mid-1940 year in Philadelphia, and they tracked these people throughout their young adult life. They found that approximately 18 percent of those risk cohorts were responsible for over 50 percent of the crimes committed by the entire universe of that study. Which indicates, to me at least, that the chronic juvenile offender is the one who carries over and becomes your repeating offender. I think this would probably bear out.

Chairman PEPPER. These relatively few people are responsible for most of the crime; is that the case?

Mr. BROWN. Yes, sir.

Chairman PEPPER. The problem is what to do with those relatively few people. Did you come up with recommendations?

Mr. BROWN. Yes, we did. We made five recommendations based on this study. The first is to control the repeat offender; the criminal justice system must become a true system. By this, we mean a system that develops information about itself, which allows an overview of it, which allows you to evaluate it and which is interrelated, one component complementing and indeed functioning hand in hand with the other component.

Second, we recommend there should be a prosecution policy within a police department which is understood by each component of the criminal justice system, by the public, and most importantly by the criminal himself.

We found, for instance, our prosecution policy in the department was not firm, in that we really didn't understand ourselves, what we were doing about our prosecutions and, indeed, we found that we had detectives and supervisors making decisions about whether or not to file cases. It was our conclusion this was probably not a prerogative of the police department but rather a prerogative of the district attorney who is constituted with that responsibility. And if we make that determination off in a corner, then the district attorney doesn't have sufficient information to make an intelligent determination as to how many cases to file or what to ask for in regard to his prosecution.

Next, we recommend that in order to reduce crime the criminal court should serve justice as rapidly as is practicable after indictment and, certainly, sooner than 9 months.

Chairman PEPPER. Has your supreme court or your highest appellate court imposed any limit; that is, fixed any time within which defendants charged with crime would be brought to trial?

Mr. BROWN. No, sir.

Chairman PEPPER. Our supreme court in Florida is pretty firm. They fixed a 60-day period. In the beginning many cases were dismissed because the prosecution had not brought the defendant to

trial within that period. There seems to be a growing tendency toward that kind of action on the part of the appellate court as one way to shorten the delay between the time the man is charged with a crime and the time he is brought to trial.

Mr. BROWN. The legislature of the State should pass laws that would increase the difficulty faced by a repeat offender in obtaining subsequent bonds when he commits further offenses while on bond and should devise additional sanctions for offenses committed while on bond.

The legislators of the State should develop legislation preventing the use of concurrent sentences for persons who are repeat offenders.

Chairman PEPPER. Do you have the repeat offender log where you get a more severe sentence after you have been convicted for two felonies and then a third one?

Mr. BROWN. Yes, sir.

Chairman PEPPER. Do you have a much heavier sentence imposed?

Mr. BROWN. It was our finding that we do have a habitual offender law in Texas, and it was our finding in our cases—and I say, "our cases" meaning the Dallas Police Department cases filed—that the habitual offender law was very seldom invoked.

Chairman PEPPER. Did you go into the question of the correctional institutions and what should be done? You are talking now about a relatively small number of people who commit most of the crime. It is one thing to lock them up in an institution; it is another thing to know what to do with them to prevent them from becoming recidivists. Did you go into that study?

Mr. BROWN. No, we didn't, Mr. Pepper. I think probably that is out of our line. We have some ideas and attitudes about that, but being police oriented and our studies being in the realm of police work I am afraid we would not be very good witnesses in that respect.

That completes my statement.

Mr. LYNCH. Director Brown, I wonder if you can tell the committee how many copies of the study were published and to whom they were disseminated?

Mr. BROWN. We printed 500 copies of it. We have disseminated them to the Texas Criminal Justice Council, Dallas area, our own governing body, and the county governing body.

Mr. LYNCH. Has this study been printed in your local newspaper?

Mr. BROWN. Some portions and excerpts have been printed. We have also made it available to LEAA, their reference library, and IACP, and a number of other assorted people we thought would be interested.

Mr. LYNCH. Has this study been sent to your local prosecutor and court officials?

Mr. BROWN. Absolutely; they saw it in its early development stage, however.

Mr. BROWN. Have any changes in the system been brought about based on your findings?

Mr. BROWN. Yes, sir. I am happy to say one of the things we did was do a lapsed-time study on courts. Our prosecutor, in a very positive manner, took that lapsed-time study and went to Austin and justified two new courts for Dallas. Secondly, the Dallas Area of Criminal Justice Council which consists of our county commissioners, the city

managers, and individuals such as that, have authorized Chief Dyson to form a task force consisting of he, Judge Mead of Dallas, the sheriff, Mr. Ledbetter, who is our probation officer. This task force is to deal with the recommendations and the findings of this study.

Mr. LYNCH. Other than the Washington, D.C., study, which from my understanding was somewhat more modest in scope than this, do you know of any police department which has commissioned its own recidivism study?

Mr. BROWN. No, sir. I don't, Mr. Lynch.

Mr. LYNCH. Mr. Chairman, I have no further questions, but I would ask that this "Dallas Repeat Offender Study" be incorporated in our record here today.

Chairman PEPPER. Without objection, it will be received for the record.

[For the study mentioned above, see material received for the record at the end of Mr. Heath's testimony.]

Chairman PEPPER. Mr. Steiger?

Mr. STEIGER. Mr. Chairman, I would like to congratulate Director Brown for what is clearly as an objective approach to this problem as I have seen.

Mr. BROWN. Thank you.

Mr. STEIGER. The only question I have, Mr. Brown, and I suspect it would be a combination of item No. 3, in which you admonish the court to serve justice as rapidly as possible, and item No. 5, in which you disavow the usage of the concurrent sentencing, both of which led to what you call the crime-free ethic in which once a man is filed, he is fixed for whatever else he chooses to do.

You would be interested to know this is not unique. In fact, in Washington, we have perhaps the biggest volume of that kind of activity because we are under the Federal Bail Bond Act, with six indexes of bail under which a person can be released. The bail is valid for all but it is creating havoc.

The result is, of course, when the guy is raising money for his defense—which I don't buy, frankly—that guy goes out and proceeds to steal as rapidly as possible, because he is going to go to jail and he wants a nest egg when he gets out. He won't suffer the consequences of subsequent crimes because of the backlog in the courts, which leads to the plea bargaining, which means he can select the crime he can most likely serve time for and cop out on that one, in exchange to waiving on the others.

You didn't address yourself to that in your remarks. Maybe there is no plea bargaining in Dallas.

Mr. BROWN. Yes; there is.

Mr. STEIGER. I suspected there might be. Actually, I think your conclusions are certainly very valid. There is, obviously, no way to legislate plea bargaining out of existence. On the other hand, clearly without a backlog and the pressures on the courts, the impetus of plea bargaining will be reduced. So I think you have hit the nail on the head. I would be very interested to see if your recommendations are implemented.

I think it would be conjecture on your part to guess how far it will be implemented.

Mr. BROWN. I can report to you some of these things that are happening. As I mentioned before, we do now have 2,000 impact courts.

I say impact courts meaning they are under the impact program in Dallas, Dallas being another impact city. This task force that Chief Dyson chairs has begun to try to understand if it is possible to prioritize cases. These questions are being asked now and a system of prioritization has been proposed. However, there are legal implications there and I am sure my colleague, Mr. Heath, will get a chance to tell us if those are proper things to do. But prioritization of cases against a person who has shown himself in the instance of the one person I noted, who had $108,000 worth of bonds, would occur to me as a policeman that it would not to be an unrealistic thing to give this man a little more priority of trial than maybe a first offender.

Mr. STEIGER. Thank you. No further questions.

Chairman PEPPER. Mr. Winn?

Mr. WINN. Mr. Chairman, I have no questions. I think your summary is very good, except I question your third recommendation because I don't think it really says anything: "In order to reduce crime, the criminal court should serve justice as rapidly as is practical after indictment."

To me it is weak. You have such a variation of opinion of what is "as rapidly as practical." I mean, I think you left it open-end and, as thorough as the rest of the study is—and I think, Director Brown, this is an outstanding document. I certainly intend to try to get a few extra copies and put it in the hands of some of my law enforcement people in my area.

Mr. BROWN. We will be happy to respond to any request to our department. If you just address them to me, we would be happy. I might say, in response to that question, Mr. Winn, I was at a loss to say what is practical, too. Justice Burger, however, had some points on that, as I recall. It was something like—I am sure my colleague would know better than I—2 months.

Mr. WINN. Yes. I think all of us have seen publicized 60 to 90 days; that we hear frequently, as you pointed out.

I have been reading pages 12 and 13, some of these Dallas case histories. They read like case histories of city after city after city that this committee has visited. Some have 15 to 20 different type offenses and still these people are right back on the streets; which is your main concern.

Until yesterday, I was not aware we had any room in our jails in the District of Columbia. For 4 years I was on the District of Columbia Committee, and we heard there was no room for offenders. They had to let them go because they had no place to put them, particularly young people. They put them in with hardened criminals or sent them out to Lorton, which is no bargain.

The facilities are another problem. You could probably do another study, I am sure, on the various facilities around.

I want to commend you on your study. I don't know whether 60 or 90 days is right, but this 9-month stuff that is going on is ridiculous. Thank you.

Mr. HEATH. Mr. Chairman, I would like to make a statement to Mr. Steiger to clear the record on one question he asked me.

Sir, you asked me about the suits that we had been involved in. There was one case that we did settle out of court. So, when I told you we had not lost any, I did not mean to take that one into consideration.

Also, I want to exclude traffic accidents from that, because I don't get involved in that type of defense.

Chairman PEPPER. Director Brown, I want to join my colleagues in commending you and your department in the highest way for this magnificent study you made and presented. I would certainly like to get extra copies myself.

Do you know of any other department, agency, or authority anywhere in the country that has made similar studies? We would like to have access to them.

Mr. BROWN. Yes, sir. The FBI does an excellent study, a careers in crime study. As a matter of fact, we have documented some of their findings in our study. I know Mr. Adimand Keene with the FBI in the Crime Reporting Section, I think, puts that study together, and he has been most helpful and supportive of us.

Chairman PEPPER. You are getting at the very heart of this problem. I talked to a chief of police the other day, in company with our two counsels, and I was a little discouraged when I left the conference with this chief of police because I thought he sort of assumed there were such a number of people that were going to commit crime, but there wasn't an awful lot you could do. You practically had to accept the fact there were certain people that had some sort of predilection toward crime and some sort of antisocial attitude or character that meant as long as those people were in our society you could expect to see them committing crimes and expect to see crime committed.

You go through the prisons, as all of us have done many times, and you will see types of people; most of them relatively uneducated people with little skills, a lot of them school dropouts and the like. I am not saying poverty in any sense of the word justifies anybody committing crime, but it does look like there are certain people who have some sort of instability of character, some sort of peculiar makeup that gets them into crime or permits them to get into the criminal group; doesn't it?

Mr. BROWN. Yes; it does.

Chairman PEPPER. If we could go back far enough in their lives and find the first manifestation of that antisocial attitude it would obviously be helpful in trying to keep them from becoming criminals when they grow to an older age. I have heard schoolteachers say, that you observe in the lowest grades, second or third grade, symptoms of activities on the part of young people that are warning signs that they feel may be of that peculiar constitution that permits them or stimulates them later toward crime.

It would seem to me to be a study that should be carefully made as to whether we might put emphasis on trying to straighten out those

whose lives are beginning to be warped, as it were, at a tender age and, in that way, maybe, prevent crime.

Have you any comment on that?

Mr. BROWN. Yes, I do. I agree with you, sir. Chief Dyson agrees with you, because we have discussed this a number of times.

One of the people we spoke to about this very problem was Dr. Holbrook, Dr. John Holbrook, chief psychiatrist for the Texas Department of Corrections. Dr. Holbrook is very familiar with workings of the sociopathic mind. It is his opinion—we sought the need to say some of the things Dr. Holbrook said to us, although we were not able to conclude or go further into that—sociopaths can be identified and that he is responsible for many of our unsolved crimes, being a smarter criminal than the ones he accuses us of catching. And he says you are only catching the low and slow ones, you are not catching the fast criminals.

He challenged us and challenged Chief Dyson, and we agree with you, Mr. Pepper, that there should be a way to hopefully help the individual before he gets into this role of repeating. I think it will probably take someone with more intellect than a policeman like myself, but these are fascinating things. If we could short stop that career early it would just be tremendous.

Chairman PEPPER. If a child has an ear defect, or speech defect, or sight defect, or stammering defect, and certain other physical defects, we have programs for them. But if the child develops that instability or incorrigibility, that indicates that he is becoming an antisocial person, we don't have many programs for them; do we?

Mr. BROWN. No, sir.

Chairman PEPPER. Thank you very much.

Please carry the commendation of this committee to your department. We commend you for what you have done.

Mr. BROWN. I certainly will. And, again, Chief Dyson, had he not had legislative problems in Austin that were very, very pressing and very intense would have been here. He asked us to assure you that he would.

Chairman PEPPER. Thank you.

[The following material, previously referred to, was received for the record:]

DALLAS POLICE DEPARTMENT
CRIMINAL JUSTICE INTERFACE DIVISION

Operating Procedure

DIVISION PURPOSES AND FUNCTIONS

The purpose and function of the Criminal Justice Interface Division is:

1. To provide consultative legal services to the Chief of Police, the Assistant Chiefs of Police, supervisory officers and other personnel of the Department;

2. To provide liaison services between the Police Department, the City Attorney's Office, the District Attorney's Office, the Federal Prosecuting Agencies, and other agencies of the criminal justice system;

3. To provide case review on all prosecution reports of IMPACT (stranger-to-stranger) and Part I, F.B.I. Index Crimes submitted to the Office of the District Attorney for prosecution;

4. To monitor the disposition of criminal cases by the Office of the District Attorney. Cases resulting in "no-bill" actions by the Dallas County Grand Jury or dismissals by the courts will be closely monitored for weaknesses or deficiencies in police investigation, reporting techniques, and case preparation;

5. To assist in the development of policy statements such as special orders, rules and regulations which affect legal procedures of the Department;

6. To assist the Director of Training in preparing material and instructing on legal matters;

7. To assist in legal proceedings affecting Departmental personnel as requested by the City Attorney and District Attorney or specifically directed by the Chief of Police;

8. To assist on special projects and programs established by the Chief of Police, and;

9. To provide liaison with the Dallas Bar and the State Bar of Texas on legal matters affecting police operations.

THE IMPACT PROGRAM

On December 7, 1972, the Dallas Police Department made an application for the three (3) year grant under the provisions of the "IMPACT" program of the Law Enforcement Assistance Administration of the United States Department of Justice for an expansion of the Criminal Justice Interface Division to accomplish the following goals and objectives:

1. Implement new systems and procedures to more effectively handle offenders of these specific types of crimes. (IMPACT stranger-to-stranger crimes).

2. Improve organizational effectiveness of the criminal justice system.

3. Promote coordination and free exchange of information among criminal justice entities.

On January 15, 1973, this grant application was approved by the Texas Criminal Justice Council which is the state criminal justice planning agency for the State of Texas. Funding was received in February of 1973, and the program became operational on March 1, 1973. To accomplish these goals and objectives, the following specific objectives were set for the Criminal Justice Interface Division:

1. To reduce the rate of "no-bill" actions by the Dallas County Grand Jury in Part I Index Crimes - specifically, stranger-to-stranger crimes - from the current rate of approximately 30% to a maximum of 20% within three years: 2% the first year, 4% the second year, and 4% the third year. If this objective can be accomplished in less time, a further reduction will be sought.

2. To reduce the number of cases dismissed after indictment or the filing of a complaint-information in major misdemeanor cases, in stranger-to-stranger crimes, from approximately 18% to a maximum of 12% within three years: 2% the first year, 2% the second year, and 2% the third year. If this objective can be accomplished in less time, a further reduction will be sought.

All programs of the Criminal Justice Interface Division will be directed to the accomplishment of these objectives.

DIVISION PROCEDURES

I. Command and Accountability

A. The Criminal Justice Interface Division shall be commanded by a Director, who is a licensed attorney, and is directly responsible to the Assistant Chief of the Special Services Bureau for the performance of Division purposes and functions.

B. The Division shall have such other personnel as may be authorized by the Chief of Police.

II. Command Responsibility

A. The Commander of the Criminal Justice Interface Division will be responsible for providing consultative legal services to the Chief of Police, the Assistant Chiefs of Police, supervisory officers and other personnel of the Department. He shall conduct such other liaison missions as the Chief of Police shall request.

B. Assistant City Attorneys assigned to the Police Department will be under the day-to-day direction of the Division Commander, but shall remain under the overall jurisdiction of the City Attorney. All personnel actions involving these personnel will be administered by the City Attorney.

III. Hours of Assignments

A. The normal hours of duty for the Criminal Justice Interface Division shall be from 8:15 a.m. until 5:15 p.m., Monday through Friday. The sworn personnel of the Criminal Justice Interface Division shall work such hours as are necessary to fulfill their mission regardless of the time or date.

B. Attorneys assigned to the Division will be subject to call twenty-four (24) hours a day, seven days a week. One attorney will be designated as "Duty Legal Advisor" on a rotating, bi-weekly basis, and will be called to the scene of all major crimes.

IV. Personnel Authorizations

A. The following personnel will be authorized by the Police Department:

1. Director of Police - Division Commander
2. Director of Police - Chief of Court Liaison Services
3. Sergeant of Police (1) - Supervise court liaison investigators
4. Investigators/Patrolman (11) - Court Liaison Services
   a. 1 for each of the nine district courts
   b. 1 for the juvenile courts
   c. 1 for the County Juvenile Department
5. Police Clerk 6 (1) - Supervise office administration
6. Stenographer 5 (2) - Secretarial services

B. The following personnel will be authorized for assignment to the Police Department by the Office of the City Attorney:

1. Assistant City Attorney Grade 19 (3)
2. Assistant City Attorney Grade 16 (1)

LEGAL SERVICES PROCEDURES

I. Consultative legal services

A. Consultative legal services will be given to the Chief of Police, Assistant Chiefs of Police, command, and supervisory personnel of the Dallas Police Department.

B. Consultative legal services to police officers and civilian personnel will be given through their immediate supervisors.

C. Consultative legal services will not be given to other departments of the City of Dallas. Such inquiries will be referred to the Office of the City Attorney.

II. Nature of legal services

A. Legal advice will be given as advice and not as a command or direction to personnel requesting advice. In serious cases, the attorney receiving requests will contact the Director of the Criminal Justice Interface Division.

B. Legal advice will not be given to settle disputes between superior and subordinate personnel except where such advice has direct bearing on legal matters affecting the Department.

III. Internal Affairs Investigations and Complaints

A. Attorneys and other personnel of the Criminal Justice Interface Division will not receive complaints about police personnel or involve their actions in internal complaint cases except on direction of the Director of the Criminal Justice Interface Division.

B. Complaints against police department personnel will be referred directly to the Internal Affairs Division in accordance with General Order 70-6.

IV. Public Inquires

A. Requests from members of the public for information will be honored insofar as it does not amount to public legal advice.

B. Persons seeking legal advice should be referred to the Dallas Bar Association Lawyer Referral Service or the Legal Aid Unit of Dallas County as appropriate.

V. Field Services

A. One attorney of the Criminal Justice Interface Division will be designated as the "Duty Legal Advisor" for a two-week period on a rotation basis.

B. The Duty Legal Advisor will respond to field requests for legal services on any major crime.

C. The Duty Legal Advisor will be expected to respond to any emergency call from the Communications Center where field legal services are needed on major crimes on a twenty-four (24) hour basis.

VI. Case review procedures

A. An attorney will review all IMPACT (stranger-to-stranger) crime prosecution reports before they are filed with the Office of the District Attorney. All Part I Index Crimes as classified by the Federal Bureau of Investigation Uniform Crime Reporting System will also be reviewed.

B. The review of prosecution reports will not delay the filing of criminal cases as required by General Order 70-2. A review may be made immediately after filing where a review would delay the processing of a criminal case.

C. Any offense indicating the need for further investigation will be returned to the appropriate investigating section through their Division Commander. A log will be maintained of all cases returned for further investigation or information.

VII. Review of "no-billed" and dismissed cases

A. Attorneys will review all criminal cases involving IMPACT offenses and Part I Index Crime offenses which are "no-billed" by the Dallas County Grand Jury. The deliberations of the Grand Jury are secret by law. Review and comments will be made only with the Assistant District Attorney assigned to the Grand Jury. Individual grand jurors will never be questioned about their actions.

B. Cases involving IMPACT crimes and Part I Index crimes which are dismissed after indictment but before trial will be reviewed by an attorney. Personnel assigned as court liaison investigators will make a record of all cases

dismissed and report them through their supervisory personnel to the Director of the Criminal Justice Interface Division. An attorney will review any such dismissed case with the chief prosecutor of the court that the case was dismissed in to determine if the dismissal was the result of a failure of police investigation or other police procedures. Records will be maintained on the causes of dismissals which relate to police procedures and action will be taken to eliminate deficient investigation through training, improved investigative procedures, or improved reporting.

VIII. Major Crime Investigation Assistance

A. An attorney will be assigned on request to assist an investigating officer on any major crime requiring legal advice or assistance. Major crimes shall include - but not be limited to - murder, armed robbery, kidnapping, burglary, theft, and narcotics violations.

B. An attorney will be notified and will immediately assist in the investigation of any case where deadly force is used by or against a member of the Department which results in death or serious bodily injury.

IX. Civil Distrubances or Mass Arrests

A. In the event of riot, civil disturbance, disorder, or unlawful assembly, an attorney shall report to the field command post or the Office of the Chief, as may be appopriate.

B. The Director of the Criminal Justice Interface Division shall act as liaison with the Office of the City Attorney, the State Attorney, and courts for the purpose of the establishment of any legal directives necessitated by the emergent situation. This includes, but is not limited to, mass arrest procedures, abbreviated arrest and processing forms, and protection of the rights of police officers and arrestees.

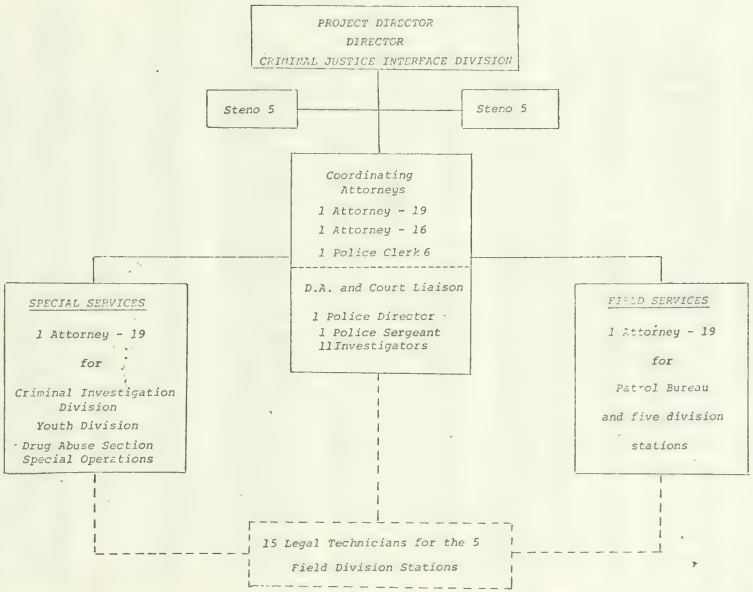
X. Legal Opinions and Written Directives

A. Attorneys will give oral opinions on any request for legal advice from members of the Departmant.

B. Formal written "City Attorney" opinions will not be issued without prior approval of the City Attorney.

C. Memorandums, Special Orders, and General Orders will not be issued until approved by the Division Commander and staffed with command personnel as appropriate.

PROJECT ORGANIZATION



*These attorneys positions will be filled by the staff of the City Attorney. They will be assigned to the Police Department for this project on a full-time basis under the day-to-day direction of the Project Director, but will remain under the overall jurisdiction of the City Attorney.

PERSONNEL DUTIES

I. Director of Police - Division Commander:

A. Command the Criminal Justice Interface Division and serve as chief in-house legal counsel to the Chief of Police, the command staff, and supervisory personnel of the Dallas Police Department;

B. Serve as principal liaison officer in legal matters involving criminal justice agencies;

C. Directly support the City Attorney and his assistants in legal matters involving the Police Department;

D. Develop programs, plans, and projects to interface police enforcement activities with other agencies in the criminal justice system;

E. Be responsible for planning and coordination of legal matters within the Department;

F. Develop programs, plans, and projects for more effective legal aid and services to Police Department personnel;

G. Coordinate with Director of Training for legal subjects in basic, advanced, and specialized training programs;

H. Develop policy statements, general orders, special orders, procedures, and policies of the Department to assure compliance with new legal requirements, monitor existing general orders, special orders, policies and procedures of the Department to assure compliance with legal requirements;

I. Monitor and coordinate Departmental legislative programs with the City Attorney's Office and at congressional, state, and local levels.

II. Director of Police - Chief of Court Liaison Services

A. Command personnel assigned as liaison with the district courts, the county courts, the juvenile courts, and the County Juvenile Department;

B. Closely monitor prosecution reports in cooperation with other attorneys to see that prosecution reports are correctly filed, that the investigation is complete, and that all legal problems have been resolved;

C. Monitor courtroom testimony of officers in court for the purpose of improving case preparation and witness presentation to the courts, and;

D. Monitor dispositions of cases prosecuted in county and district courts.

III. 3 Police Attorneys, Grade 19; 1 Police Attorney, Grade 16:

A. The duties of one Attorney, the Coordinating Attorney, will be as follows:

1. To act as project coordinator and serve as the principal liaison officer with the District Attorney and other criminal justice agencies concerned with the investigation and prosecution of stranger-to-stranger crimes;

2. Be responsible for program development to improve legal services to the Police Department and to improve coordination and cooperation between the Police Department and other agencies of the criminal justice system;

3. Develop policy statements such as general orders, special orders, and directives on legal matters involving police operation;

4. Review existing general orders, memorandums and directives of a legal nature to insure that such material is correct in legal areas and is current with the latest judicial decisions and legislative enactments;

5. Review case preparation procedures and evaluate existing policies for improvement of the prosecution of stranger-to-stranger crimes, and;

6. Develop training programs to increase the investigative effectiveness of enforcement personnel.

B. The duties of the second attorney, Special Services, will be as follows:

1. Assist the Division Commanders, supervisory and investigative personnel of the Criminal Investigation Division, Drug Abuse Division, Youth Division, and Intelligence Division, in the investigation of criminal cases and in the preparation of prosecution reports for the District Attorney's Office;

2. Assist in the preparation of search warrants, warrants of arrest, and other criminal processes in the investigation of criminal offenses;

3. Closely assist the Division Commanders in cases of repeat offenders and crimes of exceptional violence, in filing of charges, setting of appropriate bonds, denial of bonds when indicated, and coordinating with the District Attorney's Office to expedite the indictment and prosecution of these offenders;

4. Coordinate with special law enforcement task force operations and team policing projects directed toward stranger-to-stranger crimes as directed;

5. Monitor prosecution reports prepared by investigative personnel, and;

6. Revise the propriety of charges, legal problems (such as preservation of evidence, search and seizure, etc.), proper witnesses, and quality in preparation of reports and completeness of the investigation.

C. The duties of the third attorney, Field Services, Grade 19 will be as follows:

1. Provide legal assistance to the Assistant Chief of Police of the Patrol Bureau and the five Patrol Division Stations;

2. Provide personal consultation and legal advice to command personnel, supervisory personnel and investigative personnel assigned to the Patrol Bureau;

3. Prepare search warrants, warrants of arrest and other criminal processes as required;

4. Monitor arrest reports, offense reports and prosecution reports prepared by personnel of the Patrol Bureau, and;

5. Review division policies and procedures to insure that they meet all legal requirements of the statutes and current court decisions.

D. 1 Police Attorney, Grade 16-Step 1, will have the following duties:

1. Assist the coordinating attorney, the attorney assigned to the Patrol Bureau, and the attorney assigned to the Criminal Investigation Division, Youth Division and Drug Abuse Division;

2. Closely monitor prosecution reports in cooperation with other attorneys to see that prosecution reports are correctly filed, that the investigation is complete, and that all legal problems have been solved;

3. Monitor arrest reports, offense reports and prosecution reports prepared by personnel of the Patrol Bureau;

4. Monitor courtroom testimony of officers in court for the purpose of improving case preparation and witness presentation to the courts;

5. Monitor dispositions of cases prosecuted in county and district courts;

6. Serve on any special task force projects related to stranger-to-stranger crime, and;

7. Coordinate with probation and parole agencies for the revocation of probation and parole for persons committing stranger-to-stranger crimes.

All four attorneys will be employed as Assistant City Attorneys with full-time assignment to the Police Department. The attorneys will be under the day-to-day direction of the Project Director, but will remain under the overall jurisdiction of the City Attorney.

IV. Court Liaison Personnel

A. Sergeant (1)

1. Responsible for coordinating the duties of investigators assigned to the district court, the county courts, and the juvenile courts.

2. Directly responsible for supervision of these personnel and review of the disposition of cases handled by the District Attorney's Office.

B Investigators, District Courts and Juvenile Courts (10)

1. Assist the District Attorney's Office in securing the attendance of witnesses in the district court and in the final preparation for trial of cases involving persons arrested by the Dallas Police Department.

2. Monitor testimony of departmental personnel appearing as witnesses for improvement of courtroom presentation and case preparation;

3. Review prosecution procedures at trial to determine weaknesses and deficiencies in police operation, policies, and procedures, and;

4. Perform such court services as requested.

C. Investigator, County Juvenile Departmant (1)

1. Coordinate investigations of the Youth Division with the Dallas County Probation Department and the Texas Youth Council;

2. Coordinate with judges and prosecutors in the Juvenile Court in preparation and presentation of cases from the Dallas Police Department;

3. Monitor the trial of juvenile cases for improvement in investigations, case preparation and for witness preparation and presentation, and;

4. Review policies and practices with the Dallas Police Department and the Dallas County Probation Office for improvement in handling of juvenile offenders.

V. Clerical and Stenographic Positions

A. 1 Police Clerk 6

1. This position will provide administrative assistance to the attorneys on this project;

2. Will assist in case review and the compilation of statistical and record information on the project, and;

3. Will assist the coordinating attorney in the drafting of training materials and policy directives designed to correct errors and weaknesses in investigative and reporting procedures and the development of model training guides and check lists for enforcement personnel.

B. Stenographer 5 positions (2)

1. Two Stenographers, Grade 5, will be assigned to the Office of the Division Commander and will be accountable to him for the proper performance of assigned duties;

2. Should be filled by experienced stenographers capable of taking dictation with complex technical legal terms and then transcribing them into legal documents;

3. Maintain a legal library including a cross reference filed by citations;

4. Act as receptionist both in front office and via telephone;

5. Perform ordinary secretarial duties such as receiving and sorting mail, making appointments, composing routine mailing letters, and receiving and handling inquiries and complaints;

6. Prepare time work records as required, and;

7. Maintain complex filing system as required by General Order 68-3 (Administrative Filing System), and other files as required.

APPENDIX I

DUTIES OF LEGAL ADVISORS AT DIVISION STATIONS

Attorneys assigned as Legal Advisors to Division Substations will have the following additional duties:

1. Legal Advisors assigned to Division Stations of the Dallas Police Department will be employed as Assistant City Attorneys. These attorneys will be under the day-to-day supervision of the Director of the Criminal Justice Interface Division but will remain under the overall direction of the City Attorney.

2. Legal Advisors at Division Stations will report directly to the Division Commander and will serve in the capacity of advisor on legal questions and procedures.

3. Duties of the Legal Advisors will include, but are not limited to the following:

   a. Advise the Division Commander, supervisory officers, and police officers on legal matters;

   b. Review prosecution reports, offense reports, and arrest reports to insure that charges are correct and that information is complete;

   c. Assist the Division Commander in reviewing procedures, practices, and policies involving legal matters;

   d. Assist in roll-call training on legal subjects;

   e. Review cases which are "no-billed" or dismissed by the courts which originate from that Division, and;

   f. Perform such other duties relative to legal matters as may be requested by the Division Commander, Director of the Criminal Justice Interface Division, or the City Attorney's direction.

4. Legal Advisors will not command, supervise or direct police personnel but will serve only as a staff advisor of the Division Commander.

5. Any irregularities, defects in procedure, or problem areas involving legal matters will be reported directly to the Division Commander.

6. Any irregularity or indication of misconduct by employees will be immediately reported to the Division Commander. If any such conduct requires immediate corrective action, it will be reported immediately to the senior supervisor on-duty and to the

Division Commander as soon as appropriate.

7. Legal Advisors will not conduct internal affairs investigations or inquiries. Such cases will be immediately referred to the Internal Affairs Division and the Division Commander.

8. Legal Advisors will work the hours and days prescribed by the Division Commander and/or the Director of the Criminal Justice Interface Division. Legal Advisors will be subject to call on a twenty-four hour basis for major crimes and police incidents.

9. Legal Advisors will not involve their activities in Administrative matters of the Police Department unless such matter is directly related to or concerned with legal problems.

10. Legal Advisors will not involve themselves in personnel actions, evaluations, transfers, re-assignment of police or civilian personnel.

11. Legal Advisors will maintain records or their daily work activities as required by the Director of the Criminal Justice Interface Division.

12. Clerical and stenographic assistance to Legal Advisors will be provided by the Division Commander and the Director of the Criminal Justice Interface Division.

APPENDIX II

DUTIES OF LEGAL TECHNICIANS

A. Personnel selected and trained as Legal Technicians will be assigned to operating bureaus and divisions.

B. Legal technicians will confer directly with attorneys assigned to the Criminal Justice Interface Division on major legal problems and procedures.

C. Legal Technicians will directly assist operational personnel as follows:

1. Assist field, supervisory and jail supervisors in correctly charging criminal violators;

2. Monitor arrest reports to insure correct charges are filed and that the basic elements of the alleged criminal violation are reported;

3. Assist field and supervisory officers in the correct reporting of offense/incident reports;

4. Monitor field offense/incident for quality in correctness and completeness in preparation;

5. Assist field and supervisory personnel at the scene of major crime incidents or where "on-the-spot" legal advice is required;

6. Assist in the preparation of criminal process, i.e., search warrants and warrants of arrest;

7. Coordinate with attorneys in the Criminal Justice Interface Division on major crime investigation and on serious or complex legal problems;

8. Assist field personnel and supervisory officers in re-investigation or further investigation when needed;

9. Give roll-call training to field personnel;

10. Have a working knowledge of legal research, and;

11. Follow through on major crime and repeat offenders from arrest to Grand Jury.

DALLAS REPEAT OFFENDER STUDY

DALLAS POLICE DEPARTMENT

FRANK DYSON
Chief Of Police

ACKNOWLEDGEMENTS

We would like to take this means of expressing our appreciation to the members of the following organizations who were so helpful in providing the information contained in this report. The spirit of their cooperation testifies to their willingness to work hard in overcoming the problems of the criminal justice system.

Similarly, any failures to properly evaluate or interpret the findings of this study are freely borne by the writers and not these fine organizations.

Dallas County Sheriff's Office
Dallas County Probation Department
Dallas County District Attorney's Office
Texas Board of Pardons and Paroles
Texas Department of Public Safety
Texas Department of Corrections
Federal Bureau of Investigation
Data Services, City of Dallas

Prepared by: Planning and Research Section, Dallas Police Department, January 1973

SUMMARY OF RECOMMENDATIONS

- To control the repeat offender, the criminal justice system must become a true system.

- There should be a prosecution policy within the police department which is understood by each component of the criminal justice system, the public and most importantly, the criminal.

- In order to reduce crime, the criminal courts of this district should serve justice as rapidly as is practical after indictment.

- The legislature of this state should pass laws that would increase the difficulty of a repeat offender obtaining subsequent bonds when he commits further offenses while on bond and devise additional sanctions for offenses committed while on bond.

- The legislature of this state should develop legislation preventing the use of concurrent sentences for persons who are repeat offenders.

Chapter I
THE DALLAS REPEAT OFFENDER STUDY

The purpose of this study is to determine the amount of crime committed in Dallas by repeat offenders. Further, the study intends to identify Dallas area criminal justice procedures which can be improved in order to minimize repetition of criminal offenses.

This is a pragmatic study written by police officers to document what is happening in the criminal justice system. It seeks first to learn what is happening, who is committing the crimes, and to what extent. Further, our study attempts to learn what is occurring after arrests to those individuals who are charged with committing the crimes so that remedial steps can be taken to make the criminal justice system accomplish the goals society intends for it to accomplish.

Insofar as possible, we will have to build a circumstantial case against the criminal offenders in determining responsibility for crime in Dallas. This is caused by the fact that over 70 per cent of the offenses committed are successful. In spite of this condition, we feel the analysis of arrests, clearances, and criminal histories will develop a conclusive case against the repeat offender. An argument exists that perhaps the 70 per cent of the offenses not cleared by the police are all committed by first offenders, but there is no evidence to support such an argument. However, there is strong circumstantial evidence supporting the position that repeat offenders are committing a majority of this unsolved crime as well as the solved crime.

We realize there are many social conditions that lead to crime. Studies into social problems such as poverty, urbanization, and prejudice we leave in the hands of more qualified researchers. However, there is no doubt that the criminal justice system has a strong effect on the criminal conditions in our society and this study is written to encourage solutions to any imperfections in the system.

It is hoped that laymen will find this study of interest and support the recommendations, however, this study is directed primarily to the practitioner seeking system improvement. There is no doubt that real improvements in the system will pay off in crime reduction. In the area of control of the repeat offender, we feel this will lead to a substantial reduction that will be felt in a matter of months.

There have been an enormous number of writings on how to improve the criminal justice system. However, most of these were presenting subjective recommendations on such things as length of sentence, type of incarceration, or method of rehabilitation. This study seeks to be more pragmatic by identifying who is committing crime (i.e., the repeat offender) and what can be done within the system to control this person. We take this stance with the belief that the sureness and swiftness of justice is more important than the degree or type of punishment.

In order to achieve the objectives of this study, we collected data from every conceivable area of investigation that was pertinent to identifying the offender. When we discovered the impact repeat offenders were having on the crime rate we continued our research to identify the weaknesses in the criminal justice system related to the control of these offenders.

METHODOLOGY

The major data collection portions of this research was in four distinct parts. They include (1) a review of the literature, (2) statistics on inmates, (3) interviews with inmates, and (4) arrest statistics and system time lags.

A review of the literature on recidivism from the law enforcement standpoint was conducted to determine what was known of repeat offenders, what research had been conducted and its design, and whether previous studies supported our research. This included information from published work, interviews with experts in the field, official documents of criminal justice agencies, and documented case histories of Dallas offenders.

An analysis and summation of statistical information on all the Dallas County offenders now incarcerated in the Texas Department of Corrections was conducted to secure information on what type of person transversed the system from beginning to end. This included a review of social characteristics, offense information, and criminal histories of these offenders.

Personal interviews were conducted with a sample of Dallas County offenders who were convicted and sentenced to prison in order to determine their feelings and experiences with the system. This effort was made to expand on the information gained in the statistical analysis mentioned in the previous paragraph.

An analysis of a substantial number of offenders filed on by the Dallas Police Department was made to determine their criminal histories and their experience in the criminal justice system. This also includes a review of the time delays within the system and the *case fallout* that occurs from time of offense to the time of sentence.

DEFINITIONS

For the purpose of this study a **repeat offender** is any person who has been arrested by a police agency; has had a case filed against him for a felony or major misdemeanor; and is subsequently rearrested and filed on by the Dallas Police Department for other felonies or major misdemeanors.

Consequently, a **first offender** is a person filed on by the Dallas Police Department who has not previously had a felony or major misdemeanor case filed against him.

A **case filed** indicates an act of presenting information and evidence to the District Attorney for the purpose of prosecution of a specific individual for a criminal act. The specified individual is at that time usually in detention or free on bail bond.

Bail bond is a cash or real property surety that an accused will appear to answer charges levied against him. It can be posted by himself or a third person. The third person is often a **bondsman** who will post the bond for a fee of 10 to 20 per cent of the value of the bond.

The **criminal justice system** in Texas is comprised of several entities working together to comprise a system. Chronologically, it usually begins with a police agency investigating a criminal offense, gathering evidence, and arresting the perpetrator. This information is filed with the District Attorney, who in turn files the information with the grand jury. The **grand jury** consists of twelve citizens who decide if the evidence is strong enough to bind the accused over for trial. Insufficient evidence results in a **no bill,** otherwise a **true bill** is returned to the District Attorney to place the case on a court docket.

The **court,** which may or may not have a jury, receives the information and evidence on the case and decides if the accused is guilty or not guilty. A **not guilty verdict** results in a discharge from the system while a **guilty verdict** requires a sentence. The court or jury decides the amount of punishment and the judge decides whether it will be served on probation or by incarceration. In Texas a jury may recommend for or against probation but the judge makes the decision with no bind to the jury's recommendations.

Probation is served while free in the community under the supervision of the court through its probation officers, while **incarceration** is served in the County jail or at the Texas Department of Corrections. If a specified time is served in the Department of Corrections, the Parole Board can grant parole. **Parole** is the serving of the remainder of a sentence while free in the community under the supervision of the Parole Board.

Thus, it can be seen that there is considerable diversity in the criminal justice system. The police department is responsible to the city government; the probation officers are responsible to the courts; the sheriff, bond administration, and the county jail are responsible to the county government; and the Department of Corrections and the Parole Board are responsible to the state.

There is little wonder, therefore, that the criminal justice system has been called a *non-system*. It did not grow as a system. Rather, it grew like a series of compartments created to care for specific needs. Perhaps this research will open avenues wherein a workable, effective system can be built.

Chapter II
LITERATURE ON THE REPEAT OFFENDER

Conception of this study into the impact of repeat offenders first brought about a search of the literature. This was done in order to determine if we could draw conclusions from research previously conducted on the subject. We found a preponderance of theory and little research.

This is not to say that there were no studies found on repeat offenders. In fact, we found four informative studies pertinent to the subject which are worth summarizing in this chapter. The President's Commission on Law Enforcement and the Administration of Justice addresses the characteristics of offenders in the second chapter of their study, *The Challenge of Crime in a Free Society.*

The FBI publishes the *Uniform Crime Report* annually and this report contains the most in-depth statistical analysis of repeat offenders available under the section entitled "Careers in Crime." This study is conducted periodically to document the extent to which criminal recidivism over a period of time contributes to annual crime counts.

Perhaps the most valid and undisputable study found was *Delinquency in a Birth Cohort* written by M.E. Wolfgang, R.M. Figlio, and Thorsten Sellin. Although it concerned juvenile delinquency, many of the facts discovered carry over into adult crime characteristics. It was a longitudinal study of a birth cohort, meaning it concerned a group of boys, all born in 1945 (cohort). The study tracked them from age seven to eighteen (longitudinal). This cohort study was a study of crime and delinquency conducted in Philadelphia, Pennsylvania, tracking the boys from the time they entered school until they were eighteen years old. After data gathering, they categorized the youths into non-delinquents, one-time offenders, non-chronic repeaters (1 to 4 offenses), and chronic repeaters (5 or more offenses). They found that these 9,945 boys accounted for 10,214 official criminal offenses.

Another well documented, pertinent study found was an analysis conducted by the Washington, D.C. Police Department. It consisted of documentation that a substantial amount of Washington crime was committed by persons previously arrested and free on probation, parole, or personal recognizance bond. There were 2,755 documented rearrests with over half of them being free on personal recognizance bonds.

Excerpts from these studies are presented in the following sections of this chapter, along with additional pertinent excerpts and documentation of three Dallas offender's case histories.

CHARACTERISTICS OF OFFENDERS

The most striking fact discovered when an in-depth study is made of criminal offenders is that a great many of them continued to commit crimes even after criminal sanctions had been brought against them. Arrest, court, and prison records furnish insistent testimony to the fact that these repeat offenders constitute the hard-core of the crime problem. (President, 1968)

The Commission's study has looked into a great many state and federal prison system's statistical studies that lead to the conclusion that despite considerable variation among different jurisdictions, roughly one-third of the offenders released from prison will be reimprisoned, usually for committing a new offense within a five year period. Those who commit monetary crimes such as burglary, auto theft, forgery, or larceny are much more likely to be recidivists. However, robbery and narcotic offenders are also frequently repeaters. Those who are least likely to commit new crimes after release are persons convicted of crimes of violence such as murder, rape, and aggravated assault. The figures on recidivism are extremely high even when only those detected and rearrested are considered. Undoubtedly, many commit crimes that are never detected. (President, 1968)

A two year follow-up by the Uniform Crime Reporting System of the arrest records of 6,907 offenders released from the federal system between January and June of 1963, shows that 48 per cent had been arrested for new offenses by June of 1965. Complete figures on the per cent convicted are not available. (President, 1968)

Any study made of adult offenders will show the importance of juvenile delinquency as a forerunner to an adult crime career. It will support the conclusion that the earlier a juvenile is arrested or brought to court for an offense, the more likely he is to carry on criminal activity in his adult life. Also, the more serious the first offense for which a juvenile is arrested, the more likely he is to continue serious crimes, especially in the case of major crimes against property. The more frequently and extensively that a juvenile is processed by the police, court, and correctional system, the more likely he is to be arrested, charged, convicted, and imprisoned in adult life. (President, 1968)

The President's Commission on Law Enforcement and The Administration of Justice points out that a person in the business of crime is in a risky business. The Commission's studies found that the professional and habitual criminal's need for ready capital often opens him to severe exploitation by loan sharks. Most often this problem arises as a consequent of an arrest. To meet the cost of his bonds and initial legal fees, he must engage in more frequent criminal activity, often more risky than his ordinary line of work. If arrested while out on bond, he will have additional cost. This

pattern may be repeated many times over before the habitual criminal is brought to trial. (President, 1968)

The Commission's studies also pointed out that the professional and habitual thief could not exist without the fence and quasi-legal fence such as pawn shops. The habitual thief means to sell his stolen goods, although habitual thiefs often retail their own stolen wares. Many sell them to receivers of stolen goods who resell them. Sale to a fence may cost the thief 75 per cent of the value of the goods but it reduces the risk of it being stolen from him or of being arrested with it in his possession. He also avoids the risk involved in the retail process. Other instances involve a large quantity of goods, goods that are perishable, or otherwise likely to quickly lose their value, and goods for which there is specialized demand and require a division of labor and a level of organization beyond the capacity of an individual thief. (President, 1968)

Professional thieves, because they work regularly at crime, account for a large share of thefts, particularly costly thefts that occur. Control of this type of criminality requires new forms of police intelligence operations which some police departments are now beginning to develop. Furthermore, this type of work needs to be supplemented by much more intensive research on professional criminality as a way of life.

CAREERS IN CRIME

The following section is an enumeration of the most in-depth study found on recidivism. It is a report from the *1970 Uniform Crime Report* chapter on "Careers in Crime." It is inserted in this study of the Dallas repeat offender because most federal crimes are also state and local offenses, thus, the repeat offenders depicted in the UCR study closely paralleled the repeat offender in Dallas County from all indications.

From 1963 through 1969, the Uniform Crime Reporting Program processed data on some 240,000 offenders for statistical use. This study has been used to document the extent to which criminal recidivism over a period of time contributes to annual crime counts and has also been used to show the need for the centralization of law enforcement information at the state and national level in view of criminal repeating and mobility. This study was made possible by the cooperative exchange of criminal fingerprint data among local, state, and federal law enforcement agencies. **While the basis of selection in this study was a federal offense, it should be kept in mind that most federal criminal violations are also violations of local and state laws.** The offender records examined in this study are, therefore, felt to be comparable to the local and state experience for the more serious violators. (FBI, 1971)

The "Careers in Crime" study brought to the Uniform Crime Reporting Program valuable statistical experience in the field of criminal histories, and has demonstrated the potential use of criminal history information to measure the success or failure of the entire criminal justice system. The key to the effectiveness of the system is in knowing what happened to the people who were handled or treated by the criminal justice process, specifically, whether they were deterred from further criminal acts and/or rehabilitated.[1]

Beginning in January 1970, the FBI commenced converting federal offender records to computer forms for an operational criminal history file within the National Crime Information Center (NCIC). The record formats and data elements for criminal history, although designed for operational use, were established with full recognition of the value of criminal history for statistical and research purposes.

Profile

A summary of 37,844 offenders arrested on federal charges in 1970 is on the following table. Of these offenders, 25,909 or 68 per cent had previously been arrested on a criminal charge.

Average Four Arrests Per Offender

These 37,844 offenders had an average criminal career of five years and five months (span of years from first to last arrest). During this time they were arrested on criminal charges an average of four times each for a total of 158,000 charges. These offenders had a total of 52,936 convictions and 22,240 imprisonments of six months or more during their crime careers prior to their arrest in 1970.

The extent to which these offenders had a prior arrest for any offense is set forth in the following table. Likewise, per cent convicted for a prior crime is set forth.

Statistics Conservative

Keep in mind that this presentation is conservative and understates the amount of crime committed by these offenders since it is based on police detection, arrest and submission of a fingerprint card. As indicated in earlier pages of the publication, law enforcement agencies do not clear or solve most crimes. It is also true that the prior conviction and imprisonment rates are slightly lower than actual because police agencies do not always submit such data after arrest, conviction and release.

A profile of criminal repeating for selected offenders is shown in the following table. Average age for the first arrest is high because of the general practice not to submit criminal fingerprint cards on juveniles. Criminal career is the average years between the first and last arrest.

The offender profile is classified by type of crime for which arrested in 1970.

A study of the 25,909 repeat offenders indicate that 45 per cent were rearrested in the same state during their criminal careers and 55 per cent were rearrested at least one time in states other than that of the original arrest. Twelve per cent of the repeat offenders were arrested in three different states during their criminal career and 10 per cent were rearrested in more than three different states.

Four Year Follow-Up

A part of the Careers in Crime Program was the follow-up on offenders after their release from the federal criminal justice system. The records of offenders released during 1965 were followed for new arrests through 1969. Charts and tables are presented in this section on the rearrest experience by offense; type of release; and age, sex, and race of the offender.

	Forgery	Embezzlement	Fraud	Weapons	Narcotics	Gambling	Stolen property	All other offenses
Total number of subjects	1,706	1,187	1,411	2,166	5,131	867	1,519	11,910

FBI CHART

TABLE 2

4-Year Follow-Up of Persons Released in 1965

[By age, sex and race]

Age	Total	Race			Sex	
		White	Negro	Other	Male	Female
Total all ages	16,332	10,890	3,980	1,462	15,042	1,290
Percent with subsequent charge	62.5	60.4	67.6	64.5	64.3	41.1
Under 20	1,751	1,220	330	201	1,669	82
Percent with subsequent charge	73.7	71.6	77.2	80.1	74.9	48.8
20–24	3,816	2,661	825	330	3,479	337
Percent with subsequent charge	71.2	68.8	77.6	74.8	73.7	45.4
25–29	2,780	1,800	720	260	2,524	256
Percent with subsequent charge	65.0	62.2	71.1	67.7	67.0	45.7
30–39	4,066	2,533	1,192	341	3,712	354
Percent with subsequent charge	62.4	61.1	68.4	58.9	64.5	41.0
40–49	2,501	1,709	603	189	2,314	187
Percent with subsequent charge	52.6	51.0	56.7	53.4	54.4	30.5
50 and over	1,418	967	310	141	1,344	74
Percent with subsequent charge	38.1	36.9	40.6	40.4	38.8	24.3

Keep in mind that this program for completeness depends on the criminal fingerprint identification function. The arrest fingerprint card establishes the charge and, usually on minor charges, the actual disposition. Otherwise, to obtain disposition data at prosecutive or court level the system relies on the submission of a second form. Further, for correctional release, another form or fingerprint card must be submitted. For the follow-up study only those records can be used that are complete and actually show a release in a given year (1963, 1965) back to the community. If the disposition or correctional release information is not received routinely for a specific charge, it does not become known on a subsequent rearrest.

Sixty-Three Percent Rearrest Rate

Of the 16,332 offenders released to the community in 1965, 63 per cent had been rearrested by the end of the fourth calendar year after release. Of those persons who were acquitted or had their cases dismissed in 1965, 85 per cent were rearrested for new offenses. Of those released on probation, 56 per cent repeated, parole 61 per cent, and mandatory release after serving prison time 75 per cent. Offenders receiving a sentence of fine and probation in 1965 had the lowest repeating proportion with 37 per cent rearrest. This type of sentence is generally found in connection with violations such as income tax, fraud and embezzlement.

When criminal repeating is viewed by type of crime for which arrested, convicted, or released in 1965, rearrests ranged from 16 per cent for the income tax violators to 80 per cent of the auto thieves. The predatory crime offenders had high repeat rates with 76 per cent of the burglars, 68 per cent of the assault offenders, and 57 per cent of the robbers who were released in 1965 were rearrested within four years. Likewise, 69 per cent of the narcotic offenders who are frequently users were rearrested after release. The fact that 67 per cent of the forgery offenders were rearrested for new violations within the four-year follow-up, documents law enforcement experience with this type offender.

This has been documented many times, as it is here. Nevertheless, this fact calls for greater rehabilitation efforts directed at the younger offender, if hardened criminal careers are to be aborted. Of the offenders released in 1965, 74 per cent of those under the age of 20, 71 per cent of those 20 to 24 years of age, and 65 per cent of those offenders 25 to 29 years of age were rearrested by the end of 1969. When viewed by race, the Negro rearrest rate, 68 per cent, was higher than the white offender rate of 60 per cent. All other races, made up primarily of Indian Americans, had a rearrest rate of 65 per cent between release in 1965 and 1969. Of the 1,290 female offenders released in 1965, 41 per cent had been rearrested for new offenses by 1969.

Table 3 sets forth the cumulative percentage of rearrest by age group and by year after release. By the end of the second calendar year (1967), after release during 1965, 53 per cent of the offenders had been rearrested. This pattern supports prior studies of this kind and is consistent for all age groups. Of all offenders rearrested during this four-year follow-up, over one-half were under 30 years of age and the majority of these rearrests occurred within two years after release. There is set forth in the same table the rearrest experience of federal offenders released compared to a generally different group released in 1963. The latter experience has been previously published in prior issues of *Uniform Crime Reports*. The repeat rate for both groups over the similar periods of follow-up (four years) is about the same. This is true not only for each age group as shown here but also by type of offense and type of release.

COHORT STUDY

Delinquency in a Birth Cohort was published in 1972, and was written by Marvin E. Wolfgang, R. M. Figlio, and Thorsten Sellin.

A **birth cohort** is a population or group of persons born in a given year. The cohort that this study covers is all of the boys born in 1945 who lived in Philadelphia, Pennsylvania, during the eight years following their tenth birthday. Females were excluded from this study because of their low delinquency rate and because registration with the Federal Selective Service was used as a terminal data source. (Wolfgang, 1972)

The study used school records, police records, and selective service lists to track and document the histories of these boys. Police records were used in this study, rather than the court disposition records, for the same reasons they are used in this Repeat Offender Study. The authors felt that police arrest figures gave a truer picture of the actual delinquency rate. (Wolfgang, 1972)

This very in-depth study analyzed the youth in connection with delinquency, social-economic status, race, mobility, age at first arrest, offense seriousness, recidivism, and academic success. The following paragraphs are a summary of the findings in relation to delinquency and recidivism in an urban setting and it is believed that these facts are as germane to Dallas as they are to Philadelphia.

The cohort consisted of 9,945 boys and the search of police records indicated they were responsible for 10,214 recorded offenses. These 10,214 offenses were committed by 35 per cent of the boys or 3,475 delinquents. Thirty per cent of these offenses were Index offenses as defined by the FBI. (Wolfgang, 1972)

The 35 per cent of the cohort that were delinquent were further categorized into one-time offenders, non-chronic repeaters, and chronic repeaters. A non-chronic repeater is a youth arrested from two to four times, while a chronic repeater is a youth arrested five or more times. (Wolfgang, 1972)

Table 4 gives a breakdown of the number of boys in each category and the number of offenses committed by that category. Of the 10,214 cohort offenses, 8,601 (84.2 per cent) were committed by the 1,862 recidivists (53.6 of all the delinquents). Those who committed five or more offenses (627 or 18 per cent), whom they call chronic offenders, were responsible for 5,305 of these delinquent acts or 51.9 per cent. (Wolfgang, 1972)

Table 4 indicates that 18 per cent of the delinquents

TABLE 3

4-Year Follow-Up by Age Group and Type of Release in 1965

Type of release	Total	Under 20	20–24	25–29	30–39	40–49	50 and over
Total	16,332	1,751	3,816	2,780	4,066	2,501	1,418
Percent with a subsequent charge	62.5	73.7	71.2	65.0	62.4	52.6	38.1
Probation and suspended sentence	5,787	902	1,422	975	1,258	796	434
Percent with a subsequent charge	56.1	68.7	63.2	58.6	55.4	42.7	28.1
Fine	1,340	84	235	219	359	243	200
Percent with a subsequent charge	61.6	83.3	77.4	66.2	59.9	52.7	43.0

TABLE 4

OFFENDER CATEGORIES AND NUMBER OF OFFENSES COMMITTED BY COHORT BOYS

Category	Number of Boys	Per Cent of Cohort	Per Cent of Delinquents	Number of of Offenses	Per Cent Offenses
Non-Delinquents	6470	65.1	———	———	———
Delinquents	3475	34.9	100.0	10214	100.0
One-Time Offenders	1613	16.2	46.4	1613	15.8
Non-Chronic Repeaters	1235	12.4	35.6	3296	32.3
Chronic Repeaters	627	6.3	18.0	5305	51.9

(Wolfgang, 1972, Tables 6.1 and 6.2)

committed almost 52 per cent of the crime. Therefore, 627, or 6.3 per cent of the cohort committed over one-half of the crime. This cohort study supports the hypothesis of the Dallas Repeat Offender Study. It demonstrates that a small number of high-risk repeaters committed a majority of the criminal offenses attributed to the cohort.

The authors of this study also conducted analysis on the seriousness of offenses committed by these boys. They discovered that 90 per cent of all offenses resulting in bodily injury to the victim were committed by boys that were repeat offenders. This leads to the conclusion that continuation in criminal activity increases the probability of violence. (Wolfgang, 1972)

In the summary of this study, the authors addressed themselves to the question of when should some type of intervention other than routine criminal justice administration be imposed on a delinquent criminal career.

> The most relevant question, then, is at what point in a delinquent boy's career an intervention program should act. One answer would be that the best time is that point beyond which the natural loss rate of probability of desistance, begins to level off. Because 46 per cent of the delinquents stop after the first offense, a major and expensive treatment program at this point would appear to be wasteful. We could even suggest that intervention be held in abeyance until the commission of the third offense, of an additional 35 per cent of the second-time offenders desist from then on. Thus, we reduce the number of boys requiring attention in this cohort from 3,475 after the first offense, to 1,862 after the second offense, to 1,212 after the third offense, rather than concentrating on all 9,945 or some large subgroup under a blanket community action program. Beyond the third offense, the desistance probabilities level off. (Wolfgang, 1972)

SENTENCING THE REPEATER

An important facet of controlling repeat offenders lies in the type of punishment given him upon conviction. Mr. Sol Rubin discusses increased punishment for repeat offenders in his book, *The Law of Criminal Correction*.

He states that practically every state in the United States, as well as the federal government, has one or more laws providing for increased punishment for a crime committed by a person who had been previously convicted or previously incarcerated in a correctional institution. (Rubin, 1963)

Specific recidivism statutes provide for increased punishment if the crime of which the person is convicted is the same as one for which he had been previously convicted. The American colonies used specific recidivism statutes, and the form was continued in the states. General recidivism statutes, more common than the specific type, provide for increased punishment for a reptition of crime whether or not the earlier offense was the same as the later one. [Texas has a general recidivism statute] (Rubin, 1963)

Rubin tells us that both the general and specific recidivism statutes have been attacked as unconstitutional on a variety of grounds. None of these attacks have prevailed. The courts have firmly held that the additional penalty is not ex post facto, does not constitute double jeopardy, does not deny the offender equal protection of the laws, and does not violate due process requirements. The additional penalty is held to be incurred not for the first offense once more, but for a condition represented in the repeated crime. (1963)

Under the common law, a court has power to impose cumulative sentences on conviction of several offenses charged in separate indictments or in separate counts of the same indictment, with imprisonment for one commencing at the termination of imprisonment for the other. Similarly, a court may impose a sentence to commence upon the termination of another sentence imposed by another court, although a statute may prohibit it. However, wherever the statute does not control, multiple sentences are construed as running concurrently, unless the sentencing judge states otherwise. This is generally so even where the terms are imposed by different courts. [This is true in Texas.] (Rubin, 1963)

INTERVIEW

On April 12, 1972, members of this section interviewed Dr. John Holbrook, Chief Psychiatrist, and Mr. Eric J. Holden, Psychological Counselor, of the Texas Department of Corrections to obtain their opinions, relative to their professional experience, regarding repeat offenders. We felt their experience in dealing with offenders would give us valuable insight on repeat offenders. For that reason we include a summary of their opinions and theories in this chapter. These were given from the professional training and experience of these men and from scientific studies known to them.

Dr. Holbrook and Mr. Holden had these observations relative to this study. There has been practically no meaningful research conducted to identify the specific impact the repeat offender has on the overall crime picture. They felt that this definition of a repeat offender (utilizing persons filed on) was a fairly valid indicator of a person's involvement in crime. They felt that most stranger-to-stranger crime is committed by psychopaths.

Relative to the offender and repeat offender in general, Dr. Holbrook and Mr. Holden had the following observations and estimations. Forty per cent of all criminals are psychopaths (sociopaths). Eighty to ninety per cent of all crime is committed by these psychopaths. They stated that Cleckley, a noted authority on psychopaths, gives the following description of the psychopathic personality in his book, *The Mask of Sanity:*

> ... we can conclude that he does not profit from experience. He will not accept blame and responsibility for his failures or for any of his antisocial actions ... Emotionally, he is shallow

and incapable in most human feeling, especially is he lacking in any feeling of remorse... He is irresponsible, antisocial, and destructive without any known motivation for such behavior

These two professionals feel that psychopaths are genetically created, that is, they are different from the day they are born. According to different studies, forty to seventy per cent of all psychopaths have different brain wave patterns.

They state that psychopaths characteristically do not respond emotionally in the same manner a normal person does. Their whole central nervous system is different. They make true emotional physiological responses to only two things; an ego threat or ego stimulation. That is to say that normal emotions such as love, fear and desire for security have no effect on their social interactions.

Dr. Holbrook states the opinion that psychopaths have a high average or superior intelligence, giving him the ability to avoid detection. He feels that money is only a minor secondary motivation for criminal activity with psychopaths, and that they commit antisocial acts for ego stimulation. At the present time there are no known methods of therapy or behavior modification that are effective in treating the psychopath. According to these professionals, time is the only factor that will cause a psychopath to reach any degree of normalcy. They state that 30 per cent of them burn out in the third or fourth decade.

Their opinion is that present correctional institutions only further criminalize inmates. Prisons only give convicts more vocations, more education, and more mobility. The convict utilizes these things to continue his criminal activity.

By attacking the environment, new situations are being created for the psychopath to operate in. They feel the offender must be modified, not the environment. In their opinion the offenders being caught by the police and eventually sent to prison are only high grade morons, while the psychopath who is committing eighty to ninety per cent of the crime is seldom being caught.

They state a study has shown that psychopaths can be identified in terms of a basic physical response. One method is the Galvanic Skin Response (GSR) which is a function of the autonomic nervous system. By presenting ego relevant stimuli to a person, the emotional response as recorded by a GSR machine will identify the psychopath. Any technician who can operate the GSR machine can be easily trained to present the proper stimuli which are relevant to the psychopath. A polygraph machine can be used for GSR recording and police officers would be ideal people to train to operate the machine and interpret reactions. Dr. Holbrook feels that not only will this method identify the psychopath, it can predict the types of crimes the person is likely to commit, and the predictability of this person committing a crime with 80 to 90 per cent accuracy. He states that whenever a psychopath receives a serious ego threat, with almost 100 per cent certainty, this person is going to commit an antisocial act within 24 hours to rebuild his ego. The mere act of a police officer questioning a psychopath on the street can be enough ego threat to cause this person to commit a criminal act to stimulate his ego.

There were post-identification actions recommended by Dr. Holbrook. The first calls for very early identification. The goal should be to make identification before the person becomes involved in antisocial activity, preferably at ages five and seven. At this stage there may be some therapeutic treatments which will prove effective in preventing antisocial behavior.

Secondly, Dr. Holbrook felt that if the police know who the psychopaths are, they can have some idea what crimes the psychopath is going to commit and with what frequency they are going to commit these acts. With these factors known, the police can develop and employ more effective preventive methods and apprehension measures.

They predict that treatment and behavior change is ultimately going to be chemical or neuro-surgical by placing an implant in the brain. The technological capability to do this and control deviant behavior is here.

These men predict that if action is not taken to control the psychopath, we can expect one major crime committed against each family every year by the turn of the century.

A POLICE DEPARTMENT STUDY

The Washington, D.C. Police Department conducted a study relating to the repeat offender and the criminal justice system in that area (1972). This report covers the calendar year of 1971, with particular emphasis on the last quarter, October, November, and December. The report primarily concerns the individual who is on some form of release, parole, probation, personal recognizance, or housed in a community correctional center, and who is rearrested.

The individuals studied in this police department report were under the supervision of one or more of the following agencies at the time of their rearrest: District of Columbia Bail Agency, Superior Court Probation Office, District of Columbia Department of Corrections, or the United States District Court Probation and Parole Office. The Criminal Investigation Division in Washington documented the rearrest of 2,755 individuals in one of these release status.

A study by that division of the 2,755 individuals rearrested while on some type of release status reveals that felony charges were placed in 1,680 or 60.9 per cent of the rearrests. Included in these felony charges are thirty-six individuals who were rearrested for homicide in 1971 while in release status. They found that these thirty-six homicide arrests accounted for 12.7 per cent of the 283 homicides committed in the District of Columbia in 1971.

The following chart is a breakdown of the 2,755 individuals rearrested by the agency responsible for the supervision of the individual at the time of his second arrest. (Washington, 1972)

D. C. Bail Agency (personal recognizance)	1,437
Superior Court Probation	609
D. C. Department of Corrections	555
U. S. District Court Probation and Parole	154
TOTAL	2,755

Between February 1, 1971, and December 31, 1971, the Washington Police Department documented the rearrests of 1,437 individuals who, at the time of their rearrest, were under the supervision of the D.C. Bail Agency on Personal Recognizances releases. These 1,437 individuals accounted for 52.6 per cent of the total rearrests documented by them in 1971. (1972)

In October, November, and December, 1971 a total of 482 persons on personal recognizance releases were rearrested by the Washington Police Department. Felony charges were placed in 295 or 61.2 per cent of the rearrests. Ninety-eight or 36.6 per cent of the felony charges were for robbery. Fifty-four of the robbery cases were for armed robbery. There was an average of 105 days between the first arrest and the rearrest. (1972)

These figures document the futility of police departments arresting and filing on criminals if they are not brought to trial in a reasonable time and a meaningful rehabilitation effort made.

NEED FOR COORDINATION

Ex-attorney General Ramsey Clark articulates the need for efficiency and coordination in the criminal justice system. If police are not effective in preventing crime, prosecution, courts and prisons are flooded. If police fail to solve crimes, prosecutions cannot proceed and courts cannot do justice — the rest of the system never has its chance. When a district attorney's office inadequately presents cases developed by police, the deterrent effect of the process is lost. Guilty persons are not convicted and the public is not protected (Clark 1970).

If courts have huge backlogs and are unable to reach criminal cases for many months, burdens are placed on police, who may be confronted with a series of crimes committed by people released on bail pending trial. Prosecution offices face the difficult task of keeping up with witnesses, constantly reviewing old matters and endeavoring to present stale evidence when trial is reached. Jails will be overcrowded with defendants who are not released pending trial. Additional burdens on manpower and facilities are costly, but more costly still in the loss of deterrent effect through delay (Clark, 1970).

For the accused, delay often means an increased capability to commit crimes or a diminished chance for rehabilitation because of continued exposure to forces tending him toward crime — the old gang, the broken home, the narcotics habit — because crimes may be committed while he is awaiting trial, or because of associations and experiences in jail before trial. For the innocent person accused of crime, delay means prolonged anxiety. If held in jail pending trial, the accused faces reduced ability to obtain evidence or witnesses to establish innocence. Failure of the correctional aspects of the system render the entire process practically useless (Clark, 1970).

Mr. Clark's observations closely match those of this study. There is a strong need for coordination between the agencies of the system. This coordination cannot take place without increased information exchange and data gathering.

DALLAS CASE HISTORIES

The following study was made in order to present the criminal histories of three repeat offenders in the Dallas area. From this documentation can be derived the extent of criminal activity of these men and how the criminal justice system has been unsuccessful in its attempt to thwart these offenders. It is obvious that no statistical conclusions can be made from this data, but it does indicate that the system is failing in far too many instances. The following true case histories are not presented as being typical or representative. However, they are true case histories of three individuals and are indicative of the need for efficiency in the system. Complete documentation of these histories are on file with the Dallas Police Department.

Fictitious names will be used in this study to allow distribution outside the criminal justice system. The first repeat offender case history compiled in this study was that of Mr. X.

Mr. X first came to the attention of the Dallas Police Department at age 16 when he admitted to five Residential Burglaries and two Auto Thefts. He was turned over to the juvenile authorities. He was arrested at 17 for AWOL from the Air Force and turned over to the Air Police.

At 25, he was arrested for Driving While License Suspended. While he was on bond, the city filed a case of Sodomy on him. The grand jury delivered a no bill in the case.

In the following ten years Mr. X's criminal activities included:

- Arrested for Investigation of Burglary — released by Dallas Police Department.
- Arrested three times in seven months on "Vagrancy Law", twice in company of prostitutes and once with working burglar who was out on bond.
- Arrested for Driving While License Suspended — fined $250 and court costs.
- Arrested for Driving While Intoxicated — fined $150 and court costs and served three days in jail.
- Two cases of Theft Over $50 filed on him and warrant issued. When arrested, he had possession of stolen property. He was released on a $1,500 bond covering two cases of Theft Over $50, one case of Burglary and one case of Receiving and Concealing Stolen Property. The grand jury returned a no bill on the Burglary case.
- A few days later arrestee on Tarrant County Burglary Warrant. Secured a $1,000 bond and was released.
- The two cases of Theft Over $50 were reduced to Theft Under $50. The court assessed his penalty at $500 in fines and one day in jail in each case.
- Arrested for Theft of $12,000 from department store. Later true billed and released on $1,000 bond.
- Killed two men with his shotgun, contended they tried to rob him. Grand jury no billed him.
- Arrested for Receiving and Concealing Stolen Goods and released on bond.

Arrested for defrauding an innkeeper in Nueces County

Mr. X is a man who has become very adept at avoiding arrest and delaying conviction. His only convictions have been for Driving While License Suspended, Driving While Intoxicated, and Theft Under $50. He has paid fines and served five days in the County Jail. He has been no billed on Sodomy, Theft/Over, Burglary, and Murder charges. True bills have been returned in Theft Over $50 and Receiving and Concealing charges. Mr. X was out on bond on the Receiving and Concealing charge after September, 1970 and after October of 1970, on the Theft/Over charge. As of November 28, 1972, he was still free on these bonds.

The second case history is that of Mr. Y. His criminal career began at age 13. Between the ages of 13 and 16 he was transferred to the Dallas County Juvenile Home seven times. Among the activities that prompted this action was his involvement in three Theft charges, one Burglary, Auto Theft, Indecent Language Over the Telephone, Shoplifting, Carrying Prohibited Weapon, and Simple Assault.

Between the ages of 17 and 26 Mr. Y's criminal record includes the following:

- Auto Theft — filed by grand jury — two-year probated.
- Burglary and Violation of Parole — True billed by grand jury — sentenced to Texas Department of Corrections for two three-year concurrent terms.
- Three months after his parole from the Texas Department of Corrections was completed, he was arrested for Burglary — true billed by grand jury — sentenced to a five-year term.
- Less than three years later, he was charged with Theft Under $50 and Alias Tickets — received City jail time and a fine.
- Arrested for Burglary — true billed — released on cash bond.
- Eight days later, again arrested for another Burglary and released on bond.
- Theft Over $50 — released on bond.
- Arrested for outstanding Auto Theft and Burglary Warrants — pled guilty to Theft from Interstate Shipment — received five year federal penitentiary sentence.
- Pled guilty to the Burglary and Theft Over $50 charges — received two two-year sentences to run concurrently with federal time.
- Pled guilty to the Burglary Business House Nighttime charge and received an additional two-year sentence to run concurrently with the federal sentences.
- In January of 1972, Mr. Y was transferred to the Federal Correctional Institution at Texarkana, Texas. Although he was assessed a total of eleven years, the terms will run concurrently. (The longest being the five year federal prison term.)

During his adult career, Mr. Y, presently 27 years old, has been true billed for Auto Theft twice, Burglary four times, and one time for Theft from Interstate Shipment and Theft Over $50.

Before he began to serve his current time at the federal penitentiary, he had spent less than four years in confinement. Spending four years in prison out of his thirteen years of participation in crime evidently did not act as a deterrent to his financially rewarding profession.

Another case is that of Mr. Z. His adult life of crime began in August of 1967. The following is a brief account of his activities.

- Forgery case filed — Grand jury no billed him.
- Arrested for Sodomy, posted $1,000 bond and released—assessed a two-year probated sentence.
- Arrested, while still on probation, for Illegal Possession of a Narcotic Drug. His probation was revoked and he was assessed a two-year sentence in the Texas Department of Corrections.
- Thirteen months later he was released from prison.
- Arrested for Theft Under $5 - fined.
- Arrested for Unpaid Traffic Tickets — fined and City jail time.
- Arrested for Disorderly Conduct — Posted bond and released.
- Arrested for Burglary — made bond and released.
- Charged with Theft Over $50 - warrant issued.
- Residence Burglary arrest — bond - released.
- Arrested on three Burglaries and one Theft Over $50 warrant — placed in County jail.
- At this time an additional hold was placed on Mr. Z for the New Mexico authorities while he remained in the Dallas County jail.
- Grand Jury returned true bill on all of the offenses. He received a ten-year sentence on each case, the sentences to run concurrently.
- He was assessed a ten-year sentence for Burglary.
- Assessed a five-year sentence for Auto Theft.
- Mr. Z was transferred to the Texas Department of Corrections at Huntsville, assessed a total of fifty-five years, all of which he is serving concurrently, and a detainer from Otero, New Mexico.

The maximum time Mr. Z will spend in prison on this fifty-five year total will be ten years (i. e., the longest sentence of the group). He will be eligible for parole in three years and four months minus any time off for good behavior. In view of these and other case studies, the swiftness and surety of justice in Dallas is questioned.

Chapter III
PRISON INMATES FROM DALLAS COUNTY

The purpose of this study was to summarize and report statistical information on all the Dallas County offenders incarcerated in the Texas Department of Corrections, in March, 1972.

The statistical information in this study was derived from information supplied to this Department by the Data Processing Department of the Texas Department of Corrections. The total number of Dallas County prisoners confined in the Texas Department of Corrections at Huntsville was 2,933 according to data analysis obtained in March of 1972.

The information reported below gives the social characteristics, offense information, and prior criminal histories of Dallas area inmates. Convictions for robbery and burglary account for a majority of the inmates with an overall average of five-year sentences. This data source was not designed to give previous criminal histories and does not give an aggregate per cent of inmates with previous arrests or convictions. It does indicate that 25 per cent had been sentenced to state reformatories and that 73 per cent had convictions resulting in jail sentences. It also indicates that 37 per cent had previously been in the Texas Department of Corrections.

SOCIAL CHARACTERISTICS

Race

Of these prisoners, it was determined that 57.17 per cent were black, 38.35 per cent were white, and 4.46 per cent were of Mexican extraction.

Sex and Age

It was also determined that 95.36 per cent were male and 4.64 per cent were female. Their average age was 31 years with 50.6 per cent of the prisoners falling between the ages of 20 and 28 years old.

Marital Status

The marital status of the prisoners indicated that 44.87 per cent were single, 27.20 per cent were married, 16.36 per cent were divorced, and the remainder fell into other categories.

Citizenship

Ninety-nine and eighty-six hundredths per cent were citizens of the United States and the remainder were citizens of other countries.

Military Service

Seventy-five and forty-five hundredths per cent were shown to have never served time in any branch of military service. The majority of those who did serve (14.11%), did so in the Army and the minority (0.03%) were reservists.

OFFENSE INFORMATION

Murder

There were 278 or 9.48 per cent of the Dallas County prisoner population serving sentences for *murder* at the Texas Department of Corrections. Of these, 265 have committed one (1) murder, 12 have commited two (2) murders, and one is responsible for five (5) murders. Their combined total was indicated as 293 murder victims or an average of 1.05 victims per offender.

Rape

One hundred and forty-two or 4.84 per cent of the Dallas County prisoner population were serving sentences for *rape*. Of these, 116 have committed one (1) rape, 18 have committed two (2) rapes, 7 have committed three (3) rapes, and one is responsible for six (6) rapes. Their combined total was indicated as 179 rape victims or 1.26 victims per offender.

Robbery

Eight hundred and thirty-five or 28.47 per cent of the Dallas County prisoner population were serving sentences for *robbery*. Of these, 517 committed one (1) robbery, 142 committed two (2) robberies, 73 committed three (3) robberies, and 103 were responsible for four (4) or more. One individual was shown to have committed ten (10) robberies. Their combined total was indicated as 1,539 robbery victims or an average of 1.84 victims per prisoner.

Assault

Seventeen or 0.58 per cent of the Dallas County prisoner population were serving sentences for felonious *assaults*. There were no prisoners serving sentences for multiple offenses of assault.

Burglary

Eight hundred and sixty or 29.32 per cent of the Dallas County prisoner population were serving sentences for *burglary*. Of these, 630 committed one burglary, 161 committed two burglaries, 34 committed three burglaries, and 35 were responsible for four or more. One individual was shown to have committed 39 burglaries. Their combined total was indicated as 1,293 burglary offenses or an average of 1.50 offenses per prisoner.

Theft Over Fifty Dollars

Six hundred and sixteen or 21.00 per cent of the Dallas County prisoner population were serving sentences for *theft over fifty dollars*. Four hundred and seventy-nine committed one theft over, 102 committed two, and 35 were responsible for three or more. Their combined total was indicated as 805 theft over fifty offenses or an average of 1.31 offenses per prisoner.

Auto Theft

Ten or 0.34 per cent of the Dallas County prisoner population were serving sentences for *auto theft*. There were no prisoners serving sentences for multiple offenses of auto theft.

Number of Codefendants

Fifty-one and forty-eight hundredths per cent of the prisoners stood trial alone, 23.42 per cent had one codefendant, 13.50 per cent had two, and the remainder had from three to fifteen codefendants.

Detainers

Two and ninety-four hundredths per cent of the prisoners had one or more detainers by authorities in the State of Texas. Sixty-seven hundredths per cent had one or more out-of-state detainers, and there were 0.40 per cent with one or more federal detainers.

The total number of Dallas County prisoners were serving an average sentence of 19.9 years with 61.2 per cent of the prisoners serving between two and ten years.

PRIOR CRIMINAL HISTORY

Previous Sentences

Fifteen and forty-six hundredths per cent of the prisoners had received one or more suspended or probated sentences as juveniles from state courts. Thirty-two and eighty-seven hundredths per cent had been confined in county detention homes one or more times and 25.03 per cent had been confined in state reformatories. No tabulation is available from the Texas Department of Corrections to determine the aggregate per cent of prior juvenile confinements.

As adults, 7.46 per cent had received one or more suspended sentences from state courts and 45.56 per cent had received probated sentences. Federal probations had been received by 2.04 per cent of the prisoners. Seventy-three and twenty-seven hundredths per cent had previously been convicted and served one or more county jail sentences. Sixty-three and twenty-seven hundredths per cent were at that time in the Texas Department of Corrections for the first time, 21.24 per cent were there for the second time, and 15.43 per cent had served three or more sentences. Fourteen and thirty-six hundredths per cent had been confined one or more times in other state or federal prisons and 6.79 per cent had served time in military prisons. No aggregate tabulations were available to show previous prison experience ratios.

Parole Violations

Six and sixty-nine hundredths per cent had previously been returned to the Texas Department of Corrections for parole violations and 1.36 per cent to other prisons.

Profile of Dallas County Prisoner

From this information, the characteristics of a typical Dallas County offender in the Texas Department of Corrections can be drawn. The character description was derived from modal values of variable distributions of Dallas County inmates and is by no means representative of any known individual.

The typical Dallas County offender was:

- Twenty-two and one-half (22 1/2) years old.
- Black
- Male
- Presently single.
- Had not served in any branch of military service.
- Had a 9th grade education.
- Had an I.Q. of 85 to 90.
- Classified his occupation as unskilled.
- Had not served prior sentences in the Texas Department of Corrections or any other prison.
- At that time serving time for one offense.
- Was convicted of burglary.
- Was serving a sentence of five years.
- Had not received a probated sentence as an adult or juvenile.
- Had a previous conviction for which he had served County jail time (offense not determined).

Chapter IV
INTERVIEWS WITH DALLAS COUNTY INMATES

Members of the Planning and Research staff interviewed the 99 inmates from Dallas County that were in the Diagnostic Center on March 4, 1972. Inmates are assigned three months of their sentence for testing and evaluation. For that reason, we chose to test all inmates at that Center to represent a pseudo-random sample of recently committed inmates. It was felt our questionnaire would obtain a greater degree of truthfulness if it was administered in conjunction with other prison interviewing.

The interview was introduced as being voluntary and strictly for research purposes. It sought to determine the inmates account of how much crime they had committed, their previous criminal history, and their experience with the criminal justice system. As indicated in the information following, the interviews determined that: nearly all inmates convicted of more than one offense were serving concurrent sentences; a majority had juvenile arrest records; and the repeat offenders admitted to many more offenses than they were convicted of committing.

The inmates were all arrested and convicted in Dallas County and arrived at the penitentiary in January and February of 1972. The following information was obtained from these interviews. The questionnaire used in these interviews can be found in Appendix I.

The average length of time the prisoner lived in Dallas County before he was arrested for his current offense was 15.7 years.

Sixty-nine and seven tenths per cent had been employed full-time when they committed the offense for which they were convicted. Thirteen and one tenth per cent had part-time employment and 17.2 per cent were unemployed.

Inmates classified their employment prior to their convictions as:

42.4% - Unskilled
30.3% - Semi-skilled
23.2% - Skilled
4.0% - Professional

The following indicated they were caught for their current offense by these listed methods:

48.5% - In The Act or Fleeing
24.2% - Informant
15.2% - Arrested by Detective
13.1% - Caught with the Loot
12.1% - Arrested for Another Offense
4.0% - Surrendered

The average length of time between the inmate's arrest and his trial was 5.3 months.

Thirty-six and four tenths per cent obtained their own attorney and 63.6 per cent were represented by a court appointed attorney. (Only one of the inmates admitted to paying for his attorney and bond fees with money obtained through criminal activity.)

Twenty-nine and three tenths per cent secured a bond for their release while awaiting trial. Seventeen and two tenths per cent of those who obtained a bond admitted to committing criminal offenses while released.

Guilty pleas were entered by 81.8 per cent of the inmates. Ninety-three and eight tenths per cent of these indicated they did so because they were guilty or to lessen their punishment.

Seventy of the inmates were convicted of an Index offense. A breakdown of the offenses were:

26 - Burglary
15 - Robbery
10 - Theft Over $50.00
9 - Aggravated Assault
7 - Auto Theft
4 - Murder

Fifty-seven and six tenths per cent have been convicted of one offense, 29.3 per cent convicted of two offenses, and 13.1 per cent of three or more offenses. Of those with convictions of more than one offense, 37 are serving concurrent sentences and one is not. The other five inmates did not respond.

Fifty-two and five tenths per cent thought that they would not be apprehended when they committed their current offense.

The sentences received ranged from one year to life. The average length of sentence was 8 years.

Fourteen of the inmates appealed their convictions. Two of these inmates withdrew their appeals before they were heard and the remainder received affirmed convictions.

Only four of those appealing their convictions secured an appeal bond.

Fifty-four of the inmates stated that they had been taken into custody as juveniles. Twenty-two of those 54 were confined in reformatories for their offenses.

Fifteen and two tenths per cent have served two or more previous sentences in other state or federal penitentiaries.

Sixty-nine and seven tenths per cent responded that prison acted as a deterrent to crime for them. The remainder disagreed.

Out of the 45 persons responding, only 26.7 per cent stated that being an ex-inmate limited their chances of finding employment.

Forty-two and four tenths per cent were arrested the first time for Index offenses.

The inmates considered the police attitude toward them at the time of their arrest as:

37.4% - Average
35.4% - Hostile
24.2% - Friendly
6.1% - Suspicious
4.0% - Helpful

The following reasons were given as the cause of their criminal activity:

37.4% - Old Gang
21.2% - Drinking
21.2% - Drugs
9.1% - No Opinion
6.1% - Employment
5.0% - High Living

The following responses were given to the question - "Why did you commit the current offense?":

23.2% - Money
20.2% - Using Drugs
19.2% - Had Been Drinking
14.1% - No Opinion
12.1% - Influenced by Friends
11.1% - Enjoy Excitement
4.0% - Didn't Think They Would be Caught

Sixteen of the inmates estimated their average income from criminal activities as $980.00 per week. The others either refused to answer this question or claimed to have received no monetary gain from their criminal activity.

Forty-two and four tenths per cent of the inmates indicated they used the money obtained by criminal activities for:

47.6% - High Living
40.5% - Rent
31.0% - Food
23.8% - Drugs
21.4% - Drinking
16.7% - Women
9.5% - Gambling and Debts

Forty-seven and five-tenths per cent of the inmates indicated they had used drugs as indicated below:

97.9% - Marijuana
34.0% - Pep Pills
31.9% - Hard Narcotics
29.8% - Barbiturates
23.4% - LSD
19.2% - Speed

Forty-nine inmates admitted committing a total of 3,204 offenses of burglary. Only 46 or 1.4 per cent of these offenses were brought to trial. This reveals an average of 65 offenses committed per person.

Twenty-nine admitted committing a total of 353 offenses of auto theft. Only 22 or 6.2 per cent of these offenses were brought to trial. This reveals an average of 12 offenses committed per person.

Forty-two inmates admitted committing a total of 467 offenses of theft over $50.00. Only 21 or 4.5 per cent of these offenses were brought to trial. This reveals an average of 11 offenses committed per person

Seventeen inmates admitted committing a total of 50 offenses of armed robbery. Only 16 or 32 per cent of these offenses were brought to trial. This reveals an average of 3 offenses committed per person.

Those 74 inmates who were repeat offenders admitted to committing 4,047 Index offenses, while the 25 that were first offenders claimed to have committed only 27 Index offenses.

Forty-eight of the repeat offenders admitted to committing 3,201 burglaries for an average of 65 offenses each, while four first offenders admitted to only four burglaries.

The inmates indicated they had used one or more of the below listed services in the preparation of successful completion of their criminal acts:

13.1% - Fence (Receiver & Concealer)
12.1% - Lawyer
10.1% - "Square" as a Buyer or Informer
8.1% - Drug Supplier

These opinions were expressed as means to prevent a person from committing a future offense after his release from prison:

49.5% - Job Placement
41.4% - Counseling
41.4% - Learning a Trade
21.2% - A Place to Live
6.1% - Education

In addition to what they were arrested for, 47 inmates admitted to committing one or more of the following offenses since their last release from prison. Of these 47 inmates:

61.9% - have committed at least one burglary
19.0% - have committed at least one auto theft
19.0% - have committed at least one lesser offense
14.3% - have committed at least one theft over $50.00
9.5% - have committed at least one armed robbery
4.8% - have committed at least one aggravated assault

The following opinions were expressed as reasons why persons become repeat offenders:

42.4% - Money
30.3% - Need for Drugs
22.2% - Don't Believe They Will Be Caught
17.2% - Associates
10.1% - Not Afraid of Punishment
9.1% - Enjoy Excitement
8.1% - Unable to Lead a Normal Life

Only two inmates of the 99 interviewed expressed a desire to return to criminal activity when released from prison.

Chapter V
DALLAS POLICE DEPARTMENT ARREST CHARACTERISTICS

An important source of understanding concerning who is committing criminal offenses is an analysis of who the police are arresting and filing cases against. Such an analysis is the substance of this chapter. Because of the large number of offenders filed on in a year, we sought a smaller yet valid sample from which to draw our conclusions. The sample source used for this segment of the Repeat Offender Study was the names of all adult persons filed on for Index offenses during the months of January, April, and July of 1971. This sample yielded 1,076 persons. Records could not be located on nine (9) persons after a diligent search of all available records, leaving a valid sample of 1,067. These months were picked at random and represent 32 per cent of the Index cases filed in 1971. From this total, it was determined by a search of the Dallas County Sheriff's Identification Section and the Dallas County District Attorney's Office that:

General Facts

- Six hundred and thirty-five (635) persons were repeat offenders.
  Four hundred and thirty-two (432) persons were first offenders.

Repeat Offenders

- Fifty-nine and two tenths per cent of the persons filed on were repeat offenders.
- Fifty-four and five tenths per cent of the repeat offenders were black and 45.5 per cent were white, Mexican and others.
- Ninety-four and six tenths per cent of the repeat offenders were male and 5.4 per cent were female.
- The average age of the repeat offender was 27 years for males and 29 for females.

First Offenders

- Forty-eight and seven tenths per cent of the first offenders were black and 51.3 per cent white, Mexican and others.
- Eighty-five and four tenths per cent of the first offenders were male and 14.6 per cent were female.
- The average age of the first offender was 26 years for males and 28 years for females.

The following tables indicate grand jury and court actions by offense and the relationship between first and repeat offenders. Each offense is dichotomized by type of offender showing the disposition or status of the case. The average length of sentence does not vary substantially between types of offenders and it is interesting to note first offenders averaged longer

NOTE: Average first offender prison sentence for all Index crimes is 6.2 years, the repeat offender is 7.7 years.

sentences in the offenses of theft and auto theft. Overall, the repeater averaged 7.7 years in prison compared to 6.2 years for first offenders.

Comparisons

The following figures give a relationship of offender's previous history by offense. Further, it shows the number of offenders filed on for each Index offense and the per cent of those that are first or subsequent offenders. Burglary and robbery have the largest per cent of repeaters with 69 and 64 per cent respectively.

Persons Charged With:	Total Persons	% Repeat Offenders	% First Offenders
Murder	49	57.1	42.9
Rape	40	42.5	57.5
Robbery	107	64.5	35.5
Aggravated Assault	251	54.2	45.8
Burglary	276	69.2	30.8
Theft Over $50	211	59.2	40.8
Auto Theft	133	51.9	48.1
INDEX CRIME TOTALS	1067	59.5	40.5

Previous Criminal Records of Repeat Offenders

Murder

Of the 28 repeat offenders filed on for murder, the following previous criminal histories were revealed:

- Two persons or 7.1 per cent have previously been filed on for murder and had one or more no bills returned by grand juries.
- Five persons or 17.9 per cent have previously been sentenced to prison for Index crimes. (The records indicated that there have been no prison sentences for convictions of lesser crimes.)
- Three persons or 10.7 per cent have previously received probated sentences for Index crimes. (The records also indicate that there were no probationers for lesser crimes.)
- Thirteen persons or 46.4 per cent have been previously convicted of one or more major misdemeanor or felony offenses and served County jail sentences.
- Eighteen persons or 64.3 per cent have previously been filed on for other violent crimes. (Rape, Robbery, Aggravated Assault, or more serious assaults.)
- Seven persons or 25.0 per cent have previously been filed on for prohibited weapon offenses.
- One person or 3.6 per cent had previously been filed on for a drug offense.

Rape

Of the seventeen (17) repeat offenders filed on for rape:

- Two persons or 11.8 per cent have been previously filed on for rape and had one or more no bills returned by grand juries.
- Three persons or 17.6 per cent have been previously filed on for rape and had one or more true bills returned.
- Seven persons or 41.2 per cent have been previously sentenced to prison for Index offenses. Two persons or 11.8 per cent have been sentenced to prison for lesser offenses.
- Eight persons or 47.1 per cent have previously received probated sentences for Index offenses. One person or 5.9 per cent received a probation for a lesser offense.
- Seven persons or 41.2 per cent have been previously convicted of one or more major misdemeanor or felony offenses and served County jail sentences.
- Ten persons or 58.8 per cent have been previously filed on for other violent crimes. (Murder, Robbery, Aggravated Assault or more serious assaults.)
- Seven persons or 41.2 per cent have been previously filed on for other sex crimes. (Sodomy, Fondling, Indecent Exposure, etc.)
- Seven persons or 41.2 per cent have been previously filed on for prohibited weapon offenses.

Robbery

Of the sixty-nine (69) persons filed on for robbery:

- Three persons or 4.4 per cent have been previously filed on for robbery and had one or more no bills returned by grand juries.
- Seventeen persons or 24.6 percent have been previously filed on for robbery and had one or more true bills returned.
- Twenty-five persons or 36.2 per cent have been previously sentenced to prison for Index offenses. Five persons or 7.2 per cent have been sentenced to prison for lesser offenses.
- Twenty-three persons or 33.3 per cent have previously received probated sentences for Index offenses. (The records indicate that there were no probations received for lesser offenses.)
- Sixteen persons or 23.2 per cent have previously been convicted of one or more major misdemeanor or felony offenses and served County jail sentences.
- Twenty-six persons or 37.6 per cent have been previously filed on for violent crimes. (Murder, Rape, Aggravated Assault or more serious assaults.)
- Thirteen persons or 18.8 per cent have been previously filed on for prohibited weapon offenses.
- Seven persons or 10.1 per cent have been previously filed on for drug offenses.

Assault

Of the 136 persons filed on for assault:

- Two persons or 1.5 per cent have previously been filed on for assault and had one or more no bills returned by grand juries.
- Thirty persons or 22.1 per cent have previously been filed on for assault and had one or more true bills returned.
- Thirty-four persons or 25.0 per cent have previously been sentenced to prison for Index offenses. Eleven or 8.1 per cent have been sentenced to prisons for lesser offenses.

- Thirty-four persons or 25.0 per cent have previously received probated sentences for Index offenses. Eleven or 8.1 per cent have received probations for lesser offenses.
- Forty persons or 29.4 per cent have previously been convicted of one or more major misdemeanor or felony offenses and served County jail sentences.
- Forty-seven persons or 34.6 per cent have previously been filed on for other violent crimes. (Murder, Rape, or Robbery.)
- Thirteen persons or 9.6 per cent have previously been filed on for prohibited weapon offenses.
- Seven persons or 10.1 per cent have previously been filed on for drug offenses.

Burglary

Of the 184 persons filed on for burglary:

- Ten persons or 5.4 per cent have previously been filed on for burglary and had one or more no bills returned by grand juries.
- Eighty-seven persons or 47.3 per cent have previously been filed on for burglary and had one or more true bills returned.
- Seventy persons or 40.2 per cent have previously been sentenced to prison for Index offenses. Fifteen persons or 8.2 per cent have been sentenced to prison for lesser offenses.
- Fifty-eight persons or 31.5 per cent have previously been convicted of one or more major misdemeanor or felony offenses and served County jail sentences.
- Thirty-seven persons or 20.1 per cent have previously been filed on for violent crimes. (Murder, Rape, Robbery, Aggravated Assault.)
- Fifteen persons or 8.2 per cent have previously been filed on for prohibited weapon offenses.
- Twenty-one persons or 11.4 per cent have previously been filed on for drug offenses.

Theft Over $50

Of the 125 persons filed on for theft over $50:

- Twelve persons or 9.6 per cent have previously been filed on for theft over $50 and had one or more no bills returned by grand juries.
- Forty-five persons or 36.0 per cent have previously been filed on for theft over $50 and had one or more true bills returned.
- Thirty-one persons or 24.8 per cent have previously been sentenced to prison for Index offenses. Twelve persons or 9.6 per cent have been sentenced to prison for lesser offenses.
- Forty persons or 32.0 per cent have previously received probated sentences for Index offenses.
- Ten persons or 8.0 per cent have received probations for lesser offenses.
- Forty persons or 32.0 per cent have previously been convicted of major misdemeanor or felony offenses and have served County jail sentences.
- Fifteen persons or 12.0 per cent have previously been filed on for violent crimes. (Murder, Rape, Robbery or any assault.)
- Nine persons or 7.2 per cent have previously been filed on for prohibited weapon offenses.
- Thirteen persons or 10.4 per cent have previously been filed on for drug offenses.

Auto Theft

Of the 69 persons presently filed on for auto theft:

- One person or 1.4 per cent had been filed on for auto theft and had a no bill returned by a grand jury.
- Ten persons or 14.5 per cent have been previously filed on for auto theft and had true bills returned.
- Twenty-five persons or 36.2 per cent have previously been sentenced to prison for Index offenses. Eleven persons or 15.9 per cent have received probations for lesser offenses.
- Sixteen persons or 23.2 per cent have previously been convicted of major misdemeanor or felony offenses and have served County jail sentences.
- Nine persons or 13.0 per cent have previously been filed on for violent crimes. (Murder, Rape, Robbery, or Aggravated Assault.)
- Four persons or 5.8 per cent have previously been filed on for prohibited weapon offenses.
- Five persons or 7.2 per cent have previously been filed on for drug offenses.

The following figures indicate the repeat offenders and the number of previous Index offenses that have been filed on them:

Number of Previous Offenses Filed	Persons	Percentage
One Offense	298	46.9
Two Offenses	144	22.7
Three Offenses	82	12.9
Four Offenses	50	7.9
Five or More Offenses	61	9.6
TOTAL	635	100.0

Chapter VI
A CRIMINAL JUSTICE SYSTEM

The preceding four chapters have been documentation of the fact that repeat offenders are accountable for a substantial amount of the crime problem. This study will now present a subjective analysis of the criminal justice system to indicate the areas needing improvement to control repeat offenders.

The Police

Often when a repeat offender is arrested for burglary, or other monetary offenses, his arrest clears up dozens of offenses, although, in many instances, only one or two cases are filed with the County Grand Jury.[2] Because of the large number of offenses committed in a city the size of Dallas, detectives are unable to study each individual offense. Subsequently, a great many offenses without leads are suspended and are not reviewed by the individual detective. During 1971, there were 12,481 Index offenses cleared by arrest, yet only 6,178 were filed with the District Attorney or Juvenile Court. This represents a prosecution rate on only 49.5 per cent of the cleared cases. A research of multiple-offense clearances by the Criminal Investigation Division in February and May of 1972 show that repeat offenders account for 90 per cent of the multiple case clearances investigated by this Department. Since 90 per cent of the multiple clearances are cleared by repeat offenders, it follows that a majority of the unfiled cases or approximately 5,670 cases were probably committed by repeat offenders.

The following tables represent a quantitative model of how Index crimes are processed by the Dallas Police Department. It has been developed in order to make visible our response to citizen victimization and to highlight areas within our part of the criminal justice system which should be strengthened. They document the offenses reported from September, 1970 to August, 1971.

Each table represents a separate category of Index crimes. By reading from left to right across each month, the reader is able to trace the Department's efforts once an Index crime has been reported.

For example, on Table 12, consider the offense of murder. By reading from left to right across the top line, we see that for September, 1970, there were 21 murders reported, two unfounded, or 9.52 per cent, which left a total of 19 murders known to police. This means that only 90.48 per cent of the murders reported for that month were actually murders. Column 5 indicates that the Police Department cleared 20 murders by arrest or exceptional arrest, which was 105.26 per cent of the murders known to police. During the modeling period, juvenile cases were averaged and for this category, an average of .83 persons or 4.37 per cent of the crimes known to police were filed against juvenile offenders. This makes a total of 31.83 per cent cases filed, or 167.63 per cent of the crimes known to police. Column 8 shows how many of the total cases filed were filed "at large." In this instance there were five, or 26.32 per cent of the murders known to police. The next column (No. 9) is divided into two sub-columns and shows two important conclusions.

The first sub-column indicates the per cent of cases filed as compared to the number of crimes cleared. This column answers the question, "What is the ratio of cases filed to cases cleared?", and 100 per cent would be a one-to-one ratio. In this category for September, the ratio was in excess of one and one-half to one. The final column reflects the relationship of cases filed to murders known to the police. Here again, 100 per cent would reflect one crime filed for every crime known to police.

In summary, by reading across the model, one can easily see what proportion of the reported crime falls out or becomes a by-product of the criminal justice system as it applies to the Police Department.

Column 9 becomes the most important portion of the model since it permits comparison of the end product, i.e., cases filed against criminals as compared to the number of crimes cleared and crimes known.

The concept of modeling is not a new term; it is only new in law enforcement. It simply means to set out in quantitative form what is believed to be the significant factors in a situation, and to structure them in a logical manner.

Since this concept did not prevail during the years that our information system was being constructed, the data necessary to construct a model is fragmented in this Department. Therefore, data must be gathered from a number of sources and in some instances is simply not directly available, and must be reconstructed. An example of this is the number of juvenile cases filed each month.

Data had to be gathered from the *FBI Return B, Annual Return of Offenses Known to Police, Criminal Investigation Division's Monthly Report on Cases Filed with the District Attorney; the Dallas Police Department Summary of Crime of the Month;* and the *FBI Return C, Actual Return of Persons Charged,* in order to construct this model. Inasmuch as no monthly report is made of the number of juvenile cases filed, an average had to be drawn from the annual report to the FBI.

Police response is most vigorous in the crimes of murder, rape, auto theft, and robbery, when viewed in terms of the number of cases filed to the number of crimes known to police. For the period of this analysis, September, 1970, through August, 1971, the Department filed the following percentages of cases in those instances where the case was cleared by arrest: murder 115.42 per cent, rape 62.54 per cent, auto theft

* Juvenile Cases Filed is a monthly average

67.65 per cent, and robbery 73.22 per cent. Murder exceeded 100 per cent because of cases filed that had been cleared earlier

In the aggravated assault category, there was a low correlation between cases cleared and cases filed. For the survey period, only 23.70 per cent of the cases cleared resulted in the filing of a case with court. Larceny/theft and burglary also received a less vigorous prosecution rate. Larceny/theft was 40.81 per cent and burglary was 50.30 per cent.

Psychologists tell us that it is not the degree of punishment which serves as a deterrent to crime, but the certainty of it. By examining this model we are able to determine the certainty of having a case filed with the District Attorney's Office by the Dallas Police Department when a crime is reported.

Criminal Courts

Two related areas of responsibility of the criminal courts that lead to repeat offenses of habitual criminals are the bail bond procedure and the excessive time required to try a case.

The right to bail is a constitutional guarantee and is designed solely as a method of ensuring the defendant's appearance at trial. In a majority of cases, a released defendant takes advantage of the bail system to live with and support his family, maintain ties with his community, and busy himself with his own defense by searching for witnesses and evidence, and by keeping in close touch with his lawyer. The repeat offender and habitual criminal takes advantage of this freedom to earn money by criminal activity to pay for the bond fees and lawyer fees. A released habitual criminal realizes that any further offenses he commits will not, in most cases, lead to further punishments. He also knows that these additional offenses will be expeditiously disposed of if he is filed on for further offenses. Two possibilities are available; either the prosecutor will only prosecute the best case allowing the others to go unprosecuted, or he will prosecute all of the cases and routinely these additional sentences will run concurrently.

A multitude of examples of such misuse of the bond system can be enumerated. Suspect, Dallas Police Department # 65536, a 24 year old burglar, is one such example. He is presently out on 11 bonds, most of them for burglary and he was still at large as of the first of June, 1972. The total amount of bail for these 11 warrants is in excess of $51,000. This indicates that the amount of bond is not of great importance to a successful burglar.

Some further examples of habitual criminals using the bond system to further their careers are:[3]

- T.J.M. has seven bonds against him for habitual burglar outstanding for a total of $30,000.
- B.G.R. has a total of 17 bonds against him for forgery and theft totaling over $23,000.
- M.S. has a total of nine bonds totaling $7,100 for such offenses as theft over $50, auto theft, drugs, shoplifting, and passing worthless checks.
- J.L.S. has a total of 17 bonds totaling $108,000 for offenses ranging from carrying a prohibited weapon to theft over $50, with a majority of the cases being for passing worthless checks. These bonds go back as much as 30 months.

The people in these examples and many more are still free and walking the streets of Dallas with no indication that the criminal justice system has had any deterrence on their criminal activity. More detailed examples of criminal activity while on bond can be found in the three case histories outlined in Chapter II.

While conducting this study, it was found that the Sheriff of Dallas County and his bond desk are eager to cooperate with the Dallas Police Department when bond abuse cases that are contributing to our crime problem are brought to their attention. Sheriff Clarence Jones has volunteered to set cash bonds on Dallas Police Department suspects with a current history of multiple offenses if we request it. One week several cash bonds were set at our request. The mechanics to request such bonds must be established in this Department. The setting of a cash bond rather than a property bond severely limits a suspect's capability of remaining free on bond. The Sheriff's cooperation must, of course, be tempered with the fact that he has extremely limited incarceration space.

The following is an analysis of a project recently conducted by the Patrol Bureau and by Sergeant C. J. Macsas of the Operations Analysis Unit of the Planning and Research Section. In the first three weeks, the Sheriff's Office has required cash bond on four suspects and subsequently they remained in jail. While the remainder of the city is experiencing the normal seasonal increase in residence burglaries, this experimental area in South Dallas has shown a 50 per cent reduction. Similarly, the entire Southeast District experienced an 18 per cent reduction in residence burglaries that we believe can be attributed to this repeat offender control effort.

PATROL CRIME CONTROL PROJECT
—Twenty-Five Day Evaluation—

The Patrol Bureau in the Southeast District has initiated a "Crime Control Team" consisting of five patrolmen and one sergeant. This team utilizes a covert operation in that all of them work out of uniform. Their main target area has been beats 312 and 313 selected because of their high residential burglary density this year. The team differs from most in that it consists of patrol officers very familiar with the work location. This familiarity coupled with such measures as requiring higher bond (even cash bonds) for those arrested in the area for burglary and the raiding of fences in the Southeast District has brought a surprising change to the residential burglary trend in the Southeast District. Following is a short evaluation of the results thus far for the "Patrol Crime Control Project."

Last year residential burglary increased citywide from May to June. During the twenty-five day period of the project's operation in June (June 5th-30th), the Southeast District has had a decrease of seventy residence burglaries from the corresponding period in May. This is by far the largest decrease recorded in the city per district for this time period. It is more than double the next largest decrease (30 burglaries in the Northwest District). The rest of the city (excluding Southeast District), in fact, recorded an increase of

thirty-two residence burglaries during this time period.

The specific target areas within the Southeast District, beats 312 and 313, had residence burglary decreases of nine and five offenses respectively in this time span. This represents decreases of 34.6 per cent and 31.2 per cent respectively.

The second watch, which was the primary work time, recorded a decrease of 64 offenses in June from the corresponding period in May.

It must be pointed out here that bail is a constitutional right and cannot be used solely to detain a person in jail before conviction. Under the present system where months pass before a case can come to court, it would be unconstitutional to incarcerate a suspect this long without recourse.

Consequently, another area of solution would be to provide an accelerated trial process for high-risk and habitual defendants. In Philadelphia, for example, a special calendar for defendants charged with habitual offenses or crimes of violence has recently been set up. Such defendants are to come to trial no more than thirty days after indictment. It is still too early to know whether and how much this lessens the likelihood that released defendants will commit further criminal acts; but other studies have shown that the risks are closely related to the length of time that elapses before trial, according to the President's Commission On Law Enforcement and Administration of Justice. This possible solution is very timely if indeed Dallas County requests funds for two additional criminal courts from the upcoming Impact program. One or both of these new courts could be used to calendar only habitual and multiple offenders.

Nine Month Delay In Trial

Crowded court calendars are the indirect cause of bail abuses by repeat offenders. In 1971, a total of 3,294 Index offenses filed by the Dallas Police Department were disposed of by grand jury no bills or by criminal court action; 988 offenses were disposed of by grand jury no bills with 268 Index offenses being reduced to lesser charges and handled by the three Dallas County Criminal Courts. The seven Dallas County Criminal District and Judicial Courts disposed of 2,038 Index offenses. Table 19 gives information on the average elapsed time for court disposition. It takes approximately nine months to dispose of an Index offense. This means that a man arrested for an Index offense and filed on may be free on bail to commit further offenses without threat of further punishment for several months. *The average is not affecting law enforcement as much as the exception.*[4]

Interviews with Dallas inmates indicate that it takes an average of 5.9 months to even plead guilty. Only 10 per cent of those pleading guilty were able to get dispositions in less than 60 days. There is no basis for claiming Dallas County justice is either swift or sure.

Delay Results In Multiple Cases

This delay in disposition of criminal cases leads to repeat offenders having multiple cases pending against them by the time they are finally brought to trial. For the purpose of this study, the term **person with multiple cases pending** will refer to any person who has two or more cases pending, at least one of which is classified as an Index offense. As of February 1st of this year (1972), the Dallas Police Department's Identification Section records indicated that a total of 995 persons filed on by this Department had two or more cases awaiting trial in the Dallas County Courts. These include 2,446 cases filed from March 3, 1972, through January 31, 1972.[5]

Of these 995 persons, a total of 1,728 Index offenses and 718 other felony or major misdemeanor offenses were filed against them. Sixty per cent of these people are awaiting trial for Index offenses. Over 28 per cent of these people have three or more offenses awaiting trial. Aggravated assault, theft, and burglary, in that order, are the offenses for which most individuals are awaiting trial while aggravated assault, theft, and robbery account for the largest number of cases pending. A sample of our records indicate that well over half of these multiple offenses derive from separate offenses and separate arrests.

Concurrent sentencing is the rule in Dallas County courts. This creates a **free crime** atmosphere for second and subsequent offenders. Concurrent sentencing is permitted under Article 42.08 of the *Texas Code of Criminal Procedure*. By law it is the prerogative of the judge to permit his sentence to run concurrent with previous unserved convictions. Juries do not decide.

Of the 99 convicts interviewed at the Texas Department of Corrections, 37 were serving sentences on a concurrent basis, while only one man was serving one sentence after another.

One man said he was serving 17 concurrent 5-year sentences for armed robbery.

This practice is common knowledge among the criminal subculture and is, therefore, actually responsible for a great number of crimes since the deterrence or threat of prosecution is removed from the mind of an offender once he is filed on by a police agency. The offender is actually driven and encouraged to commit crimes by a system which imposes financial need for money to defend himself against criminal allegations on the one hand, and on the other removes additional criminal sanctions for the subsequent crimes he does commit.

Parole and Probation

A number of people benefit from both probation and parole and become law abiding citizens. But a 1970 FBI report on persons rearrested after release in 1965 quoted in Chapter II that 56 per cent of those probated and 61 per cent of those paroled were rearrested within four years.

Parole and probation are humane treatments and deserve a try, but this study indicates that they cannot be used to treat repeat offenders. Increased and improved treatment of offenders on probation and parole may also ease the problem.

Prison Release

It is hard to get into prison in this state considering nondetection (73 per cent in 1971), reduction of charge (22 per cent in 1971 of those arrested), probation (28 per cent in 1971 of those true billed), and nonconviction (42 per cent of those filed on in 1971). Figures from the Texas Department of Corrections show that 40 per cent of their inmates from Dallas County do return. Fifteen

per cent manage to get to the Texas Department of Corrections three or more times.[6] Because of the difficulty and crowded court dockets, far too few *habitual criminal* cases are prosecuted in this country.[7]

An analysis of the judicial statistics for the Dallas Police Department in 1971 indicates that of the 2,306 grand jury true bills for Index offenses, only 34 per cent actually received a prison sentence. This data is gathered from monthly reports of the Criminal Investigation Division on *Cases Filed With The District Attorney* and an annual Data Services printout on *Police and Court Releases*. Documentation is on Table 22.

This study strongly indicates that control of the repeat offender is the primary means of reducing crime for the criminal justice system. If a house is burglarized in this city today, there is a 70 per cent chance the burglar has been subjected to the criminal justice system before. In all Index offenses except rape (42.5 per cent), the chances are over 50 per cent.

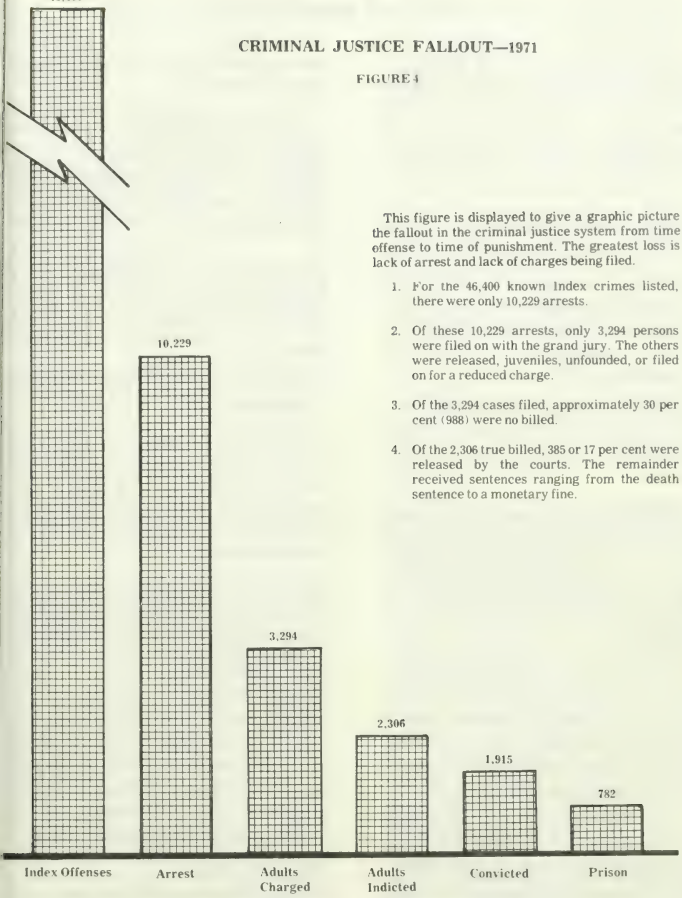
CRIMINAL JUSTICE FALLOUT—1971

FIGURE 4



This figure is displayed to give a graphic picture of the fallout in the criminal justice system from time of offense to time of punishment. The greatest loss is in lack of arrest and lack of charges being filed.

1. For the 46,400 known Index crimes listed, there were only 10,229 arrests.
2. Of these 10,229 arrests, only 3,294 persons were filed on with the grand jury. The others were released, juveniles, unfounded, or filed on for a reduced charge.
3. Of the 3,294 cases filed, approximately 30 per cent (988) were no billed.
4. Of the 2,306 true billed, 385 or 17 per cent were released by the courts. The remainder received sentences ranging from the death sentence to a monetary fine.

Chapter VII
CONCLUSIONS AND RECOMMENDATIONS

The actual amount of crime being committed by repeat offenders in Dallas cannot be determined offense by offense, however, the foregoing information builds a strong case to support the hypothesis that they are responsible for a substantial amount. Valid estimates can be drawn from arrest statistics, actual case histories, and inmate interviews. Our findings allow us to draw the following conclusions based on these inquiries.

THE REPEAT OFFENDER

It can now be reasonably concluded that well over one-half of all Dallas crime is committed by repeat offenders. Arrest statistics indicate that almost 60 per cent of the suspects filed on by the Dallas Police Department are repeat offenders.[8] Further, a review of multiple-offense clearances by the Criminal Investigation Division in February and May of 1972, show that repeat offenders account for 90 per cent of the multiple case clearances investigated by this Department with first offenders accounting for the remaining ten per cent.[9]

Additionally, the interviews with 99 Dallas County inmates at the Texas Department of Corrections on page 17 indicates that repeat offenders claim to have committed 55 times as many offenses as a like number of first offenders or 99 per cent of all offenses admitted by inmates.

Summarizing, we find that repeat offenders accounted for 60 per cent of the serious cases filed, 90 per cent of the multiple clearances, and commission of 99 per cent of the offenses admitted by inmates. Although these statistics cannot be averaged or mathematically combined, a preponderance of evidence exists supporting an estimate that over one-half of Dallas' crime is being committed by repeat offenders. Such an estimate is both conservative and logical in view of these findings.[10]

It would seem to follow that by removing the repeat offender from society, crime will be drastically reduced. This was borne out when the Dallas Police Department recently conducted an experimental procedure in a high burglary incidence area to control these burglaries. The major difference of this project over similar efforts was the securing of cash bonds on repeat offenders apprehended in this area. Control of repeat offenders proves more effective than other police practices such as saturation patrol.[11]

Further, a concentrated effort to control repeat offenders would probably have the greatest impact in the crimes of burglary and robbery. These two offense categories had a higher number of repeat offenders. The study indicated that almost 70 per cent of the persons who were charged with burglary were repeat offenders. Robbery also reflected a high repeat offender involvement with 64.5 per cent of the persons charged being repeaters.[12]

THE CRIMINAL JUSTICE SYSTEM

We found there is no continuity of information on criminal cases to permit measurement, evaluation and correction of problems in the criminal justice system in Dallas. This is probably the most important finding of this research with respect to the criminal justice system, for without sufficient information about the system's problems, present and future, they lay dormant and unsolved.

An example of the lack of sufficient information to track criminal cases is evidenced by our inability to learn the current whereabouts in the system of the 7,052 Index offenses filed last year by this Department. They simply cannot be found unless each individual's name is specifically traced using hand searches of records.

This lack of continuity leads to a lack of coordination. This means the agencies of the system have different or even conflicting goals.

Chapter VI points out that the police often concentrate on clearance rates while this study indicates prosecution of the repeat offender would reduce crime more effectively. Before effectiveness can be measured in any segment of the criminal justice system, it must be determined what are the goals of that segment of the system. Why are efforts expended? What do we intend to accomplish? What will that accomplishment mean?

It is not the intent of this study to infer that the sole purpose of the Dallas Police Department is to put people behind bars. Nevertheless, it cannot be denied that it is the purpose of this Department to respond to each and every complaint by a victim of a crime with a vigorous effort in bringing the perpetrator of the crime before a court of proper jurisdiction.

Since our society provides a filtering system for these offenses in the form of the grand jury, it can be said that the objective of the police role should be to receive and record complaints of crimes; to unfound those complaints which can be proved invalid, thereby establishing the total number of crimes known to police for this Department's jurisdiction; to investigate all offenses; to arrest those offenders which can be legally arrested; and finally, to file cases against adults with the office of the District Attorney, so that they may be brought before the grand jury for further processing in the criminal justice system and to file cases against juveniles, when appropriate.

In the past, law enforcement has not looked upon the number of cases filed as part of its measure of ef-

fectiveness. An example of this is the fact that the *FBI Annual Report* discusses how many offenses were solved, determines what per cent of those cases filed received conviction, but does not relate either what per cent of the cases or crimes known to police were ever filed with grand juries or district attornies, or what per cent of the cases cleared were ever filed with grand juries or the district attornies. This builds in the minds of policemen the concept that when a case is **cleared**, they have succeeded in their role. The consequence of this viewpoint by policemen equates clearing a case with success. This is not the case since clearing a case is only an administrative act which does not in any way deter crime. This has led to such practices on the part of law enforcement officers of **cleaning up the books**; that is, permitting a person who is being charged with one offense admit to a number of other offenses which later go uncharged in court.

Another consequence of such a viewpoint is that it permits law enforcement to passively accept the rejection of cases by the District Attorney's Office or the failure to convict by court through faulty testimony, or poor case preparation without triggering vigorous action to rectify shortcomings.

If, for instance, policemen equated success with convictions or cases accepted by the District Attorney's Office, they would perceive that a case had failed when and if a poor investigation had been conducted, and when the officer was unable to support his case with sufficient evidence to convict or even file his case.

Such an attitude would lead to a strengthening of investigations by investigating officers, insistance by police managers that cases were adequately prepared for prosecution. Finally, it would provide incentive to the Police Department to strengthen its capabilities through self-evaluation where offenses could not be filed.

It is certain that some members of law enforcement as well as some members of the District Attorney's Office would argue that any attempt on the part of law enforcement officers to file more cases will flood the courts with cases, since courts are already overcrowded, grand juries overworked, prosecution staff limited, etc. However, the question must be asked, are those cases which are not being filed too many to file, or too weak to file? Or is it a case of both? Similarly, would the filing of some additional cases on suspects only clog the wheels of justice or would this serve as an incentive to the courts to turn from the practice of allowing convictions to be served concurrently, avoid imposing illogical penalties, and ultimately bring about the reevaluation of the court and prosecutor's part of the criminal justice system.

One can understand that in the case where the crimes of an occasional suspect have been so numerous that it would be unrealistic and counter-productive to file all his cases, however, it would seem that the judgment about how many of the cases to file with the grand jury legally lies with the District Attorney's Office. Therefore, the best course of action would seem to be that of filing all the cases with the office of the District Attorney, and assume that he exercise the prerogative of his office in determining which cases are to be presented to the grand jury.

In the event the District Attorney determines that it would not be in the best interest of public policy to file a case prepared by the Police Department with the grand jury, it would be most helpful if this Department could receive information concerning this judgment along with comments from the District Attorney's Office setting out what could have been included to strengthen the state's case. By such actions, the Department would be in a position to better evaluate its efforts.

Certainly, as has been stated before, there will be occasions where the reason for not filing the case is that there are too many cases to file. On the other hand, one can anticipate that there will be instances where the reason for the failure to file the case is that the District Attorney feels that there is insufficient evidence. Certainly the Department needs a reply in either instance.

When the Department has filed a case which, in the opinion of the District Attorney, is not supported by sufficient evidence it should be incumbent on police management to objectively evaluate these cases and determine the cause of the insufficiency and to take such action as will ensure that an optimum level of investigation is obtained. Further, when the fatality of the case is due to a lack of testimony or poor support from the public, the Department needs the information to evaluate the amount of public assistance being given. Since the Police Department cannot function in a vacuum, and must have witness, complaint and general public participation in the prosecution of crimes, the District Attorney rejection on these grounds will be important data for the Community Services Division.

We discovered in this study that offenders are often free for months after arrest and have substantial financial burden placed on them for bond fees and attorney costs.

Available data indicates that cases filed by the Dallas Police Department and tried during 1971, in both district and county criminal courts averaged 271 days or over nine months. These same cases ranged from an average lapse time of 193 days in one court to 446 in another. The average lapse time for grand jury action in 1971, was 46 days. (See page 34)

We found that this leads to two other criminal justice problems. Repeat offenders often amass huge bonds--while continuing their criminal careers. These bonds are usually not ensured by cash. Repeat offenders learn to use the bail system as a means of continuing their careers in crime after arrest. Some examples are available of repeat offenders who have abused their bond privileges on page 32 of this study.

Bonds ensure future appearances in court — they do not preclude additional criminal offenses. The criminal justice system has no device for releasing criminals to await trial while assuring that no future crimes will be committed. Time and time again we have documented cases where persons were freed on 5, 7, and 9 bonds awaiting trial. The presumption under law is that the person is innocent until proven guilty, yet reason demands some protection for the public against a person who would require so many court appearances.

Nevertheless, our attorneys tell us that there is no

provision under criminal law in Texas to enjoin a person from committing future crime.

Our conclusion is that concurrent sentencing is the rule in Dallas County courts. We feel this creates a "free crime" atmosphere for second and subsequent offenders. It is our conclusion that sentences running consecutively would deter crime more than sentences served concurrently. We do not wish to usurp the judges prerogative of determining length of sentence but we feel concurrent sentencing is detrimental to control of repeat offenders.

Of the 99 convicts interviewed at the Texas Department of Corrections, 37 were serving sentences on a concurrent basis, while only one man was serving one sentence after another. (See page 16) One man said he was serving 17 concurrent five-year sentences for armed robbery.

This practice is common knowledge among the criminal subculture and is, therefore, actually responsible for a great number of crimes since the deterrence or threat of prosecution is removed from the mind of an offender once he is filed on by a police agency. The offender is actually driven and encouraged to commit crimes by a system which imposes financial need for money to defend himself against criminal allegations on the one hand and on the other, removes additional criminal sanctions for the subsequent crimes he does commit.

Lack of information prevents us from pinpointing the cause, but the time lag between charging an offender and sentencing him leads to abuses of the bond system and concurrent sentencing practice. Pinpointing the agency is not as important as identifying the problem. Bail is a constitutional right but a nine month delay before trial is not. Nor is concurrent sentencing a right.

The overall problem is lack of coordination and common goals. A great amount of additional research is needed to learn methods of identifying and prosecuting persons responsible for heretofore unsolved crimes. According to Dr. John Holbrook, the typical offender who is apprehended and prosecuted by the criminal justice system is not necessarily the same as the typical offender who escapes punishment. Dr. Holbrook feels that added research may prove the latter to be a much more intelligent individual who is able to evade arrest and avoid prosecution more often than his less successful counterpart.

RECOMMENDATIONS

The primary conclusion reached by this study is that there is a lack of negative sanctions sufficient to prevent a person from becoming a repeat offender. In fact, once his life style is set toward crime, the system appears to facilitate his career.

The bond system does not deter further criminal behavior, yet supplies the monetary need for further criminal action. The police department seems to be seeking offense clearances rather than actively seeking to control the repeat offender. The courts do not seek additional punishment or rehabilitation time for repeat offenders, rather they routinely give concurrent sentences to them. These, plus other problem areas that have not been quantified in this study, cause the criminal justice system to appear ineffectual against the repeat offender. The first offender may be inhibited by the system, but that is not part of this research.

Based upon the foregoing facts, the following measures are recommended as ways to combat repeat offenders.

• To control the repeat offender, the criminal justice system must become a true system.

The present system is, at most, only satisfactory in administering justice and rehabilitation to first offenders. However, for the repeat offender who strives to circumvent the criminal justice system, the uncoordinated haphazard efforts to divert him and correct his behavior are largely ineffective. The key word in creating an effective system is coordination. A search for coordination in the present system is disheartening.

In view of this, it is recommended that a task force be formed under the auspices of the Dallas Area Criminal Justice Council to develop measures for coordinating the efforts of the several components of the criminal justice system in this area. The product of this study should be a report to the Executive Council of the Dallas Area Criminal Justice Council setting forth specific steps to lead to a lasting system for coordination.

• There should be a prosecution policy within the Police Department which is understood by each component of the criminal justice system, the public and most importantly, the criminal.

During the month of May 1972, it can be observed that there was almost a direct one-to-one relationship between the cases filed by the Dallas Police Department and the number of persons charged, in other words, an average of only one case was filed against each person charged. However, a closer look will reflect that in many instances a person had ten, fifteen, twenty cases which were cleared. Similarly, there were many cases filed out of the city against persons by other jurisdictions which cleared Dallas' crimes. As far as can be determined, the decision to file or not file a case is an arbitrary one made by an investigator and/or his supervisor.

Therefore, it is recommended that a no-quarter policy against criminal offenders be implemented, clearance rates notwithstanding! If the police serve warning to the public, the criminal, the FBI/UCR and the press that they will no longer give credence to the number of offenses cleared, that preventing crimes and prosecuting offenders are their priorities, and further that they expect a sharp decrease in the clearance figure, they will be in a position to throw off the need to bargain for those clearances with the criminal.

Following that, it is recommended that a task force be convened to develop a prosecution policy which is aggressive. This policy should be couched in terms which offer the sternest possible threat to criminals in Dallas. The task force should be charged with developing policies which seek stringent prosecution, multiple case prosecution, habitual offender convictions and queuing of cases where necessary.

• **In order to reduce crime, the criminal courts of this district should serve justice as rapidly as is practical after indictment.**

A long delay between the time that a case is filed and the time of disposition allows the repeat offender to commit many more crimes. Two additional district courts will be recommended for Dallas in the 1973 Criminal Justice Plan being submitted by the Dallas Area Criminal Justice Council. These courts can and should be used to try repeat offenders as quickly as possible in order to remove these high-risk offenders quicker than first offenders. Similarly, appellate courts should be encouraged to follow this lead. A 60-day arrest-prosecution-appeal period is essential to crime control.

• **The legislature of this state should pass laws that would increase the difficulty of a repeat offender obtaining subsequent bonds when he commits further offenses while on bond and devise additional sanctions for offenses committed while on bond.**

At the present time, many repeat offenders are free on several bonds. Just the requirement that subsequent bonds be cash bonds could reduce the repeat offender's ability to make repetitive bonds. Also, legislation calling for the forfeiture of secondary bonds upon conviction for a crime committed while on that bond would assist in preventing the repeat offender from continuing his criminal activity and inhibit bond abuse.

• **The legislature of this state should develop legislation preventing the use of concurrent sentences for persons who are repeat offenders.**

It is not within the scope of this study to recommend how long a convicted felon should be incarcerated for his offense, but the criminal justice system cannot cease sanctioning criminal acts just because it has invoked a primary action against a repeat offender. Some form of judicial reform is needed.

Chairman PEPPER. Call the next witness?

Mr. LYNCH. Chief Peters from San Antonio.

Chairman PEPPER. Chief Peters, I want to tell you that your able representative in the House, and our colleague, the Honorable Henry Gonzalez, was especially anxious to be here this afternoon to introduce you and your associates. He had to take a plane to go back to San Antonio, and he asked us to express his regret he would not be here to hear your statements, although he is very much aware of the fine program you are going to tell us about today.

Incidentally, Chief, you have one of the interesting cities of this country, one of the beautiful cities. My regret is I don't get to go there often enough. It is a very hospitable city.

Mr. Lynch, will you proceed?

Mr. LYNCH. Yes, Mr. Chairman.

Mr. Emil E. Peters is the chief of police of the San Antonio Police Department. He has been with that department for 31 years and has served as chief since 1971. Mr. Peters is a graduate of the FBI Academy.

Mr. Peters, if you have a prepared statement would you deliver it to the committee at this time, sir?

STATEMENT OF EMIL E. PETERS, CHIEF, POLICE DEPARTMENT, SAN ANTONIO, TEX.; ACCOMPANIED BY ROBERT A. BENFER, CAPTAIN; THOMAS T. FENLEY, SERGEANT; AND ROBERT GLENN AND ARTHUR TREVINO, PATROLMEN

Mr. PETERS. Yes, sir. Thank you. And I thank you, Mr. Pepper, and the other members of the Crime Committee for inviting us up here to tell you about what we feel is one of our success stories in San Antonio.

I would like to introduce my people: Capt. Robert A. Benfer, who heads my crime bureau; Sgt. T. T. Fenley, who is one of the three sergeants in the special squad we are going to talk about; Robert Glenn and Arthur Trevino, who are members of the special squad we call the task force.

Now, I would like to explain their attire because this is part of their game. They wear very casual makeup and, in fact, I think that is one of the things we attribute much of the success to.

If I can go back very briefly and tell you a little bit of background of our story, because I think these are historical things that might bespeak the bare bones budget and why we never implemented a program of this type prior to the availability of some startup funds through LEAA.

Very briefly, in the past 2 years, our city has been one of the growing cities of the Nation in experiencing these growing pains and the usual constrictions and frustrations of a growing metropolis. Twenty years ago, our city had a population of 490,000, a police force of 380, and a total police budget of $1,800,000. Today, our population is 748,000; the area is 243 square miles while our police force numbers 1,000, with a budget of $15 million. I point this out to illustrate the job of "catch up" we have been faced with. Consequently, the demand for men was always greater than the force and any shift of a sizable number of men to a special assignment left other duties or needs for policing undone.

In the fall of 1970 our task force was born—made possible by a discretionary grant of LEAA in the amount of $146,000. The grant made possible the use of a 20-man team on overtime; thus not penalizing other needed operations. It provided funds for 6 months, then one-half of that amount for another 6 months during which time we were to assign 10 regular duty men with the promise to fund 10 more regular duty men at the end of the second 6 months. A 2-year grant from our S.P.A., the Texas Criminal Justice Council provided an additional sum of $84,000 through which we increased the squad by 10 men on an overtime basis with our promise to continue with regular duty men at the end of these 6 months to make for a permanent squad of 30 men. That is where we are today. At this time, our task force is funded by our city as a regular activity of the police department, the budget being in excess of $320,000.

The objective is to reduce crime or to slow down the increase in crime; to increase arrests by interception and other means than the standard preventative patrol and investigation method. The name of the game became inconspicuous surveillance and stakeouts in high crime areas or wherever a crime wave became obvious. We therefore adopted a very nonpolice appearance. The squad's vehicles are reclaimed abandoned unclaimed vehicles from our vehicle compound. Radio communication is provided by portable radios. Varied dress and personal attire replaces the uniform or business suit.

As you see them today, the way they wear their hair, or they wear a beard, or whatever it is depends on the assignment. These men are reserved for special assignments, do not do normal patrol and, therefore, blend into the environment perfectly.

The impact, in very brief form, can well be measured by the crime picture in our city: In 1968, 41,958 major crimes; 1969, 46,423; 1970, 43,279; 1971, 39,643; and 1972, 39,715.

The above figures differ from those on the FBI report only in that these are larger as they include assaults and misdemeanor thefts—which makes for the total picture—however, if the lower figures are used, the arc is the same. We peaked in 1969—then effected good decreases in 1970 and 1971. In 1972, we have a small increase—3 percent—but well below the higher years or the 5-year average.

The morale of this squad is exceptional—equaled only by their success, and the reputation of this squad among the criminal element as well as the citizenry is just the way we want it. It is great. In one more effort to get LEAA aid, I have just completed an application for an add-on—a 1-year budget for overtime to be used only and specifically to add to the capability of this squad by temporary expansion to 50 or 70 men, when needed, by using other off-duty officers in addition to this squad on an overtime basis. This would provide occasional semi-saturation with stakeout men during a wave of robberies, burglaries or gang-type assaults. Again, one year's experience would provide sufficient justification in future budget hearings to make it a regular component of the operation.

As I mentioned before, the name of the game is inconspicuous attire. These men are assigned daily, according to a design or plan, based on experience through reporting and computer aided history. Captain Benfer and his crime bureau decide where we need help: Burglaries, thefts, or robberies and, accordingly, try to anticipate where these men are to work.

The work hours vary. They may be daylight or nighttime, by and large, a blending with the environment with these old model cars in dress that fits the neighborhood, whether overalls, plumbers' gear, or what have you and that has contributed immeasurably to their success.

Mr. LYNCH. Chief Peters, this committee has heard previous testimony from Commissioner Patrick Murphy of New York, and this morning from Commissioner John Nichols of Detroit, concerning programs quite similar to your program. New York's is called the city-wide anticrime section. It has been quite effective in making felony arrests for street-level violent crimes. Would you describe for us what, in your judgment, the success rate of this special force has been in your city?

Mr. PETERS. Particularly, in the category of robbery and burglary, we have done a tremendous amount of good. In fact, in 1970, when we first went into operation, our robberies dropped probably 50 percent in 2 months because we used the stakeout method. Then, of course, we started concentrating on burglaries and thefts, parking lots, what have you, and did a lot of good in that, and then again we shifted back to robbery; but we do work on all major crimes. Although on special occasions, when there is a type of panic arising through maybe a rapist that is repeating or something of that order, we will use them in these fields.

Just in December and January, the past December and January, again the robbery picture went, what we thought was, out of sight in San Antonio, and through the months of January and February we concentrated on that at that time. We increased it through the method I have described.

I hope for some aid from the criminal justice council in Texas and a new grant which would enable us to use more men and add to these 30 men. In a city as large as ours, with a number of business houses, 30 men is not enough to provide saturation whatsoever. There are times we can add 50, 60, 70, and really do the job, and recently we did just that. Of course, we can't continue too long without bankrupt problems in our budget. We did that through February and March and the figure was reduced 100 percent.

Chairman PEPPER. Tell us, how do you deploy your men? Do they walk or go in cars?

Mr. PETERS. We have the vehicles we have reclaimed from the vehicle pound. We, of course, like other cities, have the job of picking up cars from the streets that are abandoned, and, after 60 days, because of space, they have to be sold under our law.

We select from this option the cars that might prove valuable in our work and claim them, take ownership by the city and, after some necessary repairs in our garage, put them in the field.

They are everything from 1962 Dodges to pickup trucks and what have you. This, along with the portable radio which, of course, is not unique, but along with this provides us mobility and, of course, communication for these improvised vehicles.

Mr. LYNCH. Do your officers patrol singly or in teams?

Mr. PETERS. In this squad, normally in teams.

We will do stakeouts singularly. For instance, we had a run on ice stations, or all-night shopping marts, so there we singled them out. We put men inside the building and, in a few cases, depending upon

the vision, the geography of the area, we would have maybe a second man in the area.

Mr. LYNCH. Have task force members in your city been involved in situations which resulted in fatalities to offenders?

Mr. PETERS. Yes, sir.

Mr. LYNCH. How many; could you tell us?

Mr. PETERS. I believe three.

Mr. LYNCH. And that is since when?

Mr. PETERS. December of 1970.

Mr. LYNCH. Could you tell us the circumstances surrounding those, what kind of offense?

Mr. PETERS. Business burglaries and groceries.

Mr. LYNCH. Were they on stakeouts?

Mr. PETERS. Yes, sir.

Mr. LYNCH. You have at present 20 full-time men?

Mr. PETERS. The first year was 20, yes, sir; under the original grant. Now, we have 30.

Mr. LYNCH. And they, in the normal course of their duties, dress as the gentlemen at the table with you are dressed?

Mr. PETERS. Right. And it's been including coveralls, the appearance of migrant workers, plumbers, what have you, depending upon the type of crime. That is the squad.

Mr. LYNCH. What is your police per capita ratio?

Mr. PETERS. About 1.3.

Mr. LYNCH. That would make you about the lowest police per capita ratio of any of the 13 cities that are appearing before this committee. Do you need more policemen in San Antonio?

Mr. PETERS. We do. We have an authorized strength of 1,075. I have about 40 vacancies; discounting the ones in school now, our strength is 986. We are right at a thousand and the class in school would put us over.

Mr. LYNCH. Do you need more policemen than your authorized strength?

Mr. PETERS. Correct.

Mr. LYNCH. How many policemen do you need to significantly reduce the crime rate?

Mr. PETERS. I believe that compared with cities throughout the Midwest, and not beginning to compare with Washington, D.C., which has five times as many, or St. Louis with twice as many, I would say 1,400 men in ratio to the cities throughout the Midwest.

Mr. LYNCH. You told us you have 1.3 policemen per thousand inhabitants. Washington, D.C., has close to seven policemen per thousand inhabitants, which is about five times as many.

Mr. PETERS. They have about 5,000 officers.

Mr. LYNCH. About five times as many per capita.

Mr. PETERS. No, five times as many.

Mr. LYNCH. They also have five times as many per capita, which is really a better measure.

I wonder if you could have some of your officers briefly tell the members of this committee what they do in a normal day's course of operation, how they police now and how it differs from duties which they performed as uniformed officers?

Mr. PETERS. Right.

Sergeant Fenley?

Mr. FENLEY. Yes, sir.

The assignments, like the chief said, are drawn up as to what specific crime area is needed. We have many different ways we go about this. Some of the ways are by picking up known burglars if burglaries happened to be the problem. We stake out their houses when they leave in the morning, we follow them. Then when they commit a crime we make the arrest and the police officer is a witness to the crime, which has led to better prosecution than depending upon the citizen coming in and testifying; which most of the time on burglary they weren't there when it happened anyhow.

We have other ways of staking out known "fences," where stolen property is sold, and just by going up and stopping everybody that comes in there we recovered a lot of property that way. However, in these cases our prosecution is no good but we run the fence out of business.

We do the same with narcotic connections.

If theft happens to be the problem, for instance, car prowling, most of it takes place at the average shopping mall. We place one, maybe two, on a roof with field glasses, and the other teams are mingled in with the vehicles. As soon as the car prowler is seen in action, the men on the roof radios—we have a special channel that doesn't go through the dispatcher's office—it to number so and so car whatever it is, "A car prowler in action." The men go over and again make the arrest as the crime is being committed.

We have been used as leg work—canvassing a neighborhood—for some of the crime bureaus such as homicide, on murder cases where it is imperative that as much information could be compiled as soon as possible. We have staked out areas where rapists have set up a pattern. It took us a week on one, 3 days on the other, and we got apprehensions on both of those.

Mr. LYNCH. Do you have a system of making out contact cards? I wonder if you would describe that to the committee and tell the committee what value those cards have.

Mr. FENLEY. Yes, sir. The contact card is the standard contact card which most cities have and which are in the municipal police administration. For each person that is contacted, a contact card is made out on them.

Mr. LYNCH. What does a "contact" mean? What kind of person would you contact?

Mr. FENLEY. This would be a person under suspicious circumstances or a known criminal. The card is completely filled out. It gives where the contact was made, the name of the subject, who was the subject, what type of vehicle he was driving, and the reason for the contact. These are then turned over to the intelligence bureau and also to the crime bureau, whichever bureau possibly would be interested in it. The intelligence bureau puts it out every morning. Once a month they print up an intelligence bulletin which is sent out on the local police departments, Texas Rangers, department of public safety, and it keeps an up-to-date listing of the vehicle license numbers, the type of vehicles, who so and so is running around with.

Mr. LYNCH. In essence, a field intelligence report?

Mr. FENLEY. Right. That is exactly what it is.

Mr. LYNCH. What value do those serve to other units in your department?

Mr. FENLEY. Well, there is a lot of time a crime has not been reported at the time the contact is made. And if we can place the subject in the area of where a crime took place, then the crime bureau will have this information; and through diligent detective work they can come up and clear their case most of the time through the fact the subject can't say he was not in town or that he was in another part of town when this took place. We have a contact card showing he was in the vicinity.

Mr. LYNCH. Do you serve any supervisory role in the task force?

Mr. FENLEY. Yes, sir.

Mr. LYNCH. Would you describe what that role is?

Mr. FENLEY. It is coordinating the assignments from Captain Benfer. Captain Benfer gives us an assignment, it is the supervisor's duty to review it. If it is a stakeout-type assignment, we go out, check the area, we make recommendations to our men, and this is one thing I want to stress. Because a man is a good policeman does not necessarily mean he will be a good undercover or task-force-type officer.

Mr. LYNCH. Fine. With that remark, would you tell us how you select men for this special task force assignment?

Mr. FENLEY. Yes, sir.

Well, from the very beginning, when we first began to set up our permanent task force, we went into the 201 file of each one of the men who had written requesting to come to the task force. We checked to see how if they had bad reports or anything like that, and then we talked with the immediate supervisor. We checked to see what disposition, whether they were under stress, whether they could hold up, whether they were cry babies, and, of course, you have some where the stakeout isn't exactly to their liking; they wouldn't want it. We even went back into their records as far as their service records to see what caliber a person they were. Then we personally interviewed them and asked them their reason for wishing to come to the task force. We didn't want somebody that was just looking for a home for retirement or something like this. We wanted people that would produce. When we round up, our average length of service on the department from our task force officers appeared to be 5 years on the department.

Mr. LYNCH. Does this kind of duty require an aggressive policeman?

Mr. FENLEY. It takes an aggressive policeman and one with great imagination.

Mr. LYNCH. I wonder if we could ask Mr. Trevino why he volunteered for the task force.

Statement of Arthur Trevino

Mr. TREVINO. Basically, the main reason was I wanted to do investigative work, and in the patrol function the techniques we use, we haven't enough time to actually investigate on calls we respond to.

Mr. LYNCH. In your present work you have a chance to do investigatory as well as regular noninvestigatory work?

Mr. TREVINO. Yes, sir; I believe time is of the essence, we have time to spend with the subject the whole day, for that matter. We might spend the whole day, the next day, a whole week, living with him.

We might get up with him in the morning, go with him to work, and follow him until he commits a crime.

Mr. LYNCH. How long have you been on the task force?

Mr. TREVINO. Since June of last year.

Mr. LYNCH. How many arrests have you made since you have been a task force member?

Mr. TREVINO. I couldn't recall the number.

Mr. LYNCH. Has it been a good number?

Mr. TREVINO. A good number, yes, sir.

Mr. LYNCH. A good number of felony arrests?

Mr. TREVINO. The majority, 99 percent.

Mr. LYNCH. What kind of felonies?

Mr. TREVINO. Robberies in action, burglaries in action, possession of narcotics, narcotic paraphernalia.

Mr. LYNCH. Is this kind of police work more dangerous to you than patrolling the streets in uniform?

Mr. TREVINO. I wouldn't say it was; no.

Mr. LYNCH. Chief, I wonder if you could tell us, have you lost, or had shot, or otherwise injured members of your task force?

Mr. PETERS. We have had some shot at. We haven't lost any. We have lost two patrolmen in the last 12 months.

Mr. LYNCH. But not task force members?

Mr. PETERS. No.

Mr. LYNCH. Under what circumstances did you lose the patrolmen?

Mr. PETERS. Patrol officers patrolling the district. We use one-man cars around the clock and have for some 30 years, but that didn't necessarily play into this nor was it the reason.

Mr. LYNCH. You have used one-man patrol cars for 30 years?

Mr. PETERS. Since 1939, over 30 years.

Mr. LYNCH. You must have been the first department in the country to start that.

Mr. PETERS. Wichita, Kans., and San Antonio were the two originally. Maybe Kansas City.

Mr. LYNCH. Do you use foot patrol?

Mr. PETERS. Very few. It is, like Chief Camp mentioned, a luxury we had to abandon when the city spread so rapidly. We do use some in the downtown area now. And, in fact, beginning Monday, I will have a little money through revenue sharing I am going to spend on overtime, following the pattern or St. Louis plan.

Mr. LYNCH. Do task force members, in fact, spend more time in quasi-foot-patrol than regular policemen do?

Mr. PETERS. No; except they can be assigned to a given area or on a given crime or particular crime and it doesn't take them away from their patrol duties or the duties that would otherwise be left undone. They are available for this purpose.

Mr. LYNCH. Do you use task force members on decoy assignment?

Mr. PETERS. Decoy and stakeout; yes, sir.

Mr. LYNCH. I wonder if Mr. Glenn could tell us why he volunteered for this kind of duty. I take it you did volunteer?

Statement of Robert Glenn

Mr. GLENN. Yes, sir; I did. I volunteered to get out on more extensive investigation work, because as a regular patrolman you are

identified with a marked car and wearing a uniform and you can't get close to the criminal element.

Mr. LYNCH. Do you think you are more effective now as an unknown officer out on the street dressed the way you are than you would be in a uniform?

Mr. GLENN. Yes, sir; I do.

Mr. LYNCH. Have you made more arrests since you have been a task force member than you made regularly as a uniformed officer?

Mr. GLENN. Yes, sir. Being a uniformed officer, the majority of arrests used to be misdemeanors, whereas now they are felonies.

Mr. LYNCH. How long were you a regular uniformed officer, sir?

Mr. GLENN. A little over 2 years.

Mr. LYNCH. Captain Benfer, I wonder if you could describe briefly for us how you operate this unit.

Statement of Robert A. Benfer

Mr. BENFER. My area of responsibility is homicide, robberies, burglaries, and thefts. In those duties I have regular detectives, lieutenants, and sergeants, but the problem we have now is that the detective, I suppose, spends 50 to 60 percent of his time riding to court and making reports. He has very little time for investigating.

And when we develop the problem, we develop an area. Recently we had a rash of robberies of icehouses. The time spent on these other things kept the detectives and the small detail we do have, due to lack of manpower, from being able to go out there and really follow up any leads they had. This particular instance, we took the area that was being hardest hit and we used the entire task force, plus extra men on overtime duty, and put them in these icehouses. There were several apprehensions. Mr. Glenn, here, managed to be in one place where a holdupman ran and Glenn did shoot the man, shot him in the leg.

It helps me in the fact that when we do have a problem in any area, and the detectives cannot handle it themselves, we have a man to put into this one particular problem area until it is solved. In most cases it has been solved. Rape cases, burglary cases, robbery cases, it is just throwing the whole group into that particular situation until the problem is solved. It may take 2 or 3 days, it may take 2 or 3 weeks, but we leave the man there until it is solved.

Mr. LYNCH. Could you use more members in the task force in a city your size if you were without present budget restrictions?

Mr. BENFER. Without budget restrictions, yes, sir; we could. The task force is 3 percent of the total police department. And due to other problems, I am sure we can't get that many men.

Mr. LYNCH. Do you publicize the existence of this task force within the city of San Antonio?

Mr. BENFER. It is a known fact, whether we publicize it or not, because the papers publicize any time a task force man makes a good arrest—so and so arrested by task force stakeout or something to that extent.

Mr. LYNCH. Do you regard the number of task force members as security information in your department or will you release that publicly?

Mr. BENFER. I don't understand the question.

Mr. LYNCH. Do you secrete the number of members you have on your task force, or if a newspaper reporter or citizen asks you, do you tell them how many people serve in this unit?

Mr. BENFER. That is a well-known fact within the department and the city.

Mr. PETERS. I might add we have, several times, increased sporadically for specific needs. I would like to have more flexibility to do that; this is the first specific need. At such times of course, we don't release our plans until after the strike is made, and then it comes out.

Mr. LYNCH. What kind of public response and what kind of response from the press has the task force received?

Mr. BENFER. Very well received by press and by the citizens; I know that by the demands made on me. Everybody that has a burglary calls up and wants the task force because the word has gotten out in the last 2 years of the success they have achieved; the capability they have; how they can do that.

So, frequently, businessmen, even residents now, call and ask for the task force. On an individual case of that nature, we can hardly use it but we look to use it where there is an area inflicted or a pattern established. That is where we feel it is most effective.

Mr. LYNCH. As you may know, the STRESS operation in Detroit was subjected to rather sustained severe criticism in the Detroit press. That came as a result of a number of fatalities inflicted upon people in Detroit, people in the act of committing crimes, by members of STRESS. I think your testimony was that three people have been killed by task force officers.

Mr. PETERS. I am going to reduce that to two.

Mr. LYNCH. After those fatalities, was there any kind of severe editorial criticism of your department in the newspapers?

Mr. PETERS. No, there wasn't. There was a group, very active at that time, that tried to come back at us on one of the shootings. It was a burglar, and different activists groups put up the complaint. But the grand jury, the district attorney's office, FBI, they all looked into the grievance and they all ruled in our favor; the officer was acting under law, under circumstances that would make any reasonably prudent officer react the way this officer did when he shot the burglar.

Mr. LYNCH. I take it your city has a substantial number of Mexican Americans and a substantial number of blacks, and in all likelihood other ethnic groups. Do you try to get relatively the same ethnic mix, or racial mix, on the task force?

Mr. PETERS. We try to have.

Mr. LYNCH. How are you doing?

Mr. PETERS. Well, we are not too far off, I don't think.

Bob, maybe you had better answer that.

Mr. BENFER. We have approximately 50 percent Mexican Americans, we have two blacks. Our population in the city is some 51 percent Mexican American and about 9 percent black. The rest are Anglos. A little over 50 percent are of the minority group, or in our case, the majority.

Mr. LYNCH. Would you, for instance, use Officer Glenn to conduct a task force operation in a predominantly black neighborhood?

Mr. BENFER. He would blend in a lot better in that neighborhood, yes; but he is not restricted.

Mr. LYNCH. He might use Officer Trevino in a Mexican American neighborhood?

Mr. BENFER. Yes.

In other words, where they would fit in better. They are not restricted to that area.

Mr. LYNCH. I understand that, but as a technique of making them "invisible."

Mr. BENFER. That is correct.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Chairman PEPPER. Mr. Winn?

Mr. WINN. It sounds like your operation task force is working very well. You remarked in your opening remarks that you get these cars that have been abandoned and a great many of them look like what we call clinkers. Why do you go to clinkers? Because some of the narcotic peddlers and pushers are driving Cadillacs.

Mr. PETERS. That is true. We were using a Lincoln, a couple of Buicks. They weren't late models, of course, but none of our burglars and hijackers are driving around in that type of vehicle.

Mr. WINN. They are driving the older vehicle?

Mr. PETERS. Yes, sir; and in the neighborhoods where we were working.

Mr. WINN. Is that because they are not doing well or because they don't want to be conspicuous?

Mr. PETERS. Both. In the neighborhoods, parked on the street, and stakeouts, I think it would be less conspicuous than a shiny new car, and certainly less conspicuous than our normal staff detective cars, unmarked, but always giveaways.

The blending in or disguise is so well that the week before last the task force men were staked out and a pedestrian was walking down the street and a car drove by and shot him in front of the two task force men. They were parked. This was a petty gang-type thing that breeds in the West Side particularly, and, of course, our task force men pursued him and apprehended him. He really just didn't expect at all two officers were watching him. They didn't realize he was going to shoot.

Mr. WINN. The intent was to kill?

Chairman PEPPER. Was the man killed?

Mr. BENFER. No; he was chased down a blind alley and then turned on the officers, of course, and shot it out with them. He, in turn, was shot but he wasn't killed. He was shot in the leg and shots were fired at our men.

Chairman PEPPER. Did they catch the men that did the shooting?

Mr. BENFER. Yes, sir.

Mr. WINN. For instance, if Mr. Glenn goes into a black area, or predominantly black area, and sits in, and begins to make contact is he not fairly easy to spot after a while? I mean, because he is big, looks like an athlete. I don't know. It seems to me if a man was in either that or Mr. Trevino's, in maybe the Spanish-speaking area, could be singled out if they were in the area too long.

Mr. PETERS. I think our cars have been the secret to continuing success. They switch cars.

Mr. WINN. So they don't look like the same guy to the same people. If they were in the same car a couple of weeks in a row, or 10 days

they would think that guy, we see him all of the time. Of course, they can change their garb, too.

Mr. PETERS. That is true. On our automobiles, we just feel that has played a tremendous part in the success of the program, because these old "clinkers" don't usually last too long anyway.

Mr. WINN. Some of those don't look too good.

Mr. PETERS. Mr. Trevino was relating to me he arrested the same guy twice. This guy swore he knew he was a police officer, but he turned around and arrested him a week later and he didn't recognize him.

Mr. WINN. Do you shave your beards and mustaches and things to go along to make it fit the occasion?

Mr. BENFER. Some of the group have beards and shave them off. Some leave them on. In other words, they don't stand out as police officers, even though they may be recognized if they step out in front of someone. But they don't go down the street standing out as police officers in old clinkers. The thing I believe the character looks at is a car, and the second time to see who is driving it. And they know our police cars. They know our plainclothemen's cars.

Mr. WINN. Do the task force members go into a place, hang around the pool hall, go to the beer joint, or wherever the problem is, where they can pick up word about possible activities or possible robberies being planned?

Mr. PETERS. Not so much; that would be an undercover type of work. We use some men in undercover work.

Mr. WINN. I am having a hard time, even after hearing of this same type of operation three times in the last couple of days, how you differentiate between an undercover or task force officer.

Mr. PETERS. The undercover man does not make arrests.

Mr. WINN. He never makes arrests?

Mr. PETERS. Normally not, in our department. He will operate until he has fingered, and in the meantime we try to get sealed indictments and serve the warrants. Because once the warrant begins to be served, he is known.

Mr. WINN. I didn't particularly look, but I don't remember seeing any pictures of girls or women.

Mr. PETERS. Not in this force.

Mr. WINN. Would there be any place, because there are women connected with particularly planned robberies, getaway cars, things like that. At least, they are in the movies that way and you read about them. I guess there are. There are lots of women in jail.

Mr. PETERS. We haven't thought about using any as yet. It is possible. We don't have too many women right now. We use one in homicide on rapes.

Mr. WINN. How is that working out?

Mr. PETERS. Very well.

Mr. WINN. You just have the one?

Mr. PETERS. Just one in homicide, one in juvenile, and two in records.

Mr. LYNCH. Mr. Winn, I would like to comment to the chief that Commissioner Murphy is using a number of female police officers in his units similar to yours, and the commander of that unit indicates that they are even more effective than men and they are delighted with the performance of the women who are their counterpart of your task force, and hope to increase that number because they have been so ef-

fective, especially at getting muggers and robbers. They have been used primarily as decoys.

Mr. PETERS. I would envision we would eventually, also. We, as I mentioned before, are undermanned, and, of course, we always have to watch every program to be sure the tail doesn't wag the dog. So our task force is about as big as we can afford at this time, in ratio to our total personnel.

Mr. WINN. You, obviously, have a pretty efficient police department, but it would seem to me from the trends that there are going to be more and more places to use women. I suppose in task force work that women might be able to do a better job, because of the use of wigs and things like that, than the men.

Mr. PETERS. True.

Mr. WINN. Although one of the task force members said their men wore wigs and I am sure that is probable but I don't think they would last too long. I think they are too easily spotted.

Mr. PETERS. I would think so.

Mr. WINN. Thank you, Mr. Chairman.

Chairman PEPPER. Gentlemen, if you don't want to state it for the record you need not do so, but where do you gentlemen carry your badge and gun?

Mr. PETERS. They, of course, keep that concealed. They use one with a flapover so they can put it in their pocket to show when the occasion calls for it.

Chairman PEPPER. What about your weapon? Do you have a place to carry that?

Mr. PETERS. Right.

Chairman PEPPER. Gentlemen, this is the kind of thing we have been so much interested in, the innovative, ingenious approach. What you are doing is letting the criminal know that he never knows whether some fellow walking down the street or sitting in the car is a police officer or not. Just like the two fellows who shot that man down. The ordinary civilian would have been afraid to testify he saw him shot down. The culprits thought they would get away with it the way these criminals do get away with public shootings like that. Yet, there were officers who saw it and were not afraid to trace them and not afraid to testify they saw them do it. That seems to me to be an ingenious way of dealing with the criminal.

We want to commend you. You have done a very fine job.

Without objection, I would like to put in the record the document here entitled "Samples of Crime Task Force Case, 1970–73, San Antonio Police Department, San Antonio, Tex."

Without objection, it will be incorporated in the record.

[See material received for the record following Mr. Peters' testimony.]

Chairman PEPPER. Chief Peters, we want to thank you and your associates for coming here and giving us this very interesting presentation. We wish you good luck and further success. We hope that something can be done to help you get more money, more police, and more task force members. Personally, I think the Federal Government ought to put very large funds into the programs to carry out such things as you do, to give you more effective personnel. I hope someday we will be able to get such.

Mr. PETERS. We thank you, Mr. Chairman. And on behalf of our department and our city, we thank you for the privilege of coming before you.

Chairman PEPPER. Thank you very much. Good luck.

[The following material was received for the record:]

SAMPLES OF CRIME TASK FORCE CASES (1970–73), SAN ANTONIO POLICE DEPARTMENT, SAN ANTONIO, TEX.

We were having a rash of Convenience Food Store (called Ice Houses in our area) holdups. It seems "Ice Houses" are prime targets here because they are so numerous and very popular for quick purchases and usually have only one clerk on duty. At one "Ice House" we had a Task Force man staked out in the storeroom behind the checkout counter, at about 11 P.M. a man entered the store, looked at some books, then went to the register drew a small pistol (known as a Saturday night special) and informed the clerk, "this is a stick up, put the money in a paper bag". The clerk complied. At this time the Task Force officer slipped out the rear door with shotgun in hand and confronted the hijacker as he left, this so startled the hijacker, as he looked down the barrel of the officer's gun, he threw down his gun, the bag of loot and screamed loudly.

Many other cases on file were cleared by this arrest. This subject has been convicted and is now serving his time.

In an area of the city where a large hippie colony was gathered, information was received that they were dealing in stolen goods and narcotics. Two Task Force teams were assigned to obtain license numbers and descriptions of the vehicles in the area. One team was sent into the area and the other team remained outside the area as a backup team. Everything was going smoothly until dark when the hippies sent out "guards", one of the Task Force men was on foot, the other had remained in the car. The man on foot radioed the man in the car that the "guards" were headed his way, he slid down on the seat and acted passed out. Three hippies sat on the hood of the car and lit a "joint" of marijuana and smoked it while they debated rolling "the drunk" in the car (the Task Force officer), but soon tired of this and did nothing but finish smoking the "joint". The other Task Force officer was stopped by the "guards" but he put a story on them about looking for some street in the neighborhood and said he wanted to buy some stuff, they almost took him in but instead advised him to leave. The Task Force officer walked to the end of the block caught a bus and rode a couple of blocks, got off and contacted the backup team, they waited for the "down and out drunk" officer to join them.

With the license numbers obtained it was found that most had been used in burglaries, by setting up stake outs on the houses and watching the flow of articles being taken in, a Search Warrant was obtained and a large amount of stolen property was recovered. The "Burglary and Theft Ring" was broken up.

A rapist had established a pattern in a section of town consisting of a large number of duplexes. The Homicide Office asked Task Force to see what could be done. A map of the area was obtained and the addresses and times of the burglary/ rapes were marked. The area was then checked for the best placement of men. Three locations were selected (in the shape of a triangle) one on top of a fire house tower and one on each of the two other points. We worked from midnight to 5 a.m. each night. On the 7th night a subject fitting the description was spotted prowling, he spent about two hours trying windows in the neighborhood looking for one unlatched. He then approached one of our stakeout autos, leaned on the truck (two Task Force men were lying on the seats inside) then walked on past. The officers felt the suspect might have seen them so they stopped him. In checking our files we found the man was wanted on traffic warrants and placed him under arrest. While searching the subject a screwdriver was found on his person which belonged to Southwestern Bell Telephone, a screwdriver matching this one was found on the scene of one of the rapes. Homicide was contacted and a check of the suspect's fingerprints matched those from some of the crime scenes. Two cases of rape and three cases of burglary were filed on the man. A pistol taken in one of the burglaries was recovered from the suspect's mother's home. The suspect lived in one of the duplexes in the area of the crimes.

The subject has been convicted and is serving concurrent 25-year sentences.

One afternoon a brutal murder was committed, two Task Force men were assigned to do the "leg work" in the case. This consisted of knocking on doors in the neighborhood and talking to people, finding out what they had seen during

the day, then following up on all the information they received. Before the day was out, they had developed enough information for Homicide to "make their case". It turned out to be the nephew of the victim.

The subject was convicted and given a life sentence.

While two Task Force officers were watching a car (used in a robbery the night before) a known dope pusher parked nearby, from his position he could not observe the officers. As the Task Force team watched another car pulled up and a package was passed by the pusher, then both cars left. Another Task Force team, parked closeby, took over surveillance of the wanted car leaving the original team free to follow the car with the package. A short distance later the car, containing a man and woman, was stopped and the officers confiscated the package, in the package was 6½ grams of HEROIN. The couple was arrested and filed on. By the alertness of these Task Force men we were able to also file on the pusher who had boasted he was too smart to be caught.

The second Task Force team, that had remained at the sight of the staked out car, made two arrests for armed robbery.

All five subjects are now out on bond awaiting trial.

Through Intelligence information, it was learned that three men were planning to burglarize a gun shop. It was further learned that they might also "hit" another location (a lounge). Six Task Force teams were assigned (three to each location). At approximately 11 P.M. the subjects arrived at the gun shop, waited a short time, then got out of the auto with a crowbar and began working on the door, seeing an auto approaching they dropped the bar, returned to their car and drove away. About two hours later they returned, again prying on the door but were still unable to gain entry, this time they took the bar with them and left. About 35 minutes later the teams at the lounge location reported they had arrived there and were "casing the place", but again they left this scene only to return about an hour later. Upon their return they pried on the front door, both side doors and the rear door, they could not gain entry here either and left the lounge. Two Task Force teams followed them. The subjects went to an apartment complex under construction, broke into one of the apartments, but did not steal anything (it was later learned they intended to burglarize it the next night). Leaving the complex they again drove to the lounge, after driving past several times they stopped. Two men got out again and the car left the scene, one team of Task Force men followed. On this attempt they *FINALLY* gained entry. The team following the car was notified and all suspects were arrested. Through this arrest it was learned these subjects had been involved in many burglaries in San Antonio and South Texas, including the U.S. Coast Guard Armory at Port Isabel, Texas. Information was also obtained on a "fence" with several hundred dollars in property recovered.

The men have been tried and received 7 years.

Earlier this year a San Antonio Police Officer was murdered by a hijacker fleeing from an establishment he had just robbed. All Crime Task Force personnel were pressed into service. The Detectives had six good suspects, all with outstanding warrants for robbery. Within 30 hours, five of the subjects were located and booked in jail by the Task Force officers. The one remaining suspect was brought in by his father who had been contacted by a sergeant in Burglary. This subject confessed to the robbery and the killing of the officer. By locating the other subjects as rapidly as they did, the Task Force officers enabled the Detectives to eliminate the five and concentrate on the 6th man, causing him to "give himself up".

A footnote to this case should state in rounding up the other five men Robbery Detectives were able to clear many outstanding cases that were on file.

The muder suspect also implicated another man and they are both now out on bond, pending trial.

A subject was arrested in dowtown San Antonio for auto theft, by a team of Task Force officers. The next day word came from the jail the man wanted to talk to some Task Force men. Two men were assigned, the subject told them of an international car theft and narcotics ring, of which, he was a member. Cars, mostly expensive types, were being stolen in New York, New Jersey and California, titles were forged and license plates obtained, then the cars were brought to San Antonio. The cars remained here until 6 or 7 were accumulated, then were driven to Laredo, Texas, across to Nuevo Laredo, Mexico then about 20 miles into Mexico where a large manmade cave was located, the cars were left there. At this location a "lieutenant" of the gang would pick up heroin and cocaine in return for the automobiles, he and the drivers would all return to San Antonio

where the narcotics were "cut" and taken back to New York, New Jersey and California to be distributed. The local flunkies would each receive 10 grams of heroin a day to sell for $40.00 per gram, the going price being $30.00, the seller was allowed to keep the extra $10.00 from each gram as his pay. The subject stated there were 12 to 14 street sellers and they were making many trips to Fort Hood, Texas where a large market for narcotics existed.

With this information a conference was set up with the Narcotics Bureau, the Auto Theft Bureau, the State Intelligence office, the Texas Rangers and the F.B.I. It turned out each agency had some of the above information and with this, were able to tie it all together. After about three months of undercover work we were able to break up the gang. At this time D.A.L.E. (office of Drug Assistance Law Enforcement) is still working on some of the top members of the gang and have made some very good narcotic cases, plus recovering large sums of money which have been confiscated by the I.R.S.

(Officers Report—January 5, 1973)

CRIME SUPPORT GROUP ANNUAL REPORT

GENERAL INTRODUCTION

The San Antonio Police Department established its Crime Support Group in the Fall of 1970. It began with the training of policemen in the various police tactics that would be needed in a semi-undercover type of unit. There were approximately two-hundred and sixty officers that completed the sixteen hour training requirement. This was made possible by the aid of a federal grant received through the Criminal Justice Council in Austin, Texas.

Under supervision of the Intelligence Bureau Commander the Group began active participation in police assignments with an assist to the Narcotics Section of the SAPD on the night of December 2, 1970. Sixty-eight suspected drug offenders were rounded up and brought in.

The next few months the Group was in the process of developing toward becoming a permanent unit of the San Antonio Police Department. This was done on June 1, 1971 when the Group was formally made a permanent unit of the Crime Bureau in the Criminal Investigation Division.

PERSONNEL

The Group began operation with a total of twenty officers. There were two sergeants and eighteen patrolmen. These men were carefully selected for their new duties. This was done by a close review of each applicant's official 201 file with the view in mind of each one's potential that would be developed by careful supervision from the sergeants in charge of the Group.

In February 1972 a new grant was put into use which enabled the Group to expand operations with fifty extra officers working on their relief days. This program of overtime was continued until June 30, at which time the funds were exhausted. From this group of officers ten patrolmen and one sergeant was to be selected for permanent assignment to the unit. This was completed on July 7th. As of the present time the Group is at full strength with three sergeants and twenty-eight patrolmen. One civilian clerk is also assigned who assists in accounting, scheduling and the preparation of reports. This makes a total of thirty-two men.

ASSIGNMENTS

The Group's basic assignment is to work in the areas of high crime impact. This may be in any given area of the city. The assignment may be for one day, two days or it may go on for weeks. The area of assignment may shift or several areas may be covered at one time. It will depend upon which area or areas have the greatest need. It is easy to see that the unit must be very mobile and flexible.

The current commander of the Group is Captain Robert Benfer, Chief of Detectives. It is from his office that assignments are approved and issued to the sergeants in the Group. They then work up a plan and assign the personnel accordingly. The following is a list of Sections that the Group has assisted the current year: Burglary, Homicide, Narcotics, Robbery, Theft.

The above listed sections have received assistance in the form of day and night patrols, surveillance of subjects and fences, gathering information, and rounding up suspects for questioning. The Group has also supplied information and assist-

ance to the Department of Public Safety, the Federal Bureau of Investigation, the Texas Rangers, the Federal Postal Inspectors, and various Police Departments around the state.

METHODS OF OPERATION

The Group being a semi-undercover unit, must have a certain degree of cover in order to succeed in its objectives. To accomplish this the Group utilizes unmarked pound vehicles for its assignments. These vehicles cover the complete range of makes and models. They have been quite effective in that the criminal element have had police in their midst and never aware of that fact until they are placed under arrest. These officers wear their hair longer than the average police officer. They also wear clothing that allows them to blend in with the environment they are working in. They have been so effective in this that subjects under arrest just don't seem to be aware that it has happened. In one actual case two subjects came up, sat down on the fender and lit up Marijuana cigarettes never aware it was an unmarked police car occupied by two police officers.

SERVICES RENDERED

This Group has had a unique opportunity to be of service not only to the citizens of this city, but to the police department as a whole. The Group is composed of the three major ethnic groupings in this city. This had enabled them to go into all areas of the city and to gather information not always obtainable by uniformed officers and by the Detectives. Some of the members of the Group have had an almost unbelievable ability to know and keep tabs on the criminal element within the city. A subject would be needed for questioning or a person would be under a warrant for arrest and wanted by a Section in the Crime Bureau. The men in the Group would go out and bring that subject in to the station sometimes in a matter of hours.

In addition to supplying needed information on wanted subjects, the Group also has been very diligent in making out contact cards on active criminals in the city. These cards are forwarded to the Intelligence Office and are available to all members of the SAPD. Current information as to addresses, vehicles and associates of these subjects is listed on these cards.

The subjects brought in are also mugged in color portrait type pictures which make for greater accuracy in identification. This file of pictures is maintained in Captain Benfer's office and is available to members of the SAPD. Listed below is the number of contact cards and pictures produced in this current year of 1972: Pictures taken, 1,701; contact cards, 1,835.

APPREHENSIONS 1972

The Group has had a very productive year in the number and kinds of arrests. The Group has doubled the number of Felony arrests over the previous year of 1971. In certain categories of crime a reduction has been achieved by the SAPD. It is believed by those in a position to know that one of the reasons for a brighter picture in the fight against crime has been the Crime Support Group. Supplied with this report is a chart showing the breakdown on the number and kinds of arrests produced by the Group. Listed below is the number of arrests for this current year of 1972: Felonies, 688; misdemeanors, 503; total, 1,191.

SUMMARY

This report would just not be complete without a word about the morale in this unit. There is an attitude of cooperation existing between the officers and their supervisors that is reflected in some of the results produced this year by the Group. Many of the accomplishments of this year have come from men working on their off duty time. Many of the arrests were made on the way to work or on the way home after regular duty hours. This is the result of PRIDE.

The officers and sergeants are pleased to be a part of, along with the other units, of this San Antonio Police Department.

Sgt. Thomas T. Fenley.
Sgt. N. Russell Poppell.
Sgt. Robert L. Lewis.

CITY OF SAN ANTONIO (TEX.) DEPARTMENT OF POLICE CRIME SUPPORT GROUP ANNUAL REPORT 1972

Chairman PEPPER. The committee will adjourn until tomorrow morning at 10 a.m., when we reconvene in this room.

Whereupon, at 5 p.m., the hearing adjourned, to reconvene at 10 a.m., Friday, April 13, 1973.]

STREET CRIME IN AMERICA

(The Police Response)

FRIDAY, APRIL 13, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:15 a.m., in room 311, Cannon House Office Building, Hon. Claude Pepper (chairman) presiding.

Present: Representatives Pepper and Winn.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

This morning we close the first week of our hearings into street crime in America.

During the course of this week, we have heard testimony and received statements regarding effective, workable law enforcement programs designed primarily to respond to crime at the street level. We have, for instance, heard testimony from three specialized anticrime units from New York City, Detroit, Mich., and San Antonio, Tex. We have heard testimony from Indianapolis regarding its very heavy commitment to citizen participation programs and on the benefits which can flow from its policy designed to enable law enforcement officers to use patrol cars as private family vehicles.

We have heard testimony from the Dallas Police Department regarding its very thorough study of criminal recidivism, and from the same department we have heard testimony regarding a most imaginative legal services unit which provides on-the-scene, in-house legal assistance to street patrolmen.

We have heard testimony from the St. Louis Police Department regarding its most promising hardcore juvenile delinquency team counseling program—a program which this date has achieved significant results.

These and many other agencies have testified at length before this committee and have confirmed our faith in the ability of police and law enforcement agencies to respond to new problems and to adapt police operations to current needs.

To conclude this first week of hearings, we will today call upon four outstanding police patrolmen from the Kansas City Police Department to explain that department's resourceful and imaginative approach to police work in the 1970's. We would be remiss if we did not indicate our thanks to the many commissioners, chiefs of police, offi-

cials, and patrolmen who have contributed so much to make this phase of the hearings successful.

During the course of this very busy week, we have heard from and are indebted to the police departments of New York City, New Orleans, Indianapolis, Cincinnati, Chicago, Washington, D.C., Detroit, St. Louis, San Antonio, Dallas, and Kansas City, Mo. The programs and policies pursued by these police agencies can surely offer encouragement to our citizens and can show the way for other police agencies.

But the street level response to crime is only the first part of the criminal justice system's responsibility. Next week, we shall consider another portion of the criminal justice system. From April 14 through April 19 we will be hearing testimony on "crime in the streets—the reduction of juvenile and adult recidivism through new correctional approaches." During that week, we will be hearing testimony about new kinds of correctional programs, and about better ways of dealing with juveniles who are involved in serious delinquency and serious crime. The reduction of juvenile crime offers the best hope for the eventual reduction of all crime in the United States. As a priority matter we must devote massive and sustained attention to those individuals who early in their lives demonstrate a propensity for committing antisocial and criminal acts. We have learned long ago that the correctional systems in this Nation are ineffective when they are asked to "correct" a criminal who has already reached the mid-point in his criminal career.

We must, therefore, strengthen our resolve to bring to bear as many financial and personnel resources as necessary to attack criminality before it becomes an established lifestyle. The many professional specialists who will testify next week will describe in detail new approaches and new ideas in rehabilitating young delinquents. We are convinced that a sound way to deal with crime is to utilize our considerable correctional and social service resources when our young men and women first indicate that they are potential delinquents.

Finally, from May 1 through May 8, our hearings will concentrate on prosecution and court programs which offer the means to expedite criminal cases in our courts. These hearings then will cover the entire criminal justice process: they are practical hearings in that they are designed to demonstrate that many police, court, and correctional agencies are attempting to improve the administration of justice, thereby making our streets safer for all Americans.

It is now my pleasure to introduce one of our most distinguished, most faithful, and helpful members of this committee, a man who is deeply interested in the problem of crime in this country, and is as dedicated as any man in the Congress, or the country, in trying to do something about it. That man is my distinguished colleague and friend, Hon. Larry Winn.

I ask him if he will be kind enough to present our witnesses this morning.

Mr. WINN. Thank you, Mr. Chairman.

I don't represent Kansas City, Mo., although I had the privilege of being born in Kansas City, Mo. But when I went to the University of Kansas, I stayed in the State of Kansas and have the privilege of representing the Third Congressional District of Kansas now.

I am sorry our colleague, Mr. Bolling, cannot be here this morning. He said he would try to make every effort to be here, and I know that you gentlemen appreciate the fact that all of the Members of Congress have busy schedules. Mr. Bolling hopes he can make it before you leave the hearing room this morning.

It is my pleasure and privilege, Mr. Chairman, to introduce to the committee and to you as the chairman, five members of the Kansas City, Mo., Police Department.

Mr. Thomas J. Sweeney, who is a consultant to the Kansas City, Mo., Police Department, four young patrolmen: Darrel W. Stephens, James G. Post, Charles E. Brown, and James Head.

I would like at this time, Mr. Chairman, if I may, have the privilege of reading a letter addressed to you.

Chairman PEPPER. Glad to have you do that.

Mr. WINN. The letter is from a friend of mine, Mr. Clarence M. Kelley, chief of police in Kansas City, Mo. I might say that because of the setup in the Kansas City area, all of the police departments there in Wyandotte and Johnson Counties which I represent, and in Jackson County, and in Kansas City, Mo., work together very closely in an arrangement that does not come under the purview of this committee, but which we call the metro squad, because we have, as you well know, Mr. Chairman, a State line that divides us.

This letter to you from Chief Kelley reads as follows:

DEAR MR. PEPPER: We are honored to be one of the select group of law enforcement agencies invited to appear before your committee to discuss innovative crime control strategies. We welcome this opportunity to present our accomplishments and we stand prepared to assist your committee in any way possible.

I have chosen to send five young men as our representatives. Four are patrolmen, the fifth is a civilian. These men are representative of the large number of our personnel who have been instrumental in designing and implementing innovative programs in Kansas City. They personify the type of department we are striving to build.

In any department the support of such men is necessary if the implementation of change is to be successful. Their participation in management helps to gain that support. They have, in addition, an enormous contribution to make. These men in fact represent sources of talent that have been ignored all too long by police administrators. They know intimately the problems currently facing our personnel on the street. They attack problems with an openness and a vigor not characteristic of police administrators. The programs they present to you today give testimony to their abilities. They have visions of law enforcement in the future and they may very well be the police administrators of tomorrow.

Sincerely,

CLARENCE M. KELLEY,
Chief of Police.

KANSAS CITY, MO.

Mr. WINN. Mr. Chairman, I think that it is obvious by the ages of these young men, and some of the hearings we had earlier in the week, that we do have a new, innovative idea in police administration of using younger and younger men. I know you and I are both in agreement on that and we are very pleased to see young men in police administrative work.

Without further ado I would like to introduce to the committee Mr. Tom Sweeney.

Chairman PEPPER. Thank you very much, Mr. Winn.

Mr. Sweeney, we are glad to have you and the other gentlemen with you, and we appreciate the letter from the distinguished chief of police of Kansas City, Mo. Please convey our thanks to him.

Mr. Lynch, you may proceed.

Mr. Lynch. Thank you, Mr. Chairman.

Mr. Chairman, members of the committee, I suppose the key phrase for describing the Kansas City Police Department would have to be "participatory management." Each of that department's four major patrol divisions has a task force comprised of four to six men, mostly patrolmen. These task forces are responsible for deciding which projects within their respective areas of responsibility could best be undertaken by their division.

They are further responsible for implementing those projects. In effect, each task force operates as a "think tank" and it uses front-line, street-level patrolmen rather than departmental administrators or theorists who are far removed from crime in the streets.

Mr. Sweeney, I wonder if at this time you could briefly describe how the department is organized, what the task forces do, and then at that time, I wonder if you would call on the patrolmen with you this morning to describe what major projects will be implemented by them in their respective areas of Kansas City.

STATEMENT OF THOMAS J. SWEENEY, TASK FORCE PROGRAMS COORDINATOR, POLICE DEPARTMENT, KANSAS CITY, MO.; ACCOMPANIED BY DARREL W. STEPHENS, JAMES POST, CHARLES E. BROWN, AND JAMES HEAD, PATROLMEN

Mr. Sweeney. Thank you, Mr. Chairman.

Just as a prefatory remark I would like to indicate that Kansas City has, for the fourth straight year, experienced a declining crime rate. Since 1970, crime in Kansas City has declined by 23.8 percent. We would like to believe that decline is partly due to our efforts.

We have, however, some problems in identifying the precise contributions that the various innovations we have introduced have effected. The department has been characterized by change and introduction of new programs since Chief Kelly arrived 11 years ago. In addition to the programs we will talk about this morning, I should note Kansas City has increased its police force by 350 men in the past 2 years.

It has a modern crime lab, evidence technicians, a regional academy, and presently is the center for a national street lighting experiment.

In addition to measuring the impact, or trying to assess the impact of program innovations, we are faced with two realities: One is that crime is declining in a large number of cities; and second, there appear to be some social factors, we are not able to put our fingers on, that are also effecting the decline in crime. Additionally, the state-of-the-art in police work in measuring effectiveness is very, very poor.

I would like to take just a minute to read two brief quotes from the report prepared by the Rand Corp. to the Department of Housing and Urban Development in 1970. I think this provides some background for much of what we will talk about which we are doing in Kansas City.

We believe there are significant knowledge gaps which make it impossible to allocate as rationally as should be, the more than $1 billion devoted annually to police patrol programs. Because of these knowledge gaps, police administrators currently must plan, principally in terms of input measures (such as the number of patrolmen on the street or the number of patrol hours), although what they are trying to effect are output measures of police effectiveness, such as true crime rates, apprehension rates, and the speed and quality of service in response to calls for services. These knowledge gaps are one of the most important factors limiting the development of effective aids to police patrol decisionmaking.

That same report goes on to indicate—

In short, between one-third and one-half of all police time is devoted to preventive patrol and the police cannot specify with confidence what effect it has on crime or criminal apprehension. In such a situation, police administrators cannot know resources are being allocated effectively. Analytic and experimental studies are needed and could result in very substantial changes and improvements in the use of police manpower.

That, as I said, is a basis for much of what we are doing in Kansas City. We think our approach is somewhat unique in law enforcement agencies in that it is probably the most systematic and perhaps the first effort to introduce participatory management, using field patrolmen in the design of patrol strategies. We also believe it is the first time in the history of this country, fairly well controlled, fairly scientific patrol experiments have been conducted by a police agency.

Those experiments test many of the underlying assumptions of police work. We would like to talk this morning, very quickly, as we go through the discussion of the task force projects and the research we are presently engaged in, about the effectiveness of patrol activities and also about the problems we face.

The problems we face include police community relations, crime, et cetera.

We would like to talk about some of our technological innovations, our helicopters, our computers, and certain efforts we are making to professionalize our police personnel because we firmly believe the most important resource we have is our men on the street. They exercise enormous discretion and they are the key individuals in law enforcement. We would like to talk about some efforts we are undertaking to try to understand and improve our interaction with the citizens.

First, in response to Mr. Lynch's question, I will talk about the developmental process. In October of 1971, Chief Kelley established four task forces in the four major patrol divisions of the department. There is one for each of our three geographical divisions—northeast, central, and south patrol. The fourth task force is in our special operations division, which includes the tactical unit.

The composition was primarily field patrolman, the commanding officer of that division and usually one representative of the supervisors. They were given a mandate by Chief Kelley to identify more effective and responsive patrol strategies. The constraints placed on these individuals, basically, were that they had to maintain commitments made publicly as to the allocation of police personnel and that they had to undertake competent analysis of the problems and solutions and be prepared to defend those solutions when they presented them to Chief Kelley. But, basically, he entrusted to these men the authority to design patrol strategies.

The process was characterized by a conflict of ideas. For those of us who had been around police circles, we know generally there is a tendency not to introduce conflict of ideas, but rather maintain the status quo. Some of our discussions became quite heated, and we had occasions when individuals threw books at one another. But generally there was a sincere attempt to understand the problems that we faced, to get out different points of view and identify strategies.

We were provided support for this effort by the Police Foundation, and what is rather unique about that support is that the Police Foundation put a good deal of money, about $60,000, into Kansas City for developmental work and to support the activities of the task forces without any commitment or understanding of what the outcomes of those projects might be.

From our point of view, that is unique to funding agencies. Basically, we have had several outcomes with which we are rather happy. First, obviously, are our four patrol programs with their 13 separate components. We have had numerous outcomes, and perhaps the most significant is the demonstration of competence on the part of field patrolmen to design and administer projects. There is a desire among our men to remain in patrol and this, again, is uncharacteristic.

We have had men turn down transfers to specialized units such as detective and tactical units. There is a growing interest on the part of our personnel to understand problems and to acquire knowledge through research. Basically, there is an enthusiasm for change in the department.

I would like to turn the platform at the moment over to Patrolman James Head. James is going to talk about one of our primary efforts at the present time to analyze aggravated assaults and homicide. This, I think, is characteristic of an approach we are going to be taking in the future to cut apart all of the problems we face in developing innovative solutions.

Statement of James Head

Mr. HEAD. Thank you.

Mr. Chairman, I am from the Northeast Patrol Division, Kansas City, Mo., Police Department. What I would like to tell you about this morning is a new project our task force has undertaken. It is dedicated to the prevention of crimes of violence or investigating the possibility of reducing the same.

Our experience has been that posing the question of preventing crimes of violence, particularly those surrounded by environments of closures, acquaintance, and emotion, usually elicits responses that such events are nonpreventable. These responses appear to be predicated on the above situational elements which imply a spontaneity and privacy surrounding such acts, thus precluding any external control mechanism—such as the police—from being present in a preventive capacity.

We certainly do not take issue with statements regarding the inability of the police to be present in even a minority of such violent situations, but we have difficulty concluding from this that crimes of this nature are nonpreventable and that the police are, in effect, powerless to deal with them before the fact.

The data gathered for this study is from the years of 1970 and 1971. The data includes homicides and aggravated assaults for those years. They further substantiate the findings of several previous studies that a large portion of homicides and aggravated assaults occur during the course of domestic disturbances.

For purposes of this study, each homicide and aggravated assault was placed into one of three categories—nondisturbance, nondomestic disturbance, and domestic disturbance.

This data reveals that about half of the homicides occurred in disturbance situations. From a randomly selected sample of 500 aggravated assaults in each of the 2 years mentioned, with a confidence level of 99 percent, it was discovered about two-thirds of the aggravated assaults occurred in disturbance situations.

Dividing the disturbance-related category into two separate categories, domestic and nondomestic disturbances, it was revealed approximately one-third of the total homicides and aggravated assaults involved a domestic disturbance. This indicates that a sizable portion of the homicides and aggravated assaults occur in disturbances, particularly those of the domestic definition.

This appears to support the idea that the violent characteristics of a person are manifested in a disturbance situation, thus tending to support the hypothesis that police officers have contact with potentially violent offenders in these situations.

Mr. Chairman, I have statistics to support this from the years 1970 and 1971. In 1970, we had 122 total homicides in Kansas City. Of these homicides 59 took place in a disturbance environment. Of the 59, 34 took place in a domestic disturbance. In 1971, we had a total of 113 homicides in Kansas City, 58 of which were disturbance homicides.

Chairman PEPPER. What do you mean, Mr. Head, by a "disturbance homicide?"

Mr. HEAD. Let me define a disturbance. This is commonly known in police circles as a situation, a disturbance of the peace of some party in which the police are called to intervene and preserve the peace. This is a disturbance.

Chairman PEPPER. Thank you.

Mr. HEAD. Of the total 113 homicides in 1971, 58 were disturbance homicides and 45 of these 58, or 40 percent, were in a domestic disturbance situation.

Mr. LYNCH. Mr. Head, if I might interject one question. In the domestic disturbances you are talking about, did most of those occur indoors; inside some premises?

Mr. HEAD. Yes, sir, normally. A domestic disturbance, for purposes of definition, results from a disturbance which occurs in or within close proximity to a residence where the resident is directly involved in the disturbance, or which is responsible for the presence of one or more of the persons involved.

Mr. LYNCH. Thank you.

Mr. WINN. Mr. Head, do you have any figures for 1972? You gave us 1970 and 1971.

Mr. HEAD. No, sir; I don't.

Mr. WINN. You don't have the 1972 figures yet?

Mr HEAD. No, sir.

Mr. WINN. Do you think they are down?

Mr. SWEENEY. Our homicide rate is down slightly. We believe basically the percentages seem to be holding pretty consistent from year to year so far as what proportion are disturbance related and nondisturbance, and what proportion domestic we have not as yet determined. Approximately 25 percent are involved in domestic disturbance.

Mr. WINN. I was talking about the whole total of homicides. You gave us 122 in 1970 and 113 in 1971, which is a small decrease. I was wondering if you had anything for 1972.

Mr. SWEENEY. Seventy-one homicides in 1972.

Mr. WINN. So it is down pretty good.

Mr. SWEENEY. Down 31.1 percent.

Mr. WINN. Thank you.

Mr. HEAD. To continue, the aggravated assault rates for 1970 and 1971. In 1970 statistics, we studied 500 aggravated assaults. Of the 500 studied, 312 were disturbance-aggravated assaults. A total of 31 percent, or 155 of these disturbance-aggravated assaults, were domestic-disturbance related.

Mr. LYNCH. Would you define, in Kansas City police terms, what aggravated assault is?

Mr. HEAD. An aggravated assault is an assault on another person with a weapon. It can be a gun, a knife, or club.

Mr. SWEENEY. Maybe I can anticipate Mr. Winn's next question and indicate aggravated assaults have gone up 8.6 percent, and nonaggravated, up 40.3 percent.

Mr. HEAD. Out of the total of 500 aggravated assaults in 1971 for the study, 334, or 67 percent, were disturbance-aggravated assaults; 161 of the 334 were domestic disturbance.

To further establish contact between police officers and potential violent offenders, the arrest records of victims and suspects involved in domestic disturbance homicides and aggravated assaults were examined. The data shows that in about one-third of the homicides and aggravated assaults, either the victim or the suspect had an arrest for a disturbance in the 2 years prior to the actual commitment of the crime.

Even more impressive is that these figures pertain only to arrests. It is known that many disturbance situations——

Chairman PEPPER. What percentage did you say had an arrest in the previous 2-year period?

Mr. HEAD. In one-third of the homicides and aggravated assaults, either the victim or the suspect had a prior arrest.

Mr. WINN. In a 2-year period?

Mr. HEAD. In a 2-year period prior to the situation.

Chairman PEPPER. Did you go beyond the 2-year period to see how many others had had previous arrest records?

Mr. HEAD. No, sir. We were aiming mainly at the assault or the homicide and we were trying to consolidate the study.

Chairman PEPPER. We had a very interesting series of witnesses here yesterday afternoon from the Dallas Police Department. They made a thorough study of recidivism in Dallas and it is very interesting what they found. You found it with respect to these people for a 2-year period and they carried it back further, went into different age groups and the like. It would be of interest to you to see that Dallas report. They will be glad to send it to you.

Mr. HEAD. Even more impressive is that these figures pertain only to arrests, for it is known that many disturbance situations do not result in an arrest. Thus, it can be assumed that even a higher percentage of victims and suspects have actually been involved in a disturbance situation and have had contact with the police prior to their involvement in homicide or aggravated assault.

My figures for arrest rates on homicides for 1970 indicate that we had 34 disturbance-related homicides. Of these 34, 32 percent, or 11, of either the victims or the suspects, had a disturbance or an assault arrest within the previous 2 years.

In the 1971 study, for arrest rates, the domestic disturbance homicides, we had 45, and in 10 of these the suspect or the victims had had an arrest for disturbance within the prior 2 years.

In 1970 we had 155, disturbance-related aggravated assaults, 58 of which the victim or the suspect had an arrest for disturbance or assault within the previous 2 years.

In 1971 we had 161 disturbance-related aggravated assaults and in 59 of these, or 37 percent, the victim or suspect had been arrested in the previous 2 years.

We went a step further in Kansas City and tried to check the addresses where the violent crimes occurred. We found that contact between police officers and potential violent offenders, to a certain degree, has been established through the arrest records of victims and suspects of homicides and aggravated assaults. In order to determine the amount of contact, the addresses of the scenes of the domestic-disturbance homicides and aggravated assaults in 1970 and 1971 were checked by computer for service calls made to that address within the 2-year period prior to the homicide or aggravated assault in question.

Studies indicate that of the total of domestic disturbance homicides and aggravated assaults for the years 1970 and 1971, an average of 85 percent of the addresses had disturbance calls within a 2-year period prior to the homicide or assault in question. On an average, 53.8 percent had four or more disturbance calls during this period. These addresses include apartments and addresses of persons other than the victims or suspects. Since some of the homicides or assaults occurred while visiting at a friend's residence, it should be mentioned that although the probability exists, there is not a definite correlation between the disturbance calls at these addresses and the persons involved in the homicides and assaults due to a lack of disturbance name association in the computer. Since an apartment, due to multiple tenants, reduces the probability a person is involved in previous disturbance calls these addresses were eliminated from further analysis.

Mr. LYNCH. Mr. Head, I wonder if I could interrupt at this point. It seems you made a very important finding that in 85 percent of these cases the Kansas City Police Department, if I understand you correctly, responded to family disturbance or other disturbance calls in the same building or even in the same apartment unit which eventually became the scene of a serious aggravated assault or a homicide.

Do you, as a matter of course, fill out, even when an arrest is not made, any kind of field interrogation report or contact report naming the person involved in a family disturbance situation?

Mr. HEAD. No, sir.

Mr. SWEENEY. One of the things we are trying to do is get a profile. Very few police departments keep that kind of information. Disturbances are handled routinely. We keep crime reporting information but not disturbance data. We have a hunch we are going to get into that because we need further background.

Mr. Head's statistics, that he will present, control for multiple dwellings in which the individuals live and get even stronger. As they get further into the address of the victims and perpetrators the correlations are astounding.

Mr. LYNCH. Which suggest that additional law enforcement action of some kind may well be necessary. Is that the inference you draw?

Mr. SWEENEY. Yes.

Mr. LYNCH. Do you give members of your northeast task force special training in responding to family disturbance calls?

Mr. HEAD. Not at this time. We are still involved with defining the problem.

Mr. LYNCH. I would commend to your attention a family disturbance pilot program in the District of Columbia. The police administrator was brought from the New York City Police Department, a gentleman who gave specialized training in a controlled, year-long experiment, and there were no injuries or fatalities to policemen in more than 1,000 calls.

One of the highest causes of police fatalities in major urban areas is response to family disturbance calls. We just lost a young Washington, D.C. policeman who was shot in the stomach with a shotgun while trying to help a family out of their problems.

Mr. SWEENEY. I am aware of that study. Basically, the methodology was not tremendously strong because we don't know what the ratio of police officer assaults and disturbance calls is. We admit it is an area in which we get into trouble. It is interesting to note that that particular individual is now back doing an analysis of the problem and basically he wants to go back and take a very hard look at what is involved in disturbances. Getting back to where we are right now, we still have a long way to go. But I think you hit right on where we are heading in some way, shape, or form.

Mr. LYNCH. Thank you. Would you proceed, Mr. Head?

Mr. HEAD. To eliminate the possibility that apartments were the addresses of the calls, and the people involved in the disturbance calls were not those actually at the address where the assault or homicide took place, these addresses were eliminated. The results indicates that an average of 82.4 percent of the addresses had previous disturbance calls, with an average of 43.3 percent with five or more disturbance calls in the 2 years prior to the act.

Mr. WINN. What you are saying, then, if you don't keep the names on record, at least at the present time, then what this survey does is help you spot the trouble areas. Is that true?

Mr. HEAD. Yes, sir.

Mr. WINN. You mean general areas. I think I know what you are finding out in your statistics, but if you don't keep names then you can't go back and check on the same continuous troublemakers as far as names are concerned, so you must be checking on areas.

Mr. HEAD. We are checking on names and addresses, sir. At this time we are developing information and statistics to define the prob-

lem, to point out the fact that we do have contact with these people prior to their committing a serious crime, the crime of violence. There is going to be just a whale of a lot of research involved in this study.

The study, as we envision it, should cover some 16 months. At the present time, I think they have been on this for about 6 weeks.

Mr. WINN. I know you are in the early stages of this. Our advance information—and I should have brought that out in my introductory remarks—is that you are, at this early stage, seeing a pattern. I know the northeast area in general. In my opinion, it is a low-income area.

Mr. HEAD. The majority of the assaults and homicides, as nationally, do occur in the lower socioeconomic class. However, this study covers the entire city. It is not restricted to northeast.

Mr. WINN. I think we were of the opinion this part you were referring to was northeast; but this is the whole city?

Mr. HEAD. The northeast task force is doing the study, but the study itself covers the entire city.

Mr. WINN. And you include the southern area, that includes the higher income area?

Mr. HEAD. Yes. And the northern area.

Mr. LYNCH. Mr. Head, as you proceed collecting additional data, it seems to me what you are saying that the inference becomes stronger that persons finally involved in serious aggravated assaults and homicides have, in fact, been telegraphing that for quite a period of time.

Mr. HEAD. That is true. Yes, sir.

Mr. LYNCH. Would you proceed.

Mr. HEAD. At this point in time we have talked to different doctors and we really can't find two that will agree on certain points about people. So you can see the dilemma we are faced with. We are trying to develop a program to identify and possibly treat these potential suspects or participants in violent crimes.

At the present time we have difficulty finding two doctors who can identify or agree on a specific individual.

Chairman PEPPER. Excuse me. Have you gone into the matter enough to begin to identify certain general causes or general characteristics of those who are found to commit these crimes?

Mr. HEAD. No, sir; not at this point.

Chairman PEPPER. Have you made any determination as to the age groups, generally, of the ones who commit the crime?

Mr. HEAD. No.

Mr. SWEENEY. Sir, the task force has outlined a study program and they are right now entering the study phase that relates to going back and looking at the offender characteristics, going back and talking to both the victims and perpetrators. As Jim indicated, it will probably be several more months before they even complete that phase.

Basically, what we are presenting is more of a framework of how we are analyzing the problem; and we do find very definite correlations and we do have contact with these people.

Chairman PEPPER. When you do find the facts about these individuals who have been guilty of recidivism and the commission of crime you will naturally have to have the cooperation of other departments of Government in order to assist these people.

Mr. HEAD. Yes, sir.

Chairman PEPPER. Do you have access to such facilities and personnel in your city or State?

Mr. HEAD. We do have several referral agencies in Kansas City, Mo. However, at this time we don't have a program designed. We are still identifying the problem. We are still in the very basic stages. We may reach a point where we can have a profile to identify potential suspects or potential criminals. This would aid us in indicating treatment or referral to a doctor, and so forth.

However, at this point, it is still too early to define just what we are going to do, when we do end the study.

Mr. LYNCH. This kind of data will enable you to make concrete recommendations as to statistical inferences that will, hopefully, be inescapable and therefore you can make specific recommendations as to what can or what ought to be done. I take it that is the chief intent, not to let this study die as an academic document, but be an action kind of study so you may make recommendations for preventing these kinds of crimes.

Mr. HEAD. Yes. This is very true. We feel that while we are undertaking the study covering some 14 months, we realize at the end of the study we may decide indeed the police are doing the best thing they can right now and there is no better thing we could be doing. This is a possibility, and we haven't ruled this out, but it is too darned early at this point to make a determination or to try to say what we are going to do when we finish it.

Mr. LYNCH. But this kind of study could very well be referred to the social service and mental health agencies and other agencies in the city; is that right?

Mr. SWEENEY. Yes. Chief Kelley has a strong interest in this. The only reason we have not as yet involved the agencies to define the problem and some related solutions is it is pretty hard to identify the relevant ones.

Mr. WINN. In your studies, are you going back to see how many of these individuals were involved in juvenile delinquency crimes, too, or would that be a later part of your study?

Mr. HEAD. There are no plans at this time to go into that phase.

Mr. WINN. Won't some of that information show up if you are in contact with these people that have committed these crimes and you are interviewing these individuals; won't the fact they started and first got into trouble at the age of 15 or 16, whatever it might have been, show up in your interviews?

Mr. HEAD. This could be in the interviews. However, when you speak of juveniles, you speak of an entirely different problem. Our records on juveniles are restricted.

Mr. WINN. No, I am afraid you missed my point. I mean when you are interviewing the adults.

Mr. HEAD. Yes, sir. That is what I said.

Mr. WINN. Criminals now. I am sure some of the other police departments have already incorporated this information in their records. It shows these people have been committing crimes since they were juveniles, clear back to 13, 14, 15 years old. I am sure when you are interviewing these people that, even almost accidentally, a young man is going to say, "Yes, I first stole a bicycle when I was 13."

Mr. Head. I am certain these results may turn up in interviews, but as I say, just for the record, we don't have that capability.

Mr. Winn. Thank you.

Chairman Pepper. Following what Mr. Winn has said, I would strongly suggest that you do include in your inquiry the past history, particularly the youthful history, of that individual. We have considerable evidence that a large part of the adult criminal group started their criminal activities in their teens.

That constitutes a problem and a challenge to people who are trying to do something about crime.

Mr. Sweeney. We are faced with the problem of also identifying the whole myriad of disturbances we run into. It is quite possible researching disturbances may have some beneficial effects and keep homicides from occurring in certain situations. But looking down the road, we have projected in our new computer systems that we will maintain much more extensive information on disturbances; and they are likely to include the background characteristics and patterns of interactions and problems.

But exactly what the elements of that profile are, or what the significant aspects of looking at an individual are, we can't say at this time.

Mr. Head. As I said, we eliminated the apartment addresses. We also eliminated the addresses that were residences of persons other than the victims or suspects of the homicides and assaults in the study. This increased the probability that the disturbance calls at the remaining addresses would have involved the victims and suspects of those homicides and assaults. The results indicated an average of 88.2 percent of the remaining addresses had previous disturbance calls and an average of 45.9 percent had five or more disturbance calls.

This data indicates that the scenes of the domestically defined homicides and aggravated assaults, even though the addresses are not necessarily those of the victims and suspects, have a high probability as disturbance environments and those contain a high potential for violence.

By elimination of apartments and addresses of persons other than the victims and suspects, the data indicates a high probability that the victims and suspects have been involved in previous disturbances, thus demonstrating violence potential in previous police contact.

As I say, gentlemen, at this point, I can quote you figures on arrests, on addresses, and so forth, of victims and scenes of assaults and homicides in Kansas City, but at this point all I can say is we are defining the problem and we hope to come up with an answer to it.

Mr. Lynch. Mr. Head, do you have restrictions on the kinds of people who may purchase firearms in Kansas City?

Mr. Head. In order to purchase a firearm a person must first obtain a permit.

Mr. Lynch. And the criteria for that is what?

Mr. Head. They have to go to the sheriff's department.

Mr. Lynch. Are people with felony records, mental disturbances, disqualified?

Mr. Head. Yes, sir.

Mr. Lynch. I assume a number of these family disturbances resulting in homicides are handgun matters. It would seem to me if you

can develop an accurate profile based on police contacts, field interrogation reports, and history of violence potential, that that might be one additional source that your legislative body might wish to look into in restricting the ability to purchase handguns or other weapons designed to do great bodily harm. It certainly wouldn't hurt looking into that possibility after your study is concluded.

Mr. HEAD. Yes, this is true. However, a large portion of the homicides and aggravated assaults are committed with rifle and shotguns, because they are in the home.

Mr. LYNCH. It wouldn't hurt to look into that, either, I suppose.

Mr. WINN. If the gentleman would yield, I would like to point out—I don't want you to be misled by the fact that they have the registration and everything—we still have the same problems we do in most cities. The loan sharks, come over to the Kansas side and get guns, and go back and forth. We still have an element of the underworld there that supplies some of these weapons.

Mr. HEAD. Most of the weapons, the Saturday night specials, as so described, aren't purchased through legitimate means in the first place. That is part of the problem.

Mr. LYNCH. As you do this study, what would you indicate to the committee, in your judgment, is the study's prime area of short-term law enforcement payoff, police payoff? How will you use the results from the point of view, simply as a law enforcement agency?

Mr. HEAD. Hopefully, at the conclusion of the study, we will be able to identify potential participants in violent crimes and thus reduce, or have some effect on, the total number of violent crimes.

Mr. LYNCH. How? That is what I am interested in finding out. What implications would it have for you if you were a task force commander? What action will you take that you cannot now take? Would you put these people under surveillance, for instance?

Mr. HEAD. It is too early at this time to attempt to define it.

Mr. SWEENEY. We think there are too many people in this country who have jumped to the solution to that problem before they bothered to look at the problem. We find that is partly our reaction to disturbance intervention programs nationwide. We are in the process of looking at what has been proposed up to now that does relate to what seems to be the critical aspects of these disturbances. It is possible the officers may be trained to handle them.

It is also possible to use more intensive referral, and we even talked about the possibility of individuals professionally trained, working for the police department, but riding in areas of high disturbances and handling the calls themselves.

There are some possibilities, but it is very, very early and one of the feelings—as I said, is there are certain unique features of Kansas City—is that there is no necessity to impose a solution before we have defined the problem.

By the same token, if Jim is done, I would like to keep it moving. There are about 10 or 15 components we would like to cover.

Officer Brown is involved in a study of patrol activity at the present time. It is the first major patrol experiment of its kind in the country and it has attracted national attention. The national institute is presently planning to replicate it in two other cities. The amazing thing is that it was designed by patrolmen. It comes 43 years after the

first call for its implementation, and it is rather interesting to note, since Kansas City designed it, that San Diego, 6 months later, designed a parallel kind of study.

Statement of Charles Brown

Mr. Brown. Thank you, Tom.

The south patrol division task force was initiated in October of 1971. At that time, we began to identify the problems within our division, as well as conduct a search to determine what information was currently available on policing. As Tom mentioned, we soon discovered there was a lack of empirical data on the literature on police, particularly concerning preventive patrol. And by "preventive patrol," we mean the visibility of police, marked police cars, men in uniform.

In fact, we found that the contents of the majority of available police literature does involve theory, and theory only. Thus, prior to starting any new project, we felt we should first try to develop the basic knowledge on which to base our future patrol strategies.

We began by asking three very fundamental questions: What do patrolmen do: how much time do they spend on the various activities they perform; how effective is the time spent on preventive patrol, which amounts to approximately 35 percent of the patrol officer's time in Kansas City.

To answer these three questions we developed two research projects. The first is the activity analysis project. This project began in March of 1972. By using a specially designed activity sheet, which requires the officers to account for every minute of their tour of duty, we sought to identify all of the various activities performed by patrolmen and the amount of time they spent on them. This special activity sheet has been, and is being, used on a random basis.

The second project is known as the proactive-reactive patrol deployment experiment. It began on July 19, 1972. The purpose of this experiment is to determine the effectiveness of preventive patrol, using such indicators as crime statistics, citizen perception, satisfaction with police service, fear of victimization, and the police officer's perception of his job.

A 15-beat area encompassing the entire socioeconomic spectrum of the community was chosen as the experimental area. In this 15-beat area, 5 beats are proactive, which means a high level of aggressive preventive patrol; 5 beats are reactive, where the officers do not enter this beat except as a result of a call for service from a citizen; and 5 beats are controlled, where the same levels of patrol are provided as previous to the experiment.

I have here a mock deployment, which will give you an idea of how this may look and the way it is designed. These beats were interspersed amongst each other, where you would have "control" next to a "reactive" and "proactive."

The evaluation of the experiment consists of six key elements. I would like to make a comment about evaluation. This is what we at South felt perhaps was one of the reasons for the failure of many experiments throughout the country, or even the success of them—and when you go to other departments or other sources of information, and you are unable to find out what either caused the failure or made them

a success was the very lack of evaluation—and we felt in order to really determine effectiveness of our preventive patrol we should have a very extensive, and as it turned out, very complicated system of evaluation.

The first element is crime monitoring. Crime is being monitored, beat by beat, on a weekly basis. We can make comparisons to the previous week, previous month, and previous time period last year. Historically, data, also beat by beat, is being updated for the past 3 years. This is for the purpose of quantifying seasonality and transient crime.

At the end of the experiment, analytical comparisons for periods prior to and during the experiment will be made, as well as between the three experimental patrol strategies.

The second element is the community survey. A citizens' survey instrument was designed whereby we would be able to obtain and measure the citizen's satisfaction and perception of police, fear of victimization, actual victimization rate, prior contact with police, and various demographic factors.

Of these surveys, 1,200 were conducted in the experimental area prior to the start of the experiment. The survey will again be repeated at the end of the experiment, which is October of this year, for the development of comparative data.

The third element is the business survey of approximately 160 businesses in the experimental area. This survey was also conducted prior to the experiment, and addresses the same general questions as the community survey. It will be repeated at the end of the experiment and utilized for analytic comparisons.

The fourth element of the evaluation effort is called the observer program. This involves the use of three civilians and one police officer, who ride with the beat officers in the experimental area. At the end of each ride, they debrief, and dictate an extensive description of what occurred during that ride.

With this data, we will be able to document, as never before, what a police officer does, how he does it, why he does it, the range of police styles, and the effect of the different styles on the citizens in a wide variety of situations.

The fifth element of our evaluation is the police-citizen encounter survey, which also involves the use of four observers. This effort involves what we feel to be a rather unique concept. It is the gathering of information about police-citizen contacts in three perspectives. These are the views of the police officer, the view of the citizen, and the view of the observer. When certain types of contacts are made between the police and citizens the officer involved and the observer witnessing the encounter complete a questionnaire. Within a 48-hour period a professional interviewer from our survey research team makes contact with the citizens and asks them to complete a questionnaire.

The information obtained from the encounter survey includes a description of what was said and done by whom, attitude, satisfaction, and demographic data concerning the citizen. This portion of the experiment is still in pretest phases.

The sixth element of the experiment is a "response time" survey. From it we will determine levels of citizen satisfaction along with

police response times. The response times and citizen satisfaction will be quantified in three ways.

First, the four observers will note the various time components which make up response time. Second, police dispatcher, telephone and radio tapes will be monitored. Finally, a mail survey will be directed to citizens who have initiated calls for police service. This three-way comparison will provide the complete description of all time elements contained in total response time as it relates to citizen satisfaction.

The final element of our project consists of efforts to obtain supporting data for the previously mentioned elements. Data relating to traffic patterns, accident rates, citizen complaints against police officers, criminal arrests, and weather, will be obtained for their inclusion in an overall evaluation and analysis of the experiment.

Mr. LYNCH. Mr. Brown, all I can say is "wow." I wonder if and when you fellows finish the job at the police department you would like to turn your considerable talents to other criminal justice agencies. I wish there were 300 police administrators sitting in the audience this morning to hear that presentation. I think it is quite remarkable.

Thank you.

Mr. SWEENEY. Charlie just mentioned the analysis of response time as it relates to citizen satisfaction. We presently have on the drawing board a very detailed analysis of response time as it affects outcome in terms of apprehension, witness availability, victim injury, and we will again assess the issue of citizen satisfaction.

As I said, it is on the drawing board and we will be presenting that to a funding agency within a few weeks. Our analysis indicates we don't detect very much crime. We are doing a very detailed analysis of what we prevent and we now, fortunately, are going to take a very hard look at what portion of crime is even amenable to rapid response by police.

This is a very basic question which we talked about at the national institute.

Chairman PEPPER. What is the basic question?

Mr. SWEENEY. What portion of crime is reported to the police within close proximity to time of occurrence that makes police response a valid strategy? Yet that is one of the crime solutions people around the country are emphasizing, and we wonder if we may be putting a lot of eggs in the basket that has no payoff at all.

We know we have to respond rapidly to emergencies——

Mr. LYNCH. There are several programs around the country, are there not, which have spent considerable amounts of money, computer programs, very sophisticated communication systems, all geared to getting a policeman to the scene of a major crime within *x* number of seconds or minutes. I take it what you are saying is that that is the cart before the horse; that unless citizens, victims, or observers report those crimes within a certain period of time, the other issue of response time becomes a meaningless issue.

Mr. SWEENEY. Yes. It gets back to the issue of not having done a problem analysis before solutions were proposed.

Mr. LYNCH. Thank you.

Mr. Sweeney. We now would like to address some of our technological innovations. I would turn it over to Patrolman Post, who will discuss helicopter patrol, our computer, and its proposed uses.

Statement of James Post

Mr. Post. Mr. Chairman, the first strategy I will discuss is the helicopter patrol. This is entitled "Sky ALERT"—an acronym for Aerial Law Enforcement Response Team—and is one of Kansas City's newest crime fighting efforts. Sky ALERT utilizes six Hughes Model-300 helicopters.

Each helicopter is equipped with high intensity flood lights that generate up to 1.2 million candlepower in a beam that will light up the darkest street or alley. The helicopters are aloft, weather permitting, throughout the day or night, 7 days a week. Kansas City is a pioneer in the night use of helicopters for routine patrol.

Sky ALERT is a versatile support tool to ground officers. Yearly, helicopter officers respond to thousands of incidents, assist in arrests, detect and report fires, locate occupied stolen automobiles—resulting often in arrests—and make water rescues. The helicopter is unparalleled as an observation platform; roof tops, industrial grounds, railyards, and parks are exposed to aerial scrutiny—34,805 buildings searched in 1972 alone.

Sky ALERT provides district patrol an extra dimension and increased effectiveness—5,550 flight hours of crime prevention patrol flown during 1972. Helicopter officers cover far more territory, observe activity invisible to ground units, and easily overtake fleeing vehicles—74 times in 1 year. As a ground-aerial team, helicopters direct ground units to the exact location of activity.

Sky ALERT increases officer security. With a rapid response, the presence of a police helicopter overhead acts as a distinct and positive deterrent to the possible assault of ground officers by suspects—helicopters assisted in 1,738 pedestrian checks during 1972. As a support vehicle, the helicopter has greatly increased the dimension of effective police work.

The majority of funds for the Sky ALERT team of six helicopters and the newly erected 7,100-square-foot heliport have been provided for by Federal grants. The heliport stands on a 5-acre site of municipally owned land in eastern Kansas City. It provides hangar space for the six ships, office space for flight crews, an air-conditioned workshop for the aircraft mechanics, as well as parts storage area and a large locker room. The heliport also provides a unique venture for law enforcement agencies, as many agencies are required to utilize existing airport facilities.

Sky ALERT flight plan preparation and subsequent evaluation is conducted by Kansas City's crime and traffic analysis unit. The most recent evaluation was prepared January 25, 1973, and provides the following comments regarding Sky ALERT effectiveness:

First, directed helicopter patrol, that is, helicopter patrol which utilizes smaller patrol areas—DPA's—and specific time frames are more effective than random patrols. Further, helicopter patrol, when properly directed, is a valuable tool which may result in significant decreases in certain types of serious crime.

The following crimes were studied during the evaluation period and are believed to be the most preventable with the aid of helicopter patrol: Residence burglary, nonresidence burglary: auto theft, armed robbery, strong-arm robbery, and larceny—purse snatch. Decreases were noted in all but two of the selected crimes. The two exceptions were auto theft and larceny—purse snatch.

An important point to note is that while the total known—or reported—crimes in Kansas City decreased 10.6 percent during the last 6 months of 1972 as compared to the same period in 1971, the known crimes in the DPA's decreased 26.2 percent.

Again, it is important to stress the fact that much is to be learned about helicopter patrol and its effects on crime. It is felt with more time devoted to this study in the future, great strides can be made.

A second area of discussion I would like to present is our computer system. This is named "ALERT II."

Law and order in Kansas City is maintained by the Kansas City, Mo., Police Department, the 22d largest police force in the United States. Comprised of approximately 1,700 personnel, the force yearly processes 110,000 arrests, investigates 40,000 reported offenses, responds to and records 26,000 vehicle accidents, and answers 405,000 calls for services. The communications center, operating on seven radio frequencies, originates or responds to 11 million radio transmissions per year; an average of one transmission in every 2.7 seconds.

The urgent need to process information with precision and rapidity influenced the selection of the computer telecommunications system. The computer system commenced operations in 1968 to meet the information needs of the officer in the field.

The system was given the acronym "ALERT"—Automated Law Enforcement Response Team. The computer functions as an invaluable aid to the officer in the field, and computer technicians adjust their workload to the needs of the police operations system. The computer system, itself, is said to be a real time system because the information files reflect "real life" or constant, up-to-date status of wanted persons, stolen vehicles, and abstract criminal histories.

ALERT serves all regional area law enforcement agencies and those civil agencies involved in the criminal justice process. A total of 47 agencies are interfaced with ALERT, including 26 police departments, six county sheriffs, the Kansas and Missouri highway patrols, the Kansas City municipal court, the Jackson County prosecuting attorney, the Jackson County juvenile court, the Kansas City Parole Office, the Kansas City prosecutor's office, the FBI, the Federal Postal Inspector, the law enforcement branch of Internal Revenue and the Missouri State Parole Office. At present, 115 data communications terminals are interfaced into the police computer system.

The police computer is interfaced with MULES—Missouri uniform law enforcement system—and with the FBI computer—NCIC—in Washington. These interface systems provide law enforcement agencies in the Kansas City region relay services to the State and National files concerning all nationally known felonies of wanted persons, stolen vehicles, stolen property, stocks, and bonds. An average of 5,000 communications are exchanged between the Kansas City police computer and the FBI computer every 24 hours.

Utilizing the law enforcement manpower resource allocation system—LEMRAS—the department is improving the effectiveness of current police resources by concentrating the available forces throughout the 316 square miles of Kansas City. The LEMRAS has shown that the greatest need for responding to calls for service exists between 11 p.m., Friday night, and 1 a.m., Saturday morning. Therefore, approximately 65 police units are totally committed to responding to calls for service with an average of 24 minutes spent on each call. Studies of calls for service predicted by the LEMRAS compared with actual occurrences indicate a 95-percent accuracy rate by the computerized system.

Kansas City implemented a computerized police planning system with the designation of "Copps." The system is capable of projecting resource requirements for up to 10 years in advance. The system allows the department to take an in-depth view of future resource requirements measured against projected new or revised programs. Copps is modern-day management technique to meet expected change, produce desired change, and to prevent undesired change.

In January 1972, the computer system was renamed ALERT II to denote the involvement of the system into criminal justice operations. We have identified 48 specific areas where the computer is used in effective support of the criminal justice process.

I have these listed in the material we will present to you and I am happy to present them. These 48 areas include, of course, in-depth record information, moniker files, the preparation of traffic reports, court reports. We even have a 10-day warning notice that automatically goes out to the folks who haven't paid their parking tickets.

Invasion of privacy is a phrase often heard when people debate the issue of computers. It is a matter of grave concern; one that law enforcement is keenly aware of and which professional administrators have vowed would not be violated in the implementation of this new technology. All matters programed into the computer must be fully documented and all questions of legitimacy are resolved in favor of the individual, prior to entry.

Responsiveness to the public it serves has been the goal of police agencies and computer technology increases that possibility to a degree that challenges the imagination. Rapid response to calls for service is facilitated by resource allocation systems utilizing the vast capabilities of the computer for calculating variables in the environment. Service and responsiveness were the primary considerations in the design of ALERT, and it is to this end the system is dedicated.

We are now in the process of designing something we call ALERT III.

During the first 6 months of 1972, the department conducted extensive field tests of two brands of mobile field terminals. In an effort to extend the capabilities of the ALERT II computer system to the field officers, ALERT III is being designed. ALERT III consists of mobile computer terminals to be placed in each of the department's field units, providing each officer direct online entry and retrieval capabilities.

Following are the projected uses of the ALERT III mobile terminals as set forth in a funding proposal.

The first of those will be direct-entry reporting, including offense reports, field interrogations, disturbance history data, and activity reporting. It will eliminate the bulk of the paperwork our men are now faced with.

The second area would be criminal subject information available to the officer in the field, directly to his police car. The first area will be criminal records. The second area would be suspect generation system, to include description file, modus operandi file, a moniker file, field interrogation system, informant contacts, street crime intelligence—to include both suspect tracking and associate tracking; 10–31 backgrounds.

In Kansas City, 10–31 is the designation given to people that pose a threat to police officers, due to past experience and their past actions.

We also are including fluid prepositioning system, again due to projected calls-for-service data.

A referral system, available to the man in the police car, including the problem/resource query, referral qualifications—that is, the case type and income—contact persons, and service backlog. If the man has a problem, instead of going to a phone booth, digging out the yellow pages, for example, he can punch directly into the computer the problem he has, or the type of referral he desires. They will be told the nearest agency, individual, to contact, and even, hopefully, the backlog of that specific agency.

The next area will be neighborhood profile/activity planning model. This information will provide the officer with both cultural and demographic information, address listings, community resources within his beat, to include neighborhood organizations, public services—schools, welfare, referral agencies—and even community leaders and contacts.

Also, police activity in the past—crime patterns, calls-for-service patterns, field interrogation history, special police hazards and security systems, police characters and associates, informant contacts, and even objectives.

Also, floor plan layouts and blueprints of buildings on his beat, should he receive a call on a burglar alarm or something of this nature.

It will include a field reference system, to include legal reference, policy reference, procedure reference, and case status.

Mr. Lynch. When will that ALERT III be implemented?

Mr. Post. Tom can probably give you more exact dates as he has been actively engaged in the preparation of this grant proposal.

Mr. Sweeney. We would project we could have these car terminals operational approximately 6 months from the time they are funded, and it ties into the direct entry in criminal intelligence information. The other systems are projected to be developed over a 5-year period. Again consistent with the concerns that police departments nationwide are calling for the in-car terminals, their value would be carefully evaluated as they are very expensive pieces of merchandise.

Mr. Lynch. How expensive? What will it cost you to implement it on a departmentwide basis?

Mr. Sweeney. The figures would depend on the number of units. For the equipment and installation, approximately $1.9 million. You talk about $800,000 worth of programing to develop these various systems which we have outlined. And on top of that, about another

$500,000 if you want to get a competent evaluation. I think, because they are so expensive, competent evaluation is needed.

Mr. LYNCH. Something in the neighborhood of $3.2 million would sufficiently equip your department?

Mr. SWEENEY. That is correct.

Mr. POST. The units are $3,000 apiece.

Mr. SWEENEY. I guess my personal feeling is that the traditional uses of in-car terminals, if you will, are probably not cost effective. Our whole view recognizes the patrolman as the central resource in the department. Everything is geared to provide information to him directly.

Mr. LYNCH. Are there departments which have units which do provide them with the things you discussed; namely, checks, wanted-car checks?

Mr. SWEENEY. There are other things in here.

Mr. LYNCH. Are the departments presently using them for those purposes?

Mr. SWEENEY. Yes; I believe there is one in Florida.

Mr. LYNCH. There is another in California. Mr. Sweeney, are you aware of any police department which is planning the extensive use of an in-car terminal which would provide the kind of information that Mr. Post has just described?

Mr. SWEENEY. No.

Mr. LYNCH. Thank you.

Mr. POST. We have several other areas. Probably one of the more significant ones—both Mr. Lynch and the chairman asked questions earlier of Officer Head—we also would hope to include in the ALERT III package is a disturbance intervention profile, the first area being location histories, both prior disturbances by location and the police action taken at the previous calls for service or area disturbances, the probable disturbance cause in the past, and the probable participants.

The second area would be dealing with individuals and those disturbance-prone individuals, both by physical description, social history profile, and even to include trigger words and subject words. For example, if it was found in the past the police officers had been there, the individuals in question had reacted to certain terms or certain phrases, these would be entered and possibly a red light flash and say, "Don't use this word," et cetera.

Mr. LYNCH. Mr. Post, in essence what you are saying is, this would give a policeman on patrol virtual access to the department's entire file, at least on all of those situations you have been talking about. Isn't that accurate?

Mr. POST. Yes.

Mr. SWEENEY. There is certain information quite obviously not available—intelligence information of various sorts. Because we are also in the system with the juvenile court, their records are locked out to us.

Mr. LYNCH. But any kind of decisional information required to respond to an immediate situation. This, again, I would like to emphasize, is what you call the real time system. When you use that term, for those of us unfamiliar with computer terminology, what would that mean, Mr. Sweeney? When an officer punches a button on

that in-car terminal how long is he going to have to wait for a response?

Mr. SWEENEY. The response is almost instantaneous. We use one sort of version of that now. We get address calls. The computer will do a random search in a two-block area around that address and indicate if there are dangerous individuals living in that vicinity and the officer will be alerted when he arrives at the scene, and provided a description of the individual if he is there. The system precisely indicates the individuals known to live at that address.

This is the direct result of having an officer shot in 1969. He walked into a situation. Many other officers knew what the problem was at that location, but he did not. He was a new officer and, unfortunately, he was killed.

Mr. LYNCH. This system could have alerted him to that problem?

Mr. SWEENEY. Yes, this system is in existence right now. A random, two-block search is available to us.

Chairman PEPPER. Excuse me just a minute. Let me make sure I understand it. That system discloses who in that area has been guilty of disturbances?

Mr. POST. It is not restricted to disturbances. If we received a disturbance call, the dispatcher, prior to the time he places the call over the air, or simultaneously, will enter the address of the call in the computer. Then for an area surrounding that occurrence, the computer will provide incidents, past histories, or subjects that have assaulted officers in the past.

They will say, "There is no record at the address you are going; however, two doors to the west there is so-and-so, who assaulted police officers in 1969."

This is in existence now. All we are talking about in ALERT III is to move this one step closer to the man in the field, and that is put it in the car with them.

This will conclude my presentation on the computers. At this time, I would like to introduce Officer Darrel Stephens, from special operations, who will talk to you about the things and the projects they are involved in.

Statement of Darrel Stephens

Mr. STEPHENS. I am representing the special operations division task force and we have designed a three-part project entitled, "Apprehension-Oriented Patrol Deployment." This project is centered on the deployment of manpower available in the division's tactical unit. The tactical unit is a flexible unit designed to support other elements of the department, and has the responsibility for dignitary protection, crowd control in special events, and disorder suppression.

The three parts of the project are the criminal information center, perpetrator-oriented patrol, and location-oriented patrol.

The purpose of the criminal information center is to collect, correlate, analyze, and disseminate information relative to crime and criminal activities in the Kansas City area. The center was designed for use by the entire department and other agencies in the metropolitan area.

The center began by identifying the most active burglary and robbery subjects. These subjects were identified by each of the three patrol

divisions, the investigations division, and the tactical unit. A notebook was published that contained mug shots and the most current information available on the subjects. These notebooks were distributed within our department and other law enforcement agencies in the area.

The notebook introduction requested that officers contact the center when they stopped, observed, or arrested and of the subjects in the book. The introduction also requested that the officers forward any information they had in regard to criminal subjects or criminal activities.

The people that are in this book—this should be made clear—are the type of offender one would call the professional offender. They are individuals who survive on the fruits of their criminal efforts. The subjects in the book average 12.3 felony arrests per person and 1.15 felony convictions.

The center also solicited support of the community by publishing several articles in a local newspaper. These articles requested the citizens contact the center in the event they had information about criminals or criminal activities in their communities. We are of the opinion the center can serve as a valuable communications link between all of the law enforcement agencies in the metropolitan area, citizens in the community and the respective elements of our own department, in a common effort to make our city a safer place to live.

The perpetrator-oriented patrol is defined as the assignment of officers to high probability criminal suspects with a view toward apprehending such suspects in the commission of a crime or by gathering enough information about these subjects to convict them for crimes that they have committed in the past. This patrol tactic involves systematic spot surveillances of these subjects on a periodic basis. On this basis, suspects are not surveyed continuously, but rather in the term of an assigned officer's available patrol time and information relative to the suspect's probability of being criminally active.

Thus, where it is highly probable a suspect is active, he is the subject of greater surveillance. The surveillance tactics employed might be defined as flexible and open, rather than closed, visible, and provoking.

With respect to legal aspects of surveillance, the court in *Johnson* v. *Johnson*, U.S. district court, northern district, held that "within limits laws enforcement authorities could conduct a continuous surveillance." Specifically, the court held: "The Federal Bureau of Investigation can maintain one car within the block of the subject's residence for the purpose of surveillance and permit one car to follow the subject."

Location-oriented patrol is defined as the assignment to areas, as determined by crime information analysis, with a view toward maximizing apprehensions. The officers are assigned unmarked vehicles not commonly associated with police work, such as campers, taxicabs, sports cars, and the like.

The tactical unit squads receive their assignments from the crime analyst, who is a member of the task force staff. The analyst reviews burglary and robbery reports daily. Assignments are made in areas that show some type of pattern in the offenses committed, or where a large number of offenses are committed.

The analyst prepares an assignment folder that contains the offenses, a breakdown on how and when the crimes are occurring, and the type of property that the victim is losing. The analyst also reviews any information that he has available from citizen sources or sources within our department or other metropolitan agencies. He provides any suspect information on people that might be responsible for the crimes in the area.

The assignment folder is given to the squad, which is made up of six men and the supervisor; they review the assignment and discuss what type of strategy they will use to attack the problem. It may be a combination of using undercover-type tactics—where they can move in and observe what is happening without changing the environment—or they may utilize a more proactive-type policing with uniforms and visible patrol.

The special operations task force project will be evaluated in several ways. The criminal information center will be evaluated basically in terms of its use by officers in the department and those from outside agencies. The patrol strategies will be compared with each other and with other types of patrol that are being conducted within the department.

The location-oriented patrol will be measured with respect to the 24 experimental beats that we are operating as compared to eight control beats, matched in groups of four, one patrol beat to three experimental beats. We will compare the time that we spend in experimental beats with the same time period in the control beat and if there is any decrease or increase in crime, if we prove it, we say we have some type of effect.

Mr. Lynch. Mr. Sweeney, I wonder if at this time you could explain to the committee how your department has received funding for these various projects. I understand you indicated LEAA has provided some funds. It is also my understanding you are receiving a substantial amount of support for implementation and for evaluation from the police foundation.

Mr. Sweeney. Since 1969 we have received approximately $4.2 million from LEAA, and in the past year we have received $1.1 million from the police foundation.

Mr. Lynch. What is the foundation money being used for?

Mr. Sweeney. The police foundation money primarily goes to the support of patrol task force implementation. They did specify money to permit the developmental work, and its undefined outcomes. Since they have ended up supporting the projects that have emerged out of it. The Police Foundation has also provided support for some new task forces we started, one in the area of investigation and another in the area of personnel.

They are providing support for publication of a book just simply both readings and materials we have found useful in patrol in the last year. We expect that book will be published in about 2 weeks.

Mr. Lynch. Is there a separate, independent evaluation component for the patrol task force work?

Mr. Sweeney. I should indicate, approximately $2 out of every $3 awarded to us by the Police Foundation have gone into the evaluation. This is very uncharacteristic of most funding agencies and the foundation is as anxious as we are to find out basic information.

Mr. LYNCH. Who is doing that evaluation?

Mr. SWEENEY. We have an independent staff with members of the Police Foundation on it, and independent civilian consultants we have hired. And as Officer Brown indicated, we have some police officers involved in the observation and evaluation.

Mr. LYNCH. You said it was uncharacteristic, and you said that with a smile. I take it your view would be that while it may be uncharacteristic, it is a fundamental necessity in this kind of program?

Mr. SWEENEY. Given our basic knowledge in the field at the present time we believe it is a fundamental necessity; yes. We are talking with the national institute about some other studies they are anxious to do. They came to us and asked if we would be willing to undertake research. This is in both the areas of investigation and areas of response time.

Mr. LYNCH. It has been your testimony this morning that in development of all or in the major part of these programs, the street-level patrolman of the Kansas City Police Department has participated; is that correct?

Mr. SWEENEY. The computers and helicopters go back a couple of years, but the ALERT III design Jim read earlier is the product of the task force officers and myself.

Mr. LYNCH. Are you still a member of the staff of the Police Foundation, Mr. Sweeney?

Mr. SWEENEY. No, that is a point of confusion. I never was a member of the staff of the Police Foundation.

Mr. LYNCH. What was your association with them?

Mr. SWEENEY. I was the program director of the Massachusetts State Planning Agency back in the end of 1971 and beginning of 1972, when I served as a Police Foundation consultant to the south patrol division. In January of last year I was asked by both the foundation and Chief Kelley to come to Kansas City on a full-time basis. So I am paid out of the grant to Kansas City. But, basically, I am owned and disowned, as is appropriate, by the foundation and the department.

Mr. LYNCH. I see. Thank you.

Mr. Chairman, I have no further questions.

Chairman PEPPER. Before Mr. Winn begins, what is the source of funds of the Police Foundation, Mr. Sweeney?

Mr. SWEENEY. I believe it was in 1970, the Police Foundation was established as a subfoundation of the Ford Foundation and was given $30 million and a mandate to foster police improvements throughout the Nation. They have a board, totally independent of the Ford Foundation. It is comprised of prominent academicians in the field, as well as prominent members, such as Quinn Tamm of the IACP and several past police chiefs, such as Herbert Jenkins of Atlanta and Stan Schrotel of Cincinnati.

Chairman PEPPER. Mr. Winn.

Mr. WINN. I really don't have too many questions. I am very impressed with the businesslike and efficient approach that Mr. Sweeney and these young men are taking in trying to analyze the problems of crime. It is obvious that they have shown an inclination and a desire to solve these problems enough that they wanted outside financial help. It is badly needed in these fields.

I would like to point out to you, and I am sure none of these men know that I have a special interest in the Kansas City, Mo., Police Department since my father was formerly secretary to the board of police commissioners in the Kansas City area many years ago.

I would like to point out to the committee, too, that the community relationship that the police department in Kansas City now enjoys, I think is one of an outstanding response on the part of the community. This has not been easy for the Kansas City, Mo., Police Department to overcome, because down through the years, when Kansas City did not enjoy a very good reputation as far as crime-fighting was concerned—and none of these young men were involved in that—the police department for some period of time was frowned upon by the community.

I think Chief Kelley has done an outstanding job of allowing his young officers and the law enforcement officers on the police department to participate in many community activities. I think the community has faith in them.

I had written down some questions on exactly how all of these surveys and this statistical information, which to some people may seem kind of dull, will turn it around and be a part of preventative procedures of crime, but I think after hearing 2 hours of testimony, and the fact you pulled it all together, I think you have answered my questions just by your testimony.

Mr. SWEENEY. I would like to respond to one point you mentioned about the finances. Departments across the Nation are sorely in need of financial support, particularly in the equipment areas. Cities cannot cut back on their budgets for personnel generally, but we are hurting very badly in keeping pace with technology and also hurting badly because the cities have not in the past put up money for research and development.

I should indicate that we have several other projects going on in Kansas City. What we have outlined to you today is on the task forces. I should indicate that last week Chief Kelley gave us the go ahead on the new development program and we now consider our task forces somewhat obsolete. We are designing a sector development plan aimed at taking the information coming out of the task forces and feeding it back into our sectors to develop specific tailored strategies for each area of the city.

Mr. WINN. I wonder if you could, this would hold true of all of your testimony and any statistical information you would care to add, give it to the committee or send it to the committee for inclusion in the record.

I have a feeling, Mr. Chairman, that when we build the complete record of 3 weeks of hearings, every morning and every afternoon for 3 weeks with police departments from all over the country, that the record will be one that each police department will want to have in their hands so they can compare them. It is amazing to us that even though there are international police associations, and the police chiefs meet, there seems to be a fantastic lack of communication between the police departments as far as statistics are concerned.

They don't seem to share the things that should be shared with other police departments and still they are all facing the same basic problem with the continuous rise of crime in this country.

Would you agree to that?

Mr. SWEENEY. I fully agree. Another thing would be, as I indicated earlier, the absence of information. We should admit we are guilty of a certain amount of "departmental chauvanism." We are proud of our department. I think, at times, this is also a danger.

Many departments around the country will tell you that they are the best, and I think tune out listening to what the other departments have to offer. Chiefs of police cannot admit they may learn something from another chief of police.

Mr. WINN. We have found when we ask one city department and one chief, do you know about the program that is now in progress and has been for 2 years, or 6 years, in another city? That they say, "yes, we heard about it; but we don't know what it is all about." Still, they might be asking LEAA for additional funds to do exactly what somebody has been doing for 2 years.

Mr. SWEENEY. This is one thing we found the Police Foundation has been good to us on, in addition to providing research and development costs they have provided us with the ability to travel around the country and look at what is going on. We have tried wherever possible to avoid duplicating that which has already been developed. That is a bad problem of law enforcement today.

Mr. WINN. I thank you very much for your testimony today. As I said, anything you care to include in your new sector program that you say Chief Kelley has approved, if you would send us the background and outline on that for incorporation in the record, this would be very beneficial, I am sure, to other police departments somewhere in this country.

Mr. SWEENEY. Thank you.

Chairman PEPPER. Mr. Sweeney, I would appreciate it if you and your associates would give me what answers you can to these questions.

First, who are the people, generally, who commit crime?

Second, what have you learned to be the cause of crime, primarily?

And, third, commendable as your efforts have been in reducing crime in your area are, we still have in every city of America a lot of crime of a violent and serious character.

The third question is, What can be done, in your opinion and out of your experience and knowledge, to further reduce materially crimes of violence and serious character in this country?

The first is, who are the people who commit crimes? Second, what have you observed to be the cause; and, third, what more can be done to reduce crime in your city of Kansas City, Mo.?

Mr. SWEENEY. Mr. Chairman, I think they are all somwhat interrelated. I would put criminals in three categories by type of crime. The first is opportunistic, which may be pretty close to anyone, or at least a large number of persons in our society when the opportunity presents itself. It also takes in large categories of juveniles.

The professional who makes his living off crime. In this person we generally have been able to identify a social pattern, or lifestyle of crime. We are learning more about it, his associates and interactions. And the last is the emotional criminal.

What we have got to do is take each type of crime category and cut it up. I don't think it makes any sense to talk about crime, as rape, without breaking it into distinct categories and finding out if its victim precipitated rape, for example. There are other sick people out

there running around snatching women off the street. We really have to break crime apart. Other types of rapes involve just plain grudge reporting. I think we have to cut apart every single crime category. Jim mentioned for aggravated assault and homicide, we are now going back and beginning the study of rape.

I think we have to do the same with burglary: Take it apart and identify how it is committed; who it is committed by; the economic distribution of stolen goods; every possible way how we can get a handle on it.

We do not accept, as most other police departments, the assumption we can only deal with the opportunity to commit crime. We think we can deal with the motivating factor beforehand. I think what we are faced with is bankruptcy in knowledge in this country at the present time about crime problems in general and everyday police problems everybody seems to know go on in the street.

There are officers out there, we know, who understand those problems. They are close to them daily. They use very sophisticated techniques in addressing and handling emotionally disturbed people. Perhaps the finest applied psychologists in this country are in police departments. We have to find out what they know, what the problems are, and get it back in the form to help us select the best person to send on the streets, because there is no way we can supervise him very closely. He is out there exercising enormous discretion. We have to provide him with the best information we can and train him to exercise that discretion in the best way possible.

I cannot come up with any quick solutions. I am saying we are trying to move on a number of fronts. We are trying to use the best technology available to provide our officers with information and provide them with support. We are trying to move in the research areas to fill knowledge gaps which we have inherited. There is a lack of understanding of both the criminal and of deterrence prevention, and the problems we face. We are trying to professionalize and build our people.

I think we are at a very early stage in development in the United States and I think we seriously have to begin with the admission that we know very, very little.

Chairman PEPPER. Do you believe by persistent application of this sort of technique you have displayed here this morning that we can reduce crime in this country?

Mr. SWEENEY. Yes, sir. I will not accept the premise that several of the academicians have come out with and said, "There is nothing police can do about crime." I am not going to claim we can control crime. I think we can do certain things to bring it under control, reduce it, and cut down certain types of crime.

Chairman PEPPER. Are you handicapped in any way by lack of funds in doing what you would like to do and know how to do in curbing crime further in Kansas City, Mo.

Mr. SWEENEY. We are impaired somewhat by the fact that the cities generally are very bankrupt. They do not have the money. They have commitments to a certain number of police officers. We end up haggling over budgets. It is not a matter of bad faith, just an absence of money.

Last year one-fifteenth of 1 percent of our budget went into equipment and capital outlay. We need basic equipment. If we are going to

get to the point of providing officers in the street with information like a professional, we need further technological advancement. There needs to be a very conscious effort of advancement but I don't think we should reinvent the wheel.

There are many problems. There is no way the Kansas City, Mo., Police Department could take on all of the problems we would like to undertake at this time. We could sit down and between us list off to you about 400 problem areas we think we need information on. There is no way we can tackle all of those at this time.

I think we run head on into simplistic solutions that people propose and they propose them without sufficient knowledge of what the police have to do.

Chairman PEPPER. The LEAA funds that have been made available to you in the amount you told us about, do you think it would be better for whatever funds are made available to you to be usable at the discretion of your department, or should they be necessarily relegated to certain uses?

Mr. SWEENEY. I can respond for myself and not for Chief Kelley or the department. I guess my personal view is I would like to see Federal subsidies in basic areas of equipment and capital outlay, that would be basically at the discretion of the local community. Beyond that a substantial portion of money should be provided for research and development. This should not be absurd amounts of money, because we do not have a stable of people to conduct the kind of research and analysis or even equipment development we need.

The Government should selectively choose those people capable of helping the law enforcement people in the country and endorse them—and I mean very selectively.

Chairman PEPPER. If certain funds were made available to the Police Department of Kansas City, Mo., giving you the authority, the discretion, as to how they can best employ those funds, whether putting on additional police or hiring research teams that you do describe here today, purchasing certain critical equipment like these computers and the like, how would you employ those funds?

Mr. SWEENEY. I would almost in some ways put the research and development into a separate pool. I think I would provide subsidy to the departments for day-to-day operations because we are critically in need of that across the Nation.

But I would take the research and development area and, simply because we do lack a stable of people that could come in and help us, selectively farm that out and let the criminal justice undertake all of the rest of the work the system needs. And between police departments, we have to divide the work between us and replicate each other's work to find out if we are on the right track or not.

You have found from the survey Mr. Head told us about, one-third rate of recidivism in a period of 2 years in respect to people committing homicides and aggravated assaults. In dealing with those people, the repeaters, you, obviously, as I said a while ago, have to have the help of the courts, prosecuting attorneys, and other State and/or Federal agencies.

Chairman PEPPER. Otherwise, it is kind of like we have in a lot of areas, habitually arresting drunks, habitual drunkards, you are arresting them again and again and again. But the police department doesn't

have a means ordinarily for dealing with those people, except to arrest them and put them in jail.

Mr. SWEENEY. We are heavily dependent upon other people.

Chairman PEPPER. What would you say are the problems you have in respect to the prosecuting attorneys, the courts and the correctional institutions of your area? How do they relate to your problem?

Mr. SWEENEY. There are significant backlogs. I guess I would also add that I think, as I said, we are heavily dependent on the rest of the system. I think we have to get a lot of our own house in order. I think they have got to move.

We have to set priorities. Obviously, the backlogs are immovable.

Chairman PEPPER. How long does it take in Kansas City, Mo., ordinarily, for a person to be brought to trial after he has been apprehended?

Mr. STEPHENS. About 6 months.

Chairman PEPPER. During that 6 months, you have the problem of bond and that individual engaging in some other criminal activity, and by the knowledge you have displayed, a lot are repeaters anyway. The chances are those people are going to commit some more crimes during that 6 months that they are out on bail. And if you keep them in the prison, you have to pay for them, or the taxpayer does.

Mr. WINN. Excuse me. Mr. Stephens, isn't that 6 months an improvement over what it was before, with the appointment of a couple of new judges?

Mr. STEPHENS. From my experience, going through the system after the arrest, it has been averaging around 6 months for the past 4 years. Prior to that, it may have changed.

Mr. Chairman, in regard to the recidivism of some of these people and your discussion of the bonding procedures, some of the people that we are dealing with in the perpetrator-oriented patrol strategy fit the picture you described of getting out on bail and repeatedly committing crimes to pay their lawyers and bondsmen.

We had several individuals that were arrested as much as seven or eight times from the time of the first arrest until they went to trial for that first crime they were charged with committing like crimes.

Chairman PEPPER. I heard from a certain source this morning that in the District of Columbia a certain person was charged with committing a homicide and an armed robbery and has still been out for several weeks because the police department didn't consider it was its duty to serve a bench warrant and the Department of Justice, U.S. Marshal's Office, didn't have enough personnel to do it.

Now, that is certainly a tragic situation, if there are people out who have been charged with serious crimes and maybe whose bond should have been revoked and bench warrants issued, but nobody to serve the warrant. Could a condition like that exist in Kansas City, Mo.?

Mr. POST. I hope not.

Chairman PEPPER. I would hope it couldn't happen anywhere, but it shows the shortage of personnel in certain critical areas. This is a person charged with a murder and an armed robbery still hanging around, presumably on the street, because nobody is picking this person up.

Anyway, you have the court problem and, of course, the prosecuting problem. What about your correctional institutions? What do you do

with these people, these repeaters that you discovered? What do you think should be done with them?

Mr. Brown. Mr. Chairman, I might attempt to give an answer which might be prevalent among policemen today, particularly those policemen out on the streets in the police cars, and that is that frustration in regard to your correctional system and the court system, that they are a part of the system, but they have no input into the system, really no control over what the system does, and they are in fact facing, having to react to, the system instead of going forward and improving the system.

There is nothing they can really do.

Chairman Pepper. In other words, you are the people that have the responsibility of apprehending and incarcerating these people who commit crime, but you don't have anything to do with what is done with the people you incarcerate, or you arrest.

Mr. Brown. That is correct, sir. And because of the problems in the rest of the system, it instills, I think, a deep sense of frustration in the policeman, too.

Mr. Sweeney. I guess I am somewhat reminded of two studies I am aware of in the correctional area that a lot of people in the country in the correctional field seem to be avoiding. One was done in New York, a massive offender study, and the other in California.

They analyzed the custody and results of the correctional system and came out with the yield of zero to negative impact.

Chairman Pepper. President Nixon states our penal institutions were more colleges for crimes than correctional institutions, in so many instances.

Mr. Sweeney. They had zero to negative impact, and on top of this the California data indicated we were spending approximately $250 million a year warehousing or keeping people in the correctional institutions in the State and only paying about $150 million of police-related activities. Almost two times as much money being spent on warehousing people in the correctional system than being spent in the prevention area. That study is the "California Assembly Office Report on the Cost and Effectiveness of California Law Enforcement and Corrections."

Chairman Pepper. One other area, and that is the juvenile delinquency section. What are your experiences with that? What are your problems with the juveniles?

Mr. Post. We have very frustrating experiences there, also I suppose, due to existing juvenile codes, we are not really in a position to make any recommendations, other than there are problems there and it is frustrating.

Mr. Head. I would like to respond to that. It is very frustrating dealing with juveniles. It is a whole different ballgame for the police officer. As is the case in Kansas City, we can't interrogate a juvenile until he has gone before a juvenile court. We are awarded that authority by the juvenile court to interrogate a juvenile for a serious crime.

So you can see this is very frustrating for a police officer.

Mr. Lynch. That would be the case, Officer Head, whether this is homicide, rape, aggravated assault, or a child who has taken $2 worth of material from a store; is that right?

Mr. Head. Yes. Any stealing or any serious crime.

Chairman Pepper. Gentlemen, there was a case here in the District of Columbia a few years ago, where a 17-year-old youth robbed, raped, and killed an elderly lady; and all that was done to him was to incarcerate him until he was 21 years old and then turn him out.

That, to me, is shocking evidence of irresponsible handling of that kind of a case. Who knows but what that boy, if he is willing to commit all of those crimes, does not have a predilection toward crime and maybe for committing serious crimes upon other people when he gets out again. It would seem to me that that situation probably happens in a good many parts of the country, too.

Mr. Head. We have a very recent case in Kansas City where a 14-year-old was involved in a triple homicide, and the juvenile court said he could not be tried as an adult. Consequently, this will end up as one of these cases where he is a ward of the juvenile court and will be sentenced through them.

Chairman Pepper. The difficulty of it is, if they could do something about it, if they could treat him or do something. Probably some good strap on some of those would help a lot, if they were applied a number of times, to teach them a little respect for law and society.

Gentlemen, we want to thank you in the warmest way for the splendid testimony you have given us here this moning. It is encouraging to see your initiative. Will you please convey to Chief Kelley our deep gratitude for your coming here and our warm commendation of what he and his department are doing and showing the keen intelligence, initiative, and imagination to come to grips with the fundamental problems that are involved in the commission of crime.

Mr. Sweeney. Thank you, sir.

[The following material was received for the record:]

Crime Specific Disturbance Intervention: Program Development Phase

introduction to theory

Posing the question of preventing crimes of violence, particularly those surrounded by environments of closures, acquaintance, and emotion, usually elicits responses that such events are non-preventable. These responses appear to be predicated on the above situational elements which imply a spontaneity and privacy surrounding such acts thus precluding any external control mechanism such as the police from being present in a preventive capacity. In 1971, the Federal Bureau of Investigation alluded to this in their UCR by stating:

"As it has been pointed out in prior issues of this publication, police are powerless to prevent a large number of these crimes, which is made readily apparent from the circumstances or motives which surround criminal homicides. The significant fact emerges that most murders are committed by relatives of the victim or persons acquainted with the victim. It follows, therefore, that criminal homicide is, to a major extent, a national social problem beyond police prevention."

The inability of the police to be present in even a minority of such violent situations cannot be disputed. This agreement does not necessarily lead to the conclusion, however, that such crimes are non-preventable or that the police are powerless to deal with them before that fact. Such a conclusion might be logical if prevention is defined only as removing the opportunity for committing a violent act. Most preventive practices of police such as mobile patrol, technological monitoring systems, programs involving citizens alerts and target hardening are principally focused on opportunity removal. As measured by this framework, situation of private violence most certainly are non-preventable.

Skepticism invades non-preventability conclusions, however, when the scope of preventive definitions is broadened to consider factors other than an oppor-

tunity for the act itself. Any crime, including acts of violence, lends itself to consideration of at least two factors: (1) the opportunity (environment, situation) for the act to occur and (2) the willingness (desire, motivation) of the individual to act. It is the second of these factors that has been most neglected in considering the preventability of criminal acts.

Several psychological and sociological theories on the framework of this motivation have been advanced (see Preliminary Literary Research, Appendix 1). In this respect, it is believed that most of the factors, conscious or unconscious, contributing to a specific motivation exist prior to, during, and after a reaction to that motivation.

Aside, therefore, from the question of existence of such factors, are such questions as abilities to (1) recognize and identify these factors, (2) treat them, and (3) establish the contacts necessary to implement such recognitions and treatments. The question of ability to recognize certain factors lends itself to both historical research of actual violence situations as well as analysis of current situations having similar motivational frameworks. The question of treatments is amenable to experimental testing—even if recognition abilities are limited (recognition implies a selective or screening process for treatment entry and some form of randomization might be utilized barring an effective screening criteria). Both recognition and treatment, however, are dependent on the third question, i.e., establishing that contacts with individuals subsequently involved in violent acts do in fact occur. The lack of such contacts prior to the act would prohibit the application of any recognition and treatment systems developed. A preliminary examination of homicide and aggravated assaults had indicated that a high percentage of these violent acts have characteristics similar to those of disturbances, particularly those of a domestic variety. In this respect, the chances for the manifestation of recognizable violence indicators also appear to be maximized.

PRELIMINARY ANALYSIS

To delineate the contact theory, the Department collected data on homicides and aggravated assaults occurring during 1970 and 1971. Each offense was placed into one of three categories: (1) Non-Disturbance—homicides and assaults not directly evolving out of a disturbance situation, e.g., a homicide or assault occurring during the commission of a crime; (2) Non-Domestic Disturbance—homicides or assaults resulting from a disturbance outside of a domestic setting, e.g., in a tavern or on the street; and (3) Domestic Disturbance—homicides or assaults resulting from a disturbance in or within close proximity of a residence where the resident is directly involved in the disturbance, or is responsible for the presence of one or more of the persons who are involved.

Half of the homicides (48% in 1970 and 51% in 1971) occurred in a disturbance environment. From a randomly selected sample of 500 aggravated assaults for those years (confidence level of 99%) it was discovered that about two-thirds of the aggravated assaults (62% in 1970 and 67% in 1971) occurred in a disturbance environment. A narrowing process revealed that approximately one-third of the homicides (28% in 1970 and 40% in 1971) and aggravated assaults (31% in 1970 and 32% in 1971) involved a domestic disturbance. This appears to support the idea that the violent characteristics of a person are manifested in a disturbance situation.

In examining the arrests records of the participants in domestically related homicides and aggravated assaults, it has been found that a sizeable number have had previous contact with the police in disturbance and assault situations therein establishing the likelihood of a positive correlation between disturbances, homicides and aggravated assaults. The 1970 data revealed that in 32% of the homicides and 37% of the aggravated assaults, either the victim or the suspect had an arrest for disturbance or assault within 2 years prior to the homicide or aggravated assault in question. Similarly, the 1971 data revealed that in 22% of the homicides and 37% of the aggravated assaults, either the victim or the suspect had an arrest for disturbance or assault within 2 years prior to the homicide or aggravated assault in question.

These figures are impressive in that they pertain only to arrests. Most disturbance situations do not result in an arrest being made. Thus, it can be assumed that an even higher percentage of victims and suspects have actually been involved in disturbance situations and may have had contact with the police prior to their involvement in the homicide or aggravated assault. Supportive of this will hopefully be data now being extracted from existing computer systems con-

taining addresses where disturbances have been handled by police in an informal process. Matches with addresses where homicides and aggravated assaults have occurred may then show at least a probability of disturbance—violent crime participant synonymy (the address data does not contain name associations). The preliminary analysis points to a positive correlation between disturbances, homicides and aggravated assaults. It also reveals that the police have had contact with the victims and suspects prior to the homicide or assault.

Thus the police may have had at least the opportunity to intervene in the motivational process leading to a homicide or assault. Some attention, therefore, must be given to utilization of this opportunity.

It is questionable as to whether the present methods of handling a disturbance situation are effective in averting future violence, since the data reveals that about one-fourth of the aggravated assault victims with previous disturbance or assault arrests (25% in 1970 and 21% in 1971) and about one-third of the aggravated assault suspects with previous disturbance or assault arrests (37% in 1970 and 34% in 1971) have disturbance or assault arrests subsequent to the aggravated assault in question. If the present methods of dealing with disturbances are not satisfactory in averting future violence, then more effective methods must be found. This is the purpose of setting up an experimental environment to test the effectiveness of various methods in treating disturbances to reduce homicides and aggravated assaults.

CONSIDERATIONS IN EXPERIMENTAL DESIGN

It is anticipated that in the experimental framework it would be necessary to have a control group to serve as a baseline to measure the effect of the various experimental groups. The control group might encompass the conventional treatment of disturbances, with no changes in the present disturbance procedures. The officer either makes an arrest or handles the disturbance in such a manner as to temporarily restore peace, and then proceeds with his normal police duties. There would be very few referrals of the disturbance participants to agencies where they might reach aid in solving their specific problems, and what referrals are made would not be available to the officer in any systematic form. The experimental groups would then be set up in such a way that the effectiveness of the experimental variable could be measured against the control group, or against another experimental group. Various experimental groups have been contemplated, of which all or any combination could be used in the actual experiment.

For example, Experimental Group I might consist of the conventional treatment used in the control group, with the addition of providing the officers a referral system. With the referral system, the officer might have available to him a list of social agencies dealing with various kinds of problems. Using the referral system the officer would use his judgement in referring people to these various social agencies. In this experimental group the effect of referral based on the officer's judgment might also be assessed.

Experimental Group II might consist of officers specially trained to handle disturbance situations. The training would include a grounding in psychological and sociological theory to help the officer better diagnose and understand the factors involved in inter- and intra-personal conflicts. In addition, the officer could be provided with the referral system. In this experimental group, we might examine the diagnostic effect of special training and referral by comparing it with Experimental Group I. Experimental Group II might actually be divided into two experimental sub-groups. The first sub-group of trained officers could provide only surface referral services and then continue with their normal police duties, while the second grouping could provide the referral services and then devote their full time to following the progress of their referral cases. The officers would determine that the persons referred actually arrived at the agency and that the agency provided the proper service and attention to the referred person. By comparing these two sub-groups it would be possible to determine whether the trained referral service in and of itself, or the progress of the referral is the more important factor (the combination may also be shown as the key).

Experimental Group III might consist of professional social workers utilized full time by police officers to handle disturbance situations. From this group it can be determined whether a professional social worker is any more adept at diagnosing and handling personal conflicts than a police officer. As in Experimental Group II, this group could be divided into two experimental sub-groups. The first sub-group could make contact with the disturbance subjects making necessary referrals and end their contact with the subjects at this point. The

second sub-group could use referral and follow the progress of their subjects through the referral process. Once again this might help to determine if it is actually the referral that is effective or if the follow-up is equally important. By comparing Experimental Group II and III, a fair evaluation as to the effects of professional social workers as compared to specially trained officers can be made both in terms of diagnosis and ability to follow-up.

MEASUREMENT CONSIDERATIONS

To correctly evaluate the results of the experiment it is important that the correct measurements be made. Some of the measurements foreseen at this time include, the number of disturbances processed through the experimental and control groups: disturbance recidivism: referral rates: arrest rates: and the homicide and aggravated assault rates. The homicide and aggravated assault rates would be calculated for the domestic disturbance and non-domestic disturbance categories separately. This might enable the Department to determine if treating domestic disturbances has an effect on non-domestic homicides and aggravated assaults as well as those within the domestic categories.

There are also various attitudes that might be affected by the experimental processes that could be measured. One of these is the attitudes of disturbance participants towards the police and vice versa. Depending upon what type of treatment and service the disturbance participants receive, their perception and attitudes toward the police may vary. Likewise, the police officer's attitudes toward the disturbance participants may vary according to the type of approach he uses in handling the disturbance. Another attitude measurement would be those of the professional social workers towards the police and of the police toward the soical workers. These attitudes might be measured on a pre-test-post-test basis. Also measurable may be the attitudes of the various social agencies toward the police and vice-versa.

In effect, the above measures tend to address the values of particular treatments. A successful impact upon the principal crimes addressed without perhaps knowing the reason is certainly beneficial; however, this may also be an excellent opportunity to study the causative factors and relationships heretofore supported only within a theoretical framework. In this respect, considerable attention might and probably should be given to pattern identification within the experimental and control groups during the conduct and evaluation periods of the treatment processes.

ADDITIONAL PRELIMINARY PLANNING STEPS

Although considerable research has been done to date in preparation for an eventual test and evaluation period, the realization of such a period still requires a number of preliminary steps. Those to be considered include: (1) the better articulation of the theoretical framework, (2) the determination and design of an appropriate experimental framework to include the formulation of suitable programs, the identification of proper group entrance mechanisms, and/or test areas, the attempted identification of violence indicators through interview and otherwise, the determination of suitable time frames for testing, and the determination of appropriate methods for planning and implementing this framework—with attention to estimates of manpower requirements, resource integration and costs; and (3) the determination and design of an appropriate evaluation framework to include identification of suitable measurements, methods for data collection, and techniques for interpretation—with attention to manpower requirements, resource integration and costs.

There is little question that this phase of the planning process will necessitate the involvement of outside resources inasmuch as our experience in these areas is limited. The above steps to take a minimum of four months.

Appendix I

Preliminary Review of Literature

SELECTED STATEMENTS

1. Marvin E. Wolfgang, "Who Kills Whom", *Psychology Today*, Vol. 3, No. 5 (October 1969): "A subculture of violence is created in which both potential victims and potential offenders carry the culture values that tolerate or expect violence as well as the weapons to express it." p. 75

2. George D. Newton and Franklin E. Zimring, *Firearms and Violence in American Life* (A Staff Report to the National Commission on the Causes and Prevention of Violence, 1970, Vol. 7) : A 1967 study in Chicago indicated that "71 percent of the Chicago killings involved acquaintances, neighbors, lovers, and family members—people likely to have acted spontaneously in a moment of rage and not necessarily with a single determination to kill." p. 43

3. James S. Campbell, Joseph R. Sahid, and David P. Stang, *Law and Order Reconsidered* (A Staff Report to the National Commission on the Causes and Prevention of Violence, Vol. 10) : "How can outside agencies detect violence-breeding socialization processes? Conflict-ridden socialization leaves its scars on the personality of the child at a very early age, and it often manifests itself only in quite subtle modes of familial interaction. The aggressivity or violence may not erupt until years later. Moreover, assuming detection were possible, how would we intervene? p. 188

4. Donald J. Mulvihill and Melvin M. Tumin, *Crimes of Violence* (A Staff Report to the National Commission on the Causes and Prevention of Violence, 1969, Vol. 11) : "In violent crimes, too, the victim at times contributes to the commission of the offense. We might expect the victim to contribute to major violent offenses and facilitate their execution by provoking or initiating a hostile reaction to the offender. . . , by unconsciously inviting the offense through an emotional pathology, by direct invitation or incitation, or by omission of normal preventive measure." p. 225

Twenty-two percent of the homicides in a 1967 study of 17 American cities indicated victim precipitation "Thus, the conventional assumption that the homicide victim is a weak and passive individual attempting to avoid an assault by an offender who is brutal, strong, and overly aggressive would not always appear to be correct." p. 226

"Ostensible reasons for disagreements are usually trivial, indicating that many homicides are spontaneous acts of passion, not products of a single determination to kill." p. 230

"To the considerable extent that some forms of major violence—robbery in particular, are committed by strangers in outside or public locations, improved law enforcement patrol and surveillance techniques will continue to be required as instruments of deterrence. Yet we must recognize that violence among intimates, friends, and acquaintances, especially in criminal homicide and aggravated assault, often occurs in private and indoor locations. This requires a more imaginative preventive response than traditional law enforcement has provided. Technique for discovery and intervention are needed to defuse conflict situations that might otherwise lead to serious violence." p. 238

5. Warren S. Wille, M.D., "Citizens Who Commit Homicides," *Revista Interamericana de Psicologia*, Vol. 4, No. 2 (June, 1970) : (Paraphrase) "Out of a sample of 100 homicide offenders, 47 percent had previous records of law-breaking of major proportions, which indicates that almost half of the people who eventually commit murder have a prior history of excessive acting-out of aggressive impulses, and inadequate behavior control." p. 137

"Many times, the act of homicides finally occurs when there is a more violent argument than usually following a long period of building up of feelings of grievance . . ." p. 137

6. Donald J. Mulvihill and Melvin M. Tumin, *Crimes of Violence* (A Staff Report to the National Commission on the Causes and Prevention of Violence, 1969, Vol. 12) : "We have intensively studied the criminal histories of many offenders and conclude that by far the greatest proportion of all serious violence is committed by repeaters, not by one-time offenders." p. XXXI of Summary.

Frustration brings on an instigation, or an impetus to aggression. "The strength of the instigation to aggressiveness, that is, the degree of readiness to be aggressive, depends on : (1) the strength of the drive toward the intended goal ; (2) the degree of interference with the frustrated response, including, for instance, the presence or absence of alternative ways in which to achieve one's end ; and (3) the number of times the goal seeking activity has been frustrated. According to this theory then, frustration can be cumulative and can remain active over time. However, readiness for aggression can accumulate, even though it comes from different frustrating experiences." "This theory may help to explain excessively violent responses to apparently trivial incidents." p. 435

"Many violence-prone persons are deficient in verbal and other social skills. Such persons may fall into the category of the 'pressure remover', who resorts to violence as an expression of helplessness, or as a last minute effort to obliter-

ate situations to which he is unable to respond. Violence, for them, not only expresses frustration, but also represents a brusque summary of the argument the person cannot verbalize." p. 443

(Paraphrased) "One approach to violence is the use of violence to release accumulated emotions, having little to do with the behavior of the victim. This approach reveals that violence is not a unitary phenomenon." p. 443

". . . The 'Chronically violent criminal' can be understood as an individual in whom the violence inhibitors are either absent or so over-whelmed by the instigators that the regularity of violent behavior is predictable. Putting the matter in these terms also makes clear the crucial role of external stimuli to increasing or reducing instigations and inhibitions to violent behavior." p. 450

7. Mary Lorenz Dietz, Ph.D., "Violence and Control: A Study of Some Relationships of the Violent Subculture to the Control of Interpersonal Violence," *Dissertation Abstracts* Vol. 29. Part A (March–April, 1969): (Paraphrase)

"The assumptions are that those that engage in interpersonal violence are mentally unbalanced, criminally deviant, or both. Violent acts are conceived of as impulsive and uncontrollable."

"Violence is conceived in this study as learned conduct, occurring in a linguistic environment, taking into account the self and other, and resulting from conscious and deliberate evaluation of the situation and a decision to act."

(Paraphrase) "A violent subculture exists which provides persons with the opportunity to learn norms of conduct that approve and promote violence. Violence is conceived as a form of approved conduct; and is a recognized and sometimes preferred, means of goal-achievement."

"Interpersonal violence in this context can be studied as deliberate and chosen conduct, rather than as uncontrolled, impulsive, or reciprocal." "One value of this conception is that violent acts can logically be studied as conduct that is potentially predictable." Abstract #3675

8. David Abrahamsen, M.D., *Our Violent Society* (New York: Funk and Wagnalls, 1970): "But whatever the motivation, conflicts between individuals and between groups become violent when people feel threatened or frustrated and have lost faith in society's ability to protect them or to satisfy their grievances." p. 6

9. Hugh Davis Graham and Ted Robert Gurr, *Violence in America—Historical and Comparative Perspectives* (A Staff Report to the National Commission on the Causes and Prevention of Violence. 1969. Vol. 2): ". . . Lewis Coser writes that 'we may say that a conflict is more passionate and more radical when it arises out of close relationships.' 'The closer the relationship,' so the reasoning goes, 'the greater the effective investment, the greater also the tendency to suppress rather than express hostile feelings. . . . In such cases feelings of hostility tend to accumulate and hence to intensify.'" "But Coser himself states that, though conflicts within close relationships are likely to be intense when they occur, 'this does not necessarily point to the likelihood of more frequent conflict in closer relationships than in less close ones.'" p. 396

10. Donald R. Cressey, ed., *Crime and Criminal Justice* (New York Times Book, 1971): "According to the Federal Bureau of Investigation, one of every five policemen killed in the line of duty dies trying to breakup a family fight." "The President's Commission on Law Enforcement and the Administration of Criminal Justice reported last year that family disputes 'are probably the single greatest cause of homicides' in the United States." p. 178

(Paraphrase) "The New York City Police Department estimates that 40 percent of its men injured in the line of duty were hurt while responding to family disturbances."

"According to Dr. Bard, outmoded police organization is the silent factor underlying the growing tension between police and community, particularly in the urban ghettos." "Professor Bard emphasizes that only the police, of all social institutions, are present 24 hours a day, every day of the year, to answer the call when family violence threatens." p. 180

11. Jane Watson Duncan, M.D. and Glen M. Duncan, M.D., "Murder in the Family: A Study of Some Homicidal Adolescents," *American Journal of Psychiatry*, Vol. 127, No. 11 (May, 1971): Five case studies of homicidal adolescents indicated a sequence of circumstances progressively more unbearable and less amenable to the adolescent's control. "In the developing explosive circumstances, if alternatives to violence are not available or have been tried and have failed, the risk of tragic outcome is greater." p. 77

12. Morton Bard, Ph.D. and Bernard Berkowitz, Ph.D., "A Community Psychology Consultation Program in Police Family Crisis Intervention: Preliminary Impressions," *International Journal of Social Psychiatry*, Vol. 15, No. 3 (1969): (Paraphrase) "A crisis situation, in many instances, breaches typical personality defense patterns in the face of threat, and presents opportunities for radification of usual behavior by direct intervention. It is possible that greater therapeutic effect can be achieved at the time of crisis than after the crisis subsides and typical defensive patterns are reconstituted." p. 210

13. Morton Bard, Ph.D. and Bernard Berkowitz, Ph.D., "Family Disturbance As a Police Function." Paper delivered at the 2nd National Symposium on Law Enforcement Science and Technology in Chicago, Illinois, April 18, 1968: "Wolfgang has lamented that the relationship between murderer and victim can be adequately studied only after the fact. He also suggests that the murderer may lead up to his final crime by a series of increasingly destructive acts." p. 8

"Systematic study of hundreds of instances of family violence potential may reveal a pattern similar to the 'Cry for Help' of the suicide." p. 8

"Rasch has described 'homicide situations', i.e., relationships between victim and perpetrator that appear with some consistency." p. 8

"Encouraging beginnings have been made on the possibilities of predicting homicidal behavior and identifying homicide-prone individuals." p. 8

APPENDIX II

HOMICIDE AND AGGRAVATED ASSAULT RATES

	Homicide rates								
	Total	Nondisturbance		Disturbance		Domestic disturbance		Nondomestic disturbance	
		Number	Percent	Number	Percent	Number	Percent	Number	Percent
1970	122	63	52	59	48	34	28	25	20
1971	113	55	49	58	51	45	40	13	11

	Aggravated assault rates								
	Total	Nondisturbance		Disturbance		Domestic disturbance		Nondomestic disturbance	
		Number	Percent	Number	Percent	Number	Percent	Number	Percent
1970	[1] 500	188	38	312	62	155	31	157	31
1971	[1] 500	166	33	334	67	161	32	173	35

[1] Sample of 500 randomly selected from total aggravated assaults, providing confidence level of 99 percent.

ARREST RATES

DOMESTIC DISTURBANCE HOMICIDES

	Domestic disturbance homicides	Known victims	Known suspects	Homicides, either victim or suspect has disturbance or assault arrest within previous 2 years		Victims with disturbance or assault arrest within previous 2 years		Suspects with disturbance or assault arrest within previous 2 years	
				Number	Percent	Number	Percent	Number	Percent
1970	34	34	32	11	32	9	26	3	9

Description	*Amount*

THE PROACTIVE-REACTIVE PATROL DEPLOYMENT PROJECT

By the South Patrol Division Task Force [1]

At the outset of their deliberations, the South Patrol Task Force established its primary aim as the prevention of crime. The task force identified five priority problems and began exploration of creative solutions directed toward their resolution. Immediately, the group was faced with the age old problem identified by police administrators, namely, the absence of adequate time to effectively attack their priority problems. Their non-incident time, the task force members figured, was of necessity directed toward preventive patrol. Preventive patrol, however, appeared to relate only two of their five priority problems. The necessity of maintaining preventive patrol next came under scrutiny and it was recognized that the need to test the assumptions underlying that concept logically preceded the development of patrol strategies. The Proactive-Reactive Patrol Deployment Project was therefore born.

One of the primary tasks of police departments in the United States is preventive patrol, namely, the random cruising of a police car in a given area. The assumption underlying preventive patrol, frequently stated as fact, is that the most effective deterrent to a potential criminal is the direct view of a patrolling policeman, and/or the knowledge that police officers are available to respond rapidly to the scene of a crime, thus increasing the risk of capture while decreasing the apparent opportunity for the successful commission of a crime. The belief in preventive patrol is widely shared by police administrators and is the general basis upon which police field forces are deployed nationwide.

In 1930, Bruce Smith wrote:

"Police are agreed that uniform patrols discourage the commission of certain types of criminal acts, but even this elementary proposition lacks scientific demonstration. So until we have a whole view of controlled experiments which show with some degree of conclusiveness the effect of uniform patrols upon crime rate, and the point where additional patrol strength results in diminishing returns, police service, not only in America but elsewhere throughout the world, will continue to hinge upon expert opinion, while governing bodies and the taxpaying public will be handicapped in appraising demands, for additional expenditures in the highly important field of police protection." [2]

Forty-two years later, our knowledge about the effectiveness of police patrol is not measurably improved. In 1967, in a discussion of preventive patrol, the President's Commission Task Force on Science and Technology noted, "There is little evidence on how much crime is thereby prevented or how much would be

[1] This selection is a current draft of a proposal submitted by the Kansas City, Missouri Police Department to the Police Foundation in May, 1972. Task Force membership at that time included: Major Guy Hines; Captain Clinton Kelly; Sgt. Billie Armstrong; Patrolmen Charles Brown, Donald Johnson, Donald Marcum, Michael Travis, Owen Williams and James Post. Design consultants: George Kelling and Thomas Sweeney.

[2] Bruce Smith, *Police Systems in the United States*. Harper, New York (1960) p. 121.

prevented by alternative patrol tactics."[3] Restating the position of the Commission somewhat more strongly, a recent report prepared by the Rand Corporation for the Department of Housing and Urban Development concluded:

"We believe that there are significant knowledge gaps which make it impossible to allocate, as rationally as should be the more than $1 billion dollars devoted annually to police patrol programs. Because of these knowledge gaps, police administrators currently must plan principally in terms of *input measures* (such as numbers of patrolmen on the street or number of patrol hours) although what they are trying to affect are *output measures* of police effectiveness (such as true crime rate, apprehension rate, and speed and quality of service in response to calls for service.) These knowledge gaps are one of the most important factors limiting the development of effective aids to police patrol decision making."[4]

The report called for research and experimentation to identify the relationship between police prevention patrol activities and crime prevention, deterrence, and on-scene criminal apprehension.

"In short, between one third and one half of all patrol time is devoted to preventive patrol and the police cannot specify with confidence what effect it has on crime and criminal apprehension. In such a situation, police administrators cannot know the resources are being allocated effectively. Analytical and experimental studies are needed and could result in very substantial changes and improvement in the use of police manpower."[5]

Incidental to the deterrent and detection functions, preventive patrol provides a means for police personnel to perform a wide range of governmental services, including traffic control, provision of information, and hazard identification. In addition, conspicuous presence of police on patrol is believed to increase citizen perceptions of security, while the opportunity provided for citizen contact improves police/community relations. Increased knowledge about the relative effectiveness of preventive patrol in meeting these objectives also appears vital to effective decision making about patrol techniques.

In a recent discussion of patrol, Reiss develops a set of dependent variables which are of interest and relevant to the proposed study. An analysis of patrol activity of the Chicago Police Department, found that only 2.55 percent of patrol time was spent handling criminal matters. Of those criminal matters processed by the patrol division, 93 percent were citizen initiated. It follows from this that only a minute portion of the time on preventive patrol results in the discovery of incidents which are processed in the system of criminal justice. Further he suggests that if the productivity of some of the most highly proactive units of the patrol division are analyzed, it will be found that that unit generates very few criminal or noncriminal incidences. Pre-test data gathered by personnel of the South Patrol Division through a self report activity analysis also appears to support these conclusions. In data relating solely to the personnel of that division it was determined that only 4.7 percent of patrol time was expended on self initiated, crime-related activities. This figure includes a significant percentage of time spent on nonproductive building and vehicle checks and on misdemeanors.[6]

Another indicator of operational effectiveness that Reiss suggests is the quality of the support that citizens provide to the police when the police are involved in criminal and non-criminal incidences. He thus suggests that since proactive policing alters citizen-police relations, proactive patrol results in qualitatively different support for police while they perform their duties than in reactive patrol. He suggests that in reactive patrol, citizens call for service in order to protect their vested interest and thus provide support for and legitimacy to the police intervention. In distinction, when the police, are the initiating unit, Reiss suggests that there is little support either for the officer who might have difficulty in the situation or for later processing—for example, testifying. Reiss further suggests that the aggressive patrol practices of proactive patrol results in an ever increasing residual, comprised of persons who have had negative encounters with police personnel.[7]

PURPOSE OF THE EXPERIMENT

The proactive-reactive patrol deployment strategy is a rigorous and systematic attempt to test the outcomes of different patrol strategies. As such, it allows for a cost-benefit analysis of varied strategies to determine the most effective methods of undertaking patrol. Further, it allows the department to develop "mixes" of strategies dependent upon fluctuations in need. If, for example, it were determined that reactive strategies are most effective in addressing certain types of problems and proactive more effective in others, then, strategies could be developed consistent with the most effective approach to the problems to be attacked. If it is fact that reactive strategies are most effective in certain areas, then specific tasks would be developed for patrol personnel when not responding to calls for service.

Also included in this experiment is an attempt to establish the quantitative relationships between speed and type of police response and the crime rate, deterrence of crime, probability of an on-scene apprehension, and the availability of witnesses and citizen satisfaction.

This experiment seeks to meet the obligation of a professional organization to test its methods in the light of developing theory and new methodologies. Since the effectiveness of preventive patrol is not self evident and because the capacity of the department to deal with crime is a central function, the experiment fulfills a real professional need that has not been addressed by other police agencies. In addition, the proposed analysis of response time outcomes would, hopefully, lead to the development of an empirically based queuing system to guide the dispatch and deployment of patrol personnel. The implementation of this experiment would help to maintain a climate of innovative creativity and self evaluation, not only on the part of the department as a whole but also with individual officers. This experiment would develop the capacity of the Kansas City Police Department to organize and carry out rigorous valid experimentation with only a minimum need for outside expertise.

EXPERIMENTAL METHODOLOGY

Fifteen beats were designated as the experimental area. These beats were computer matched into similar triplets on the basis of crime, called for service, ethnicity, median income and transience of population. Each triplet was reviewed by task force personnel. Attempting to establish a geographic dispersion that permitted maintenance of acceptable response time, one beat in each triplet was designated as proactive, another reactive and still another as control. Three distinct subarea groupings of five beats each were, therefore, defined. (Figure #1 depicts a mock distribution in which R = reactive, P = proactive, C = control and numerals designate common triplet beats.)

$R_{(1)}$	$P_{(3)}$	$R_{(4)}$	$P_{(2)}$	$R_{(5)}$
$C_{(2)}$	$C_{(3)}$	$P_{(1)}$	$C_{(4)}$	$C_{(1)}$
$R_{(2)}$	$P_{(4)}$	$C_{(5)}$	$R_{(3)}$	$P_{(5)}$

FIGURE I.—Simulated deployment configuration

Different levels of patrol coverage were assigned to each sub-area. The deployment sought to maximize the range of potential coverage to measure differential impact between extremes of patrol intensity.[8] In the control beats, the standard

[8] Deployment modifications relate only to regular patrol units. The purpose of the experiment as seen by the task force was specifically to ascertain the effectiveness of their divisions' personnel. Specialized units such as the Traffic, Tactical, K–9 and Helicopter Units continued to work in the test area using the same allocation patterns as prior to the experiment.

departmental assignment of a single one man unit with sixty-five percent committed time would be maintained. In the reactive areas, patrol units would enter the area in response to calls for service. Uncommitted time would be directed toward preventive patrol on the beat perimeter or in an adjacent proactive beat. In addition to increased patrol coverage provided by the car assigned to reactive areas, the regular units assigned to the proactive beat would be supplemented by up to five support cars. The resulting effect would be a level in the proactive areas four to five times the regular level of patrol intensity. The experimental deployment pattern would be maintained for one year.

Crime trends would be monitored weekly to identify experimentally induced variations and to insure that the public is given the greatest possible protection. Monitoring activities will be conducted through the use of data provided by the Crime and Traffic Analysis Unit and by daily printouts from Data Systems. If trends emerged which gave early indication of results which jeopardized the public, steps would immediately be taken to return to standard patrol.

To provide baseline information concerning the activities of patrol personnel, task force personnel have developed and will conduct a task analysis. This self-reporting system will precisely identify services delivered in the experimental area. It will specify the actual amount of time committed to preventive patrol and other activities in each of the test subareas. In addition to its contribution to baseline data, this analysis will provide valuable input to the improvement of training and personnel programs.

Present patrol patterns will not be altered to change response time. Instead, the chance variation in response time will be analyzed for the full range of called for services. True response time will be determined by combining dispatch response time (elapsed time between receipt of call and dispatch) and field response time (elapsed time between dispatch and arrival of the patrol units). Incident analysis and follow-up surveys will be undertaken in a random sample of called for services. That sample of incidents, stratified by response time, will be drawn from cases recorded by the observers. Officer, citizen and observer perceptions of the same incident will be compared to identify elements of citizen satisfaction.

HYPOTHESES TO BE TESTED

The following hypotheses have been stated for the purpose of measurement through the experimental methodology outlined below:

A. Preventive patrol

1. Crime, as reflected by victimization survey and offenses known to the police, will not vary by type of patrol.
2. Citizen perception of service will not vary by type of patrol.
3. Citizen cooperation in processing of incidents will be greatest in the reactive sub-area.
4. Citizen complaints about police service will be greater in the proactive sub-area.
5. Citizen fear and behavior as a result of fear will not vary by type of patrol.
6. There will be no variation in the types of calls for service by type of patrol.
7. Traffic accidents will increase in the reactive areas.
8. Traffic violations will increase in the reactive areas.

B. Response time

1. As response time increases, on-scene apprehension of offenders will decline.
2. As response time increases, the extent and nature of injuries to victims will increase.
3. As response time increases, the availability of witnesses will decrease.
4. As response time decreases, citizen dissatisfaction with police service will increase.
5. As average response time in an area decreases, the incidents of predatory street crime will decrease.

MEASUREMENT OF OUTCOMES

Effort to measure the differential impact of the alternative levels of patrol coverage will employ analysis of departmental data, structured observation and survey research. Measurement techniques and dependent variables are depicted in Figure II.

The analysis of Kansas City Police Department data will compare dependent variables between the three subareas, as well as for the twelve months preceding the experiment. Pre and post-test observations will be conducted on traffic flow patterns in the three subareas. Observers would ride with police officers to assess the effects of differential patrol stances, proactive or reactive, on patrol personnel and the effects on those designations on encounters with citizens. The peacekeeping and order maintenance are elusive and difficult to quantify. Observation will be utilized to ascertain the effects of differential patrol strategies on such peacekeeping activities as order maintenance in tavern areas, school vicinities, crowd control, etc. Systematic observation of these kinds of activities would be maintained during the entire length of the experiment to note what changes might take place in such activities.

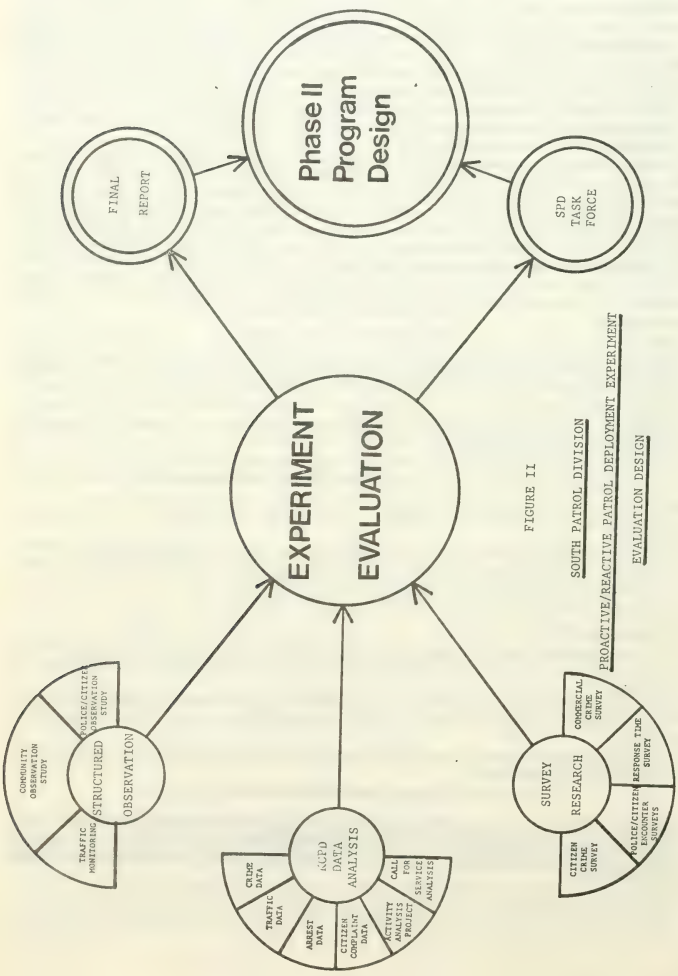

FIGURE II

SOUTH PATROL DIVISION

PROACTIVE/REACTIVE PATROL DEPLOYMENT EXPERIMENT

EVALUATION DESIGN

One of the great concerns the department has in developing the Proactive-Reactive Patrol Experiment is the response of community residents and businessmen to this experiment. One thousand two hundred households will be interviewed in the experimental area before the commencement and at the close of the project. The surveys will seek to determine whether the citizens' perceptions of the quality of police service vary in response to differential patrol strategies. These surveys will seek to measure change in terms of the citizens' fear of crime, the citizen awareness of the police presence, a change in the victimization rate, and generally what happens to citizen satisfaction as a result of the various strategies attempted.

DEPENDENT VARIABLES

1. Victimization

A victimization survey will be executed as a portion of the instrument delivered to 1200 households and 160 businesses before and at the close of the experiment. This component will be employed to compare crime variations in the alternative subareas. The survey will permit analysis of reporting variations resulting from the different patrol strategies.

2. Crime indices

A crime index will be developed using a model similar to the model developed by Peter Bloch. Qualifying incidents include murder, forcible rape, robbery, aggravated assault, burglary, larceny over $50 in value, and auto theft. Crime will be weighted according to seriousness and by deterability. These decisions will be made in terms of seriousness and deterability. Street crimes will be weighted heavily under the assumption that they are usually thought to be affected by preventive patrol. Armed robbery will be weighted especially heavily since many believe that it is the most single accurately reported crime and further that it may be susceptible to police preventive patrol.

3. Community satisfaction

As part of the community and business surveys, data will also be gathered on merchant, resident and consumer satisfaction with police services. A survey instrument has been developed which attempts to obtain other than stereotype responses toward the police. Wherever possible, questions about views of police officers will be directly related to actual experiences. (One of the reasons why citizen attitudes towards police seem to be independent of the police services is that questions about police services have tended to be global rather than tied to actual experiences.) In addition, consumer satisfaction will also serve as a critical measure for the response time component of this proposal.

4. Calls for services

A random sample of calls for service from the three areas will be analyzed to determine if there are significant differences both within and between the areas. Seasonal variations will have to be considered in the "within area" comparisons.

5. Fear

The community and commercial surveys will attempt to establish how fearful the community is and what behaviors have resulted from that fear. Subsequent analysis will attempt to see if this varies significantly within or between subareas as a result of the experiment.

6. Arrest and processing ratios

Police records will be analyzed to determine if there are significant variations in the proportion of arrests as to citizen initiated contacts versus police initiated contacts. Successful processing of a case including willingness of victims and bystanders to testify will also be related to type of patrol and response time.

7. Complaints about police service

Complaints will be analyzed to see if there are differences within and between areas. This analysis will include complaints as to police conduct as well as citizen satisfaction with the patterns of patrol activities in their area.

8. Traffic

Traffic will be monitored on a random time basis to see if violations vary as a result of different patrol strategies. An accident/pattern of patrol ratio will be developed.

Northeast Patrol Division: Action Review Panel

The approach utilized by the Northeast Patrol Division in addressing its task, the development of innovative patrol strategies, has brought that task force to the point it is prepared to implement a specific project design internal to the patrol division. The task force has also amassed, extended information from all division personnel on the nature of perceived internal and external patrol problems. This was accomplished by task force personnel meeting in small groups with all field personnel. The process appears to have strengthened both the quality of the problem identification and the involvement of field officers. The process, however, was extremely time consuming. As a result, the task force has just embarked upon the planning of a second project for which continued planning assistance is requested.

The first issue of concern focused upon by the task force was conflict emerging from police-citizen interactions in stress situations. That conflict manifests itself in several ways including physical assaults and verbal hostilities between police and citizens, resisting arrest, and complaints against police officers. Conflict between police and citizen is very complicated and often exaggerated. Half truths and irrational statements are often assumed as the truth. Allegations are made by all persons involved. At times, the citizen is clearly at fault. At times, the police officer is at fault. Many times, however, the fault cannot be clearly ascribed. It is possible, at times, that conditions of such that no blame or judgment should be made.

The problem is further aggravated when no attempt is made to resolve the conflict. When this occurs, some citizens question the integrity of the police department in dealing with its officers. On the other hand, field personnel may feel that they are being used as a "scapegoat" when a conflict situation occurs.

In an effort to establish a viable alternative for the resolution of this problem, it is proposed herein that an action review panel, modeled after the Oakland Violence Prevention Unit, be established in the Northeast Patrol Division. The proposal rests on several assumptions that are articulated below. It is unique not only because the interest and the desire to undertake such a program emerged at the field level, but also because it seeks to go beyond the confines of the Oakland project to consider a wider range of problem behavior and to consider the applicability of such a process to field supervision and recruit socialization.

BACKGROUND OF THE PROJECT

The action review project seeks to establish a non-punitive review process, totally apart from normal disciplinary channels and using a delicate balance of peer assistance and peer pressure. Task force personnel intensively reviewed the Oakland Violence Prevention program, and two Kansas City patrolmen were permitted to attend action review panels in that city.

The Oakland Violence Prevention Unit was initiated in 1969. It emerged from a joint research project into the problem of assaults upon police officers. The research data generated several interesting conclusions:

1. A small percentage of police officers account for the vast majority of complaints and resisting arrests.

2. There was no correlation between the "hard working officer" and the number of complaints that were likely to be registered against him.

3. Complaints against an officer, generally, reached their peak within the first two and a half years on the job.

The Oakland Violence Prevention program was initiated departmentwide. The structure and operations of the program were similar to those outlined below with the exception that the criteria for the identification of potential interviewees was restricted to the number of resisting arrests charged by the officer. Departmental personnel reported a universally favorable opinion of the program. That department is presently designing a more effective evaluation procedure to identify the unit's effectiveness.

Certain assumptions concerning the nature of the police-citizen conflict and behavior modification have been made prior to the task force proposal to initiate an action review panel. First, all policemen are not mean and brutal to the public; however, some policemen have greater difficulties in resolving stress situations. These difficulties may lie in the myths and expectations concerning police action, a lack of knowledge concerning better alternatives in a situation or the unconscious attitudes the officer may feel towards certain types of individuals.

Second, most policemen desire a peaceful and workable solution to a problem involving stress and conflict. However, much consideration is given to what one's fellow officers may think. Unfortunately, this consideration is often an error and is propagated by the myth "a good cop is a mean and tough cop."

Third, peer group influence is often more important to the patrolman than the attitudes of his supervisors or commanders.

Fourth, the punitive-orientation of traditional police disciplinary procedures, coupled with public hostility in performing police functions and an interdependence of field personnel in dangerous situations have developed walls of secrecy between field personnel, their command and civilian complaint agencies. In addition, field officers will not openly express their disapproval of actions by fellow policemen. The existence of these barriers preclude open identification and resolution of problems in the patrol force.

Fifth, it is extremely difficult, if not impossible, to change individual's attitudes. Behavior modification is a more appropriate goal for the project.

Sixth, behavior modification can only be achieved when the subject plays an active role in the problem analysis and accepts the legitimacy of the "treatment plan."

Seventh, if true professionalism is to develop in the police field, one of the things that must be accomplished is the establishment of a sense of duty to and for one's colleagues and an autonomous mechanism to review their performance.

OBJECTIVES OF THE PROJECT

The action review panel exists for one purpose, that is simply, to help the officer arrive at the best alternative of action in a stress situation. Officers will be asked to sit before a panel of his peers to jointly look at his records, reports and problems when it appears that his well-being is being threatened by his behavior. The program should benefit the officer in the street and his superiors. If behavior has been affected positively, the officer's actions and performance on the job will be improved, thus making his job more secure and less strenuous. Improved ability in resolving conflicts should decrease physical attacks on his person. Few complaints should be lodged against the officer. And the self-image of the police officer should be heightened.

It is anticipated therefore, that the project will:

1. reduce the number of complaints filed against police officers;
2. reduce the number of assaults on police personnel;
3. reduce the number of police-citizen encounters that require an officer to use physical force or that result in verbal confrontation;
4. increase an officer's knowledge of alternatives to be employed in stress situations, thereby resulting in more effective and appropriate problem resolution;
5. increase the patrolman's self-esteem and job satisfaction;
6. explore the feasibility of utilizing the action review process at supervisory levels;
7. explore the value of the action review process as a means of affecting improved recruit socialization by providing a better understanding of peer expectations, by establishing a forum in which the new officer can discuss personal problems encountered with police role conflicts and the working environment, and by exposure of the young recruit to a wider range of experienced officers.

PROJECT METHGDOLOGY

As mentioned above, officers will be requested to sit with the panels of their peers to discuss their records, reports and problems in an effort to seek alternative courses of action when it appears that a continuation of certain behavior poses a threat to the officer's well-being. That threat may appear in such forms as assaults on or complaints against the officer, resisting arrest, civil suits, criminal prosecution or civil rights action, suspension or termination of employment.

No fixed formula will be utilized to identify potential interviewees. Instead, a number of sources of information will be employed. An officer may be asked to meet with the action review panel:

1. if an officer has three resisting arrests (Form 100) on file in the Internal Affairs Unit within a one year period;
2. if an officer has three complaints lodged against him in a one year period;
3. if an officer's commanding officer, sergeant or co-worker has volunteered information to the project director that would indicate the officer is developing a

behavioral trend toward violent or aggressive attitudes in performing his duties, which if not corrected, could lead to formal complaints;

4. if the officer is involved in a situation which is considered severe or receives a great deal of notoriety involving violence or violation of the code of ethics. (In cases such as these, it is felt that the project director should review all information available, and then make a determination as to whether the action review program could be of possible benefit to the officer.);

5. if an officer requests the opportunity to meet with the panel, recognizing a need for self-improvement.

In the panel discussions, an attempt will be made to delve into the reports, records, or other information that reflects the nature of the behavior in question. The implications for continuation of that behavior will be considered, patterns, if present, will be identified and alternative responses in each case will be considered. The conclusions of the panel may not necessarily be critical. Where there is no doubt that the action taken by an officer was the best possible at that time, the officer will be supported and encouraged.

Attendance at the action review panels will be restricted to patrolmen. No written transcripts or recordings of the meetings will be made. The basis of the entire program is the knowledge that each officer will be able to discuss matters in a completely confidential surrounding. The most important single aspect of the success of the project is the security of the information gained in the panel. It is imperative, therefore, that the information obtained be available to the panel director only.

The project director will have access to all information including allegations filed with the office of Citizen Complaints and Internal Affairs Investigations, in order to prepare the information necessary to conduct a panel meeting. The project director will have the sole responsibility for information collection, the reproduction of information necessary for panel members and for securing the confidential information at the end of a review.

Due to the importance of the security of information obtained in the panel, the department will implement procedures and rules pertaining to solicitation and divulgence of confidential material. In any case where it is found that information has been divulged, it will be the function of the project director to bring the facts to the attention of the Chief of Police for consideration of disciplinary action.

In addition to securing the necessary information for the conduct of the panel and reporting to the Chief of Police any violation related to the divulgence of information, the project director, a patrolman, will maintain a profile of each officer in a division in an effort to identify emerging patterns. The project director will be notified immediately by the office of Citizen Complaints and the Internal Affairs Unit of any complaint lodged against a member of the Northeast Patrol Division. The action review process, however, will not be initiated until the Internal Affairs investigation has been completed. When the project director has determined that a panel is necessary, it will be his responsibility to schedule the sessions and notify all participants. In relation to the latter, he will also be responsible to appropriately match the panel members to the individual case.

The action review process is not a staff function of the staff unit. The program must maintain the integrity in the idea that it is for the benefit of street patrolmen and is conducted by patrolmen. For this reason, the panels will be conducted away from headquarters in the conference room of the Northeast Patrol Division Task Force office.

For the same reason, the selection of the project director is critical. The task force established the following qualifications for the project director:

1. Extensive and present field experience in patrol;
2. Credibility with other patrolmen;
3. Experienced in the complaint process as a result of past experience and behavior;
4. Familiar with the action review concept and process.

A project director has subsequently been chosen.

The initial action review panel has been selected. The members chosen for that panel were recognized opinion leaders of each of the shifts and met the first three criteria stated for the project director. For the first panel, it was also felt it was

necessary to have individuals who supported, in principle, the concept of the action review panel.

The initial panel will consist of seven members, the project director and two representatives of each shift. Each panel member will serve as an interviewee during the course of the training session in which Oakland police officers and psychologists consultant will serve as trainers. Intensive training of the panel will be conducted during the month of June. It is anticipated, that the panel will as a unit conduct approximately ten interviews. After that point, officers who have been interviewed will be used to fill some of the panel slots.

TENTATIVE PROJECT EVALUATION

Evaluation design assistance has not yet been made available to the Northeast Patrol Task Force. The paragraphs that follow, therefore, reflect tentative thoughts on project evaluation. The nature of the problem under focus and the process to be used by the action review panels set significant constraints on evaluation. It can be assumed that an extended period of time in excess of one year will probably be required to get measurable results back on the panel's affects. Also, because non-patrol personnel will not be permitted access to the panel sittings and because transcripts and recordings will not be maintained, any effort to analyze the patterns of interaction in the panels must remain the responsibility of patrol personnel, particularly the project director. This will mandate specialized training for that individual in small group process and transactional analysis.

Because the integrity of the project rests so heavily on confidentiality, the identity of the officers interviewed will not be made known to the evaluators. Any efforts to statistically track the subsequent behavior of officers interviewed must rely upon the project director for the data collection. As with the analysis of the panel interviews, the evaluator will be required to rely upon non-identifiable aggregate information provided by the project director.

It is presently thought that evaluation components might include the following:

1. The establishment of a comparable control group of officers in one of the other two field divisions, this would permit the separation of the precise impact of the panel sessions from the effects of the natural maturation process on the officer's behavior. The use of this approach, however, would require that significant consideration be given to the differences in background variables, such as command, demography, etc.

2. If the panel process is utilized for recruit socialization, a similar control group could be established in another division, or a random selection of subjects could be drawn from the substantial number of new recruits of the Northeast Patrol Division.

Measurement of changes to be utilized in conjunction with these control groups could include an analysis of citizen complaints, departmentally initiated complaints, an analysis of resisting arrests and hindering arrests, supervisory ratings, and perceived job satisfaction. A consumer satisfaction survey of individuals who had contact with police personnel as a result of called for services might be randomly drawn on a before and after, or an experimental and control group basis to identify citizen perceptions of the quality of service in such encounters.

An alternative technique that might be utilized in evaluation would be the delivery of a critical incident questionnaire to the Northeast Patrol Division personnel and the command staff of the department, a random sample of the two remaining patrol divisions. The critical incident analysis would serve the dual purpose of identifying incongruities between command and field perception with regard to actions and stress situations, and provide a mechanism to identify a wide range of alternatives in handling stress situations. In addition, the critical incident data would serve as a baseline against which increases in the knowledge of alternatives or changes in opinions as to how stress situations should be handled might be measured for Northeast Patrol Division personnel in general and panel subjects and participants, in particular. These shifts could be compared with personnel in the other two patrol divisions.

Northeast patrol division

Implementation project duration June 1, 1972 to June 30, 1973:	
Consultant and Control Services:	
Violence prevention consultants (2 Oakland, California police officers), 8 days at $75	$600
Process training and on-going consultation (psychologist/psychiatrist), 10 days at $150	1,500
Consultant travel and related expenses:	
Airfare 2 at $220	440
Lodging and meals (3 days at $45)	360
Local travel	100
Consultant total	3,000
Office and administrative expenses: [1]	
Office space (13 months at $200 per month)	2,600
Furniture	2,100
Telephone (13 months at $50)	650
Office supplies (tape recorder, tapes, publications, et cetera)	1,500
Office and administrative expense total	6,850
Implementation total	9,850
Evaluation (the evaluation design for this project has not been established. However, as presently conceived, the evaluation will rest heavily on the project director and already existent police data cost: therefore, should include evaluation design assistance, training of police personnel as evaluators and statistical analysis)	([2])
Project planning (June 1, 1972 to Aug. 31, 1972):	
Consultant and contract services:	
Problem Identification and Design (Larry Sherman), 20 days at $75	1,500
Travel and related expenses 10 airfares at $160	1,600
Food and lodging 20 days at $45	900
Consultant total	4,000
Task force travel:	
Field visits to other cities (airfares 4 at $150)	600
Food and lodging (16 days at $45)	720

CENTRAL PATROL DIVISION: INTERACTIVE PATROL PROJECT

The Central Patrol Division encompasses Kansas City's central business district and low income residential areas containing a significant portion of the city's minority group population. The quality of the relationship between the Kansas City Police Department and community residents has remained the focal point of the division's task force efforts. Concern for that relationship stemmed from several observations. First, police personnel working in the field frequently encountered overt hostility even when performing police functions of a service nature. Second, citizens living in portions of the community appeared apprehensive about dealing with the police even though they lived in fear of criminal elements. Pervading fear affected the quality of life in the entire neighborhood. It

tended to disrupt patterns of communication and organization that would foster greater community cohesiveness and the subsequent resolution of many problems facing the neighborhood. That fear or reluctance to deal with the police affects both citizen's willingness to report suspicious events and to follow-up criminal occurrences with testimony or complaints.

To study this problem more fully, the Central Patrol Division Task Force focused its planning activities on a small area in the division. That area has had the third highest crime rate in the city and contained a myriad of social problems including housing, welfare, health and transportation. The residents were primarily young, black, low income and highly transient. An area with similar characteristics was identified and set aside as a control area in anticipation of the subsequent needs of program evaluation.

The first program design took on the form of a neighborhood-oriented police unit that sought to provide follow-up to called-for-services and assistance to community groups in resolving neighborhood problems. It was hoped that the follow-up would improve citizen satisfaction with police service as well as make more effective use of referrals, bring to bear community resources in meeting services needs and interrupt continuing patterns of conflict such as those between landlord and tenant or between husband and wife. Initially, it was envisioned that a sufficiently large number of men would be infused into a small area, thereby permitting sufficient time for patrol follow-up as well as unstructured contact with neighborhood residents. These contacts were to be made by patrol officers on walking beats and through their attendance at community meetings. These contacts, it was envisioned, would enable the officers to identify and assist community interests in resolving neighborhood concerns that could over time, develop into police problems. An example of such a problem in the test area is abandoned housing. Abandoned buildings are neighborhood eyesores as well as hazards for young children.They provide a base of operations for juvenile gangs planning crime, using drugs and fence stolen property. These buildings have been set on fire, and the responding police and firemen become the targets of rocks and assorted projectiles. By assisting the community in the rapid demolition of such buildings, for example, the Central Patrol Task Force hoped that the police might change their image in the community and also avert subsequent problems that might emerge at those locations. The nature of the assistance to be provided by the Interactive Patrol Unit, however, was not clearly defined.

Preliminary Program Development Activities

In pursuing design efforts, the task force sought to identify citizen attitudes toward the police. A random sample of citizens in the test area were interviewed. Their responses proved startling to task force personnel. A significant majority of the respondents in an area, that was viewed as hostile by the police, reported a high regard and respect for the Kansas City Police Department. At the same time, the majority expressed the opinion that they were living in what they regarded to be a relatively safe area.

Paralleling the survey work, task force members studied several other human service delivery service systems. They interviewed persons working in community service agencies and outlined a list of seventy-five social problems that the agency personnel regarded as significant in the target area. To become sensitized to community perspectives, one task force member lived with a group of black parolees for three days in the ghetto of another mid-western city. The survey results, the review of other service delivery systems, and the experience of the task force member in the ghetto led to several additional but significant conclusions. First, there was little congruence between the police and community perspectives about an area, its problems or potentially remedial solutions. This lack of congruence was the greatest obstacle to effective police-community relations. It is the primary cause of apprehensiveness on both sides when confronting one another. Second, the mood of the community was such that it was likely to reject any program in which it has not had a hand in planning or designing, regardless of its "rightness."

PHASE I PROGRAM ACTIVITIES

Subsequent task force deliberations resulted in an action program design that is an experiment in proactive planning. It proposes to take program planning from division headquarters to a task force office in the community. It seeks to significantly involve community residents in problem definitions and patrol strategy development. If successful, the program will yield a fully documented

process for designing and introducing neighborhood oriented policing programs into other areas.

As a first step in the project, the task force personnel will meet as a panel with line staff from service agencies working within the test area. These panels will serve the two-fold purpose of defining cultural characteristics of the test area and of narrowing down the list of social problems to those considered most pervasive and most critical. The former information on culture will be reviewed by task force members and a reference manual on community culture will be prepared.

The refined problem listing will be used to construct an open-ended survey instrument that will be delivered simultaneously to police personnel and to community residents. That instrument will focus on a limited number of problems, thereby permitting the respondent the opportunity for indepth responses. The responses will be analyzed to determine both the frequency and intensity with which specific concerns are expressed.

As noted above, the test area residents were surveyed concerning their attitudes toward the police. A modified version of the same survey instrument will be delivered to division personnel to identify both the police view of the community and their perceptions of the police image as held by the citizens.

Police and citizen respondents, who are both representative of the points of view expressed, will be asked to meet in small, focused group panels to discuss their replies in greater detail. Police and community residents will sit together in the panels. They will be chaired by a moderator who is experienced in focused group discussions. In all, it is anticipated that there will be a minimum of five such panels on the subject of police image in the community. On the neighborhood problem analysis, it is anticipated that there will be a minimum of ten such panels, each one focused on a specific topic problem.

Task force members will monitor all panel sessions. As the result of the discussions, they will prepare reports on the police image and neighborhood problems. These reports, coupled with crime and called-for-service statistics for the test area will become the basis upon which specific operational strategies will be developed. The task force will prepare a preliminary patrol design. Panels will be reconstituted from the individuals who had participated in the preceding sessions. Again, police and community residents will be mixed and the sessions will be chaired by the moderator. They will review the proposed patrol strategy. Aspects of the program will be revised or eliminated in accord with the panel responses. Subsequently, a detailed program evaluation design will be prepared.

Through this joint planning program implementation model, it is anticipated that the task force will have involved 50 police officers and 100 test area residents in the development of the new patrol strategy. If these collaborative efforts have been successful, the program should be embraced by the field personnel, and a base of community support should help pave the way for full-scale implementation. If community collaboration in planning proves viable, further community involvement will be sought for the training of the Interactive Patrol Unit personnel. In addition, the interactive planning process will hopefully sensitize the community to the complexity of the police function.

To date, consultant assistance to the task force has been provided by Bart Reiner with MRI assistance on evaluation issues. Reiner and Don Heiman, the MRI representative, have established close working relationships with task force personnel. Heiman has provided valuable structure to task force planning. Intensive short term technical assistance is required during the first phase of the project. MRI will, therefore, assume the role of implementation consultant in accord with the proposed budget.

SUMMARY

The Central Patrol Task Force proposes to undertake a proactive planning process that will actively involve neighborhood residents and a significant number of division personnel in patrol strategy development. The process, if successful, will generate a receptive environment for the introduction of a neighborhood-oriented policing program as well as a documented process for developing and introducing similar programs in other areas.

Central patrol division: interactive patrol (Nov. 15, 1972–June 30, 1973)

Personnel, Secretary:	
7 months at $600	$4,200
Fringe benefits 15 percent	630
Total personnel	4,830
Contract services, Midwest Research Institute (see attached breakdown)	25,600
Consultants:	
Program design consultants (Bart Reiner) 10 days at $175	1,750
Moderator (40 days at $100)	4,000
Consultant total	5,750
Travel, consultant travel and related expenses (10 days at $120)	1,200
Space, office space (7 months at $400)	2,800
Supplies	750
Equipment, office furniture	1,500
Other:	
Telephone	700
Reproduction	450
Graphics	200
Publications	220
Petty Cash	1,000
Total other	2,570
Project total	45,000

TABLE I.—PROPOSED CENTRAL TASK FORCE MRI BUDGET

Expense category	Explanation	Survey budget	Program budget	Total
Labor and overhead:				
Project coordinator	1,134 hr	$2,256.80	$13,738.24	$15,995.04
Research assistant	880 hr		8,964.50	8,964.50
Survey assistants	232 hr	2,363.36		2,363.36
Total direct labor	2,246 hr	4,620.16	22,702.74	27,322.90
Printing expenses:				
Secondary data report	50 pages; 25 copies		100.00	100.00
Primary data report	do		100.00	100.00
Preprogram report	do		100.00	100.00
Final program report	do		100.00	100.00
Total printing costs			400.00	400.00
Miscellaneous:				
Supplies		(1)	(1)	(1)
Xeroxing	10 cents per page	(1)	[2] 100.00	[2] 100.00
Graphics	$3 per hour	(1)	(1)	(1)
Travel	At cost		10,050.00	1,050.00

[2] Weighted fee percentage does not apply.

Kansas City, Missouri Police Department Sky Alert

SKY ALERT (Aerial Law Enforcement Response Team) is one of Kansas City's newest crime fighting efforts. SKY ALERT utilizes six Hughes Model 300 helicopters. Each helicopter is equipped with high intensity flood lights that generate up to 1.2 million candle power in a beam that will light up the darkest

street or alley. The helicopters are aloft, weather permitting, throughout the day or night, seven days a week. Kansas City is a pioneer in the night use of helicopters for routine patrol.

SKY ALERT is a versatile support tool to ground officers. Yearly helicopter officers respond to thousands of incidents, assists in arrests, detect and report fires, locate occupied stolen automobiles (resulting often in arrests) and make water rescues. The helicopter is unparalleled as an observation platform; rooftops, industrial grounds, railyards and parks are exposed to aerial scrutiny (34,805 buildings searched in 1972 alone).

SKY ALERT provides district patrol an extra dimension and increased effectiveness (5,550 flight hours of crime prevention patrol during 1972). Helicopter officers cover far more territory, observe activity invisible to ground units and easily overtake fleeing vehicles (74 times in one year). As a ground/aerial team, helicopters direct ground units to the exact location of activity.

SKY ALERT increases officer security. With rapid response, the presence of a police helicopter overhead acts as a distinct and positive deterrent to the possible assault of ground officers by suspects (helicopters assisted in 1,738 car checks and 539 pedestrian checks during 1972). As a support vehicle, the helicopter has greatly increased the dimension of effective police work.

The majority of funds for the SKY ALERT team of six helicopters and the newly erected 71000 square foot heliport have been provided for by Federal grants. The heliport stands on a five acre site of Municipally owned land in eastern Kansas City. It provides hanger space for the six ships, office space for flight crews, an air-conditioned workshop for the air craft mechanics, as well as a parts storage area and a large locker room. The heliport also provides a unique venture for law enforcement agencies, as many agencies are required to utilize existing airport facilities

SKY ALERT flight plan preparation and subsequent evaluation is conducted by Kansas City's Crime and Traffic Analysis Unit. The most recent evaluation was prepared January 25, 1973, and provides the following comments regarding SKY ALERT effectiveness:

First, directed helicopter patrol, i.e., helicopter patrol which utilizes smaller patrol areas (D.P.A.'s) and specific time frames is more effective than random patrol. Further, helicopter patrol, when properly directed, is a valuable tool which may result in significant decreases in certain types of serious crime.

The following crimes were studied during the evaluation period and are believed to be the most preventable with the aid of helicopter patrol: Residence Burglary, Non-Residence Burglary: Auto Theft, Armed Robbery, Strong-Arm Robbery; and Larceny (Purse Snatch). Decreases were noted in all but two categories of the selected crimes. The two exceptions were auto theft and larceny (purse snatch).

An important point to note is that while the *total* known (or reported) crimes in Kansas City *decreased 10.6%* during the last six months of 1972 as compared to the same period in 1971, the known crimes in the *D.P.A.'s decreased 26.2%*.

Again, it is important to stress the fact that much is to be learned about helicopter patrol and its effects on crime. It is felt with more time devoted to this study in the future, great strides can be made.

Kansas City, Missouri Police Department, Alert II

Law and order in Kansas City is maintained by the Kansas City, Missouri Police Department, the twenty-second largest police force in the United States. Comprised of approximately 1,700 personnel, the force yearly processes 110,000 arrests, investigates 40,000 reported offenses, responds to and records 26,000 vehicle accidents and answers 405,000 calls for services. The Communications Center, operating on seven radio frequencies, originates or responds to eleven million radio transmissions per year, an average of one transmission every 2.7 seconds.

The urgent need to process information with precision and rapidity influenced the selection of the computer telecommunications system. The computer system commenced operations in 1968 to meet the information needs of the officer in the field.

The system was given the acronym "ALERT" (Automated Law Enforcement Response Team). The computer functions as an invaluable aid to the officer in the field, and computer technicians adjust their work load to the needs of the

police operations system. The computer system itself is said to be a "Real Time" system because the information files reflect "real life" or constant, up-to-date status of wanted persons, stolen vehicles and abstract criminal histories.

ALERT serves all regional area law enforcement agencies and those civil agencies involved in the criminal justice process. A total of forty-seven agencies are interfaced with ALERT including: Twenty-six police departments, six county sheriffs, the Kansas and Missouri Highway Patrols, the Kansas City Municipal Court, the Jackson County Prosecuting Attorney, the Jackson County Juvenile Court, the Kansas City Parole Office, the Kansas City Prosecutor's Office, the FBI, the Federal Postal Inspector, the Law Enforcement branch of Internal Revenue and the Missouri State Patrol Office. At present, 115 data communications terminals are interfaced into the police computer system.

The police computer is interfaced with MULES (Missouri Uniform Law Enforcement System) and with FBI Computer in Washington. These interface systems provide law enforcement agencies in the Kansas City region with relay services to the state and national files concerning all nationally known felonies of wanted persons, stolen vehicles, stolen property, stocks and bonds. An average of 5,000 communications are exchanged between the Kansas City police computer and the FBI computer every twenty-four hours.

Utilizing the Law Enforcement Manpower Resource Allocation System (LEMRAS), the department is improving the effectiveness of current police resources by concentrating the available forces throughout the 316 square miles of Kansas City. The LEMRAS System has shown that the greatest need for responding to "call for services" exists between 11:00 p.m. Friday night and 1:00 a.m. Saturday morning. Therefore, approximately 65 police units are totally committed to responding to "call for services" with an average of twenty-four minutes spent on each call. Studies of calls for services predicted by the LEMRAS System compared with actual occurrences indicate a 95 percent accuracy rate by the computerized system.

Kansas City implemented a computerized Police Planning System with the acronym of "COPPS". The system is capable of projecting resource requirements for up to 10 years in advance. The system allows the department to take a "indepth view" of future resource requirements measured against projected new or revised programs. COPPS is modern day management technique to meet expected change, produce desired change and to prevent undesired change.

In January, 1972, the Computer System was renamed ALERT II to denote the involvement of the system into criminal justice operations. We have identified the following 48 specific areas where the computer is used in effective support of the criminal justice process:

1. Consolidation of all active area criminal warrants/wants into one regional criminal activity data bank with the capability of retrieving all facets of a case history.

2. Cross indexing the criminal data bank for access by: (a) subject's name, (b) alias, (c) moniker or nickname, (d) vehicle license number, (e) vehicle identification number (or arrest/criminal identification number).

3. Response within ten seconds of information needs of the officer in the field.

4. Provision of information to district officers and intelligence officers on movements of organized crime subjects.

5. Provision of follow-up information to the local parole officers on persons interviewed by the district officers and identified by the computer to be in parole status.

6. Production of reports which reflect the identity of selected suspects by fingerprint classification.

7. Provision of statistical data of high vehicle accident areas so that commanders may realign patrol forces to increase enforcement in high accident areas.

8. Preparation of a list of wanted persons by residence address within beat for the district officer.

9. Provision of automated abstract criminal records for the district officer's informational use and investigative purposes.

10. Provision of summaries of investigator's work by case, by category of work within cases, etc.

11. Development and provision of current payroll budgetary information and projected cost of specific projects to the police administrator.

12. Provision of the capability to search computerized files by "method of operation" or "method of commission of a crime incident" in an effort to identify likely suspects based on previously established criminal patterns.

13. The simulation of a new police programs and accurate determination of the cost factors and resource requirements far as ten years in advance through a Computerized Police Planning System (COPPS).

14. Daily recording of crime indicies and reporting of these indicies to each Patrol Division Commander.

15. Time reporting and analysis of specialists' work levels in the Crime Laboratory Center.

16. Prediction with 95 percent accuracy of police "call for services" workload within each of the 620 "police reporting areas."

17. Provision of computerized access to the civil index of all accidents, traffic/parking tickets and offenses.

18. Calculation of uniform crime statistics for transmission to the FBI.

19. Computation of statistical information related to the National Safety Council Accident System.

20. On-line access to vehicle license registration and drivers license history for the state of Missouri.

21. Transmission of messages to ALERT, MULES, and national LETS message switching systems.

22. Access to national wanted files maintained in the National Crime Information Center at FBI headquarters.

23. Retrieval of FBI rap sheet summaries from the FBI computer through the ALERT System.

24. Provision of a daily crime summary report and daily clearance summary report which allows patrol officers the opportunity to evaluate crime trends and police effectiveness on a daily basis.

25. On-line data entry of all offense, arrests, accident traffic and dispatch statistics as well as on-line payroll entry, handling, punching and tabulating of statistics.

26. Provision for storing of criminal identification number, FBI number and fingerprint classification as additional identifiers and capability to search based on fingerprint classification codes.

27. Traffic accident information which allows for designation of locations which need selective enforcement and the evaluation of selective enforcement patrol operations.

28. Calculation of crime information which allows for analysis of related problems within the city.

29. Production of robbery evaluation information which is utilized to prepare monthly reports for the Board of Police Commissioners.

30. Provision of answers to specialized requests for historical data related to specific crimes and offenses by location.

31. On-line entry of cases filed by the prosecutor in Magistrate and Circuit Court.

32. Preparation and printing of Magistrate Court dockets and witness notification cards.

33. On-line retrieval of prosecutor information by name, prosecutor's case number, Magistrate Court case number, and Circuit Court case number.

34. Printing a report of dispositions made by the county prosecutor.

35. Grading analysis of the Sergeants Examination.

36. Preparation of a court journal for Municipal Court. (This allows for the orderly handling of traffic cases docketed in the Municipal Court).

37. Automatic preparation of warrants for arrest of citizens when they fail to appear in court as a result of on-line entry of cases when failure to report in court is involved.

38. On-line recording of dispositions from cases tried in the Municipal Court.

39. Production of a daily report for the Alcoholic Safety Action Program (ASAP) cases in Municipal Court, the prosecutor's office and the probation department on cases involving drunk driving charges.

40. Production of a daily report on pre-sentence information usually given to the judges. (The report reflects information from police, probation, and Missouri Director of Revenue files.)

41. Production of a listing produced for Juvenile Court of all referrals from the Kansas City Missouri Police Department Juvenile Unit.

42. Printing of arraignments for Juvenile Court.

43. Preparation of a court docket for Juvenile Court.

44. Production of employee paychecks, payroll records to the city treasurer and withholding tax information to the State and Federal revenue offices.

45. Case report number accountability for the Kansas City Missouri Police Department.

46. Traffic ticket accountability to the police department and to the Municipal Court of Kansas City, Missouri.

47. Printing and dissemination of a report in license sequence of wanted vehicles for those police agencies who do not have access to computer terminals.

48. Production of "reminder notices to citizens on parking violations" after ten days of time have elapsed.

Invasion of privacy is a phrase often heard when people debate the issue of computers. It is a matter of grave concern. One that law enforcement is keenly aware of and which professional administrators have vowed would not be violated in the implementation of this new technology. All matters programmed into the computer must be fully documented and all questions of legitimacy are resolved in favor of the individual, prior to entry.

Responsiveness to the public it serves has been the goal of police agencies and computer technology increases that possibility to a degree that challenges the imagination. Rapid response to calls for service is facilitated by resource allocation systems utilizing the vast capabilities of the computer for calculating variables in the environment. Service and responsiveness were the primary considerations in the design of ALERT, and it is to this end the system is dedicated.

KANSAS CITY, MISSOURI, POLICE DEPARTMENT, ALERT III

During the first six months of 1972, the department conducted extensive field tests of two brands of mobile field terminals. In an effort to extend the capabilities of the ALERT II computer system to the field officers, ALERT III is being designed. ALERT III consists of mobile computer terminals to be placed in each of the department's field units, providing each officer direct on-line entry and retrieval capabilities.

Following are the projected uses of the ALERT III mobile terminals as set forth in a funding proposal:

I. Direct-Entry Reporting
   - A. Offense Reports
   - B. Field Interrogation
   - C. Disturbance History Data
   - D. Activity Reporting

II. Criminal Subject Information
   - A. Criminal Record
   - B. Suspect Generation System
     1. Description File
     2. M. O. File
     3. Moniker File
     4. Field Interrogation System
        - *a.* Name
        - *b.* Description
        - *c.* Vehicle
   - C. Informant Contacts
   - D. Street-Crime Intelligence
     1. Suspect Tracking
     2. Associate Tracking
   - E. 10–31 Backgrounds

III. Fluid Pre-Positioning System

IV. Referral System
   - A. Problem/Resource Query
   - B. Referral Qualifications (Case Type, Income, etc.)
   - C. Contact Persons
   - D. Service Backlog

V. Neighborhood Profile/Activity Planning Model
   - A. Cultural Demographic Information
   - B. Address Listings
   - C. Community Resources
     1. Neighborhood Organizations
     2. Public Services (Schools, Welfare, etc.)
     3. Referral Agencies
     4. Community Leaders/Contacts

V. Neighborhood Profile/Activity Planning Model—Continued
  D. Police Activity
    1. Crime Patterns
    2. Called for Service Patterns
    3. Field Interrogation History
    4. Police Hazards/Special Security
    5. Special Police & Security Systems
    6. Police Characters/Associates
    7. Informant Contacts
    8. Area Objectives
  E. Floor Plan Layouts
VI. Field Reference System
  A. Legal Reference
  B. Policy Reference
  C. Procedure Reference
  D. Case Status
VII. Disturbance Intervention Profile
  A. Location Histories
    1. Prior Disturbances/Police Actions
    2. Probable Disturbance Cause
    3. Probable Participants
  B. Disturbance Prone Individuals
    1. Physical Description
    2. Social History Profile
    3. "Trigger" Words/Subject
    4. Prior Police Actions (Arrest/Referrals)
VIII. Court Scheduling System
  A. Docketing
  B. Continuances/Status Review
  C. Notification
IX. Emergency Response System
  A. Operation Barrier Assignments (By Elapsed Time)
  B. Special Operations Deployment Configurations
  C. Emergency Route Selection
    1. In-Routes (Crimes-in-Progress)
    2. Transport Routes
      a. Best Routes (Time of Day, Accidents)
      b. Dangerous Intersections
  D. Traffic Light Control
X. Police Resources System
  A. Equipment Location
  B. Vehicle Maintenance System
  C. Skills Inventory

SYSTEM SPINOFFS

I. Program Development.
  A. Crime Specific Planning
  B. Problem Specific Planning
  C. Area Planning
  D. Personnel Evaluation—Training and Development—Personnel Resource Identification
II. Interagency Transaction Data
  A. Criminal Justice System
  B. Governmental Services
  C. Private Agencies
III. Computerized Criminal Investigation
IV. Evaluation
  A. Reporting Data
  B. Survey Research Data

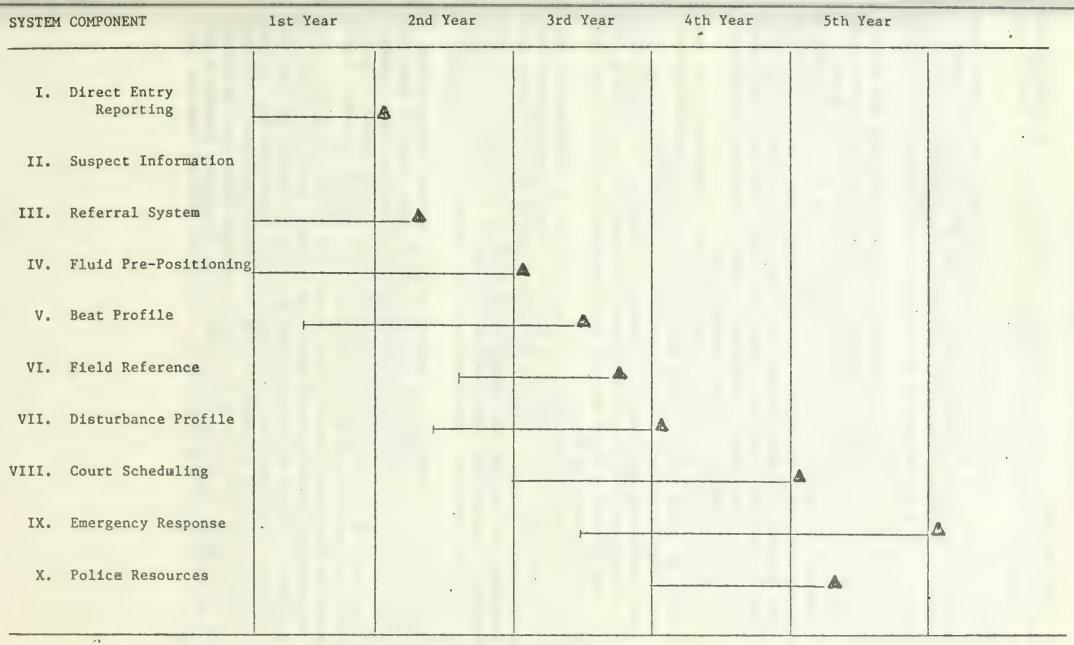
V. Public Information/Education
VI. Resource Allocation
VII. Planning-Programming-Budgeting-System



ALERT III: DEVELOPMENT SCHEDULE

[Reprinted from Electronics, Dec. 6, 1971]

KANSAS CITY TO TEST DIGITAL PATROL-CAR LINKS—NEW IBM TELEPRINTER TO BE MATCHED AGAINST MOBILE TERMINAL IN COMPETITION FOR POLICE DATA CONTRACT

Looking to link its patrol cars with the giant National Crime Information Center (see p. 108), the Kansas City, Mo., police department will match a new and unannounced IBM teleprinter unit against a new digital mobile terminal built by tiny Kustom Electronics Inc., Chanute, Kansas, in tests beginning early next year. IBM will be paying its own way, while Kansas City is paying Kustom $90,000 for its system.

Waiting in the wings with its commercially available Digicomp 300 will be Sylvania Sociosystems division of Mountain View, Calif.—the third choice, principally because of the smallness of the Sylvania 32-character CRT display.

The size of the test hardware award to Kustom—a big one for law enforcement electronics—indicates not only that Kansas City is serious about becoming a leader in exploiting technology, but also that Kustom has a clear lead in the competition. Kansas City police officials won't confirm, as competitors will, that IBM makes the terminal slated for January 1972 trial. IBM won't talk either, citing the Justice Department's prohibition against discussing unannounced products under the company's antitrust consent decree.

Nevertheless, IBM's participation is a subject of open discussion in the marketplace and indicates the giant computer maker is seriously considering entry into the field of mobile terminals for law enforcement agencies.

No voice. "With capabilities of the device we're seeking, we'll probably stop using voice communications, except in emergency situations," a Kansas City police official explains. The department expects eventually to pay about $3,000 apiece for some 250 mobile units, and will have decided by July 1972 which company can do what needs to be done.

Kustom's synchronous phase-shift keyed system uses a 256-character Burroughs plasma display [*Electronics*, July 5, p. 36]. That avoids the potentially hazardous high-voltage and implosion problems plaguing CRT displays, says Charles E. Gillam, manager of the company's data communications division.

The purchase price includes six mobile terminals, and the computer interface and associated equipment that allows the officer in the car to access his data base directly; up to 200 additional mobile terminals can be added to the package for $3,200 per unit.

The system moves messages at 1,200-plus bits per second on top of the rf carrier, says Gillam, 224 characters at a time in a burst mode of less than one second. It also has a carrier sense that avoids breaking into voice transmissions, using a random retransmission technique. For security reasons, to avoid having hard copy in an unoccupied car, the system queues messages in the computer, to be retrieved when the patrolman returns, Gillam says.

Motorola, too. Meanwhile, Motorola Communications division in Schaumburg, Ill., is demonstrating its first system tied to the national data base. Patrolmen of Allen County, Ind., in 10 cars equipped with the company's VP–100 teleprinter unit speak their inquiries to the county's radio dispatcher, who punches the request into the IBM 360 regional data base, which can access state and Federal crime information centers. The system responds directly to the vehicle initiating the request, bypassing the dispatcher, via the central encoder of the printer system and a network operating on a frequency different from the voice system's.

SPECIAL OPERATIONS DIVISION TASK FORCE

Apprehension Oriented Patrol Deployment Project

INTRODUCTION

The Special Operations Division Task Force began in the Fall of 1971. Each squad of the Tactical Unit was involved by researching areas that they felt could help in reducing crime. This research resulted in the Apprehension Oriented Patrol Deployment Project. The project has three parts: the Criminal Information Center, Location Oriented Patrol, and Perpetrator Oriented Patrol.

This report will give the reader a description of each part of the project. A section of the report is devoted to the evaluation of the project and it will explain what is being evaluated.

CRIMINAL INFORMATION CENTER

The purpose of the Criminal Information Center is to collect, correlate, analyze, and disseminate information relative to crime and criminal activities in the Kansas City area. The Center was designed for use by the entire department and other agencies in the metropolitan area.

The Center began by identifying the most active Burglary and Robbery subjects. These subjects were identified by each of the three patrol divisions, the Investigations Division, and the Tactical Unit. A notebook was published that contained mug shots and the most current information available on the subjects. These notebooks were distributed within our department and other law enforcement agencies in the area. The notebook introduction requested that officers contact the center when they stopped, observed, or arrested any of the subjects in the book. The introduction also requested that officers forward any information that they had in regards to criminal subjects or criminal activities.

The C.I.C. also searched for other sources of current information. We started receiving copies of the Field Interview Card and filed them in such a manner that the information on the cards could be retrieved. While this system worked fairly well and the information was available on a twenty-four hour basis, it still was somewhat cumbersome. The Task Force worked with

the Computer Systems Division and the Administrative Analysis Unit and through collective efforts, a computerized Field Interview Reporting System has been designed. This system is not on line as yet, but it is expected that it will be operational within the next two weeks.

The Center maintains other files that contain information that we feel would be of help to field and investigative officers.

The C.I.C. is attempting to gather and make use of the criminal intelligence information that is available in the minds and notebooks of officers in the entire metropolitan area. If this source can be successfully tapped, the usefulness of the C.I.C. will be unlimited.

Graphs and tables of the inputs and requests handled by the Criminal Information Center are attached.

LOCATION ORIENTED PATROL

Location Oriented Patrol is defined as the assignment of areas, as determined by crime information analysis, with a view toward maximizing apprehensions.

The Tactical Unit squads receive their assignments from the Crime Analyst, who is a part of the Task Force Staff. The analyst reviews burglary and robbery reports daily. Assignments are made in areas that show some type of pattern in the offenses committed or where a large number of offenses are committed. The analyst prepares an assignment folder that contains the offenses, a breakdown on how and when the crimes are occurring, and the type of property that the victim is losing. The analyst also reviews the C.I.C. files and includes any suspect information available in the assignment folder.

The Location Patrol model has been hampered somewhat due to the unavailability of the computer. We had planned to use the computer a great deal more for developing areas to work and suspects.

An alarm system has also been developed for use by the Location squads. The system is designed to be monitored by mobile units and it is portable so it can be moved with the crime trends. The alarm system has encountered numerous problems. The first set of alarms have been tested several times and have

not met with our standards. We are continuing to work with Burstein-Applebee in an effort to eliminate the problems in the system so they can be deployed. It is difficult to say when the alarms will be ready to go in the field. We have more tests scheduled and we should be able to determine when they can be deployed based on these tests.

PERPETRATOR ORIENTED PATROL

Perpetrator Oriented Patrol is defined as the assignment of officers to high probability criminal suspects with a view toward apprehending such suspects in the commission of a crime or by gathering enough information about these subjects to make a case on crimes that they have committed in the past. This involves spot surveillances on known criminal subjects and the development of informants that have knowledge of the subjects and their activities.

This has been our most difficult patrol strategy to implement. There have been several problems that were not anticipated when establishing the model. Changes have been made from time to time in an effort to improve the strategy. One of the most significant changes made was freezing two squads on the model. The original plan called for rotating the squads on the strategy every two months. After six months of the experiment, the decision was made to freeze the squads on this assignment for the remaining six months. This was done in an effort to increase productivity of the squads. It usually took a squad two or three weeks to become accustomed to this type of patrol, which was a waste of time. We also lost productive time when a squad was nearing the end of their perpetrator assignment. It was determined during the first six months of the project that some

officers did not particularly care for working the perpetrator model.

This particular strategy is also the most difficult to evaluate. The squads are able to gather intelligence information that has been used by other elements of the department. It is difficult to measure the significance of this information unless it directly leads to an arrest.

EVALUATION

The following pages contain the hypotheses that are being tested in the Apprehension Oriented Patrol Deployment Project. The project has experienced numerous difficulties with the evaluation during the six months. A full time evaluator joined the staff in February to work exclusively with the project. This has solved most of the evaluation problems. A six month evaluation report is being prepared. There will be a delay in this report because most of the data will come from the computer. The project programmer has not had the opportunity to retrieve the information because of the Field Interview System.

Hypothesis #1-INTERCEPTION RATE:

A) Interception rates for the crimes of R & B will be higher for POP and LOP than for other div. _____

B) Interception rate for POP will be higher than LOP. _____

C) Both POP and LOP will result in increased interception rates compared to earlier time periods for the Tact Unit and these increases will be greater than those for other divisions. _____

D) Increase in interception rate will be greater for POP than LOP. _____

Information:

1) R & B arrests at or near the scene of the crime

Statistic:

1) Analysis of variance

Source:

TAC	Others
LOP	PROACTIVE PATROL

Statistics:

Hypothesis #5-COMPLAINTS

1) The POP and LOP stratagies will not produce an increase in citizen complaints against police officers compared to earlier time periods.

Information:

1) Average number of citizen complaints received by the personnel assigned to POP and LOP will be obtained from department sources. These will be compared to comparable data for the prior two years to ascertain the difference created by the institution of the two new programs.

Source:

1) TAC: LOP
POP

2) TAC: prior two years

Statistics:

Design #2-Perpetrator Oriented Patrol

Hypothesis #1-

Each form of surveillance will have an effect on the possibility of arrests but the effect of P.O.P. surveillance will be greater than that of patrol division observations.

Information:

Number of arrests of C.I.C. Subjects

Statistics:

Analysis of variance (on percentages)

Design #3

Hypothesis #1-

A lower average number of robberies and burglaries will be reported in the L.O.P. Beats than in the Control Beats.

Hypothesis #2-

As compared to 1970 and 1971, a greater decrease in the average number of robberies and burglaries reported will occur in the L.O.P. Beats than in the Control Beats.

Information:

Average number of robberies and burglaries in control and experimental areas.

Statistics:

Analysis of variance

Design #4-C.I.C.

Hypothesis #1-

The existence of the C.I.C. will result in an increase in arrests per crime reported.

Information:

1970-number of crimes for which an arrest is made.
1971-number of crimes for which an arrest is made.
1972-number of crimes for which an arrest is made.

Hypothesis #2-

The existence of the C.I.C. will result in an increase in "good" arrests.

Evaluation Procedure:

Good Arrest-

1) cases prosecuted/cases presented for prosecution.
2) convictions/cases prosecuted.

Supplemant to C.I.C. Evaluation:

1) Increase in usage over time measured by:

A) Number of inputs per month.
B) Number of requests per month.

2) Questionaire to those who make requests:

A) Was information helpful?
B) Would you use it again?

TOTAL NUMBER OF ARRESTS MADE OF C.I.C. SUBJECTS

Chairman PEPPER. We have been made aware of the increasing keenness of the police departments of this country. There was a time when some people referred to the policeman as a flat foot, and the word cop meant just a fellow that walked the beat. We have had presented splendid evidence this week of the keen intelligence being employed in many of the police departments of this country today. It is a good sign for the people who want to curb crime in this country.

My father was a sheriff and police chief and I am proud of what the police officers and law enforcement officers mean to this country.

As my able colleague indicated earlier, it is our hope we will be able to send copies of all of these hearings that we have on street crime, together with our recommendations, to every police department in the country, to every sheriff's office in the country, and to every attorney general in the country, in the hopes they will be of some value to all of those various law enforcement officials.

We thank all the people who appeared before the committee this week and hope—and believe—the contributions they have made will benefit us all in the fight against crime.

The hearing is adjourned until 10 a.m., Monday, April 16, 1973, when we will meet in room 311, Cannon House Office Building.

[Whereupon, at 12:25 p.m., the committee adjourned, to reconvene at 10 a.m., on Monday, April 16, in room 311, Cannon House Office Building.]

STREET CRIME IN AMERICA

(Corrections Approaches)

MONDAY, APRIL 16, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice at 10:20 a.m., in room 311, Cannon House Office Building, the Honorable Claude Pepper [chairman] presiding.

Present: Representatives Pepper, Mann, Wiggins, Winn, and Sandman.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; James McDonald, assistant counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

Today we are beginning 4 days of hearings on "Crime in the Streets—Reduction of Juvenile and Adult Recidivism Through the Use of New Correctional Approaches."

The history of correctional success in this country has been a dismal one. The President of the United States has recently characterized prisons as "colleges for crime." Certainly this is doubly true when we consider the history of juvenile correctional institutions.

Some of you may recall that we had some hearings on juvenile delinquency and correctional institutions for juveniles a year or two ago. We had, among others, Mr. James, who wrote a series of articles for the Christian Science Monitor. Later on this week, we will view a film prepared by Mr. James. In the course of his testimony, he stated that he wondered if it would not have been better for these young people who were sent to these State institutions for bad conduct not to have been incarcerated at all.

In other words, the effect of their being incarcerated in these institutions was more deleterious than it was advantageous.

These hearings will attempt to point out to the Congress and the country that there are correctional approaches which do offer promise and hope. We will have some outstanding and most imaginative authors of youth programs in the country appearing today and throughout this week.

We all know that a very substantial proportion of serious and violent crimes is committed by juveniles and young adults. We all know that without treatment, without correction, and without rehabilitation, these juveniles progress through careers of increasingly serious crime.

For the next 4 days we will be hearing from expert witnesses who will come to Washington, D.C., to describe programs which are working and which are demonstrating that juvenile recidivism can be decreased. For example, part of our hearing today will be devoted to testimony concerning the bold approach adopted by the State of Massachusetts to eliminate its traditional juvenile institutions. Massachusetts now places juvenile delinquents in small group homes and in community-based rehabilitation centers. A number of juveniles who have lived both in institutions and under the new system will offer firsthand testimony regarding this new approach.

We have the author of that very innovative and imaginative program here to be our first witness today.

During the remainder of the week, we will hear of other States which are attempting through innovative measures to stop crime careers before they can start. Finally, we will hear from the chairman and the executive director of the American Bar Association's Commission on Criminal Justice and Services. The chairman, former Gov. Richard J. Hughes of New Jersey, will describe the programs and policies of this commission in dealing with this most critical criminal justice problem.

We think these hearings will be extremely significant and that they will point out unequivocally that no progress can be made within the criminal justice system unless and until we solve the longstanding problem of reducing the number of offenses committed by repeat offenders and by those who have already been incarcerated in our Nation's prisons and jails.

We heard a very valuable presentation here from the police department of the city of Dallas last week, in which they submitted an in-depth study of the number of people responsible for the crimes that were committed in that city over a certain period of time, which emphasizes the impression, for anyone who studies the system, that crime in general, at least most crime, is committed by a relatively few people, and if we can find out what to do with those relatively few people, we can make a very significant step forward in the solution of the crime problem.

I am encouraged by the hearings we held last week into police and community crime prevention programs.

These hearings have revealed that a relatively few people commit most of the violent and serious crimes, many of them who start their criminal careers in their teens.

We were told by Chief of Police Wilson the other day that, in his opinion, about two-thirds of all of the violent and serious crime was committed by males under the age of 28 years.

To reduce crime further, the police departments must have more money for more personnel, better trained personnel, and more research programs into the causes of crime and the character of those who commit crime.

But it is very clear that the police cannot do an effective job curbing crime without the cooperation of the prosecuting attorneys, courts—trial and appellate—and the correctional system. Beginning May 1, we will have prosecuting attorneys, trial court, and appellate court representatives to tell about the most innovative programs in those areas to be found in the country.

The beginning of the pipeline for the commission of crime is in the teenage groups, and new and innovative procedures must be employed in dealing with juvenile crime. Those are the subjects we will deal with in the hearings beginning today.

We are delighted, indeed, to welcome today Dr. Jerome Miller as our opening witness, a man who has been the leader in this innovative program you are going to hear about today. We are very proud to have Dr. Miller here.

Would you be good enough, Dr. Miller, to come to the witness table.

Dr. Miller is one of the foremost authorities in the United States on juvenile corrections and has played a very instrumental role in changing the course of juvenile corrections in the State of Massachusetts. He is now, as you know, residing in the State of Illinois, where he recently took a job as director of family services for the State of Illinois.

Dr. Miller, if you have an opening statement, will you please deliver that to the committee at this time?

PANEL OF EXPERTS IN THE JUVENILE CORRECTIONS FIELD: PAUL DeMURO, ASSISTANT COMMISSIONER OF AFTER CARE, STATE DEPARTMENT OF YOUTH SERVICES, BOSTON, MASS.; DR. JEROME G. MILLER, DIRECTOR, STATE DEPARTMENT OF CHILDREN AND FAMILY SERVICES, SPRINGFIELD, MASS.; PROF. LLOYD E. OHLIN, DIRECTOR, INSTITUTE ON CRIMINAL JUSTICE, HARVARD UNIVERSITY, CAMBRIDGE, MASS.

Statement of Jerome G. Miller

Dr. MILLER. I appreciate the opportunity to testify before this committee and to share with the committee some of our experiences from Massachusetts, and perhaps some of the possibilities for our approach having some applicability in other States of the Union.

I thought before discussing some of the specifics of what we tried to do and are doing in Massachusetts, I would give a few of my own biases, if you will, with reference to corrections and correctional reform and try to put in context, the moves that we made in Massachusetts.

It was our feeling that it is the history of correctional reform, in juvenile correctional reform as well as adult correctional reform, it really never happens in any substantive sense. Every 5 or 10 years you have a series of incidents, riots, escapes, stabbings, fires, whatever, that overflow into the community from one or another correctional facility, and then there is usually a call for reform and there is an infusion of funds into the system. But it seems if you look at the system 5 or 10 years after that call for reform, you find there is little of substantive change or reform that stays or remains. The system tends to slip back to what it was previous to the reform. In the more liberal States, you may get some new buildings out of the reform, or you may get a few new programs, but if you watch them they tend to stagnate or go downhill after a period of time.

I don't mean by that that there hasn't been progress in correctional reform within institutions, because there has. But I don't think that the progress has kept up with that of the society which surrounds

these institutions. It hasn't kept pace, and is therefore in many ways not as responsive to reform as one hopes a large system like this would be.

It is my own feeling that the problem in reforming the correctional system, and particularly the juvenile correctional system, is that it is institutionally based, that the juvenile correction system for the most part is based in large on fairly large institutions. It seems to me that many of these institutions, if not most, are quite impervious to change. They can devour any reform and any amount of money you can put into them, and over a period of time they tend to sustain themselves regardless of whether or not they are effective.

I think that this problem is a political one, really, rather than a professional or clinical one, because we are dealing in corrections, with systems which of their nature are quite undemocratic. Therefore, there is very little feedback from the clientele within the system over how those systems are run.

That, I think, leads to a sort of political situation that makes them quite difficult to change.

It seems that in many ways the juvenile correctional systems that we have, were really designed for other purposes than rehabilitation. I think that, manifestly, as we speak of them, we say they are there to rehabilitate, but I think they fulfill many latent functions for the society, and they deal out a fair amount of moral retribution and punishment.

One could survive indefinitely as a career commissioner or head of youth corrections if he preaches rehabilitation and gives punishment, provided he doesn't allow the punishment to be too widely known, so that people feel too guilty about it, and provided that he hires enough professional consultants to give a face of rehabilitation to the system.

In many ways, therefore, one purpose of the system is really to reassure people rather than to be effective, because if there is one thing we do know, it is that most of these large institutions for juveniles have been quite ineffective. In fact, it is my impression that not only are they ineffective, but that often they are actively harmful and endangering public safety.

We found in a small research study in our State, for instance, that we could cut the return rate of boys to the department within a 1-year period from 72 to 42 percent by cutting the stay in the institution from 9 months to 3 months. The longer they received the treatment the more likely they were to come back. The earlier they got in the system the more likely they were to come back on a more serious offense.

In many ways we have been providing through these institutions some false reassurance. And it is kind of a paradox that institutions are admirably suited to give such reassurance. You can go along as an administrator of a system such as this if you meet about three criteria, none of them related to what you should be doing. None of them related, at least, to the primary goals of the juvenile correctional system.

No. 1, you must stay within your budget; No. 2, you must keep your staff reasonably happy; and No. 3, you must avoid incidents which overflow into the community. All of these are good goals, but none

related to the stated purposes of these agencies, which are really to cut recidivism, to lower the repeater rate, to cut back on crime in the streets.

It would seem to me if you ran a hospital on the basis that your staff was happy; you were staying within your budget and had very few people jumping out of windows, or causing incidents in the community; but 60 to 80 percent of your patients got worse, or more ill, or died while they were with you, people would begin to question what the system is all about.

So the pressures on you as an administrator are really not pressures related to what your task should be as an administrator of a system such as this. The pressures don't come to you, really, from inmates or clients. They are captives, and in a sense they have very little say over how you run the system. They really have very little say. The administrator is not accountable, really, to the public, either, because the institutional settings isolate these problems from the community and from direct influences by the public.

Corrections is a system which is accountable only to itself, and I don't think that is a healthy sort of situation. If you make a person more dangerous while you have him with you, the person can't hold you accountable and the public won't hold you accountable, provided you maintain a large set of institutions.

Let me give an example of what I mean: Shortly after I arrived in Massachusetts we had a boy who had been in one of our maximum security institutions for, I believe, about 3 years, who was in the community and shot a policeman in Boston. I thought we would get a number of calls from the press and others asking something about our part in that, being that the boy had been with the department for 3 years. In fact, we didn't get any calls and hardly any mention was made of our department in the press.

I think the reason for this is the boy had been 3 years in a maximum security facility and in many ways we had "done our job," so to speak, and I think the implication is, he must have been something of a psychopathic individual and, despite our best efforts, he still got in serious trouble and shot someone.

Now, it seems to me that that is putting the thing backward. If that same boy had been in a community program for 3 weeks, or 6 weeks, or 2 months, or even a year, without having been in a large closed institution, I know well that the agency would have been held responsible for whatever shooting had occurred and we would have been questioned as to why this youngster was on the streets and why he was in this or that program.

It seems to me if he came to us, as he did, on something far less serious than shooting someone, was with us 3 years during one of the most formative parts of his life, and then left us and shot someone, it seems to me that is precisely the point at which the public and legislature should ask of correctional administrators, "What happened? What did you do? What made this person, after he had your treatment, go out and do this sort of thing?"

I don't suggest that the individual involved doesn't have some responsibility of his own—he certainly does in such an act—but I do suggest we have to begin to hold the correctional system accountable. I think it is much too easy and facile a thing for correctional adminis-

trators to say that these individuals have been a lifetime in forming and we can't unform that in a year or 2 or 3, or 6 or 8 months. There may be some truth to that, but it is also an easy way out of the situation. Given the research in the field to show what happens in these institutions generally, I think it deceives the public with reference to what we are all about.

Institutions are at the heart of the problem, and it isn't because they are run by sadists or people who want to hurt others; it is really because they are large bureaucracies that are incapable of being completely responsive to the people they are serving, and more importantly, they cannot long sustain whatever responsiveness they develop.

Now, I think you can make an institution useful. I think you can make an institution responsive. That is not the problem. If one wants to put resources and money into them and swim up river a great deal of the time, one can make an institution responsive.

The problem, however, is that it is virtually impossible to sustain change in institutions. It is virtually impossible to ensure that the changes you set up which make an institution human and effective, will continue. What you generally see is a charismatic person running an institution who is running a very good institution, and when he leaves it tends to disintegrate.

I think this is part of the institutional process, really. It is related to institutions for the mentally ill, mentally retarded, delinquent, or the criminal. It is a whole problem around large institutions. Large institutions really, as a treatment modality, as a method of treatment, are uniquely American inventions and they have only been with us a bit more than 140 years or so. I would recommend to the staff of the committee a book by David Rothman, written last year, called "The Discovery of the Asylum," in which he outlines something of the history of these institutions.

Institutions fulfill their own prophecies. They offer themselves as solutions to the problems they have created, and the paradox is that they are that solution in the short run. Use of solitary, violence, and isolation certainly control violent prisoners, but very often that violence in itself is an effect of being treated the way institutions treat people. It can be greatly attributed to the lack of responsiveness of the institutional setting.

We decided in Massachusetts, on this basis, that we would be misusing our mandate to reform that system if we tried again simply to reform the institutions. We had to make a choice, with limited resources, as to whether we were going to make those institutions useful or effective, or develop alternative methods. Our institutions were among the worst, at that time, in the Nation.

The Children's Bureau of HEW listed Massachusetts institutions at that time as 48th of the 50 States in 1966. We had to make a decision as to whether we would put our resources into making those institutions good institutions—and that could be done—or whether we would try to make those institutions as human and good as we could, but simultaneously move, as quickly as we could, to find alternatives to the institutions. We took the latter stance.

It seems to me that if we had put all of our inner resources into reforming institutions they could have been made quite good and they could have helped cut our recidivism. They could have been human

places, they could have been effective places. It seemed as well, however, that with the history of these places, you can't sustain that change. So we decided we would seek alternatives.

Our first year we tried to make the institutions as decent and human as we could. I am sure that the research that will come out of that, and it is being developed—I believe Professor Ohlin of Harvard University will be testifying later—will show to a degree that as we improved the level of the institutions, and we made them more effective, things were better with those youngsters in those institutions.

At the same time we felt we had to move away from them into alternatives in the community.

When you think of alternatives in the community and in the average State in this Union, think of what you are spending to keep a youngster in these training schools. One has a wide variety of alternatives one can speak to, if one can think of the money spent in institutions as being possibly available for other uses. To keep a youngster in an institution in Massachusetts, the last year we were in them, ran anywhere from $10,000 to $15,000 per person per year.

At present, in New York State, it is $18,000 to $21,000. In Connecticut it is over $25,000; in Rhode Island it is around $22,000; in Illinois, in one institution I am acquainted with, it is over $18,000.

That is a great deal of money to have available to treat someone who has a problem of delinquency. I submit if anyone in this room had a youngster who was in trouble and was given by the State between $200 and $300 a week to solve that problem, he would come up with something more original than a large training school. For what it costs to keep a youngster in a training school you can send him to the Phillips Exeter Academy, you could have him in individual analytic psychotherapy, give him a weekly allowance of between $25 and $50, plus full clothing allowance. You could send him to Europe in the summer, and when you bring him back still have a fair amount of money left over. That is what we are spending in a present system which generally is a failure and generally makes things worse rather than better.

If one thinks of it in terms of cost one has a great deal of leeway for options. I think that if the correctional system were held as accountable to our own economic system as other systems are, that it would become quite productive. If, indeed, it were a competitive system, if we did have to show that we could cut recidivism a certain rate in this or that program, if it did have to put up or shut up, if it did have to survive in a free enterprise society, I think we should run a very successful system.

Unfortunately, the correctional system does not have to survive under any rules of competition or productivity. It is not at all held responsible and it does not have to be responsive.

It has long been known in the literature that anywhere from 60 to 80 percent of youngsters in institutions—some would say more—do not have to be in large closed institutions. We took that research as factual and we decided that we would not endanger public safety if we provided alternatives for these young people.

I do not mean by that we just turned them loose in the streets, but we would provide alternatives.

We began doing that and we set up a series of options. Initially under State auspices with the help of LEAA funding, but when as

we moved more toward the private sector, together with LEAA and State funding, purchasing care from the private sector.

I would like to stress that possibility here. I do not think that generally the State system delivers direct services well. They generally tend to stagnate and go downhill. I think that services are best delivered by the private sector in competition with one another to give services, provided that the State keeps the private sector accountable and provided we get from them certain guarantees.

Now, what options did we stimulate and use? We used a wide variety of options. We used halfway houses, group homes, specialized foster homes, private psychiatric inpatient care, private psychiatric outpatient facilities, prep schools, day schools, night schools. We used technical training schools and private vocational institutes.

We used about anything that seemed feasible and would treat a youngster decently and humanly, and hopefully guarantee a bit more of public safety.

As we began to move these ways, I think it has been our impression that it is working. We do not have full statistics yet on how the system is working, as opposed to the institutions, but I think that most of the research we have had shows it all going in the right direction.

There certainly is no increase in recidivism, there certainly is no increase in the amount of violence, there is no increase in the crime rate in Massachusetts. In fact, as it has nationally, it has gone down quite significantly there. It is our impression that the system runs much more smoothly and we had much less problem with it since we have been out of the large training schools and institutional settings.

I would hope that States could begin to rethink in some very basic ways what they are doing in the area of juvenile corrections. When we talk about bad situations in some States, we are not talking as though this was 20, or 50, or 75 years ago. These things are going on at present. I will be testifying in a suit in the Federal courts in the State of Texas, where at present, at least until 5 or 6 months ago, the institutions were still tear gassing youngsters for failure to go to work on time by putting them in a locked room and throwing in a cannister of tear gas and leaving them until they vomit. There are institutions in which you still have violence from morning until night, you still have people sitting on floors, not allowed to sit on beds; then, when on beds, not allowed to go to sleep until certain times, beatings, useless work projects, et cetera.

We still have, generally, a very repressive and brutal system, and these things I don't think are entirely unknown in the institutional system.

I don't point to these practices and say they are necessarily representative of the institutional system nationally, but I think they point up what can happen in these kinds of systems, and what can underlie the better systems.

It seems to me that the only way we will get out of that is to get out of large, isolated, unaccountable institutional settings and to get back to the community, not only because it works better—it does work better—but because it involves the community, because the community can know these problems and begin to help deal with them, and because it doesn't allow the kinds of false reassurance we have been giving to communities about what we can do, when in fact we have been quite ineffective and we really shouldn't be falsely reassuring the community.

I would hope as well that the Juvenile Justice and Delinquency Prevention Act of 1973, Senate bill 821, or H.R. 6265, will receive support nationally, since it will provide a Federal structure for massive resources necessary to develop alternatives to institutionalization.

The merit of Senator Bayh's legislation is that it will create and expand community-based facilities in homes and shelter care and will steer some of this funding away from the large institutional settings.

If one were to add up the millions and millions of dollars we have sent into these large institutional settings with virtually no return, in fact, negative return, I think it would be a national scandal. I would guess the average State has spent millions, if not hundreds of millions, of dollars over the last 50 years in these large institutional structures, every bit of research which shows that generally they do not work.

Now and then they work for awhile, but generally they do not work or sustain what good results they have been able to obtain. So that I would hope that the Massachusetts model, which we could discuss and I am sure will be discussed in much greater detail by people during the day, would in a sense at least be looked at by other States as a possible option.

The Massachusetts model may mean that States do not need to depend on large institutions to guarantee public safety, that States don't need to depend on this system which has been with us for over 100 years. I think it is very fitting that since Massachusetts invented the system—we had the first two training schools in the world—Massachusetts should be the first to get rid of them.

What Massachusetts invented every State in the Union eventually followed, as did some European countries. I hope that now we have gotten rid of them and seen the error of our ways, every State in the Union and other countries as well will look again and see what we are doing there and have done.

Thank you.

Mr. LYNCH. I wonder if you could tell the committee when you became the commissioner of youth services in Massachusetts?

Dr. MILLER. In 1969.

Mr. LYNCH. You indicated, Doctor, that you had a mandate for change in Massachusetts. From whence did that mandate come?

Dr. MILLER. It came from the legislature that created the new department of youth services to replace what was called the youth service board, very similar to the old Illinois Youth Commission, or California Youth Commission.

Mr. LYNCH. What was the jurisdiction of the department of youth services?

Dr. MILLER. We were responsible for all adjudicated and committed delinquent youngsters in the State of Massachusetts, plus detention—holding of them for court—and parole.

Mr. LYNCH. During your tenure as commissioner, how large a population of juveniles were you talking about, roughly?

Dr. MILLER. Well, it would depend. There is a large amount of turnover. In terms of detention we would run probably 6,000 to 8,000 a year. In terms of committed youngsters, probably about 1,000 per year.

Mr. LYNCH. Those youngsters were held in how many institutions?

Dr. MILLER. They were held in—I haven't counted them lately—I think about seven institutions?

Mr. LYNCH. You talked in terms of endangering the public safety. I wonder if you would be kind enough to indicate to the committee, during your years with that department, how many of the youngsters committed to your institutions committed additional crimes or delinquent acts subsequent to their release and had to be recommitted?

Dr. MILLER. The best of our knowledge would indicate that the average was from 60 to 80 percent were back within less than a year. We had one institution for 12-year-old boys, 75 to 100 12-year-old boys adjudicated delinquent, in which the recidivism rate ran somewhere around 95 to 99 percentile. Virtually every boy that came in the door came back.

Mr. LYNCH. These were especially young boys who were committed there for committing what kind of offenses?

Dr. MILLER. In this particular case of the youngsters, generally it would be something less than would be involved with older kids. Generally, they would be with us because they were poor. They would be committed to us for such things as truancy, running away, stubborn child. Now and then, something more serious. But generally these are status offenses only specific to children and, really they shouldn't be offenses.

The other youngsters in the State ran the gamut from truancy to murder, as they would in any State.

Mr. LYNCH. In a typical institution, when you became commissioner, what kind of treatment, what kind of program, if any, was available to the inmates?

Dr. MILLER. It would depend. Some were better than others. I think generally the youngsters were divided up in institutions according to age and sex. I think that is generally the case nationally. Now, one puts different handles on it at different times, with different semantics and different ideologies. But basically, when you get down to the nitty-gritty, the division of youngsters in these systems was usually on the basis of age, sex, and offense.

We had, for instance, Bridgewater, the so-called Institute for Juvenile Guidance, which was a maximum security walled facility for older boys supposedly for very serious offenses. What we found when we looked through the population was that the majority were not there for materially serious offenses in terms of violence toward persons, but they were there because they were management problems in one or another of the other institutions.

Institutions generally run in complexes in States. Generally they are held together by the "big stick" or the "big threat" and that usually is one institution that is worse than all of the rest. Just as any institution is held together by the threats of one "discipline" cottage over another or one "specialized" dormitory over another, that holds it together.

Words change in those dormitories. I guess in the old days they were just called "punishment dormitories." Now they might be called "intensive care" or "adjustment centers," "time-out rooms." I saw one institution which the lock-up was called the "freedom room." I asked why it was called the "freedom room" and was told you had freedom to yell and scream in there and beat on the walls.

The semantics change, but basically I think institutions, large institutions, are not the kinds of places that are viewed by the people

in them as very healthful and they have to be held together by a certain amount of threat.

Mr. LYNCH. In the typical institution of which you are speaking—anywhere in this country—could you describe for the committee what a typical day involves for, say, a 16-year-old young man who is in there for four or five housebreakings? What happens to him during a given day?

Dr. MILLER. It would depend, again, on the institution. Some institutions would be highly programed with every half hour or so programed; the youngster being at this or that class or this or that vocational training. In the majority of institutions, however, there would be a lack of program. There would be a lot of regimentation and a lot of movement around at times, a lot of counting, generally classes would be unaccredited if they did have classes.

You generally will see very little in terms of productivity. And I think what will characterize most large institutions is a certain feeling of apathy and uselessness of the system.

As I say, some are highly regimented. To give an example of the particular institution I referred to earlier, the boys in that particular cottage are up around 6:30, 7 o'clock in the morning. They are out working then, in silence. The work consists of doing two things: Either shoveling dirt from one pile to another, running with it from one pile back, dumping a shovelful, picking up another shovel and running back to the first pile, which is useless work, or picking at open ground with picks.

They do this from approximately 7 in the morning until 11:30 or noon, with 15-minute breaks during which they kind of huddle down in a circle, in silence, heads bowed. At about noon they are brought in and showered and go into individual isolation rooms where they sit on the floor in silence. Food is fed to them on trays that are slipped to them through a slit on the floor of the room.

They sit in there in silence until 9 at night, when they are told they can go to sleep.

I believe they are allowed to lay on the bed at 1 p.m. They dare not fall asleep or more time is added to their stay, which is a problem for many of the boys who are on tranquilizers, making it hard to stay awake.

Late in the day, 9 o'clock at night, the guard comes around and they are told they may go to sleep.

The next morning, at 6:30 or 7 they are let out to continue the day's affairs as outlined above.

That is an unusually repressive institution, and at Gatesville, Tex., the institution is called "Mountain View." What this describes is the discipline cottage of Mountain View.

In the average institution it wouldn't be this punitive. Generally, you would go to classes of one sort or another. As I say, most of them are unaccredited. There would be a number of counts during the day, dinner at noon. There might be some recreation in the early evening, and generally go to bed fairly early.

When I came to Massachusetts our institution for 16-year-olds was putting boys to bed at 7:30. I think the reason was that it presented staff problems after 7:30 and it was easier to lock them in dormitories.

Mr. LYNCH. You indicated, I believe, Doctor, that in Massachusetts it was costing $10,000 to $15,000 per annum to institutionalize delinquents. What does the alternative cost? What do community-based services cost?

Dr. MILLER. Community-based services, of course, are much cheaper. Some will be much more expensive. But if you can get away from the idea of institutionalizing everyone that comes in the door, as committed by the courts, then you have a great deal of leeway for alternatives in spending that money. If you don't pay $1,000 to $15,000 for 1,000 kids, then this gives you the leeway to pay $3,000 or $5,000 for some and $20,000 or $30,000 for others.

We actually had some youngsters with us on very serious sorts of crimes that involved psychoticlike behavior, involved in some kind of very bizarre murders, and that sort of thing, and I felt in those cases we should spend a great deal to insure public safety. In no way could we say, with those cases, they just come to us and after serving a bit of time or a number of years, go back to the community.

Mr. LYNCH. Well, Doctor, with a delinquent of that nature, a felon indeed, how do you insure public safety?

Dr. MILLER. I think for the most part, with felons, as well, really, the kind of case I was really referring to was really more of a sick individual—and I don't believe most of delinquents are sick—that with felons you can insure public safety in various supervised community programs, live-in programs, and non-live-in programs. It depends on what one means by security.

There is eyeball security, if you will. This is supervision that is much closer and can be given much more closely, often in small group homes, than it can in large institutions where you have 25 or 35 assigned to an individual. No institution can be made all that secure. No juvenile institution really can be made completely escapeproof and if you look at large training schools around the country you will generally find if anyone really cares to get out of them, that in the vast majority of them, it is not too difficult a thing.

What holds them together is the fear of punishment when they come back. We had one institution in Massachusetts in the late 1940's where they broke fingers for running away. When you came back they took your index finger and brought it back until it broke. That cut down on the number of runaways from that institution, even though it was comparatively easy to leave from that institution.

I think there is a kind of feeling that if you lock someone up you have guaranteed some public safety. There is no question that if it is a solid lockup you have guaranteed public safety while that person is locked up, but when you are talking about juveniles, as I am sure this committee has heard many times, those juveniles will be back in the community, and it is kind of a deception to think that lockup in itself is going to guarantee much public safety.

Our problem with runaways, escapees if you will, seemed to diminish appreciably once we were totally in the community. There was a problem of moving from the institutions to the community and a transition period where we had a lot of kids wandering around the State, if you will, who were so used to being institutionalized that they just didn't know how to take the community-based center. They weren't necessarily getting in a great deal of trouble, but for 2 or 3 months in that transition, we had problems.

I think the reason for that was that our youngsters were highly institutionalized. You had the kind of bizarre situation in which you put a boy in an institution for 2 or 3 years and then you put him in a home in the community where the front door is open and there is public transportation, and all, and it is not a locked situation, and he will go upstairs to the bathroom and sneak out the bathroom window and climb down the drain and run, not realizing that was kind of ridiculous; he could walk out the front door. They were reacting in a sense to the institutional process, as we built in a whole self-fulfilling prophecy in institutions.

Once we got through that transitional period we had much less problem with that and the whole thing calmed. However, I stress even during all of the transition, even during the first year—and we have been out of institutions now in Massachusetts for over a year now, a year on January 10 or 12 the last boys' training school closed—I would think that now the number of incidents has appreciably diminished from what it was a year ago in the old system.

Mr. LYNCH. Would you institutionalize any juvenile delinquent?

Dr. MILLER. No, I wouldn't. That does not mean I would not say that some juvenile delinquents should be in closed, locked settings, but by the term "institutionalized," I would not subscribe to that term. I do think there are dangerous individuals who need to be in locked settings. However, those settings should not be large training schools or large penal institutions because they do not work.

They should be small, individualized, secure, locked settings. You can make a small setting locked and you can provide individualized care for truly dangerous people in them.

I would like to see a time where we would have available to the average youngster in Massachusetts, and Illinois, who is truly dangerous in terms of violence toward persons, the same sort of options that have always been available to the upper middle class, or upper class dangerous persons, and that is a private, small psychiatric closed setting, where at worst we simply provide some human care and at best we provide some care that works, as well.

It just doesn't seem to me it makes any sense any more to talk about institutionalizing anyone in large institutions. It does no one any good. The only time the large, closed institution will make any sense is when we are ready in this country to say, "Let's lock someone up and throw away the key forever." I hope we never come to that point. Even though some people may be unsalvagable I think to make that great leap would have much more meaning to the rest of us than for those whom we incarcerate.

Mr. LYNCH. It is often said that juvenile institutions teach juveniles how to commit crimes, how to escalate, if you will, their crime careers. The President recently, as the chairman indicated this morning, called the prisons in general, "colleges for crime." From your point of view, as a youth corrections commissioner, is that statement provable? Do juvenile institutions in fact encourage and/or teach young people to commit additional crimes?

Dr. MILLER. I have no question that that is true. I don't know specific research studies with reference to that. I am sure there are many. Perhaps Professor Ohlin could point to some, but I have no question of that in my own mind. I have many youngsters in my department

and it is just a common thing. If you visit any adult facility and just ask at random who was in the juvenile system, it is "Old Home Week," everyone has met somewhere or other along the line.

There is no question at all that the juvenile system as it is presently constructed is a school for crime.

We run them at all levels. We ran our little grammar school for 12 and under, where it had a 95 to 99 percent recidivism rate. We moved them on as they got older, up the line in schooling for boys, the older training school in other words, for 13- and 15-year-olds. That was kind of junior high. Then on to high school, Shirley Industrial School for Boys at 16, and junior college, the Institution for Juvenile Guidance at Bridgewater, and then on from there to the University of Walpole, or maybe postgraduate work at one of the Federal penitentiaries.

But there is no question in my mind that is the system these people are caught up in. It seems to me that if at the early ages we made more options available, our chances of breaking out of high recidivism in this country would be greatly enhanced. There are European nations who have been able to move in this direction with some significant results. Albeit, they are simpler societies and less complex in many ways, more homogeneous, but even given all of that, I do think we could substantially improve our own system.

Mr. LYNCH. As you went about the task of converting the system in Massachusetts from institutions to community-based programs, what kind of public response did you receive?

Dr. MILLER. Well, I think that we expected many more upsets than we got. We received a great deal of public support. And I think that in many ways, legislators—how could I put it tactfully—are not as progressive as the public is when this issue is confronted openly. I think the public is very much in favor of substantial and substantive correctional reform. It was our impression that this was the case in Massachusetts.

It is now, I would think, in Massachusetts, something of a political liability to be in favor of large institutions for juveniles. We don't hear it any more.

Mr. LYNCH. Doctor, public opinion is a strange thing. I suppose if you take a poll of how many people are in favor of community-based treatment programs you might get an overwhelming favorable response, unless it is from a fellow who is having one put next to his house.

Dr. MILLER. That is right.

Mr. LYNCH. How did you handle that problem in Massachusetts?

Dr. MILLER. I think that is very true. That is one of the reasons I had a certain distrust of my greatest supporters in the liberal community, who were very much in favor of these places until we decided we might want to put one or two in one or another of the suburbs where the supporters lived.

What we found, and I think we made some mistakes along the way, initially we talked of setting up group homes and halfway houses under our own auspices for delinquent youngsters, specifically for delinquent youngsters. We did get some of these going. The majority we got into communities with no problems.

We had a few problems here and there. The Harvard study indicates, I think, why we had problems and why we didn't in various communities. But I think we learned as well that it is far preferable, if one can, not to set up specific halfway houses or group homes for delinquents alone, but to set up group homes and halfway houses and alternatives that have a heterogeneous population with one or two delinquents rather than the whole house identified that way.

What we moved toward in Massachusetts—and I am sure Mr. DeMuro will speak to this when he gets here—we found a whole series of alternatives that were able to observe delinquent youngsters and provide supervision and care that did not have to be identified in the community as a facility specifically for delinquents. So long as we didn't inundate these programs with delinquents they did quite well.

So it is my own feeling that with some exceptions, and certainly there are in terms of kids who are involved in crimes of physical violence, for the most part many of these youngsters can be absorbed into already existing programs. In many States there already are a lot of alternatives around that just have not had a tradition of handling delinquent kids.

One can find these, once one begins to let loose some of that money that previously had gone to sustain training schools.

Mr. LYNCH. Doctor, in Massachusetts, I believe, you dealt primarily with children and delinquents who were referred to you by the juvenile court system. Is that too late? Should we be referring people prior to the time that they are court identified? What are your views on that?

Dr. MILLER. It is a difficult dilemma for me. I think in the abstract it is true that we should be preventing these things earlier. There are certain ominous implications, however. I think it is awfully difficult to identify delinquents, and you hate to get in the business of sorting out youngsters in grade school or high school as predelinquents. I think it has other sorts of difficult implications.

I don't think there is any question, however, that the greatest service one can do when one wants to prevent delinquency is to divert kids from the present juvenile justice system. And if that is, in fact, true, then it does involve getting in on the case early. We try to do that in Massachusetts by allowing courts to send referrals as well as committed youngsters, allowing them to refer a youngster to us without establishing a record, and I think that is a step in the right direction.

There is no question the earlier in, the better off we are in terms of cutting recidivism. But I think we give up too easily on those who are deeply in the system, particularly youngsters.

It may be a more complex situation with adults, but it seems to me that it would be very difficult from any professional point of view to throw away hope with reference to anyone 16 or under.

Mr. LYNCH. You indicated earlier that one of the problems in altering the system is certainly a political problem, and I take it you were using that term in its broadest context.

Dr. MILLER. That is right.

Mr. LYNCH. In a bureaucracy what happens to the people working in it just has to be a central issue. What does a correctional commissioner do who wishes to close institutions? What, in effect, did you do in Massachusetts to use or retrain people who had been working in the old system?

Dr. MILLER. We gave to our staff a series of options to their present jobs in the institutions, and through union negotiations allowed them to choose. There were many administrative hitches in setting this up, and doing it another time around, I think it could be done much more smoothly than we were able to do it. But we were going into uncharted areas and we had to feel our way.

Initially, what we did was give them a series of options whereby they could work in the community, they could become parole aides or work in a group home, or where they could work with kids in street work. The problem that we ran into is that many of the institutions were clustered way out in the country and away from where we planned to put the youngsters and it involved moves by the staff.

After a period of time I think things settled quite well and the majority of the staff did get into these other sorts of positions.

I think if I were to do this again, however, I would prefer that we had made arrangements at a higher level in State government to provide staff options in a variety of State departments. I think such things as pools could have been set up and giving them preference with reference to other positions that were unfilled in other State departments, so that there would have been more possibility of people being absorbed through a number of departments and it would have involved less hardships in terms of moves.

It is very difficult for people working in institutions. Their lives become just as institutionalized as the kids there. It becomes a whole lifestyle. In one of the institutions we closed the staff kept reporting for weeks, if not months, every day, even though there were no kids there. You had the impression the institutions should run beautifully if there were no clients.

The cafeteria and everything went along quite well. It is a whole lifestyle. One has to break into that, and it is very difficult.

Mr. LYNCH. You indicated that some 104 years ago, Massachusetts created the first industrial school and the rest of the country rushed to replicate that school. Is it too early, in your judgment, for the rest of the country to rush into what Massachusetts has now done?

Dr. MILLER. I think it is not too early. I think they should rush; yes. I think that we have moved too slowly in this field. I know one of the criticisms of us in Massachusetts, when we first got going, was we moved too quickly. My own feeling is we did not move quickly enough. In those areas where we moved a bit more slowly than others we had problems.

It is not a terribly radical thing to do this; it is a very reasonable and rational thing, given the research we have on the old system. And it can be done, it seems to me, much more smoothly if done quickly.

There has been a great deal of concern the Massachusetts model will be followed by other States, by groups, and there has been a great deal of interest. I don't know how many would follow it or whether they would do it the same way, but it does seem to me that it is time we think in very basic ways about providing alternatives, and I think we will be able to show in our experience there that these alternatives do work as well as the old, but, at best, much better. And it is much cheaper and much less a betrayal of ourselves in the way we treat these kids.

Mr. LYNCH. No further questions.

Chairman PEPPER. Mr. McDonald, do you wish to ask any questions?

Mr. MCDONALD. No. sir.

Chairman PEPPER. Dr. Miller, we want to commend you on this innovative program that you have offered in Massachusetts. Would you just describe what the program is, how it works, and who runs it?

Dr. MILLER. When a youngster is sent to us by the court, Mr. Chairman, he is seen in one or another of the regional offices.

Chairman PEPPER. In the first place, if a youngster is committed by a court he is committed to the correctional system?

Dr. MILLER. To our department; yes. To the department of youth services. He is then seen in one or another of the regional offices. We set up a regional structure so it would be closer to the community. A decision is made there after short diagnostic study as to what sort of resources we have available in the State on a purchase-of-care arrangement, most often from private agencies, that would insure this kid will be less a danger to the community when he returns.

These options could range from hospitalization in a private, locked psychiatric hospital to a drug, self-help treatment program where he lives in; to a group home where he may have, for instance, a job during the day, or school during the day and be there in the evenings and weekends under supervision; to a group home where he may have intensive group work and therapy a number of times a day; to being sent to a regular private school or prep school somewhere in New England at our expense where he would just engage in the regular normal routine of a school such as that; to being sent to a foster home, a specialized foster home, for instance, where he might live with a graduate student and his wife who will devote a great deal of time to him in an individual way.

Or he might go to the University of Massachusetts where we have a 10-bed group home in one of the college dormitories, run initially by the students for credit, and with the department of education providing a specialized sort of care.

He might go back to his own home and, whereas the court didn't have the money, our department would pick up the tab for family services, or for intensive counseling with him and his family in the home. Or he might be assigned to a college student who spent 15, 20, 25 hours a week with him on an individual basis and we would pay that college student for his expenses, and some money for tutoring, or what-have-you, for the kid.

What we are trying to do is provide a whole range, a whole spectrum, so you are not caught with a kid sent away by the court, the only option is training school or home, with nothing in between. We are trying to make available all these options. Surprisingly, it can be made available with an existing budget, provided you can get out from under the old system. The old system is terribly expensive. So we are not talking about a great infusion of funds.

Initially, one needs funds to get out from under the old system. But we in Massachusetts are able to handle at present close to triple the number of youngsters for approximately the same budget.

Chairman PEPPER. Doesn't this take a great many supervisory personnel to carry out the system?

Dr. MILLER. It takes our own staff placement people and parole agents who will supervise and make sure that the services are being

delivered, but the actual services for the most part are given by private groups, by private staff, and they are accountable to us to make sure these services are hand delivered.

Chairman PEPPER. Were those staffs already in existence or did you stimulate their origin?

Dr. MILLER. Many were in existence and many we stimulated. It is surprising when the money becomes available, when you say we are going to make money available to you to purchase care for kids, how many alternatives will develop.

In Massachusetts, we actually had more alternatives develop than we had money to purchase. There is no dearth of alternatives and if there is, if one makes a firm commitment to move from institutions, the alternatives will begin to create themselves.

I am certain, for instance, the University of Massachusetts had never thought of taking a delinquent kid into a dormitory until we were out of training schools and said we would make some money available on a per diem cost for kids in other settings and they came to us with the proposal. As I say, in most cases you are talking of an average of $200-plus per week per kid. That is what most States are using now to treat these youngsters.

I caution the committee as they go over figures from the States to realize that most State agencies fudge their figures in this regard. I was given a figure of $5,500 a kid in Massachusetts. But, in fact, that wasn't an honest figure. In fact, what they do is keep out capital outlay and the central administrative cost to sustain the system. They have ways of breaking that budget up so it doesn't show.

But, in fact, the cost to keep the kid in the institution in most States in this Nation at present is in excess of $10,000 and in some States it exceeds $20,000.

Chairman PEPPER. You have personnel in practically every sizable city or community?

Dr. MILLER. That is correct. We have regional offices in eight different regions throughout the State. This would be in Boston, Worcester, Bridgefield, North Shore, South Shore, New Bedford, and the Fall River area, so that we have some representation throughout the State, and then we have people that work out of these offices in satellite situations and on the streets.

So that we are available to the courts and to the schools and that sort of thing.

Chairman PEPPER. You can move the students around any part of the State you wish to?

Dr. MILLER. That is right.

Chairman PEPPER. If you have a suitable place for them?

Dr. MILLER. That is correct. One program is based on movement, outward bound, based on the outward bound concept, the British survival training, where the youngsters, for instance will hike from Connecticut to Vermont, through the Berkshire Mountains, through Massachusetts, and then will go across the State and do quarry climbing.

Chairman PEPPER. Suppose you had a boy, a dropout, say he dropped out about the seventh or eighth grade, he has been into some trouble, been in the juvenile court system, and he was committed to you. You first have an interview with him?

Dr. MILLER. That is right. Somebody in the department would have an interview with him and they would decide what options do we have primarily in this region for this young person who is a dropout. And that would range through contracts that we would have with various private schools, with various group homes, halfway houses, treatment centers, that have been developed. Very often developed for other people, but are willing to take juvenile delinquent kids if we are willing to pay a fee per week.

Chairman PEPPER. How much would you pay? Suppose a couple undertook to take four or five boys in their home and look after them and try to carry out your program? About how much would you pay per student?

Dr. MILLER. The foster care fee in Massachusetts is about $25 a week. If we are talking about a very specialized foster case, say a very disturbed youngster who is going to take a great deal of time, then we have a special contract where we pay the people up to $75 a week to provide a lot of care, where they come to group meetings together. And it is almost a job for them, a full-time job for one or another of the couple. The majority would be in homes at about $25.

Chairman PEPPER. Would those custodians provide all of the facilities that young man would receive?

Dr. MILLER. No; they may or they may not. They would generally provide the advocacy for the youngster. They would provide something in place of parents. We might in some cases, for instance, as well make available to that foster parent some money for special schooling or special tutoring.

All of this, incidentally, all together, is substantially cheaper than the training school.

Chairman PEPPER. And on the whole you find that the new system is now less expensive than the old?

Dr. MILLER. It is much cheaper. There is no question, it is much cheaper. The problem you get into is when you have to carry the old system along with the new system, because you still have to carry the staff and the institutional budget. Then it costs more because you have to add on the new. If you can get something to absorb the old system there is no question the new system can be done much more cheaply.

Chairman PEPPER. Thank you very much.

Mr. Wiggins?

Mr. WIGGINS. Doctor, when the juvenile court system in Massachusetts refers a delinquent to the department of youth services is that referral for a fixed term or for the minority of the youth?

Dr. MILLER. It is just a commitment to the department with no fixed term and then it is up to the department to decide what happens at that point.

Mr. WIGGINS. Your authority then would be to keep the youngster in the system during the full term of his minority?

Dr. MILLER. It could be. We generally kind of frown on that. We would like to return the youngster as quickly as possible to the community, as quickly as it seems feasible. It is possible, however, we can keep him until 21.

Mr. WIGGINS. And for this purpose, age 21 is deemed to be the minority-majority breaking point?

Dr. MILLER. That is correct; although you are tried as an adult in Massachusetts at age 17. We can keep the youngster in our department, provided he doesn't commit a subsequent crime, as an adult until age 21.

Mr. WIGGINS. Does the court have any discretion at all concerning the types of treatment modality that will be employed?

Dr. MILLER. What we have tried to do in this case is build up a court liaison project where we have a representative who visits the courts regularly, and larger courts, it is there full time, and we try to develop a coordinated plan with the court previous to the commitment, so we do have some agreement regarding the possibilities for the youngster.

Mr. WIGGINS. Does the court have discretion or not in terms of what you do with the youngster after?

Dr. MILLER. No. When the youngster is sent to us it is up to the department to determine disposition. What we have tried to do administratively, is to build in an arrangement with the court whereby we work these things out together ahead of time to avoid problems in that regard. But within the law, the court does not; no.

Mr. WIGGINS. It is something in the nature of an indeterminate sentence; isn't it?

Dr. MILLER. That is correct.

Mr. WIGGINS. You, being in corrections, are mindful I am sure of the criticisms and warnings of the indeterminate sentence procedure. Is that criticism justified?

Dr. MILLER. It certainly is. And it was a dilemma for me along the way. I think the indeterminate sentence and the kind of arrangement we have in Massachusetts gave us a great deal of flexibility, initially, to bring about the reforms we wanted. It gave me the flexibility to send all of the youngsters home from the training school, so we could close them on a certain date.

However, it also gives the same sort of flexibility to someone who wants to keep someone locked up for umpteen years.

So there are built-in problems to it. I would hope eventually in Massachusetts they would develop some sort of middle-ground whereby we could set some maximums, at least, on how long the youngster would be in the care of the department. We would have to rejustify the care in court after that time.

Mr. WIGGINS. Do you have sufficient flexibility to take care of the truly dangerous youngster who may be committed at age 16, for example? Must you release him at age 21, regardless of your judgment as to his danger to the community?

Dr. MILLER. I think in that case—and I don't recall that has been an issue in any specific case as of yet—we probably would go for a commitment in terms of mental health. I think one could go that route. The youngsters that were in the department while I was there would not have reached 21 yet. They all would have been 16 in late 1969 and 1970. So that hasn't been an issue.

There were two or three that came to us that first year who are still in mental hospitals, private mental hospitals.

Mr. WIGGINS. One final question. If this committee were inclined to make recommendations in this field, would it be a valuable recommendation or not that the court have more direct input concerning the disposition of the youngsters?

Dr. MILLER. I think, given the problems in the courts and the great disparity between the courts and the way they are set up and the training of the judges, that it could present many problems unless there were some very firm guarantees. I think the idea of indeterminate sentences, for instance, particularly where sentences are to a specific institution or a specific kind of place, militates against any kind of rehabilitation, ultimately. So I think it is a double-edged sword.

It is a difficult one, but I would think it could present a lot of problems.

Mr. WIGGINS. I do, too. Thank you, Doctor.

Chairman PEPPER. Mr. Winn?

Mr. WINN. Thank you, Mr. Chairman.

Dr. Miller, you mentioned just briefly a minute ago about hiking trips and I just wondered how much of your program, percentagewise, would incorporate variations of recreation.

Dr. MILLER. This particular program I referred to is the "homeward bound" program, and I believe we ran between 350 and 400 youngsters through it last year. It is a classic "outward bound" program. We hired an instructor trained in outward bound from Australia. I am a convert, incidentally, to this sort of thing. I didn't know, really, and I didn't believe this sort of approach had any relevance particularly to inner city delinquency. I no longer believe that. I think it has a great deal of relevance. Of what, I am not sure. The only thing I know is it seems to work well. I think it probably has to do with the self-concept and the fact the youngsters have some success at some things, where they have not had an opportunity to have these successes previously.

They will do such things as hiking, rock climbing, and quarries, sailing, swimming, all sorts of obstacle courses they run. They do it in brigades or groups of six or eight, in which everyone is responsible for everyone else. No one will fail the course if they try, because their buddies will carry them through it. They do a 3-day solo in which they survive alone on an island or mountain somewhere out by themselves, with a sleeping bag, a canteen of water, a piece of string and a match, and they make it on their own that way.

At the end of all of this they come together and return. It has been a very successful program. I think recreation in that sense is a very useful thing.

Mr. WINN. Now, the facilities that you closed, are none of those facilities in good enough condition they can be rehabilitated for uses as gymnasiums?

Dr. MILLER. That is right.

Mr. WINN. They are all bad?

Dr. MILLER. No, no. I am suggesting just what you are suggesting. Some of them were in pretty bad physical shape. Some were very old buildings. But a lot of these places would make very fine community colleges, very fine resources to the community. One of our institutions, I don't know if the negotiations are still on, but when I left, there were negotiations with the town to use it as an elementary school.

I would suggest that many of these institutions in many States would make phenomenal places for "noncaptive" groups. The problem is that when you have a captive group there, that is when one gets into the problem.

Mr. WINN. Have you tried using any of the old military bases that have been closed? Because a great many of those we found have pretty good recreational facilities, including Olympic-size swimming pools.

Dr. MILLER. That is right. I would say if there was a caveat any State ought to take in this regard, it is to beware of building. We don't need any more buildings. We don't need any more of these places. There are plenty of possibilities existing, if one can think creatively, in the community. There are plenty of existing unused facilities there.

Mr. WINN. What you are saying then is this recreational-type program really—and the expression is not true, because of the way we look at the word "day care," we think of that for little kids—is a day-care type of program?

Dr. MILLER. Exactly.

Mr. WINN. For the older juveniles, where they would be established in either their homes or community nighttime, but they would have recreational facilities, schooling——

Dr. MILLER. That is right.

Mr. LYNCH. Job training, whatever their situation might be.

Dr. MILLER. That is right. Because the average delinquent, you know, isn't delinquent all of the time. He is only delinquent at certain times in certain conditions with given people at given times. Generally, we know when those times and all are, and recreation, for instance, can be a major part of prevention.

Mr. WINN. Is nighttime higher?

Dr. MILLER. Yes.

Mr. WINN. As it is in normal crime?

Dr. MILLER. Yes. I think that is one of the reasons our program with the college students has been quite successful, is they have spent time with youngsters when they would be most likely to get in trouble, the evenings and weekends.

Mr. WINN. Do you use any of the programs we hear about nowadays, using professional athletes or well-known athletic heroes?

Dr. MILLER. Yes.

Mr. WINN. You have a hard time getting those fellows to give the time unless they are paid?

Dr. MILLER. We have a few around. We had Joe Scibelli from the Los Angeles Rams, and a few like that with us; yes.

Mr. WINN. But percentagewise, fellows making $100,000, $200,000, $300,000, it is pretty hard to get them to give up a couple of hours a week?

Dr. MILLER. That is right. It is.

Mr. WINN. What has been the court reaction to your general program? Has it been basically pretty much in agreement or are there all variations of opinion?

Dr. MILLER. I wouldn't want to say it has all been an agreement. My own bias is the better courts have been in agreement. I think there was some upset along the way. Many judges were used to banging the gavel and not seeing the youngster for quite awhile. They were upset when he was back in the community that quickly. They were in many ways using the training school and had to be reeducated to the new programs.

However, many of the judges, particularly, I think, the chief justice of the lower courts who hear most of our cases, Judge Flashner, were in agreement with what we were doing and saw it as a useful thing. I

think the judges have come along, particularly through our court liaison project.

Judge Linihan from south Boston, who has been the judge there for many years and certainly is quite a conservative judge by most measures, told us this fall he was extremely happy with the program for youngsters in south Boston and this was one of the better programs he had seen in his 15 or 20 years on the bench.

Mr. WINN. Did you have any kind of liaison meetings or community meetings with the courts as a group, or did you have to do this individually?

Dr. MILLER. We did both, Mr. Winn. We met both individually and in groups. I think both were useful, although ultimately I think the individual meeting turned out to be the best, the court liaison project where we could meet individually around specific cases.

I went around through a number of courts myself and met with judges as we made these moves and tried to allay fears about them. But I would say most courts now would be in agreement with what we are doing. There would be some exceptions.

Mr. WINN. Did you have meetings with the communities?

Dr. MILLER. Yes.

Mr. WINN. And with the community leaders so you could get the community support and acceptance?

Dr. MILLER. Right. Meetings with the community were crucial to this. I would guess in my 3½ years in Massachusetts. I made at least three to four speeches to community groups a week regularly, and our staff was out regularly. This was crucial to it. There is no way one can bring about that sort of move we made in Massachusetts without community support. When we got into some crises around the moves, the community was there to support us. We met, for instance, with the League of Women Voters everywhere in the State, the Council of Churches, and different sorts of groups.

Mr. WINN. To make another arm of it, because we found, in the last week particularly, that those who had good records as far as prevention of crime, had good relations with the police departments, had not only good relations with the community, but with the press. And how did you set up your relationship with the press and what was their reaction to your program?

Dr. MILLER. I feel we did very well with the press. I think that the reason we did is that we were completely open and honest with the press. We didn't hide problems at any time. In fact, we tended to share them in advance, so we could at least get a chance to explain what we were talking about. At all times, we had a very open policy to the press. We made it clear at the beginning, for instance, in changing the institutions, there would be no institution or no room in an institution or no building in an institution that would not be accessible to the press at any time, at any hour of the day or night.

I think that helped. It helped us to expose some of our own problems and showed the need for change. But I think the amount of press support we had for the reform was very encouraging and very helpful.

Mr. WINN. Did they support editorially?

Dr. MILLER. Yes; particularly the Boston Globe was very, very helpful. We got a great deal of editorial support around the State for the moves we made.

Mr. WINN. Thank you very much.

Thank you, Mr. Chairman.

Chairman PEPPER. Mr. Sandman.

Mr. SANDMAN. What do you do with a boy who doesn't work out in your program?

Dr. MILLER. Well, Mr. Sandman, what we do, we try again and again, but we have more options to try him in this time. There is no question a large percentage will not work out. It is just that we feel more will work out than in the old system.

Mr. SANDMAN. Let me isolate this.

Dr. MILLER. OK.

Mr. SANDMAN. As I understand what you said—and I hope it works—you said you have done away with all of the institutions for juveniles in Massachusetts. My question to you is this: For the boy I am talking about, a big boy, between 16 and 20, let's say, you have gone the full gamut of trying to help him. He does something bad while somebody is trying to do something nice for him. OK. What do you do for the boy the day he does that? What happens to him?

Dr. MILLER. When I say we closed all institutions, we closed all of our large training schools. We do have the capacity for a couple of small locked settings for youngsters such as this that might need controls for a period of time until we get hold of the situation.

We also have contractual arrangements with private psychiatric hospitals which have the same capacity. Every private psychiatric hospital I am aware of—Chestnut Lodge, McClean, Menninger's, you name them—all have the capacity on the grounds for a quite secure, locked facility, with good control. So for that sort of youngster we would have that capacity.

It is just that we wouldn't necessarily mean we would keep him in a long time.

Mr. SANDMAN. But my thinking is that you have to have some kind of institution for that kind of an individual.

Dr. MILLER. I think we need some sort of locked facility. But I don't think this necessarily needs to be a large institution.

Mr. SANDMAN. Regardless of the size. I was only talking of just following through your theory. Having had some extensive experience with these kinds of boys it seems to me that you always have to have some sort of threat of what can happen to you if you are not a good boy. Don't you agree with that?

Dr. MILLER. Not exactly. I think you may have to have the possibility of a locked setting. I am not at all sure the threat in these cases motivates much. One of the groups, for instance, that objected, when we closed training schools, was the private treatment facilities which were used to motivating kids to stay in them, to say, "If you don't make it here, you are going off to the training school," and they were concerned they wouldn't keep their population. In fact, that didn't occur when we got out of the training school.

I think one does have to have the capacity to lock someone up. There is no question of that. It is a matter of devising a system that allows one to choose these options, and I think you find that the vast bulk of kids that are presently institutionalized don't need to be in that sort of facility.

There are some dangerous youngsters, but even those could be in small, closed facilities that are not institutional.

Mr. SANDMAN. I have never known a judge that felt like this kid ought to go away; have you?

Dr. MILLER. No; but I think when they say, "the last resort," they don't realize there are many options before that last resort, because the judges have not had the funding available to their courts to provide the options. What it has been is a matter of a series of warnings, the possibility of some probation, maybe voluntary counseling through a local social agency that the judge might have a relationship with. But they have very few options available.

The last resort is the option they use when the other options don't work, and as a last resort the kid goes to the training school.

We like to say to the judges that we could spend some of the moneys we are spending on training schools to provide you with other options as well. So the last resort thing won't have to come into play quite so early.

Mr. SANDMAN. How about the boy who commits a common law crime, a crime other than violence? Does he come under your system?

Dr. MILLER. Yes, he does.

Mr. SANDMAN. One other question: The boy who has had a long string of scrapes with the law. In our State, for example, it is almost a rule of thumb that a juvenile comes before the court at least three times before anything happens like sending him to any school.

Dr. MILLER. That is true.

Mr. SANDMAN. And he is always—it is a matter I have always heard in private—given every break you can give him. Finally, when they are so discouraged, the parents can't do anything with them, and he has committed a common law crime, then for that reason he doesn't get this kind of treatment any more and he is then in the institutional system you refer to.

Mr. SANDMAN. OK. Then let's assume we are talking about that kind of boy. I am in accord with your thinking; I am not disagreeing with you just because I am asking the question. I think you can handle them better the way you are talking about. But let's assume this boy, in addition to doing this also, has a long record of narcotics use.

Now, under your system, do you segregate that boy from the other boys?

Dr. MILLER. Under our system we have much more capacity to do that if we wish to, in a specific case, because we are using probably 200 or 300 different settings in the State. So we do have much more option than just six or seven training schools.

So that we would have that capacity, yes; if that seemed indicated and it would depend on the specifics of the case. We do have arrangements with a lot of self-help concept housing drug treatment programs. We could use those options. We have a lot of other options that would be available. So what I am suggesting is that our system, as we are developing it and I hope it will continue to develop, legally provides a wider spectrum of options so that you have much more flexibility to work these problems through before one talks of long-term institutionalization.

I think even for those who have to be locked up it need not be in an institution, a large institution. I think you can talk about small, closed facilities for less than 25 people.

Mr. SANDMAN. Is it fair to say you believe those that are narcotics users should be placed in with other youngsters who are not?

Dr. MILLER. I couldn't say that as a rule. It would depend on the person.

Mr. SANDMAN. Don't you believe they would be highly dangerous among the youngsters who never used narcotic drugs?

Dr. MILLER. They could be; yes. It would really depend on the individual case. I would say as a general rule I would tend to agree with you, but I would hate to get held hard and fast to it with a 15- or 16-year-old. It would depend on how much a user; whether he is truly an addict or not; what he is using; that sort of thing.

Chairman PEPPER. What Federal aid is now available to the States to carry out programs as you have in Massachusetts, and what Federal aid would be desirable for that purpose?

Dr. MILLER. Our program in Massachusetts really got off the ground through the use of Federal aid; primarily, the Law Enforcement Assistance Administration.

Chairman PEPPER. How much?

Dr. MILLER. Our first year, I believe it was around $2 million. I am just not sure now. We use that as a flexibility. When I came in we had very little money to buy care with. All of our money was tied up in staff and institutions, and we used those Federal funds to break out of the system. I note the report by the urban coalition, that was fairly negative of LEAA, pointed to our program in Massachusetts as one of the few positive uses they saw of the money and we were flattered they found it that way.

However, I think there were other sources of money. Florida, I understand, has used a great deal of title IV–A funding in the program Oliver Keller has developed down there. Massachusetts was late in getting into title IV–A, and I think Mr. DeMuro will speak to that. I believe we will be receiving some title IV–A funding in addition to some more LEAA funding. Ultimately, I would hope, there would be some move in the direction of Senator Bayh's bill, which would provide funding to develop alternatives to institutions, or other similar legislation.

Because, ultimately, it will be a great deal cheaper. I realize that Congress must get tired of people coming in and saying, if we had prevention programs, or if we could have this or that treatment program, it is going to cost less, and they find 10 years later it is costing triple as much.

Chairman PEPPER. You would need Federal aid to break out of the old system into the new?

Dr. MILLER. That is correct. But I think, therefore, whatever legislation is written should include in it some firm guarantees that the States ensure they get out of the old system. Otherwise, what they will do is develop a so-called preventive program in the community, but let the old system stand and then it has precisely the opposite effect one would intend.

They will throw a wider net out and bring in more delinquents, if you will.

Chairman PEPPER. Would it be desirable or necessary, in your opinion, because of maintenance of those programs, for the Federal Government to contribute to their operation?

Dr. MILLER. I think it would be helpful; yes, sir.

Chairman PEPPER. What percentage of the cost of a State program should the Federal Government, in your opinion, pay?

Dr. MILLER. Well, it would depend on what kind of commitment the Federal Government wants to make. If you are talking about commitments through revenue sharing, I think a department such as ours should get some of that. If you are talking about continuing title IV–A funding, for instance, at the present ceiling put in by the Congress, I think that would be adequate to help most States, if they made a commitment in the area subsequently to move out of these institutions. I do not think in the long run the Federal Government would have to sustain these programs. I think the States have enough money to sustain them if they can get out from under their present programs, which are very, very expensive, and it would seem to me the best use of Federal funds would be to help the States move from their present programs to new programs.

Chairman PEPPER. We are running a little late. Mr. Lynch, would you ask the next two witnesses to come up. We will hear them together.

Mr. SANDMAN. Mr. Chairman, one other question.

Under your program, do you have any kind of work program involved?

Dr. MILLER. Yes. We have arrangements with the Urban—I don't remember—the Urban Corps. We have work programs that way. We hire a number of our youngsters, have a relationship with the division of employment.

Mr. SANDMAN. If the kid comes from a bad environment, for example, under your program in the summertime, let's assume, do you place him on a farm somewhere, where they would have to pay him?

Dr. MILLER. We might.We do have, as one of our options, helping a youngster to find a job, or helping an arrangement through jobs.

Mr. SANDMAN. Do you have any objection toward that?

Dr. MILLER. No. For a time, for instance, with our purchase-of-care money, we funded our own job corps slot. We paid an employer to hire youngsters and paid part of his salary out of State funds. It was still cheaper than institutionalizing.

Mr. SANDMAN. Have any of the other States followed your pattern in Massachusetts?

Dr. MILLER. I think most States would say they want to move in that direction, but maybe not in the same way.

Mr. SANDMAN. They haven't, though?

Dr. MILLER. No one has done it that way; no. We would like to commend ourselves to them and hope they do it that way.

Chairman PEPPER. Dr. Miller, we thank you very much. It was a very splendid presentation. We certainly hope that your imitators will be numerous in pursuit.

Mr. LYNCH. Dr. Miller, if you don't have other plans, I wonder if you could stay seated at the witness table.

Mr. Chairman, I think Dr. Miller has given us a good foundation in understanding what Massachusetts has done. We are fortunate this morning to also have with us Mr. Paul DeMuro, who is the assistant commissioner of after care of the Massachusetts Department of Family Services. Mr. DeMuro will comment on the most recent developments in the Massachusetts' system, as described by Dr. Miller.

We also have Prof. Lloyd Ohlin, who is currently director of Harvard University's Institute on Criminal Justice. Professor Ohlin was associate director of the President's Commission on Law Enforcement and Administration of Justice. He also served as a special assistant for juvenile delinquency to the Secretary of the Department of Health, Education, and Welfare, and he was the supervising research sociologist of the Illinois Parole Board.

Mr. DeMuro, I wonder if you could give us your opening remarks and that perhaps could be followed by Professor Ohlin's summary of his rather extensive prepared statement.

Statement of Paul DeMuro

Mr. DeMuro. Thank you. I think there is no need to go into a lot of detail because Dr. Miller hit the major points. There were a couple of commentaries I had. Dr. Miller generally stimulates my thinking.

One of the things we have to be aware in developing these alternatives is that we not only hook into the professional bag in the community. I know we had a great success with the YMCA, the boys' club, street programs, churches, the institute of contemporary art, people who are involved in activity they see as meaningful.

We catch up a youngster in the same kind of activity. I think frequently social workers tend to look at the community and think we have to go to more traditionally established agencies. There is nothing wrong with the established agency or the professional itself. I think we have to look to where the client is, where his interest is, who best represents that interest in the community, and what are those resources worth developing.

Particularly, I think this is the case with such federally funded programs as the neighborhood youth corps and OEO and CAP agencies that seem threatened now.

Dr. Miller mentioned at the end of his statement that we buy into the neighborhood youth corps. We have over 500 youths working with community groups, subsidized through State and Federal funds. If the Federal moneys aren't there to maintain those programs, an awful lot of what we have already done will go down the drain.

Some statistics as of last month. We had 683 kids in group care, the kind of group homes Dr. Miller described; 241 in foster care; and over 800 nonresidential service slots, being jobs, counseling, alternative schools, et cetera. This total caseload of the department is close to 3,000, which represents three times what was normally held before Dr. Miller came to Massachusetts.

Such a delivery system, as Dr. Miller says, costs less per youth than institutional settings. However, I must say that like most agencies we are in a tight fiscal squeeze. We have had difficulty transferring institutional accounts into the purchase of service accounts, and I think this is a key when other States look at what we have done. They have to have the flexibility of getting out of operating boiler rooms and large cafeterias and 1,000-acre plants and get that money into a service account, which can buy counseling and buy job training.

Moreover, as we developed better and more community-oriented programs, our image began to change from the State's youth authority to a service agency. And this is the key. The kid comes to us for a

service, be it counseling or vocational training. We become, then, a referral agency for a larger group of kids, not kids just necessarily labeled delinquents.

I would stress that there should be some mechanism, hopefully, if the Federal cuts do come to OEO, that our kind of clients, and that is generally the poor, neglected urban kid, gets tapped into revenue sharing. I have some doubt when revenue sharing comes to the large city that the cities will use it; it will go to lower the cost of real estate or traditional education. Our client, the street kid, poor kid, unemployed family, will not be able to tap in directly to revenue sharing.

I think it is encumbent upon all of us in Government to make sure revenue sharing works for the people on the outside.

I don't think we can look at Massachusetts and suggest we have all of the answers. We have, and we will continue to have, difficulties, and I think some of your questions hit on some of those difficulties. Just because a person works for a private agency, let's say the YMCA, doesn't necessarily make him a better youth worker.

There are as many untalented, fake, and corrupt people outside of State government as there are within. However, with the private sector—and this is the real key issue—one can cancel a contract or change the program to reflect the client's need or redirect moneys and programs to those most in need without fighting the frustrating bureaucracy of State government, replete with civil service protection and patronage.

There is no doubt that is the key, the ability to move money to kids and programs to that kid's need without having to close down 1,000 State employees.

Also, we need to develop more intensive-care-based smaller units which have the capability of locking the youngster up, 8 to 10 youth, staffed by the best medical and psychiatric talent available. Such programs will be costly for the damaged kid, and I am convinced, after 3 years in the field, the percentage of such kids is small. They deserve no less.

When we began changing the system in Massachusetts close to 80 percent of our youth graduated to adult corrections. Recent statistical studies on particular programs, our forestry program, suggest some dramatic results, but I will leave the studies to academia.

Chairman PEPPER. Will you go back to that figure of 80 percent you used. What was that?

Mr. DEMURO. When we first got into it in Massachusetts, 75 to 80 percent of the kids coming out of our system wound up in adult corrections.

Chairman PEPPER. The reason I was interested to get that is I have heard from various juvenile court judges the figure of 50 percent, but you said 75 to 80 percent.

Mr. DEMURO. In our State; that is correct.

Chairman PEPPER. Very good.

Mr. DEMURO. Recent studies on particular programs suggest some dramatic results, but I will leave the study to academia, and also this afternoon invite you to question five youngsters we brought along with us. We all felt the old system was a failure.

The system we are developing in Massachusetts has to be more successful than that for it is based on meeting a youth's needs on an

individual basis, seeing him as a unique personality with his own strength as well as weaknesses, and working with him to develop an appropriate treatment plan that is designed for him and not considering him a candidate for a wooden, numbered bench in a detention cottage.

And I think that is the key to it. The youth service agency sees itself as a defender or advocate for the kid, sees justice must be served, what are you looking at when the kid comes to the system, and I think that is why Dr. Miller was really successful more than anything else.

We saw a kid and what his needs were and tried to meet them.

Thank you.

[Mr. DeMuro's prepared statement will appear at the end of the testimony of this panel of witnesses.]

Mr. LYNCH. Mr. Chairman, Professor Ohlin will describe what his institution is doing to study the program, then we can direct questions to all three witnesses.

Chairman PEPPER. Professor Ohlin.

Statement of Lloyd Ohlin

Mr. OHLIN. Mr. Chairman, I appreciate the opportunity to appear before the committee to talk about the research and evaluation studies we have been undertaking with the Department of Youth Services in Massachusetts.

I am research director of the Center for Criminal Justice, Harvard Law School, and we have been following the development of the reform program for youth in Massachusetts since Dr. Miller's arrival in November 1969, and, in fact, even prior to that, following the passage of the legislation creating the new department and the mandate for reform, which he has implemented in Massachusetts.

At the outset I would like to say that I think Massachusetts is ahead of most States, but many other States are moving in the same direction. The basic theme in youth services in the United States is diversion of youth from institutions to other kinds of treatment settings, deinstitutionalization; that is, winding down the large institutions or closing them, as is happening in Massachusetts.

I think I can be quite brief. Since you do have my prepared statement, I would like to summarize it and add a couple of things that are not in there.

Chairman PEPPER. We are anxious to hear it.

Mr. OHLIN. The second major trend is the enrichment of service alternatives. One of the problems with our juvenile justice system is the lack of adequate alternatives and options for youth dealt with by the courts probation services, yet this is one thing a State system of corrections can provide with its broader jurisdiction, greater and more flexible resources.

Most States are now emphasizing community-based services rather than services far removed from the community, mostly in rural areas. As Dr. Miller indicated, he came into Massachusetts with the idea of trying to organize within the institutions a more therapeutic climate; that is, treatment cottages that could be more effective than they were before.

His first steps were to create decentralized cottage units in all of the institutions, and our studies indicate he was quite successful in this.

We studied 10 cottages to compare the old custodial system of running those cottages with the newer therapeutic cottages. Our results indicate they are really successful. The response of youth to those cottages, and the staff as well, created a very different kind of climate even within the old institutional settings.

However, it was also clear these new cottages could not be created fast enough. Older staff locked in by the civil service system were not equipped to run these types of cottages effectively and the budget was too restrictive to permit the hiring of new staff to do it.

Dr. Miller then evolved the policy of moving these cottages out into the community as group homes.

As he indicated, we did a study of the group home problem. We studied three group homes that succeeded and three that failed in an effort to identify what forms of resistance developed to community group homes, and how these might be successfully overcome. Though I will not go into this now, we did identify a number of basic conditions which either have to be created or must exist for group homes to be successful in local neighborhoods.

At the present time, there still are a number of problems that have to be solved in order to consolidate the gains in reforms which have been undertaken in Massachusetts. It was necessary to set up a regional structure, which did not exist when Dr. Miller came to that department, in order to supervise and develop community-based treatment alternatives. This regionalization structure is still being developed to make it more effective.

There is a need to provide some type of facilities for dangerous and disturbed offenders. Dr. Miller has just spoken about that at some length. There exists one institutional facility at the present time and there are plans to develop two other small public facilities housing less than 20 youths each.

The detention program has also been changed. No mention has been made of that here as yet. The policy has been to create shelter homes in place of the large detention centers which existed when Dr. Miller came. That program is going ahead rather rapidly, and I think well. The small shelter care arrangement seems to work much better than the large detention centers.

Chairman Pepper. What sort of facility is that, Professor?

Mr. Ohlin. The shelter center is similar to a small group home, housing 8 to 10 boys or girls. It is used to service the court, to hold youngsters until they are disposed of by the court.

The department has also developed an effective court liaison operation. This involves allocating part of their staff to work in the court with the probation personnel and judges, identifying cases that are likely to come to the department, working out referral arrangements, if possible, or diverting them to other alternatives so they don't have to go through the entire juvenile justice process.

There are two other points I would like to make.

Chairman Pepper. Excuse me just a minute. You mean before, when a lad was engaged in some sort of delinquency, before he was formally brought before the court some system of referral was worked out?

Mr. Ohlin. Yes. The department has been working out arrangements with the court where, prior to adjudication, the court and de-

partment agree on a voluntary referral to some type of treatment service.

Chairman PEPPER. But after the court had obtained jurisdiction?

Mr. OHLIN. Yes. The court has jurisdiction, but the case has not yet been adjudicated.

Chairman PEPPER. But there had been some sort of complaint; the youngster had in some way been formally brought before the court?

Mr. OHLIN. That is true; yes.

The department in recent months has accepted quite a large number of these referrals. It creates a situation where a youngster doesn't get a delinquency record, but yet gets the treatment that the court and the department feel would be useful for him.

It is obvious that if used too much it would be harmful. It could sweep into the department's jurisdiction many youths that are now simply warned and referred back home, or to other services in the community.

With the new purchase of service program generating competitive arrangements among private agencies, the big need now is for quality control. The department has to develop some means to insure that high quality services are being given to youths. It must decide what types of services should be continued and whether alternative services should be tried. This type of quality control program is now being developed and is essential where widely dispersed services of this kind are under contract to private agencies.

Finally, the department is wrestling with the problem of personnel development and training. Massachusetts, I guess, is not unlike many other States, since its civil service system is very strong. It provides a great deal of security and most of the staff have been there for many years. They are used to the old system and find it hard to fit into the new services which are being developed.

This is one of the major stumbling blocks to consolidation of the new programs.

So, as Dr. Miller says, we really have in Massachusetts now both systems to some extent. The old institutional system exists as an empty facade of the past, but staff are still assigned there. There is still the danger some of those institutions might be reopened. They are now beginning to be used by other departments in the State. But that danger still exists.

In conclusion, I think the Massachusetts experience clearly documents we overincarcerate kids in the United States. We rely too much on formal institutional treatment for youth. This has been a destructive policy in the past. Dr. Miller became thoroughly convinced that it was only by closing these institutions and forcing the development of new community alternatives that real progress could be achieved.

In some cases, I gather, the pace of the reform was so quick that the needs developed before the funds were there. Part of the problem in Massachusetts is to have the funding catch up with where the programs are.

That is one major strain which still exists in the program and it is a serious problem, particularly where new private agencies arise to meet this demand without adequate funding reserves to carry them over the transition period. This is where Federal funds were so enormously helpful to Massachusetts. They were flexible funds, that could

be adapted to build up the new services and take the department through a transition period during which the old services could be completely closed down and the money diverted to the new ones.

Perhaps that is all I should say in the way of opening remarks.

[Professor Ohlin's prepared statement appears following the testimony of this panel.]

Chairman PEPPER. Professor Ohlin, I suppose that we as a society in this country never have quite made up our minds just why we incarcerate people. I suspect that we do so as a carryover of the old concept of retribution, punishment.

A young man here in the city of Washington, a few years ago, 17 years old, robbed, raped, and killed an elderly lady. What do you do with a boy like that? He is of an age where he is supposed to know the difference between right and wrong. He had committed a horrible crime. What do you do with him?

One or more teenagers were responsible for shooting Senator Stennis here in front of his home recently. Senator Stennis told me that the fellow who shot him was just as cool and calm when he shot him as if he did that every day. A man's life was almost taken, a man has been confined in a hospital for many months, suffering great pain and anguish. What do you do with a young man who does something like that?

It is hard to get out of our minds that people ought not to suffer for committing a heinous crime. On the other hand, that crime has already been committed by the time it comes to public attention. I suppose the primary consideration for society after that is to keep him from committing another crime, and what we should do is probably try to use the techniques that are most likely to prevent the repetition of that crime, in which case we should put the emphasis on rehabilitation rather than punishment.

What should we do with juveniles or adults, who commit crimes?

Mr. OHLIN. The feeling you refer to that simple justice requires the meting out of punishment for especially heinous crimes is widespread. It is fundamental to the whole system of justice. That system is designed to mete out sanctions in the form of punishment, and is necessary to give people a sense of security in the laws and their administration and to encourage respect for them.

I don't think we will ever get away from that concept. The law is designed to administer punishments, and we can set up a correctional system that will handle difficult cases appropriately. Confinement, in either adult or juvenile institutions, is clearly punishment in itself. It has high visibility and I think serves the ends of justice.

But punishment by itself will not provide the public safety that we are after. We must back it up with intensive services, supervision, and treatment. In the end we will be safer if we lend our support and resources to building that kind of a system.

I don't think that we are yet in a position, as a country, to make a choice between punishment and treatment alternatives. We have to live with a system that tries to administer them both. But we would like to make the rehabilitation or treatment side far more effective than it has been in the past.

Chairman PEPPER. Would you apply to the adult correctional system the same general principles that govern this program we have been talking about here today?

Mr. Ohlin. Yes, I would. We are actually trying to move in that direction in Massachusetts with the adult system. I think that that system will probably not move as fast. We can't close down the adult institutions with as much speed as was done in the juvenile system, in part because we have the graduates of the former juvenile system. There are some very dangerous offenders in the adult system who will require secure facilities.

However, we also tend to overconfine adult offenders. We too often use confinement where other measures would work better. Partly because we haven't, again, developed other alternatives for the adults, any more than we have for juvenile delinquents.

The history of correctional reform has shown that changes tend to come first in the juvenile system and then are passed on to the adult system. I suspect that will be true of these newer policies which are now being tested in Massachusetts and elsewhere in the country.

Chairman Pepper. Thank you, Mr. Ohlin.

Mr. Lynch. Professor Ohlin, you have very substantial, to say the least, credentials in the juvenile field and also a reputation as a scholar. As a scholar and student of this field would you feel comfortable in recommending to other States that they at this time replicate the Massachusetts correction experience insofar as it applies to juveniles?

Mr. Ohlin. Yes, I would. I feel that all of the States in the country go much further in the direction of the Massachusetts experiment than they have. It may be true that in some other States there exists a higher proportion of dangerous and disturbed youngsters that one may have to keep in small institutional facilities, of the type Dr. Miller has described, than is true in Massachusetts. But I think our results show that the Massachusetts experiment has been a successful one, that it does offer a new pattern of correctional services for youth that is more effective and less costly than the alternatives we have now.

Mr. Lynch. How long will we have to track people who are graduates of the new system before a firm judgment can be made as to its efficacy?

Mr. Ohlin. We have that tracking program underway now. The big question we would like to be able to answer is, Has Massachusetts succeeded in cutting out a generation of recruits to the adult system?

If that turns out to be true it seems to me that that evidence will be compelling for other States.

Now, the time needed to determine whether or not that happens and in what measure it happens will require another 2 or 3 years. We have to allow enough time for the youngsters who have been through the new juvenile system to reach adult age and then see to what extent their criminality continues or whether instead they turn into law-abiding pursuits.

It takes a followup period of roughly 3 years to get a firm answer to that question. We will, of course, get some results sooner than that. For example, we already have some preliminary results on recidivism 11 months after treatment which show that the new system for the small group we followed is working about twice as well as the old one. But these results are still fragmentary and for an unrepresentative small group of cases, so that I would not now offer them to you as firm evidence of either success or failure.

However, the observations of DYS staff and our own research people, have given us a feeling, let's say a sound hunch, that the final figures will, in fact, show substantial improvements over the recidivism rates—as measured by new court appearances—of the old institutions.

Mr. LYNCH. Mr. DeMuro, in operating a program of this nature, whether using private or civil servants, it would seem to me, because of the things you are trying to do, you would really need more committed, more highly skilled, and better trained people. How do you recruit? What do you look for?

Mr. DEMURO. In staffing?

Mr. LYNCH. Yes.

Mr. DEMURO. I take issue with your question on one point. That is, simply, the number of people who worked in the institutions would have very good reasons to help kids. The motivation to work with juveniles, regardless of age or training, I think is the key. A number of people in the institutional settings have moved into the communities, albeit there was trauma at the beginning, some fear, but I think the department can insist, in terms of training, support, as they move from really secluded institutional models for themselves to models in the community.

Regardless of age or professional training, what I look for is this rapport and feeling for youngsters caught in the system, the ability to see that youngster as an individual rather than a category. For them, certainly, we need better and more trained people, say, psychologists ——

Mr. LYNCH. What kind of training programs do you have now?

Mr. DEMURO. Right now we attempt to get as many of our staff as possible hooked up in universities in the area. We have a rather substantial arrangement with the University of Massachusetts where students who are in professional degree programs there are truly volunteers or part-time workers for our department, and our department has people going toward advanced degrees at the University of Massachusetts.

We are attempting to develop other kinds of hookups with traditional universities throughout the Commonwealth.

Dr. Ohlin talked about the evaluations. This monitoring of delivery systems: I would like to see this really thrown to the universities, as well as evaluating of our programs and upgrading of our staff in those programs. It would be kind of a cooperative venture in each of our regions of the major university to take on the training of our staff as well as evaluating the ongoing programs. The university serves as a nice focus for a lot of committed professionals, pool of manpower, to get involved in things like this.

But we too often think because someone worked at the institution that he then can't work in the community.

Mr. LYNCH. I did not mean to imply that. I am pleased at your response. I wonder if you could tell us if Professor Ohlin's charge includes an evaluation of staff performance?

Mr. DEMURO. I will let Professor Ohlin speak to that.

Mr. OHLIN. We have tried to distinguish two types of evaluation problems here. One is an operational everyday need, since an administrator needs to know where his kids are, what types of programs they are in, how those programs are working, and how effective his staff

is in relating to youth. We have been working with the department to try to get that built into the department as an ongoing responsibility of the commissioner and his aides; that is, a special unit for that purpose.

We have our own resources committed more to the long-range evaluation problem. We have studied some immediate problems of the department to suggest policy alternatives. But, basically, we see our long-range evaluation as feeding back data into the evaluation of general policies rather than the specific performance of particular offenders, staff members, or individual programs.

Mr. LYNCH. Mr. DeMuro, Dr. Miller indicated earlier that he experienced less public antipathy toward this changeover than he had originally thought would take place. What is the situation in that regard now? What kind of public support do you have?

Mr. DEMURO. I think under Acting Commissioner Levey, we built on that initial support, particularly as we moved to answer the need for the more disturbed youngster to help him in small intensive-care units that had to be opened in the up-coming months. Mr. Levey is out continually talking to groups. We have maintained the same open access to both the press and the community. We welcome that.

With Secretary Goldmak we are developing regional area councils of private citizens who actually sit with the professional social workers and social service agencies developing a formula and policy for the expanding of funds. I think we see more of this in Massachusetts.

Mr. LYNCH. Dr. Miller also indicated, I think, in an anecdote over the recital of a crime that had been committed by someone who had been in jail for 3 years for killing a police officer and Dr. Miller said that he received no inquiries regarding that incident. Have you, since this program has been operating, had juveniles in group homes or community-based services who have gone out and committed relative heinous crimes?

Mr. DEMURO. We recently had an incident.

Mr. LYNCH. How have you handled those? Has there been a public outcry?

Mr. DEMURO. There has been no outcry. It has been honest inquiry. We had a young fellow run from a camp, shelter camp, stolen car. Unfortunately, he had an accident. There was an explosion, the gas tank exploded. There were a number of inquiries about that particular incident and we were glad to talk to people about why that particular 13-year-old boy was not held in jail; why he was at the camp.

Mr. LYNCH. For what offense had he been committed to you?

Mr. DEMURO. Driving without a license. A motor vehicle offense initially got him into trouble. But he just turned 13. It was quite workable in the eyes of our counselors at our intake procedure and that is why he was being detained at a shelter-care facility, this YMCA camp.

You can never replace that particular life or get back to that family what was taken from them in that awful accident, or whether the right decision was made in holding that particular youngster at a YMCA camp rather than locked in jail.

Mr. LYNCH. There was a fatality involved?

Mr. DEMURO. Yes, there was.

Mr. LYNCH. Not to the boy driving?

Mr. DEMURO. He was seriously hurt and was in the hospital.

Mr. LYNCH. Has he been released from the hospital yet?

Mr. DEMURO. Not to my knowledge.

Mr. LYNCH. What will you do with him when he is released?

Mr. DEMURO. I would see this youngster being a candidate really, not for a locked intensive-care thing—he has a behavior problem of running—I would see him in a small group home, intensive psychiatric work, like the Liberty House Associates, a number of intense group home experiences up in Maine, where you are talking about professional staff with him 24 hours a day, 7 days a week trying to work on his impulsiveness.

Mr. LYNCH. Some kind of control that will reasonably assure he doesn't run out and get his hands on another automobile?

Mr. DEMURO. That is it.

Mr. LYNCH. Mr. Chairman, I have no further questions. I believe Mr. McDonald has several.

Chairman PEPPER. Mr. McDonald, will you proceed.

Mr. MCDONALD. Thank you, Mr. Chairman.

I would like to direct this to Mr. DeMuro, and perhaps Professor Ohlin can answer it also. The critics of the Massachusetts experiment have said, in effect, that the system was fine under Dr. Miller, and under Acting Commissioner Levey, it works fine for the youth that it deals with, but there is at least a portion bound over to adult courts, kids that just are too difficult for youth services to handle. They are being taken away from youth services and bound over to adult court; children under 17 are being sent to the adult prisons. Can you comment on this?

Mr. DEMURO. Yes. There are two important issues here. One is we tend to think about this experiment as before and after. We had 1,000 kids trapped in a system. Dr. Miller recalls at Bridgewater that 75 kids went into alternatives. There are some heavy offenders, tougher kids, trapped in the system whom we haven't been as successful with as perhaps we might; or the alternatives haven't been successful.

However, I think the whole issue is really a smoke issue. Last week we had 14 youths in the State of Massachusetts being held currently. We did a study about a month ago to find out how many kids were in the adult correction vis-a-vis 5 years ago, and we found it was two kids more; 27 to 25, 1965 to 1972.

This doesn't seem to be an alarming increase. No one likes to see a juvenile go adult. There is, however, another side of the coin. When a juvenile does go adult he generally gets a much better trial than in our district courts. We have 69 district courts in our State and there is a tremendous variety of talents and degree of differences. So I think that although it is true some kids are being bound over: One, they are still in the process of change, particularly the older delinquent who perhaps was 14 three years ago and is now 17, can we count him as part of that population to judge the system; and, second, according to my statistics and the research my staff is doing, there aren't that many more, really.

Mr. OHLIN. We have tried to check into that because it is a very important issue. When judges feel they have been denied institutions to hold youth they believe should be confined and away from the community, the obvious option is to turn to the adult system. I agree with

Mr. DeMuro, that resort to such an alternative has been greatly exaggerated.

To the extent we can follow boundover cases, which is very difficult in Massachusetts because of inadequate records, they were coming largely from two courts where some increase has occurred. However, for the State as a whole, the increase in the last couple of years has simply brought the figure on boundover cases back to where it was 5 or 6 years ago.

Mr. McDONALD. Mr. DeMuro, there has been a lot of talk this morning about maximum detention centers. I understand you have the Andros project in Boston?

Mr. DEMURO. That is right.

Mr. McDONALD. Your main security facility in Boston.

Mr. DEMURO. That is right.

Mr. McDONALD. Again, criticisms I have heard of Andros have been it is nothing more than just like an old institution, the kids being locked up there without too much psychiatric care. Is there any difference between Andros today and the old detention centers?

Mr. DEMURO. I think one of the reasons for this criticism is Andros happens to be, unfortunately I believe, located in our old facilities. It is tremendously expensive to build small intensive-care units and we therefore had to remodel or rebuild some of our older places. Andros is very much different than anything we have had in the past, for a number of reasons.

One, it is on purchase of service contract, namely, with the Boston Mental Hospital Associates, a number of qualified psychiatric talents who actually run the program. There are certain contractual obligations we have built into their contract: A limited number of kids in programs, the number of hours of treatment, reports.

Second, Andros, as a major staff component, has tapped in a number of former graduates of the adult systems, exconvicts, who are under a constant training program by the Boston Mental Health, who have brought to that program an advocacy for the individual client that I really find refreshing, and an ability to relate to a client in the sense, "Hey, we know where you are going because we came from there."

The fellows involved there, it grew out of a peaceful movement committee, were incarcerated during the Attica riots, pulled themselves together in the peaceful movement committee and, subsequent to their release, came to our department looking to get involved. Although perhaps some of them lack professional training, not many degrees, there is an awareness on an actual level where our kids are coming from, coupled with the Boston Mental Health Associates professionalism, makes that program something unique. I haven't seen it duplicated.

For those two reasons, granted, I would like to see Andros taken apart and a small, 6-bed Andros for each one of those regions I sit on, and not 35 kids together. That doesn't make sense. There is the issue.

Mr. McDONALD. Can you comment on Roslindale? Is that still primarily a detention center?

Mr. DEMURO. The facility on the second floor is where Andros itself is housed. The third floor of Roslindale is detention awaiting adjudication in the court. Although we have been successful in opening up

camps and shelter-care programs it still serves as a secure detention site for close to 50 courts, the Cape area, through route 128, the geography of it, and because of that, the influx on a given weekend of numbers of youths coming in and out. It is not community based.

It is not one police department, it is over 30.

I would like for Massachusetts to close it and get back to the potential for that kind of youngster. I don't say we have to have potential for that kid. Certainly, we get back to where he is controlled by folks in those communities who can enrich intensive care, secure programs for our center.

Mr. McDonald. I have no further questions. Thank you.

Chairman Pepper. Mr. Nolde?

Mr. Nolde. Professor Ohlin, you mentioned the tendency to overconfine. Dr. Miller, of course, has also spoken to that issue. I take it the key there would be classification of offenders. How can you identify these dangerous offenders? Do we have adequate tools available today for identifying the dangerous offenders and separating them out, with some degree of competence?

Mr. Ohlin. I have been very much concerned with that question. My colleague at the Harvard Law School, Alan Dershowitz, has devoted the past few years to the intensive study of our ability to predict dangerousness, because the whole concept of preventive detention is tied to that capability.

I am convinced that our means for making accurate predictions of dangerousness are very crude, very inadequate, and they involve a high degree of error.

Our best predictors of dangerousness are still past conduct and confinement in juvenile institutions. Research indicates that the further youngsters penetrate into the juvenile justice system, and especially its correctional institutions, the longer they stay there, the greater the likelihood they will be adult offenders and will commit serious adult crimes.

So the best predictors we have now of dangerousness are what we have done to offenders in the past and what kind of past behavior they have exhibited. Some of the behavior that upsets us most, some of the most disturbing and worst crimes we know of, are actually rare events which seldom occur again with the same individual. It is not only because such offenders are usually confined as punishment, it is because these tend to be rare offenses and therefore very hard to predict.

But I think we still have the obligation to try. We make predictions of dangerousness now; the courts do it all of the time. We do it in the correctional systems, both juvenile and adult, and we have to continue to perfect that capability based upon our analysis of past experience.

Mr. DeMuro. Mr. Chairman, I would make one comment on that. We have had a study of our Judge Baker Clinic, which does workups on the most dangerous, labeled the most dangerous, by the court largely because of the nature of the offense. I stress the fact the Judge Baker Clinic has nothing to do with our department. In a rather complete and also competent diagnosis of 100 referral youngsters it was that clinic's finding that only 14 needed to be remanded to a locked facility. I think this stresses the point that we overshoot this.

Dr. Miller. This 100, it is a very fine study done by the Judge Baker Clinic, which is a very eminent clinic. It showed of this 100—we are talking about the 100 adjudged most dangerous youngsters seen—this particular doctor who did this study saw virtually every juvenile murderer, every youngster who has done any serious crime of violence. So we are talking of 100 youngsters sent to us on very serious crimes, or for very serious behavior, and it was their impression that of that 100 only 14 really required a locked setting.

Mr. Nolde. Do you have confidence, Dr. Miller, in the conclusions on that score? Also, as the correctional administrator who has to make those decisions, do you feel you have the tools now to make that kind of determination with some degree of accuracy?

Dr. Miller. I don't feel we have enough tools, but I think we do know the way we were doing it was quite harmful, and I think that what we were doing was very harmful and what we can do and are doing now is less harmful. We will make some mistakes. Although I must say, very candidly, I expected many more incidents than happened. I really didn't believe our own rhetoric quite enough, I guess, because I expected many more problems in the community.

Mr. Nolde. Speaking of the community, how do you go about dealing with the reluctance, on the part of the people in the community, to have facilities located in their own neighborhoods?

Dr. Miller. I think one of the points mentioned earlier is we tried to avoid setting up specific facilities for delinquents totally. I think it is much easier that the majority of youngsters, if you can absorb them into other community programs or develop new programs and take a more heterogeneous population in so you have less problems.

I am sure Professor Ohlin's study could be made available to the committee, in which they studied three group homes that met a great deal of community resistance versus those that didn't, and the kinds of techniques and things that occurred in each case.

Mr. Nolde. Professor Ohlin, I think you referred at some time to more effective measures of social control outside of the criminal justice system; specifically: Should drunks, vagrants, truants, and runaways be subjected to the criminal justice system? Would you comment on that?

Mr. Ohlin. I think this is a very important subject. We are overburdening the criminal justice system with problems that it is really not equipped to handle and shouldn't be handling. This is true of both the adult and juvenile institutions. The status offenses for children constitute a rather large part of the population that we now keep locked up in children's institutions. That really doesn't make much sense.

There really are many more alternatives and less costly alternatives out there in the community that can be developed if we are willing to put the resources and the energy into finding them. I think the Massachusetts experience has clearly demonstrated that is the case.

There are so many histories of adult offenders who started out as truants, went to training schools, escaped, returned, escaped again, maybe stole a car the next time to get away, and eventually ended up in adult institutions after having spent most of their youthful years in some kind of institutional environment. This occurs so often simply

through an escalation of what was originally a very minor and insignificant behavioral problem.

This is what we mean when we say that we very often create adult criminals rather than cut off their careers as youthful offenders with the juvenile systems we now have.

Mr. Nolde. One final question for you, Professor Ohlin, and also Dr. Miller. Can a system of punishment ever be truly compatible with individual treatment and rehabilitation?

Mr. Ohlin. I think, as I indicated earlier, we have to live with that reality. We have a system of criminal sanctions that has other functions to serve for society in reinforcing respect or regard for law and obedience to it. The prevailing opinion, which I subscribe to, is that a short sentence for the purpose of serving the ends of punishment as a sanction is in highly visible cases probably the best way to handle the problem.

There is a growing concern that the indeterminate sentence system is not working right; it tends to keep people confined for too long a period and serves effectively neither the ends of punishment nor rehabilitation. We need to change that.

Mr. Nolde. Dr. Miller?

Dr. Miller. I would tend to agree with Professor Ohlin with reference to adults. I wouldn't agree with reference to the youngsters. I think it is a very difficult problem because of the implications it has for the law. Roscoe Pound made the comment that the founding of the juvenile court was as great an act as the signing of the Magna Charta. He wasn't speaking lightly, because I think he knew the implications, if the juvenile court had really fulfilled its promise it would have had to move away from punishment and it would have struck at the underpinning of the criminal justice system, particularly with reference to juveniles.

I think it is very difficult to hunt down, convict, and send through the court system and into the training school someone, and then at one point turn around and say we are going to rehabilitate you. I think for juveniles it is a very difficult dilemma they are caught in.

I agree perhaps it is too soon to confront that, but I think these dilemmas are best confronted through successful programs and, hopefully, people will say that if the Massachusetts experiment works, we don't need to have a punitive system to cut recidivism and guarantee public safety.

Mr. Nolde. Thank you for your excellent testimony, and for the outstanding work you gentlemen are doing as leaders in your field. I have no further questions, Mr. Chairman.

Chairman Pepper. Will the judge have the knowledge, when he sentences a man to incarceration as to how long it was going to take to rehabilitate him.

Dr. Miller. That is right.

Chairman Pepper. Unless you go on the theory that you have to have a certain amount of punitive influence in the dispensation of the sentences.

At one time I happened to hit upon the figure of 5 years as good a maximum sentence as any other figure. Some knowledgeable person in the area said that's the figure he would have used. If you are going to keep anybody in prison 5 years, that probably would do just about

as much good as keeping them in 20 years. What do you think about that, Professor?

Mr. Ohlin. I think I agree in general with the thrust of your remarks. I think that if we are going to do anything successfully in the way of treatment, it can clearly be done within that time. If it is not done then, it isn't going to happen.

In the United States we confine people longer than any of the Western European countries, for example. I am not quite sure how that has happened. There is also enormous variation among the States in the length of sentence and length of average time served in the institutions.

I think a lot of this is historical accident. It developed that way and the systems become hard to change. Instead, accommodations develop as in the parole policies, to alleviate some of the injustice or burden of long sentences.

Chairman Pepper. Historically, incarceration, for that matter, is very severe treatment of people. Historically, have those things actually served as any deterrent to the commission of crime and, if so, to what extent?

Mr. Ohlin. I know from my own experience with prisons, offenders reach a point where they are described by other offenders as "burnt out." There is such a thing as confining a person long enough so that, in effect, his whole life and life prospects have changed. And the fear of any risk of further confinement is so great that they don't get in trouble when they go out. There are other offenders that I have known and studied that deliberately get caught again once they get out because they become so institutionalized that the outside scares them. They are really not able to take initiative and make decisions on their own any more.

They wind up committing inept crimes that result in their being sent back to the institution, where they usually find their old job waiting for them.

The kind of system that produces such a result is obviously bad, too.

Chairman Pepper. On the other hand, we have the problem of people who seem to be incorrigible, who, after being allowed two of three releases from prison, go right out and commit a series of violent crimes again, and upon whom all efforts of rehabilitation have seemed to be a failure. Personally, I don't think you necessarily have to resort to infliction of the death sentence upon that individual, but may develop certain individuals who are a danger to society by their own experience, society's experience, who do need to be required to forfeit their right to live in a free society the remainder of their lives? What can you say about that?

Mr. Ohlin. I suppose that may be. The problem always is in deciding which persons those are. In the prison world, they say each prisoner has a time when he is ready for release, when the motivation to stay law abiding is at a peak. Keeping him longer doesn't help; it harms.

The problem is to find that peak with these different individuals. It may be that there are some individuals that constitute such a terrible threat we simply don't want to let them out, and we have in our correctional systems many who have been there for 20, 30, or even 40 years.

Chairman Pepper. Several members of the committee and I were at Attica on Friday of the tragic week there and we spent 2 days interviewing officials and the inmates. I remember asking one of the inmates: "Look here, when you get out of a place like this, with these high walls and thick bars, with the restrictions upon your life, and the activities you experience here, why in the world would you ever want to come back here?"

"Well," he said, "it does look that way, but it is not as easy to stay out as you people think it would be. In the first place, if you have been here for a good long while, you have lost contact with your family and your friends; sometimes your family has become estranged from you. Most of us in here don't have much education or skill, we don't have much capacity to earn a livelihood when we get out. We get out with a few dollars and a cheap suit of clothes and we are on our own. The first time we apply for a job they want to know if we have ever been convicted of an offense or incarcerated in prison. We have to say "yes." If we don't tell them the truth they will find out later, or we live under the fear of it.

"Most people don't want to hire you if you are an ex-convict, and in a little while the money you got is gone and most of us don't have anything else. You get lonesome. Then you may look up some old crony you got in trouble with the first time and before you know it, you are involved again."

I thought it was a rather interesting story that he told.

Mr. Ohlin. That is a very common experience, I think, particularly among those who have been confined for any length of time. They really do lose touch with the outside world and the only persons they know with whom they can really share their experiences fully are other offenders, ex-cons.

Chairman Pepper. The superintendent at Attica told us that all of the men spent a great majority of their time in cells because they didn't have money enough for adequate training programs, educational programs; they didn't have money enough for jobs for the people that were there. The legislatures just don't provide enough money to do in the system what knowledgeable people would like to do. This man was the head of Attica. If he had the money I think he would have gotten them out of Attica and in other places, scattered around the country.

The old tendency was to build the warehouses in the rural areas as they did in my State at Raiford. But one of the things that we want to emphasize in these hearings is that knowledgeable people know a lot more to do than they have the means to do it with. That is the reason I brought up the matter of Federal participation. You got started with a Federal grant from LEAA of about $2 million. We are entertaining very seriously the idea of recommending the Federal Government to aid the States, maybe as much as 50 percent.

Do you think the States would undertake these transitions if they got as much as half of the cost from the Federal Government? Would that be a reasonable figure to consider?

Dr. Miller. I think it would be a very good motivation.

Chairman Pepper. Very good.

We had policemen here, as I told you gentlemen before the hearing began, last week. The police are struggling with their problems, but

they have to have the help of the courts and of the correctional systems, or else they are going to be sending these people right back, again and again.

Well, Mr. Ohlin, Dr. Miller, and Mr. DeMuro, the committee wishes to thank you for coming here and giving us the benefit of your ideas. If we could do so, we would like to reserve the opportunity to stay in contact with you for some continued help as we make our recommendations.

Thank you very much.

The committee will recess until 2 o'clock this afternoon.

[Whereupon, at 1:05 p.m., the committee recessed, to reconvene at 2 p.m., this same day.]

[The prepared statements of Mr. DeMuro and Mr. Ohlin, previously referred to, follow:]

PREPARED STATEMENT OF PAUL DEMURO, ASSISTANT COMMISSIONER OF AFTER CARE, STATE DEPARTMENT OF YOUTH SERVICES, BOSTON, MASS.

In 1846, a very progressive step was taken in the history of juvenile corrections. The Lyman School for delinquent boys was opened in Westborough, Mass. The purpose of this school was to separate youthful from adult offenders. Though the founders were very well intentioned, and the quality of care was superior to that of adult prisons, there were two basic defects in the plan. The mode of treatment for youth in trouble became removal from the community, and the community transferred the responsibility for its youth to another authority, the state. Institutions spread throughout the country and became the essence of juvenile corrections.

As one reviews the history of institutions, one reads of the scandals, brutality, stupidity of certain treatment programs, the punishment that was common for misconduct. For instance, if a youth ran and was captured, he was placed in a cottage where he was required to maintain silence. Frequently a finger was broken for each attempted run. In addition to the physical abuse, the subtle psychological effects of an institutional setting dehumanized a youth to such a degree that his only avenue to self-esteem and identity was the wholesale adoption of a negative or "criminal" value system.

In Massachusetts, we had a basic decision to make. Should we expend our energies to improve our institutions, or should we look to other alternatives. Given our fiscal and personnel resources, we should have been able to make the institutions more livable, perhaps even adding enriching programs. Any changes within the traditional institutions, however, would be temporary and also would be built on the faulty premise of rehabilitation through removal of a youth from his community. Therefore, we decided to seek alternatives to institutions; *not* community programs as a supplement to institutions, but rather as a complete alternative to institutions. We had a history within our agency of placing youths in private schools, group homes, foster homes, or other purchase of service agreements; but these programs were thought of as *aftercare*, after the youth attended an institution. We decided to consider these alternatives as the first step when a youth came to our Department.

We worked with community groups, universities, churches and individuals to develop programs for our youth. In essence, a spectrum of services has evolved including volunteers, foster care, family counseling, alternative schools, boarding schools, group homes, and intensive care at private psychiatric hospitals. The agencies we work with range from federally funded programs (i.e. Neighborhood Youth Corps) to McLean Hospital.

As of March of this year, we had 683 children in group care, 241 in foster care, and over 800 non-residential service slots (jobs, counseling, alternative schools, etc.) serving a total caseload of 2,928 youth. Most of these services are delivered by the private sector and paid for through a purchase of service agreement.

Such a delivery system actually costs less per youth than institutional settings; however, like most state agencies we are in a tight fiscal squeeze. We have had difficulty transferring institutional accounts into our purchase of service account. Moreover, as we developed better, more community oriented programs, our image began to change from the state's youth *authority* to a youth *service* agency; consequently we began getting more referrals. Finally, with the proposed federal

cuts to OEO and the poverty programs, I foresee our agency having to serve many more youth. Although I have my doubts, revenue sharing may be a viable plan; but I strongly suspect that the poor, black, and neglected youngsters will once again be overlooked.

I don't mean to suggest here that we have all the answers. We have had and will continue to have difficulties. Just because a person works for a private agency, doesn't necessarily make him a better kid worker; there are as many untalented, fake and corrupt people outside of state government as there are within—however, with the private sector one can cancel a contract, change a program to reflect the client's needs or redirect monies and programs to those most in need without fighting the frustrating bureaucracy of state government replete with civil service protection and patronage. Also, we need to develop more intensive care beds; small units of 8 to 10 youth staffed by the best medical and psychiatric talent available. Obviously such programs are costly, but the most damaged kids (and I am convinced that the percentage of such "hard-core" kids is very small) deserve no less.

When we began changing the system in Massachusetts, close to 80% of our youth graduated to adult corrections. Recent statistical studies on particular programs (our forestry program) suggest some dramatic results, but I'll leave the studies to academia. We all know that the old system was a failure. The system we are developing in Massachusetts has to be more successful than that, for it is based on meeting a youth's needs on an individual basis, seeing him as a unique personality with his own strengths as well as weaknesses and working with him to develop an appropriate treatment plan that is designed for him and not considering him a candidate for a wooden numbered bench in detention cottage.

PREPARED STATEMENT OF LLOYD E. OHLIN, PROFESSOR OF CRIMINOLOGY AND RESEARCH DIRECTOR, CENTER FOR CRIMINAL JUSTICE, HARVARD LAW SCHOOL, CAMBRIDGE, MASS.

The Center for Criminal Justice of the Harvard Law School has conducted a wide variety of studies in the Massachusetts Department of Youth Services over the past three years. First, the Center has conducted a continuing analysis of organizational and political measures taken by the Boston Office of DYS to define and implement new departmental policies and goals. Second, the Center more recently has begun a continuing study of the new regional offices and their work is designing and initiating treatment programs. Third, the Center examines programs for youth to evaluate the effectiveness of their organization and operation. Fourth, the Center is conducting studies of the effects of these programs on youth. Fifth, the Center is now completing an analysis of data on a subculture study of ten selected cottages at institutions since closed during the past year by the Department to serve as a baseline of comparison with the new community group homes.

These research activities began when Dr. Jerome Miller first took office, in 1969, as a reform Commissioner. The basic thrust of the research has followed the course of reform, retrospectively into the crisis events and legislative basis of the reform, and prospectively through the experiments to create therapeutic settings within institutions to the closing of the institutions and the development of community based alternatives. The research has documented difficult and trying times for the Department during this period. But the reforms undertaken have also aroused the interest of correctional planners across the country because they are charting new directions for the development of correctional services for youth. Many problems have been solved or shown to be capable of solution. Many more have come into focus as problems that still must be solved.

Our research with the Department can best be summarized by reviewing the current status of seven major developments in 1972 which reflect the central thrust of the long-term reform effort. They are all closely interrelated because they arise naturally as organizational and program problems in the movement from institution to community based corrections. If institutions must be closed because they cannot be made to serve the ends of effective treatment then a new structure of services more closely integrated with community life must be devised. Responsibility for development and supervision of such services must be decentralized and brought closer to the community through the development of regional offices. Even under such a system however, some centralized services

for the institutional treatment of dangerous and disturbed offenders may be required. In addition a closer working relationship with juvenile judges and probation personnel must be developed by court liaison staff to coordinate detention, diagnostic and referral policies and individual case decisions. The new network of community services must include a variety of alternative residential and non-residential placements for individuals and small groups which were not needed when large institutions in isolated, rural settings provided the primary treatment resource. Since such new services are more readily and effectively purchased from private agencies, it becomes essential to develop monitoring capabilities to ensure that the quality of these services meet basic standards of effectiveness. Finally it is necessary to reassess personnel requirements for this new system, to initiate staff development programs, and to arrange reassignment, retraining or discharge of former staff members to minimize personal hardship and to prevent injustice. In the following sections of this report we will review the implications and status of these seven policy problems under the following headings: 1) deinstitutionalization, 2) regionalization, 3) programs for dangerous and disturbed offenders, 4) detention, court liaison, diagnosis and referral, 5) residential and non-residential placement, 6) quality control of purchased and other services, and 7) personnel development.

DEINSTITUTIONALIZATION

A. The problem.—Since Dr. Jerome Miller became Commissioner of the Department of Youth Services, Massachusetts has been committed to finding an alternative to large institutions. For a period of time the Department tried to increase treatment effectiveness by creating within the institutions relatively autonomous, therapeutic cottage units in sharp contrast to the centrally administered traditional custody program. However experience soon demonstrated that effective development of these therapeutic programs was greatly hampered by the rural isolation of the institutions, and the difficulty of converting a deeply entrenched custodial system to a radically new type of treatment orientation.

B. Policy and procedure.—In the winter of 1971–72 the Department successfully closed two major institutions, Shirley and Lyman. Lancaster was phased down later in 1972. To do this the Department organized task forces cutting across bureau lines. Members of the planning unit, the administrative unit, and all four bureaus in the Boston Office participated in the planning and execution of the closings, as did staff in the regions and in some of the institutions. A major part of the closing of institutions involved finding alternative placements for the youth. A new administrative capability was developed to do this, first in the Boston Office and then in the regions. In addition, the University of Massachusetts placement conference was invented to provide a mass relocation capability. Another major problem in closing institutions was the reassignment of the staff. A new personnel management system within the administrative unit was developed to do this, incorporating a procedure of basing new assignments on ranked preferences of the staff and special attention to those with more seniority.

C. Accomplishments.—Most of the youth perceived the closing of the institutions as a welcome change. It gave them new opportunities to be involved in more personal relationships with advocates and program staff, and enabled them to escape the oppressive custodial climate of the institutions. Initially many staff members were greatly alarmed but in the end found the closing policy not so unsettling as it first appeared because of the efforts clearly being made to relocate staff in satisfactory positions. For regional and placement staff finding alternative placements for youth became most urgent. When federal funding of new group homes lagged behind expectations, the staff diligently uncovered new types of placements, particularly those involving new types of nonresidential services. With the closing of institutions the problem for planners and administrators shifted from the slow task of staff retraining to the problem of finding more fluid and potentially effective opportunities for contracting and purchasing services. Now they could develop new programs more quickly, and terminate unsuccessful programs more easily. Many private service agencies saw new possibilities for involvement in the treatment of delinquent youth and greater opportunities to develop and try out new ideas for treatment.

D. Continuing problems and needs.—The last vestiges of the three large institutions linger on with the haunting possibility that they may be used again as a primary treatment resource. Planners and administrators in the Department are convinced that the consolidation of the new policies for youth corrections requires the Department to divest itself of these large institutions, though vari-

ous temporary needs for housing programs are still being met by using cottages in them. As destructive as large training schools are in their judgment, there is continued use of relatively large detention and reception centers. Such facilities exhibit the same apparently inevitable preoccupations with custodial security and regimentation to maintain control over large numbers of youth confined involuntarily even for short periods of time. Although Roslindale, the Boston detention center, is now almost entirely under private contract including a program for committed youth, it is still unmistakably an institution in the traditional mold, while the Worcester and Westfield detention centers continue very much as they were before the changes of the last year. There is a distinct possibility that these three institutions, especially Roslindale, can be scaled down, if not closed, and used only for a small number of youth who simply cannot be held securely in more open community settings.

REGIONALIZATION

A. The problem.—Even before deinstitutionalization was considered there was a need to get bases of supervision, support, and guidance closer to the workers in the field in the Bureau of Aftercare. When the Department began closing the institutions this need became urgent in the entire Department, which in a sense eventually turned into a giant expansion of the Bureau of Aftercare. In addition, the shift from a custodial to treatment orientation had already abridged institutional autonomy with greater control lodged in the central office. With the movement toward highly decentralized community based services, it became imperative to reallocate a large measure of central control to the new regional offices. In this way the regional needs could be attended to better and the communities of each region could participate more effectively and responsibly in devising new correctional services for their youth.

B. Policy and procedure.—Regionalization began as a dual structure with each regional office having a director of aftercare and a director of residential treatment. In the interests of organizational and administrative clarity this duality was eliminated. The regional director of aftercare became the regional director, while the regional director of residential treatment became the assistant regional director. Regional offices began to become fully operational as the institutions closed and responsibility and authority for youth were gradually delegated to the regions by the Bureaus and the Administrative unit in the Boston Office. Thus with support from Boston Office personnel the regional offices undertook to develop placement opportunities for youth referred or sentenced to DYS by the courts. This involved developing, with the support of the Boston office, a new contracting capability at the regional level. The latest step in the process of regionalization has been the regionalization of detention, so that there is no longer any stage in a youth's contact with DYS where some regional office is not in charge of him. Finally efforts are being made to have the budget organized by regions, somewhat as it was organized by institutions in the past but with less stringent controls over intradepartmental transfers.

C. Accomplishments.—From the viewpoint of the youth in DYS regionalization has immeasurably improved service since regional offices know more about possible placements in the communities, where the youth are, and how they are doing. This now makes feasible successive trial placements if necessary so that ultimately youth can hope to get the best possible placement. The staff generally find that regionalization provides new opportunities to work more effectively with youth—ways that simply did not seem available under the old system. Some staff who have involved themselves heavily in the new programs are obviously more impressed with this than others who have avoided involvement. For planners and administrators regionalization has meant a closer fit between programs and the needs and resources of each region, (for example the U. Mass placement conference staff felt hampered by having to work on a statewide level without a regional structure to facilitate contact with local needs and resources). Regionalization has also provided a greater degree of administrative accountability for youth and resources that perviously was only partially available in the institutions and generally not available at all in aftercare. To the community, regionalization has offered a negotiated involvement that was simply not part of the older institutional system and would not now be possible without the more accessible regional offices.

D. Continuing problems and needs.—While the division of authority and responsibility between administrative and program divisions of the Boston Office

on the one hand and the regional offices on the other has been abrupt and generally effective, it still shows the marks of newness, transition, and experimentation. For example, records and current operating information systems are only gradually developing to link the regions with the Boston Office. Perhaps the greatest continuing need, associated with the transition from the institutional structure, is to divert funds from excess staff positions left in the institution budgets so that the funds can be used to expand and continue the new program in the regional areas. This need is discussed more fully in the section below on personnel.

PROGRAMS FOR DANGEROUS AND DISTURBED OFFENDERS

A. The problem.—There is widespread although not universal agreement that most people, both youth and adult, who are now locked up need not be. There is also widespread and near-universal agreement that some of those now routinely locked up, both youth and adult, really must continue to be confined in the future as well. It is also widely recognized that it is extremely difficult to separate out with a tolerable margin of error those who need to be locked up from those who do not. However recent experience in DYS with community placements has shown that with youth this problem is not as difficult as is generally assumed. Many youth clearly and obviously belong in community placements. Some clearly belong in secure settings. A few are problematic. An obvious need that emerged during this last year as the institutions closed was the provision of secure settings with intensive treatment for dangerous and disturbed youth, coupled with safeguards that would prevent such misuse of these facilities as placing in them youth who needed community resources more than secure restraints.

B. Policy and procedure.—Virtually all units of the Boston Office and the regional offices have been involved in some fashion in addressing this problem. The planning unit has recently been trying to formalize some of the conclusions and concerns of the Department in this area. The Department has found it helpful to make a distinction between youth who are behavior problems and youth who need psychiatric care. For both sorts of youth the Department has found it desirable to try to purchase services. For the behavior problem youth some conspicuous success had been achieved in the Andros program run by ex-offenders who have shown an ability to relate directly to these youth while "taking no nonsense." This program stresses use of community resources within a framework of appropriate custodial security. The Department is considering the development of additional small programs holding up to twenty youth including one for girls, along similar lines. For youth needing psychiatric care, the Department has been exploring purchase of service from private agencies with demonstrated skills in this area, and also exploring the possibility of a closely coordinated relationship with the Department of Mental Health which would allow for an exchange of services between DYS and DMH without requiring transfer of youth from the jurisdiction of one department to another. Safeguards for the youth in these different settings would be ensured by developing agreed upon standards for decision making and frequent case review.

C. Accomplishments.—The main accomplishment to this point has been the accumulation of experience just from wrestling with the problem, and perhaps a clearer idea of what needs to be done for dangerous and disturbed youth. For some youth thus far this program has meant a more constructive form of secure treatment than periodic and indiscriminate punishment in isolation cells. Staff have developed a new awareness of specific strategies that may help dangerous and disturbed youth. The planners and administrators are also much clearer about the potentialities of purchased services for these youth and necessary safeguards.

D. Continuing problems and needs.—The continuing need is for further implementation and development of the Department's experience in this area. In particular a program is needed for girls, and the projected psychiatric treatment alternatives may require more funds. Important also is increased cooperation and understanding between DYS, the courts, and the community as to the needs of dangerous and disturbed offenders and the functions of the various treatment alternatives for committed or referred youth. At present, DYS appears able to work constructively with some judges better than others in developing improved alternatives for such offenders. Clearly in the future DYS, largely through its regional offices, must find ways to work with all juvenile judges to implement better ways of treating these youth than binding them over to adult courts, or relying excessively on maximum security facilities as opposed to constructive programming in the community with other public and private agencies.

Detention, Court Liaison, and Referral

A. The problem.—DYS has been concerned about the fact that nearly all youth detained prior to trial have been held in high security institutional settings. These settings have been seen as unnecessary and destructive for most youth who are not dangerous, and for whom high security detention only aggravates their problems. DYS staff also believes that the period of detention offers a special opportunity to alter a youth's career of delinquency if used constructively. Youth may be labeled by a period of confinement and unnecessarily handicapped on their return to the community. The staff therefore is trying to reduce the probability of commitment and to provide alternatives both to commitment and to traditional detention.

B. Policy and procedure.—Alternatives to large high security detention facilities have been developed with the help of private agencies. Shelter care units have been set up in several regions, generally housing between ten and twelve youth. Local YMCA's have proved to be the most productive private resource for such facilities. In addition, foster care has been greatly expanded for detention purposes. Regions therefore now have an array of detention alternatives ranging from approximately twenty-five foster homes through shelter care (six are now operating) to the more traditional security facilities such as the Roslindale, Worcester and Westfield detention centers. Secure facilities used by more than one region are administered centrally by the Boston Office while the shelter and foster care programs are under regional control.

To deal more effectively with needs of youth while they are still under the care of the court, the court liaison role was formulated to advise courts about alternative ways of dealing with youth available to the Department. The court liaison officer considers and recommends placement possibilities within the DYS system and sometimes, as well, other alternatives to conventional detection. Thus, if a youth is referred or committed to DYS the time between such action and placement is minimized, and the reception phase in many instances is no longer distinct from detention. In seeking other options to commitment and to reduce any labeling effect of commitment, DYS has encouraged the courts to *refer* youth to DYS programs prior to final adjudication instead of *committing* them to DYS. Referrals have increased greatly throughout the system, with, of course, regional variations. It is estimated that between one-fourth and one-third of all youth in both residential and non-residential programs are now referrals instead of commitments.

C. Accomplishments.—The range of detention programs now means that some youth are detained under more benign conditions than existed previously in the tight security units. In most cases youth also seem to be aware of the advantages of referral instead of commitment to placement programs. DYS staff regard the detention, court liaison and referral programs as important components in solidifying regionalization. Program development in these areas has largely been taken over by the regional offices while quality control, monitoring, and general administrative matters have remained in the Boston Office. The court liaison and referral programs also appear to have created more constructive working relationships with the courts. DYS is providing services which the courts did not previously have readily available and is able to draw on a statewide referral and quality control system inherently difficult for the courts to develop themselves.

Private contracting agencies in the community find in these new programs an opportunity to expand their own services. This is particularly the case with the YMCA's. In a number of courts judges and probation staff have made effective use of the new referral opportunities and the assistance of the court liaison officers in utilizing these alternatives. In other instances they have been critical of the resistance of DYS staff to use high security facilities more frequently. Clearly there are still many unresolved policy differences between DYS and court personnel in regard to these new programs that must be worked out in the future.

D. Continuing problems and needs.—While the range of detention alternatives has been greatly improved during the past year, the availability and use of the older large security facilities, such as Roslindale continues to pose the problem of overdue of this alternative. Physically secure units are necessary for certain youth, but such units should probably be small in size (no more than twenty youth), administer a diversified program, and provide responsive care.

As in the past, detention services for girls lag somewhat behind the service alternatives available for boys. The court liaison program, while providing benefits to some courts and some regions, is still not operating across the entire state. Efforts need to be made to make this program an integral part of all regional systems.

Finally, a caution is in order regarding the entire package of detention, court liaison, and referral programs. It is sound to reduce the harmful results of a youth being committed. However, if youth are now being referred who otherwise would not have been committed to DYS, the risk of labeling youth at an earlier point in time is also enhanced. There is some evidence that referrals to the Department are increasing without compensating state-wide reductions in commitments. Whether the additional youth will unnecessarily acquire invidious labels, or whether their presence will lessen the degree to which the youth who have always been in DYS acquire such labels, is a question demanding urgent concern and investigation. There are many issues to be resolved. If the DYS services become less punitive, more therapeutic, and more readily available they will be used more often. Yet if they provide a treatment of last resort for the most dangerous and disturbed youth all of the youth serviced may be perceived in the same way unless clear and possibly harmful distinctions are maintained. So for the trend toward diffusion of the punitive public image of the Department seems to be achieving desirable results. Long run data on recidivism, not yet available, for current versus earlier commitments to the Department will help get some of the answers. In the meantime the generally beneficial effects of the program should be continued.

PLACEMENT

A. The problem.—One of the most pressing problems confronting DYS as the institutions were closing was the development of viable alternatives to institutional confinement. Within the context of the move to regionalize, this development of alternative placements for youth had to be seen as in large part the responsibility of the regional offices. The new placements had to be able to deal with very different types of youth problems, including youth considered especially hard to handle.

B. Policy and procedure.—The Boston Office had begun exploring new placement alternatives in 1971, and stepped up its activities in early 1972 beginning with the U. Mass Conference in January. A primary goal of this activity involved the development of group homes. However when it became obvious that Governor's Committee funding would be delayed, leaving many youth stranded as the institutions closed, a great deal of emphasis was shifted to the development of non-residential alternatives, i.e., either day or night programs in which youth can participate while living at home or in some other setting. During 1972 much of this work of developing placements was gradually shifted over to the regional offices, until now virtually the entire responsibility for developing and providing placements rests with the regions. The joint effort of the regions and the Boston Office developed, in addition to the group homes, such placement possibilities as Neighborhood Youth Corps, a recreation program at Mass Maritime Academy, and programs at community colleges as well as more fostercare than was used formerly. According to the best estimates available at this time, there are about 80 non-residential programs across the state, in which DYS places youth, about 120 residential programs and about 170 foster homes. About 600 youth are placed in residential group homes, and about 190 in foster homes, while about 620 youth are in the non-residential programs.

Finally, by seeking the help of private agencies to actually set up the new group homes and other non-residential programs, DYS put itself in a position to observe and evaluate at close quarters a wide variety of approaches to the problem of involving the community in a broadly based correctional system for youth.

C. *Accomplishments.*—Once the range of placement alternatives stabilized in the Fall, youth became much more favorable toward the placement process and opportunities. Youth seem to favor group homes and non-residential programs which exhibit a caring environment and which provide a variety of program activities. This is similar to youth reactions to the various types of cottages at the former institutions discussed in an earlier Center report in October 1972.

Boston Office and regional staff are confident that specific programs can be generated within the private sector as long as necessary financial resources exist, and that handling youth within a community context will decrease the likelihood of the youth returning to the DYS. Furthermore, these staff members

believe that communities no longer view youth problems as problems to be resolved only by youth and the state, but increasingly instead view them as community problems which can be handled within communities. The Center's study of efforts to neutralize community resistance to group homes suggests that in some communities this sense of community responsibility and capability has indeed developed significantly.

D. Continuing problems and needs.—Adequate placements for the seriously disturbed or dangerous youth continue to be a problem, as mentioned earlier. At this point, adequate alternative programs for girls are also few in number.

One of the serious problems plaguing placement in general is the slowness of reimbursement. The time lag between provision of services and payment for services is sometimes so great that contracting agencies question whether regional directors really have the authority to contract for DYS, and in some cases as a consequence smaller agencies feel threatened with bankruptcy. Prompt payment and firm financial commitments are essential to build the greatly enriched network of placement opportunities that a successful community based system of corrections requires.

QUALITY CONTROL

A. The problem.—Quality control of programs is an issue which had received little attention in DYS until the new placement alternatives were developed. However, as these alternatives were created, the issue became inescapable. The basic problem is how to maintain control over the quality of programs contracted to private agencies. This type of accountability for program quality to a public agency is something to which most of the private groups have not been accustomed in the past.

B. Policy and procedure.—Three distinct units have become involved in evaluation of ongoing programs. Some checklist monitoring of day-to-day programs was established in both the non-residential and the residential administrative units with the Bureau of Aftercare. These two units have provided useful information about activities in the various programs. However, a recently organized third unit under the direction of Assistant Commissioner Bakal has used a more systematic approach for measuring what has been happening to youth being processed through the new programs. Data has been gathered by repeatedly visiting the programs and interviewing staff and youth. Programs are now rated in various areas of Departmental concern about quality, such as facilities, administration and staff, controls, program, clinical services, diversion, and budget. Information gleaned by all three units has been used by the Boston Office and regional staff as a basis for recommending program changes, and in some instances termination of program funding.

Along with the development of the three evaluation units the Department has continued to develop an information system. This system will keep track of youth, programs, and eventually, evaluative information. It is designed to be useful both for day-to-day placement decisions and for longer run policy decisions. It should also increase accountability of both the Department's own programs and those of agencies contracting with the Department.

The Center has been working with the evaluation units and the consulting firm developing the information system to strengthen the Department's capacity to monitor its own activities and to build in routine data gathering which would also be useful for long-range research and policy decisions.

C. Accomplishments.—It is acknowledged by Boston Office staff that quality control measures are not fully operational. However progress has been made during the year. The fact that some programs have been terminated on the basis of evaluations has encouraged staff in their belief that the Department can collect evaluative data and make decisions on the basis of it. Regional directors, a number of whom were at first skeptical of the evaluation and information system, are now calling for more types of evaluation information to improve their own placement decisions. Staff involved with the development if the information system are also optimistic about what has happened during the year but expect more systematic results from computer print-outs of information on programs in the coming year. These staff members cite as a major achievement the fact that the DYS system is now organized to report regularly detailed information on youth and programs for use in the new information system.

D. Continuing problems and needs.—Quality control will probably continue to be a major issue during 1973. Evaluation efforts must be expanded to include evaluation of detention services, foster care, and non-residential services. Evalua-

tion procedures will have to be routinized to assure that once a program has received a good appraisal, it will not be forgotten, and the information system will have to be developed to the point where retrieval of information can be very quick, so as to contribute to day-to-day decisions.

PERSONNEL DEVELOPMENT

A. The problem.—In a sense all of the problems of internal development in the Department over the past few years of reform could be categorized as problems of either program development or personnel development, and the two are closely related. Personnel development is essential if new programs are to work. Staff who have been loyal to the state for years and have become committed to their work and the philosophy guiding it have suddenly been asked to change and to implement the reform policies. Not all staff can understand or accept the major reforms now being executed. Reform thus calls for new procedures to support and guide staff, or to train or replace them—in short new ways of being sure that a qualified person is there and effectively doing a required job. This also means attending to the needs of many staff members for whom the transition cannot be easy, even though the reforms may provide opportunities for more meaningful work with troubled youth.

B. Policy and procedure.—Early in the process of reform there were attempts to institute training programs for staff on a state-wide basis. In general these early efforts were not very successful in terms of staff acceptance or participation. More recently major developments in regionalization, deinstitutionalization, and purchase of service have altered staff requirements. Formal training programs are now run as regional training conferences with the help of the Boston Office, and some training can now be done on the job under the routine supervision of the regional office. In addition, deinstitutionalization and the new practice of purchasing service has besides involving new staff, put old staff in positions where it has become relevant to their day-to-day routine to learn new skills. The administration unit in the Boston Office has provided displaced staff with opportunities to transfer to different work, including new casework and other alternatives under the regional offices, or joining private non-profit treatment agencies that contract services to DYS.

C. Accomplishments.—From the point of view of the staff, accomplishments in this area are mixed. For many staff who have taken the opportunities offered to get deeply involved in the new system, the experience has been a good one. For others who have been unable or unwilling to break with past traditions, the experience has been distressing. On balance it is interesting to note that the staff union leadership, with increased understanding of what is being done and why, has not opposed the changes as it did in earlier years. For youth the process of personnel development has brought good results, since it has succeeded in moving the system toward getting the new work done by people who are able to do it. Also the administrators and planners feel that the personnel development has brought about new capabilities for change and effective work with youth.

D. Continuing problems and needs.—Perhaps the most pressing continuing need, is for the reorganization of the state budget to allow use of more of the budgeted money for purchase of service. Much of that money is now committed to maintaining underutilized institutional or other state staff positions. The majority of the staff that actually operates programs for youth are now in private agencies contracting services to the state. The budget must be revised to reflect this fact, if continued staff development is not to be seriously hampered. The Department is seeking this kind of budget revision and would like to cut its staff of state employees down to less than half of its current number.

CONCLUSION

More detailed analysis relevant to many of the issues discussed here is available in the larger reports the Center has issued during 1972. The more detailed reports are the following:

(1) Youth Reactions to Massachusetts Department of Youth Services Institutions, 1970–1972

(2) The University of Massachusetts Conference: An Experiment in Youth Corrections

(3) Neutralization of Community Resistance to Group Homes

(4) Evaluating Large Scale Social Service Systems in Changing Environments

(5) Subcultures of Selected Cottages in Massachusetts Department of Youth Services Institutions in 1971

It will be extremely important to continue to follow-up the developments described here. The Center's research plans for 1973 include continued monitoring of organizational developments in the Boston Office and the regional offices, continued program evaluation, and continued study of youth subcultures in correctional programs.

Among the special issues which will be of great interest is the question of whether the new developments add up to a net increase or net reduction of labeling effects, as the Department moves to deal with youth earlier in their court experience, and as youth who might not have become involved with DYS under the old system are now placed by DYS as a referral service for the courts. This issue may become particularly important if, under administrative reorganization, DYS becomes merged with other agencies now dealing with nondelinquents.

The Center's research in the coming year will also provide the first systematic information on effects of programs on youth, both in terms of recidivism and involvement of the youth in reintegrative relationships in the community. In addition, the coming year will provide other important followup data from a replication of our earlier study of youth subcultures in correctional settings, allowing us to compare the new group home settings with the old institutional settings, and also from continued collection of data on the organizational process of consolidating and completing reform.

It is clear that the Department of Youth Services has embarked on a program of fundamental change in the care of youthful offenders. It has made much progress in changing the old system drawing on experience with new cottage programs devised within the institutions before they were closed. It is also clear that much work remains to be done in consolidating and completing the fundamental changes. The Department will need the continued support of the legislature, funding agencies, the courts, and other state-wide and community groups in completing its reform program. Reforms have not yet been completed to insure *lasting* changes in the treatment opportunities available to youth in trouble. It is not yet clear how the current reorganization of the state administration will affect the work already done or the need to consolidate and augment the process of constructive change. The year ahead will be a critical one for confronting these problems.

Afternoon Session

Chairman Pepper. The committee will come to order, please.

Mr. Lynch, will you proceed with the first witness.

Mr. Lynch. Thank you, Mr. Chairman.

Mr. Chairman, this afternoon the first witness is Miss Lucy Keating. She is a program development specialist with the Department of Youth Services, State of Massachusetts.

If it would be all right, Mr. Chairman, I would like to ask Miss Keating a few preliminary questions and then ask her to introduce her panel of five young people who are seated behind her at the moment, all of whom have participated in a prior institutional program in Massachusetts and are now located in various group- and community-based rehabilitation service programs within that State.

Miss Keating, I wonder if you could tell the chairman and the members of the committee what function it is that you serve as a program development specialist.

STATEMENT OF LUCY KEATING, PROGRAM DEVELOPMENT SPECIALIST, DEPARTMENT OF YOUTH SERVICES, BOSTON, MASS.; ACCOMPANIED BY MISS RUTH, MR. POLLOCK, MISS LABONTE, MR. HALL, AND MISS BERGERON, CLIENTS

Miss KEATING. I am presently working in the bureau of after care, mostly involved right now with soliciting and working with groups to develop programs, both residential and nonresidential, for girls, which is an area that we need to expand on in the State of Massachusetts.

Mr. LYNCH. What contacts do you have with young people who are participating in those programs?

Miss KEATING. Right now, we have opened up the central administration office in the Boston office for the State to be accessible to the youth that we are serving and often they come to get additional information about programs across the State.

Chairman PEPPER. Would you like to repeat that?

Miss KEATING. I often meet the youth of the department of youth services as they come into the central administration office, which in the last 4 years since Dr. Miller has come into the State of Massachusetts, has been opened up to the youth so that they can inquire about additional programs they might not be finding out about.

Mr. LYNCH. Would you introduce the five young men and women you brought with you today and ask them to please take a seat at the witness table with you?

Miss KEATING. From my left, will be Jim Pollock and Tim Hall, Sue Bergeron, Debbie Ruth, and Nancy LaBonte.

Mr. LYNCH. Mr. Chairman, I would like to proceed with Miss LaBonte.

Miss LaBonte, I wonder if you would please tell the chairman and the committee how it was that you first became involved with the juvenile justice system in the State of Massachusetts; what your experience was in an institution in that State; and, finally, what kind of a program you are presently involved in.

Miss LABONTE. I first got in trouble when I was 13, just running away and doing dope, and I ended up in Lancaster, which is an institution, and I had to stay 13 months. I was released and stayed only on that site for one summer. I had gone back and I was put into a foster home after that, from which I ran.

I have been on my own for the past 2 years.

Mr. LYNCH. Would you tell us, please, what kind of institution Lancaster is, and what kind of programs you participated in while you were there?

Miss LABONTE. It is a regular institution.

Mr. LYNCH. Tell us what the daily routine was like in that institution, if you would please, from the time you got up in the morning until the time you retired in the evening?

Miss LABONTE. We got up at 7:30 and we had to have our rooms cleaned before we went down to breakfast. After breakfast we had to either work in the bakery, laundry, go to school, or we had child care, things like that.

Mr. MCDONALD. When you were sent to Lancaster what kind of girls did you associate with? You were sent to Lancaster because

you had problems at home, you were running away. What kind of girls were you associated with in Lancaster?

Miss LaBonte. Basically, all types, prostitutes, people that were sent up for dope, people stealing cars.

Mr. McDonald. With what kind of rehabilitative services and facilities did they provide you?

Miss LaBonte. I don't think they provided any.

Mr. McDonald. Did you get counseling at all at Lancaster?

Miss LaBonte. Yes, there was counseling, but how can you be counseled and be locked up at the same time?

Mr. McDonald. What kind of groups were they? Who gave the counseling to you?

Miss LaBonte. It was four counselors: like, everyone was assigned to a certain counselor and she saw them once a week.

Mr. McDonald. Where was Lancaster in relation to your home? You were from Springfield or Westfield?

Miss LaBonte. Yes.

Mr. McDonald. Where is Lancaster in relation to that?

Miss LaBonte. About 60 miles away from my home.

Mr. McDonald. Mr. Hall, can you give us a description of when you first got into trouble with the authorities and for what offense?

Mr. Hall. When I first got in trouble I was about 13 years old. My mother took out a stubborn child complaint and they brought me to court for that. When they picked me up I had in my possession a hypodermic needle and dope. So they put a drug charge on me and I got sent to Lyman School at that time and I did 3 months in Lyman School, and there was no type of drug counseling up there.

What you did from day to day was sit in their rec hall or watch TV and go down and have your breakfast and lunch, regular schedule, you know. Once in a while you would get a little counseling, you know; but as far as reform, there was none.

Mr. McDonald. Can you tell the committee a little bit about Roslindale? You were sent there. Tell us what year you were sent there. At the detention center you mentioned you had been in a number of times, can you describe for us what life was like at Roslindale? What did you do from getting up in the morning through most of the day?

Mr. Hall. Roslindale, mainly—I went there in 1967. My first time in Roslindale was probably 1967. And they had basically the same thing, you know. You come in and they write up what you go on, and your possessions, what you have, they take your personal belongings. You go to sit in the rec hall. You watch TV. Like their bathroom facilities were all dirty.

If you wasn't in the rec hall watching TV you were locked up. Like there was guys up there, sometimes beat your head against the wall, you know, brutality. Like if the kids got out of line or something like that for unnecessary reasons, there was guys up there would beat your head. I don't think that's no type of reform for any kids.

If they did something wrong, you know, it's not their place for them to take out whatever happened at home on the kids, you know, when they come to work. That's basically what Roslindale is all about.

Mr. McDonald. Why were the fellows being beaten at Roslindale; do you know?

Mr. HALL. No particular reason. You know, like we had to go to bed about 9 or 9:30. Nobody wanted to be in bed about that time, so maybe the kids would make some noise and the guys came down one night and started beating kids on the head—just because they were making noise.

Mr. MCDONALD. Tim, you told me before you were sent to Roslindale 15 or 20 times over a course of 4 years. Can you explain or tell them what Roslindale is, and why you were sent there so many times?

Mr. HALL. I was sent there so many times because I was messing around with drugs for 4 years. I was shooting dope for 4 years, from about 1967 until about a year ago. And in the course, in between that time, like I was doing a lot of things I wasn't supposed to, until I went to the rehabilitation center.

I was in and out of Roslindale, like, what sent me to Roslindale, I kept on getting busted for various things, like being on heroin and things like that.

Every time I went there, nothing would be changed. Like the same things would be going on, either the kids would be in the rec hall, and that's it. Like the gym, once in awhile. And like I say, the only thing I have seen about Roslindale that has changed—you know, it is just a detention center where the kids are held there maybe overnight. If you got arrested by the police on Thursday they held you over until Friday, the next morning, when you are arraigned.

It is like, really, the place is an institution that should have been closed a long time ago. It is no place for anybody to live.

Mr. MCDONALD. How about Lyman Hall? You spent some time there. Can you explain the routine at Lyman; what was done for you as a young juvenile offender; what kind of rehabilitation you got there, if you got any at all?

Mr. HALL. There was no type of rehabilitation at Lyman School. It was more or less set up on the basis of Roslindale. Like you would sit in the rec hall, you know. Like they had a TV room. You could play basketball, you could watch TV. You had your choice, but as far as setting up educational and therapeutic things, they had school up there but it only lasted for something like 3 months and the kids only went if they wanted to. They weren't forced to go or anything like that.

It all depends on how you behaved up there whether you got the chance to go home, like they give 2-day passes or the 3-day passes. It all depends on your behavior whether you got one.

Mr. MCDONALD. Explain to us how you got involved with First, Inc. and what that program is all about, including what it has done for you.

Mr. HALL. Well, I was out of jail for awhile and so the condition of my parole from Lyman School was not to use any drugs again. OK, so I came back home. I did start using drugs again. So I got it so bad my mother called my probation officer on me and he came with two officers to arrest me one morning and took me to Roslindale. I stayed up there for a week. Then I was sent to First, Inc., which is a drug rehabilitation center. That was a drug, more or less, therapy place where they had encounters, seminars, rap sessions, and different things like that.

Mr. McDonald. Tell the committee about the facility itself; was it strictly for juveniles?

Mr. Hall. No, it was for anybody; no difference as to race. It was all kinds of races there; no difference as to age. All different ages, not just for juveniles. They have encounter groups, where you would go in discussion, like your past life with your family, different things.

Mr. McDonald. Were there locks on the doors?

Mr. Hall. No, there was no locks on the door. When I first came there I really didn't want to stay, but I seen some of the friends I was with in the street and they were using drugs pretty bad and I said, "If they can do it, I can do it, too." I just stayed in.

If you got locked doors a person is going to want to think about getting out. But if you have open doors, and if it is just an institution or rehabilitation center, you know, they are going to think twice about leaving, think it is going to do me some good. It was a self-help program. If you didn't want to be there you didn't have to stay there, you know.

Mr. McDonald. You were given a choice? When your probation officer came around to arrest you that time, he gave you the choice?

Mr. Hall. He didn't give no choice then. He just came and arrested me in my bed, he and two policemen, and took me up to Roslindale. I stayed up there a week before he would come to see me. When he did come up there he told me I couldn't go back home. He said I had a choice of going to Oakdale or halfway house.

I picked the halfway house, drug halfway house, because I was still on drugs.

Mr. McDonald. Have you touched any drugs since that time?

Mr. Hall. No, I haven't. It has been 1 year and 2 months.

Mr. McDonald. When was it you went to First, Inc.? When did you start that?

Mr. Hall. In March.

Mr. McDonald. March of what year?

Mr. Hall. 1972.

Mr. McDonald. Have you been arrested at all since that time?

Mr. Hall. No.

Mr. McDonald. What are you are doing now?

Mr. Hall. I am working in Waltham, at Parke-Davis. I put together cardiographs.

Mr. McDonald. In your own opinion, if you hadn't gone to First, Inc., if you had gone to Oakdale——

Mr. Hall. I probably would have still been on drugs.

Mr. McDonald. Thank you, Tim.

Miss Bergeron, can you give the committee a description of when you first got in trouble; how old you were; where you lived at the time; and whom you were living with?

Miss Bergeron. I was 14 years old and I had got in trouble for stealing cars. My first time I got in trouble, I got probation. The second time, I got put under observation for 2 weeks in Westfield Detention Center, and from there I went home and got picked up again for loitering.

I got put away for violation in Worcester Detention Center; and from there I went to Lancaster Reform School; then from there I got

transferred to Lyman Reform School: and from Lyman, I went home.

Mr. McDonald. Over how long a period of time was this?

Miss Bergeron. About 2½ years, 3 years.

Mr. McDonald. How old are you now, Sue?

Miss Bergeron. Seventeen.

Mr. McDonald. How was your homelife before you started getting in trouble? Were you getting along with your family?

Miss Bergeron. I wasn't living with my family. I was just living with friends.

Mr. McDonald. Can you describe Westfield for us?

Miss Bergeron. It is a small building and it holds about 25 people. When I was there, my first time being there, you had to wear State clothes, and it was like the girls' side and boys' side, and you stayed on the girls' side and went to bed about 8:30 and lights out by 9 and you stayed in your room.

Mr. Lynch. You indicated you weren't living with your family. Why weren't you living with your family?

Miss Bergeron. I wasn't; I just didn't like people telling me what to do.

Mr. Lynch. Do you have brothers and sisters?

Miss Bergeron. Yes.

Mr. Lynch. How many?

Miss Bergeron. Two other sisters and a brother.

Mr. Lynch. Do they live at home?

Miss Bergeron. Yes.

Mr. Lynch. Have they been in trouble with the juvenile authorities?

Miss Bergeron. No.

Mr. Lynch. You said you were 14 when you were first arrested for stealing an automobile?

Miss Bergeron. Yes.

Mr. Lynch. When you were first sent to a juvenile facility, what kind of treatment, if any, were you given there?

Miss Bergeron. Treated just like all of the rest of the kids. I was greeted when I came in and then searched. You couldn't have makeup, or any money on you, or anything like that.

Mr. Lynch. Did you have any regular kind of counseling program?

Miss Bergeron. No.

Mr. Lynch. Did adults deal with you in any particular kind of way? How did you relate to the adult correctional personnel there?

Miss Bergeron. You are talking about Westfield now?

Mr. Lynch. The first correctional institution you were sent to. Is that Westfield?

Miss Bergeron. No, that would be Lancaster. Westfield is the detention center, like an overstay until you are placed.

Mr. Lynch. What was the first institution you served any considerable period of time in?

Miss Bergeron. Lancaster.

Mr. Lynch. At that institution did you receive any regular kind of counseling service?

Miss Bergeron. No.

Mr. Lynch. What did you do there during the day?

Miss Bergeron. I farmed. I worked on a farm.

Mr. Lynch. Did you go to school?

Miss BERGERON. Yes: I did.

Mr. LYNCH. How many hours a day?

Miss BERGERON. About 8:30 to 4.

Mr. LYNCH. When did you do the farming?

Miss BERGERON. It must have been in the summertime I did farming. It was in the summertime I did farming, all day.

Mr. LYNCH. How long did you stay in that institution?

Miss BERGERON. Three months.

Mr. LYNCH. What happened to you then?

Miss BERGERON. I went to Lyman Reform School.

Mr. LYNCH. Why were you sent to Lyman?

Miss BERGERON. They were just accepting girls. Lyman just started taking girls in.

Mr. LYNCH. How long did you stay in Lyman?

Miss BERGERON. Three months.

Mr. LYNCH. What happened to you then?

Miss BERGERON. I ran from Lyman.

Mr. LYNCH. Where did you go?

Miss BERGERON. I went home.

Mr. LYNCH. And what happened to you then?

Miss BERGERON. I was never caught. I was on the run for about a year and a half.

Mr. LYNCH. What did you do during that year and a half? What kind of life did you live. Were you committing crimes?

Miss BERGERON Oh, no.

Mr. LYNCH. Were you getting into trouble?

Miss BERGERON. Yes. I never got picked up. I was still being myself.

Mr. LYNCH. That is not what I am asking you, whether or not you were picked up. Were you getting into trouble?

Miss BERGERON. Yes.

Mr. LYNCH. Were you going to school?

Miss BERGERON. No.

Mr. LYNCH. You were living full time with your parents?

Miss BERGERON. No, no. I went home to other people, like people I considered home then.

Mr. LYNCH. Were they adults or youngsters?

Miss BERGERON. Youngsters. Yes, about 25 and under.

Mr. LYNCH. Why are you here now? What eventually happened to get you back in the system?

Miss BERGERON. Then a year and a half later I got picked up for grand larceny.

Mr. LYNCH. Was that auto theft? Grand larceny auto theft?

Miss BERGERON. No. Money.

Mr LYNCH. Go ahead.

Miss BERGERON. From there I went back to Westfield Detention Center for 5 weeks. Then I got interviewed by Genesis II halfway house.

Mr. LYNCH. Tell us what Genesis II is.

Miss BERGERON. Genesis II is an organization that has many halfway houses and has a school in Springfield. And it is just, they are just houses where kids live in there and get counseling.

Mr. LYNCH. How many other youngsters are there in that house?

Miss BERGERON. Eight others.

Mr. LYNCH. Is it all girls or girls and boys?

Miss BERGERON. It is co-ed.

Mr. LYNCH. Describe a typical day at that place, would you please?

Miss BERGERON. We get up at 8 o'clock and breakfast is at 8:30, and if you don't make it down for breakfast you don't get breakfast.

Mr. LYNCH. Who cooks breakfast?

Miss BERGERON. The counselor that is on in the morning. After breakfast, I go to school.

Mr. LYNCH. Public school?

Miss BERGERON. No, I go to Business Education Institute, keypunching school. And a couple of kids go to school, you know, a couple of kids go to work. Some of them are trying to be programed, go other places. After school I come home and there is usually something to do around the house.

Mr. LYNCH. For instance?

Miss BERGERON. Vacuuming, anything.

Mr. LYNCH. Chores?

Miss BERGERON. Yes; chores.

Mr. LYNCH. Are you assigned by the counselors to do that? How does it work?

Miss BERGERON. So many chores a week and the kids have their names by the chores.

Mr. LYNCH. You have certain assigned duties each person must perform?

Miss BERGERON. Yes.

Mr. LYNCH. What happens if you don't do your duties?

Miss BERGERON. That is mostly up to the kids. We have house meeting in the house and like all of the kids and all of the staff get together and we talk about, you know, say I didn't do my chore and we talk about something like that. What restrictions I get, or maybe not even any, because I might have a real good reason why I didn't do it.

Mr. LYNCH. How many people are on the staff at Genesis II?

Miss BERGERON. Fourteen.

Miss LABONTE. No.

Miss BERGERON. About 12.

Mr. LYNCH. About 12. Those are all adults; is that correct?

Miss BERGERON. Yes; that is counselors and volunteers.

Mr. LYNCH. There are more counselors than there are youngsters in the program; is that correct?

Miss BERGERON. Yes.

Mr. LYNCH. When you finish your chores after the evening meal what kind of a program do you have? Do you have group therapy sessions? Do you have group confrontation sessions, things like that?

Miss BERGERON. Well, like the group thing would be like the house meeting, we have one of them every day, either before or after supper.

Mr. LYNCH. What is the purpose of the house meeting?

Miss BERGERON. To get out feelings, what you are going to do, just sitting down and talking about tension in the house, and stuff like that.

Mr. LYNCH. How long have you been at Genesis II now?

Miss BERGERON. I left Genesis II and came back. It has been about 4 months all together.

Mr. LYNCH. You left it and subsequently returned to it; is that correct?

Miss BERGERON. Yes.

Mr. LYNCH. Why did you leave it?

Miss BERGERON. I wasn't getting along at first, when I first went there.

Mr. LYNCH. You mean you walked out, in other words?

Miss BERGERON. Yes.

Mr. LYNCH. Why did you come back?

Miss BERGERON. Because I wasn't doing any good.

Mr. LYNCH. What do you think about yourself now? Do you look at yourself in any different way after your experience at Genesis II?

Miss BERGERON. Yes, I do.

Mr. LYNCH. Could you tell us in what particular way?

Miss BERGERON. I don't know. Like before I went to Genesis II, even when I was in Genesis II for the first time, like the counselors were on a different level about me. I didn't want them knowing anything like my private life. I didn't want to talk to them. Now, it is really good to sit down and tell them what is happening. They try to help you if you have a problem.

Like I am just not scared to go to anybody with a problem any more like before I was.

Mr. LYNCH. Do you have any idea now as to why you were getting into trouble before?

Miss BERGERON. No. I don't really have no reason why I got in trouble. I like driving cars and couldn't get my license and took a car.

Mr. LYNCH. Do you have a license now?

Miss BERGERON. No. I am going down to get my license.

Mr. LYNCH. Are you in a driver's training program?

Miss BERGERON. I am going down for my permit now.

Mr. LYNCH. Thank you very much.

Mr. MCDONALD. Mr. Pollock, can you tell us how old you are and tell us when you first got in trouble?

Mr. POLLOCK. I am 17 and I was 8 when I first got in trouble.

Mr. MCDONALD. What did you get in trouble for?

Mr. POLLOCK. I was robbing freight cars inside the freight yards over in South Boston.

Mr. MCDONALD. What happened to you? Who were you living with at the time?

Mr. POLLOCK. I was living with my father in the D Street projects. I got caught. I went to court and they let me off on probation, but I got caught again for stubborn child, and runaway, and stuff like that. So at that time, I don't know, they got fed up with me or something. But I lived at the youth service board in Roslindale.

Mr. MCDONALD. How old were you?

Mr. POLLOCK. Still 8 years old. I was in Roslindale for about 3 months, and then I got home, and I was there for 2 weeks. Then I went back to Roslindale. I got caught again for another charge.

Mr. MCDONALD. What for this time?

Mr. POLLOCK. This time was running away, breaking into freights, stuff like that. They had me down for a stubborn child, I guess. I went back to the youth service board and spent about 4 months there, 5 months, somewhere along there. From there, I went to a foster home.

They gave me the choice of either going to a foster home or putting me in, like, as we call it, in "Blue," back in those days. Because if

you were in "Blue," as the saying is, you were committed there and you could stay there for any amount of time. At that time you could stay there for as long as a year. You know, sometimes even longer. And I didn't want that, so I went to the foster home. And I was at the foster home for about 2½, 3 years, and I got, while I was in school. I took a knife out on a couple of kids and cut them.

Mr. McDonald. This was while you were living at the foster home?

Mr. Pollock. Yes, after I was there for 2½ to 3 years.

Mr. McDonald. What was the foster home like?

Mr. Pollock. Put it this way: I am glad I am home right now because a foster home—first of all, you don't get the family care as you would with your own family. Second of all, they don't really care what goes on with you as long as you don't bother them, in so many words.

Mr. McDonald. Did they care about what you were doing? Did they have any interest at all, other than making sure you weren't picked up by the police?

Mr. Pollock. Like, when they moved to, like out in the country, you know, and the way the people acted around there was like a real big crime if you committed, like a little skipping school or something, so you had no choice. Because they would be preaching to you, especially how they knew I was in Roslindale before. They always preached to you—we don't want you in trouble out here, or you will be in a lot of trouble.

So I guess it went to my head or something, so I didn't get in trouble for awhile. But I got fed up with it after awhile and I had a lot of things on my mind, and that is when those kids got sliced.

Mr. McDonald. You were also sent to Lyman, weren't you?

Mr. Pollock. Yes.

Mr. McDonald. How long were you there?

Mr. Pollock. The first time I was at Lyman I was there for about 3 months.

Mr. McDonald. How old were you then, approximately?

Mr. Pollock. This was later on, though. This was when I grew up a little more. I was about 14. Somewhere around there. And I stayed at Lyman for about 2 months and I ran. I came back to Dorchester, stayed out for 4 months, 5 months, and I got busted again, caught for a stolen car charge and assault and battery.

So they put me back in youth service board for another 2 to 3 months, and I spent most of that time just sitting around doing nothing. But then they transferred me back to Lyman again. I was there for 3 months that time and then I went home.

That is when Jerome Miller took over the department of youth service, and like he had a lot of programs starting out then, and like I didn't get into any real programs, but I got a lot of help from a lot of new people working in them. And then they cared for you, you know.

Mr. McDonald. Before you get into that, from approximately 8 to 14 years of age you were in and out of various institutions. What kind of counseling and rehabilitation did you get during that time?

Mr. Pollock. None.

Mr. McDonald. None whatsoever?

Mr. Pollock. None.

Mr. McDonald. Did you ever have any encounter sessions or talks with the counselor as to why you were having problems at the ages of 8 through 14?

Mr. Pollock. All they took was smoke. All it meant for us was smoke. It wasn't really worth listening to them. The way you really felt about it, the guys who were trying to tell you this, you didn't really think they cared so you don't really listen.

Mr. McDonald. Could you tell us what you were arrested again for—assault and battery—you cut someone with a knife? Tell us how you got involved with DYS under Dr. Miller.

Mr. Pollock. This wasn't why I cut the kid. When I cut the kid, some other guy was in before Miller, so I just went to the same routine of Roslindale and Lyman again.

Mr. McDonald. Explain how you got involved with the DYS and what they have done for you since the time of Dr. Miller.

Mr. Pollock. That is when I was discharged on January 7 of 1972. When I was discharged I went up to my parole officer to see if I could get some clothes because I didn't have no clothes, and so there I got to know my parole officer and people that worked there pretty good. And whenever I really needed money bad—I couldn't just go up there—but if I needed it bad, they would give it to me. Or if I had something to get off my chest I could go to my parole officer because he would more or less listen to me and try to help.

Mr. McDonald. Why did you go to him in the first place, when you had all of the encounters with the authorities for about 6 years? What made you go to your parole officer this time and consider that he would even listen?

Mr. Pollock. I figured I was a little more grown up, and when I was young I didn't think of it. The first thing I thought of was just trouble.

Mr. McDonald. And your parole officer did respond. What are some of the things he did for you?

Mr. Pollock. Let's see: He tried to get my license for me; he helped me out when I had trouble with my father and my father was in the hospital with a heart attack; and he helped me out by giving me money, driving me to the hospital when I needed it. More or less showing me consideration.

Mr. McDonald. Was DYS more responsive to you? Did you feel you could go up to their office and talk to them at any time you wanted to?

Mr. Pollock. Yes, because the whole structure was entirely different, because people now, under Dr. Miller, you know, after Dr. Miller was in, they more or less, not on an adult-juvenile basis but on a person-to-person basis, and they tried to treat you like a young adult and with intelligence. I think you really need that to talk to somebody.

Mr. McDonald. What are you doing now? Are you working?

Mr. Pollock. Yes. The department of youth service helped me get a job working with the department out of another building. I am working maintenance.

Mr. McDonald. Thank you.

Miss Ruth, can you describe to the committee your experiences? First of all, how old you were when you first got in trouble?

Miss Ruth. I first got in trouble when I was 12, truancy from school. They gave me probation.

Mr. McDonald. Continue please.

Miss Ruth. They brought me to court like several times for truancy. Then when I was 13, I violated probation and I went back. I was supposed to go down and see my probation officer, like no grounds to arrest me, they didn't have any warrant or anything, but they issued one after they put me in Jamaica Plains Detention Center.

Mr. McDonald. How old were you?

Miss Ruth. Thirteen.

Mr. McDonald. And this was basically for truancy?

Miss Ruth. Yes.

Mr. McDonald. You were living with your parents at that time?

Miss Ruth. I was living with my mother.

Mr. McDonald. You have a sister and brother?

Miss Ruth. Two sisters.

Mr. McDonald. What happened at Jamaica Plains? What did they do to you?

Miss Ruth. I was there until November 4, and I thought I was going home because it was my first offense, and I was committed.

Mr. McDonald. To where?

Miss Ruth. Department of youth services, and I was there until December 23, and went to Madonna Hall.

Mr. McDonald. Can you describe to the committee what Madonna Hall is?

Miss Ruth. A convent school, run by the Sisters of the Good Shepherd. It was like a clean life. It was really strict. Never let you out of the building by yourself.

Mr. McDonald. Were you locked in at night in your room?

Miss Ruth. You weren't locked in your room, but it was like between midnight and 2 o'clock the doors were locked and they had alarms.

Mr. McDonald. When you went to Madonna Hall, had you already been to Lancaster?

Miss Ruth. I never went to Lancaster. I was there for 18 months.

Mr. McDonald. At Madonna?

Miss Ruth. And then I ran.

Mr. McDonald. What kind of life did you have at Madonna?

Miss Ruth. Going to school and going to church, and never going out. They let you go home like every third or fourth weekend of the month; that, after you had been there about 8 months. You had to be there a long time before you could even go home.

Mr. McDonald. Did Madonna Hall do anything for you? What kind of rehabilitation did they have? Did they give you any counseling? You went in as a truant. Basically, that was your problem. What did they do to help you become more sociable?

Miss Ruth. Just up there. If you didn't study, if you didn't do your homework, they write out the white slip and for every white slip you lose two cigarettes. And for a number of them, you get more punishment. They wouldn't let you talk to your parents or anything. What almost everyone up there did was go to school to keep themselves out of trouble.

Mr. McDonald. There were girls there that were committed, not by DYS, but by their own parents?

Miss Ruth. DYS and some by their own parents.

Mr. McDonald. Had any of the girls committed violent crimes?

Miss Ruth. If they had, they started letting some girls in for like stolen cars, but when I first went up there it was like truancy. I don't thinks they let you in on any drug charge at all—Truancy and runaway.

Mr. McDonald. Were you there for an indeterminate sentence?

Miss Ruth. Yes.

Mr. McDonald. What was the criteria; what would they let you go for?

Miss Ruth. They really let you go when you were ready, and you look around and some girls have been there up to 4 years. You never knew when you were going to be ready. You could stay there like 4 years.

Mr. McDonald. How did they define "ready to go back out?"

Miss Ruth. They didn't. I said, "I am ready; I am not going to get in more trouble," and they said, "You are not ready." And I said, "I am," and they said, "You are not." They just used to talk a lot of crap. They never made much sense.

Mr. McDonald. Did you get any counseling?

Miss Ruth. You used to see a social worker like a weekday, but an hour once a week.

Mr. McDonald. Did you feel like you were getting anything from the counseling session?

Miss Ruth. No.

Mr. McDonald. What happened then?

Miss Ruth. Then I ran, like different times from Madonna Hall, and from there I came back.

Mr. McDonald. Back to Madonna?

Miss Ruth. I ran. Like the last time I ran, I refused to stay, so they said, they used to always say, "If you don't smile, you go to Lancaster." That is all they say. Most of the time you are up there, they threaten "Lancaster." So I said, "Put me in Lancaster; I don't want to stay," and they wouldn't let me out.

So I made them call the youth service board worker and I went to Roslindale from there and then I got paroled to my aunt's house.

Mr. McDonald. How long were you in Roslindale?

Miss Ruth. A month.

Mr. McDonald. What happened when you started living with your grandmother?

Miss Ruth. I don't know. I didn't really like it. I couldn't really do anything there.

Mr. McDonald. You mentioned once before you were living with a friend.

Miss Ruth. Yes. When I ran from my grandmother's, I went and stayed with this girl that I stayed with another time when I ran away. One day she was looking at the paper—I was at her house for a good 3 weeks—and they had in the paper that DYS persons can go down and won't be picked up for violation of parole.

We went down and they gave her temporary custody of me until they could find another place. They weren't working on it or anything. Places were not available. So I was there for about 6 months and then I went home.

Mr. McDonald. Back to your grandmother?

Miss RUTH. To my mother's house.

Mr. MCDONALD. Then what happened?

Miss RUTH. Well, like I was living with my sister sometimes and living with my mother sometimes. And everything was pretty good. I wasn't getting in no trouble. Then I was looking for a private school. I went to one and I didn't like it.

Mr. MCDONALD. Which was that?

Miss RUTH. Windsor Mountain School.

Mr. MCDONALD. This was under DYS; they sent you?

Miss RUTH. That isn't DYS placement.

Mr. MCDONALD. But they sent you there?

Miss RUTH. Yes.

Mr. MCDONALD. Could you tell the committee what you are doing now under the auspices of DYS?

Miss RUTH. I live in Boston and I go to school every day.

Mr. MCDONALD. What school?

Miss RUTH. Newman Prep.

Mr. MCDONALD. What dorm do you live in?

Miss RUTH. It is a private dorm for girls that go to different schools in Boston. Most go to art school; some go to finishing and career schools.

Mr. MCDONALD. And DYS is paying your room and board. How much does it come to?

Miss RUTH. About $2,000 a year.

Mr. MCDONALD. Can you tell us about Newman Prep? What kind of school is that?

Miss RUTH. College preparatory school. It is a pretty liberal school. It is much better than the public schools in Boston. The classes are about 2 hours.

Mr. MCDONALD. What kind of subjects are you taking?

Miss RUTH. I am taking sociology, history, and English.

Mr. MCDONALD. Under DYS, couldn't you just be going to public schools if you wanted?

Miss RUTH. If I wanted to get off parole, I suppose I could demand to get off parole. I don't know. They don't really have to let you off no matter how old you are. But they are paying for everything. It is really stupid.

Mr. MCDONALD. Stupid, for what?

Miss RUTH. To get off parole. I have straightened out a lot in the last year.

Mr. MCDONALD. Have you gotten much counseling from DYS?

Miss RUTH. They are really good. You can go into the office any time now. There are other organizations, private organizations, in Boston.

Mr. MCDONALD. If it hadn't been for DYS, the system as it is now, where do you think you would be?

Miss RUTH. I don't know.

Mr. MCDONALD. Do you think you would still be going in and out of institutions?

Miss RUTH. If it wasn't for the new system? Yes; I would have been put in again for violation. I would be in a women's prison now.

Mr. LYNCH. Debbie, why did you begin to run away from home?

Miss RUTH. I didn't run away from home. I wouldn't go to school.

Mr. LYNCH. Why wouldn't you go to school?

Miss RUTH. Because I didn't like school. I wanted to go home and lay around all day.

Mr. LYNCH. You were 12 years old when that started?

Miss RUTH. Yes.

Mr. LYNCH. Do you have brothers and sisters?

Miss RUTH. Two sisters.

Mr. LYNCH. Who do they live with?

Miss RUTH. They live on their own.

Mr. LYNCH. At that time, were the three of you children living together with your parents?

Miss RUTH. No. One of my sisters was in a drug rehabilitation center and the other in a halfway house in Boston.

Mr. LYNCH. When you were 12?

Miss RUTH. About 12 or 13.

Mr. LYNCH. How old was the sister who had the drug problem?

Miss RUTH. One of my sisters was 16, 17, and one was about 18. They got picked up.

Mr. LYNCH. When did you start experimenting with drugs? How old were you?

Miss RUTH. When I was about 14, 14½.

Mr. LYNCH. Did you learn that from your older sisters?

Miss RUTH. No; I learned it at Madonna Hall.

Mr. LYNCH. At the time you were 12 and began to have truancy problems at school, were you living with your mother?

Miss RUTH. Yes.

Mr. LYNCH. And your father?

Miss RUTH. No.

Mr. LYNCH. Where was your father?

Miss RUTH. He died when I was real young.

Mr. LYNCH. And your mother had not remarried?

Miss RUTH. No; she had not.

Mr. LYNCH. Where do you live now?

Miss RUTH. In Haverhill.

Mr. LYNCH. Does your mother still live in Boston?

Miss RUTH. I am staying in Boston but I live in Haverhill. I go home on the weekends.

Mr. LYNCH. You see your mother now?

Miss RUTH. Yes.

Mr. LYNCH. What kind of relationship do you have with your mother now?

Miss RUTH. I guess a good relationship. We don't argue no more. I go in the house and she thinks of me as an adult. She lets me do more or less as I want. She doesn't hassle me any more.

Mr. LYNCH. In retrospect, do you have any idea why you began to get into trouble when you were a 12-year-old girl?

Miss RUTH. No reason.

Mr. LYNCH. Have you thought about it?

Miss RUTH. Yes.

Mr. LYNCH. Have you discussed it with your counselors?

Miss RUTH. You know, there really wasn't any reason. Probably because I wanted to be older than I was and wanted to be cooler than I was.

Mr. LYNCH. I would suggest that is a reason. How do you feel about that now?

Miss RUTH. That it was dumb.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Mr. MCDONALD. Miss LaBonte, you stayed 13 months at Lancaster and now you are in Genesis II. Can you contrast the difference between the two approaches in juvenile corrections? What was your life like at Lancaster as opposed to what you are getting now at Genesis II?

Miss LABONTE. My life at Lancaster was really different. I was locked up in Lancaster. At Genesis II I live a normal life. I go out to work; I go to school. I have no locks. It is more or less like living at home with a family. I have some more things open to me now. At Lancaster, I didn't have these things open to me.

Mr. MCDONALD. What did you get out of 13 months at Lancaster?

Miss LABONTE. Nothing, because I didn't have contact with the outside at all.

Mr. MCDONALD. You were isolated?

Miss LABONTE. Yes.

Mr. MCDONALD. You were locked up at night?

Miss LABONTE. Oh, yes.

Mr. MCDONALD. Can you compare what you are getting out of Genesis II as opposed to Lancaster? If you were still in an institution like Lancaster what do you think you would be doing now; or if you had just gotten out of a school like Lancaster? LaBonte.

Miss LABONTE. I think I would be in pretty bad shape, to be perfectly honest with you. I know I would have gone back to the school.

Mr. MCDONALD. Sue, could you tell us about your experience at Lancaster? Were you locked up at night, also?

Miss BERGERON. Yes.

Mr. MCDONALD. Describe your feelings about being locked up at night? Just basically what it was like at Lancaster.

Miss BERGERON. It was bad. It was just, you know, like being locked up all of the time. Like most of the girls just really tried to think of a way to beat the system. You know, like how could they get an extra cigarette. You never did anything because you wanted to do it. You had to have a reason to do it. You had to be bribed to be doing something.

If you wanted an extra cigarette, you could do something else. If you wanted to go to the movies, you had to be good. You didn't have a choice. You couldn't really express your own feelings. You were just playing a game with them. If they wanted to see good, you gave them "good" while you were in there. This is what I did.

I did as much as I did behind their back, because you couldn't let your own feelings out. So you did everything privately.

Mr. MCDONALD. How about at Genesis II, what is the contrast between Lancaster and Genesis II, from your own experiences?

Miss BERGERON. Genesis II is a really beautiful home. Like sometimes you get—like kids in there who have lot worse problems than you have and everything, but they explain to the kid, some kids need more help and all of that. It is more like a family. You never consider anybody just there. You know you have talked to them. You have talked to everybody about your problems, even the other kids. Like everybody tries to help everybody else in the house.

Mr. McDonald. What happens if a kid comes in and doesn't want to buy it; he just reacts; he is violent? What is the procedure?

Miss Bergeron. That's the house meeting, see. And like we have meetings about—he gives out his feelings. Like he is being violent toward the house because he doesn't want to live there. Nobody is forcing him to live there and there are other things like foster homes and other halfway houses in Springfield. And if he is feeling that way, but he still wants to live at the house, I guess that is when a lot of the counselors take over there and try to talk to him, ask him why he is being like that.

Mr. McDonald. Mr. Pollock, can you tell us what it means to go in and get a grant?

Mr. Pollock. That is when you are in need of some money for boarding or possibly clothes, or food, and you don't have a place to get meals at night. And you just go in, you talk to the guy.

Mr. McDonald. Who is this you are talking to? Who do you get it from?

Mr. Pollock. It could be from one of many persons, like the parole officer, deputy commissioner, commissioner, or the regional supervisor.

Mr. McDonald. How much can you get?

Mr. Pollock. Right now, I don't get any money, except my pay money. But before, like when I wasn't coming along too good I used to go in probably once a week and get about $15 for some living expenses.

Mr. McDonald. Mr. Hall, do you think you are going to go back on drugs now?

Mr. Hall. I feel as I won't go back to any drugs.

Mr. McDonald. You think the program at First, Inc., is going to keep you off drugs?

Mr. Hall. Yes; because I have contact with the house, you know, like I can go there and give up my urine or I can go to there in counter-groups, if something is bothering me.

Chairman Pepper. Mr. Mann?

Mr. Mann. Thank you, Mr. Chairman.

Debbie Ruth, how many delinquents are there in school at Newman Prep?

Miss Ruth. I don't think many people are delinquents. A lot of people are there on the GI bill, a lot of people much more older. Most of the people in classes, most classes, 20, 21. They range like, the students.

Mr. Mann. Where is Newman Prep?

Miss Ruth. In Boston.

Mr. Mann. Most of the students there are just straight people from the Boston area?

Miss Ruth. No. A lot of people didn't like public schools. There are some, I guess well-to-do families, that sent their kids there because it is a good private school. Other people are there on GI bills. A lot of old people. The classes are really good because people are paid to go there. So, you know, like they don't cause any trouble for them, because they just throw them right out.

Mr. Mann. You have no trouble getting along with anybody because you have been in trouble?

Miss Ruth. No.

Mr. Mann. Mr. Pollock, I notice you are working at a DYS facility

Mr. POLLOCK. Yes, I am.

Mr. MANN. Are you required to work there or are you under some probationary arrangement?

Mr. POLLOCK. If you consider that I am being forced in there, too, like keep away, out of trouble, no; I don't have to work there.

Mr. MANN. When you got into the last trouble, March of 1972—is that when it was?

Mr. POLLOCK. No. It was more or less around November of 1971.

Mr. MANN. What was your sentence? What did the judge and the officers, or the probation or youth services people, instruct you to do?

Mr. POLLOCK. It started out with the court and they instructed me—they didn't instruct me—they forced me into Lyman. I wasn't instructed nowhere.

Mr. MANN. Who got you out of Lyman?

Mr. POLLOCK. I done my time and I was not discharged, but paroled home, and I lived with my aunt. The department of youth services got in touch with me, or I got in touch with them, about how I was getting along in my house at that time.

Mr. MANN. That is how you got involved with the department of youth services?

Mr. POLLOCK. The first time I got involved with them, under Dr. Miller, is when I went up to see my parole officer. I think I mentioned it before.

Mr. MANN. Are you working full time at the place?

Mr. POLLOCK. Yes.

Mr. MANN. What are your plans?

Mr. POLLOCK. My plans for the future are to join the service, the Marine Corps. And that will be very soon.

Mr. MANN. How old are you now?

Mr. POLLOCK. Right now I am 17.

Chairman PEPPER. Mr. Winn?

Mr. WINN. Thank you, Mr. Chairman.

I notice in several of your testimonies, particularly the girls, you said they wanted to be treated like older people, or referred to as adults, but I wondered if they realized then, if they felt this way at the time they were 8, in one case 12, and the other case 14.

Miss BERGERON. I don't think it is the fact, you know, we just wanted to be treated as adults. In reform schools you are treated as though you are not—you are not decent, you know.

Mr. WINN. I meant prior to that.

Miss BERGERON. Yes. Everybody likes to be treated as an adult. You like to be talked to on the same level, don't like to be talked down to all of the time. Halfway house—well, the halfway house we are in we are not talked down to. You know, they talk to us like we can be helped. In reform schools, they talk like—you are never ever talked to. You are just told.

If you don't want to do it, you will be locked there all day.

Mr. WINN. In other words, in these institutions you are treated like a number?

Miss BERGERON. You know, you are just not treated.

Mr. WINN. Not treated like a human being?

Miss BERGERON. On a favoritism basis, too. If you were good you got more and if you were bad, and you weren't being helped when you

were bad, you were just being brushed aside. All of the good people got what they wanted and everything. You knew you had to be good. There weren't really any choices. You couldn't sit down and talk about it.

Mr. WINN. Going back prior to that, when we all started getting into trouble, I believe Mr. Pollock was 8 years old when he first got into trouble. The problem that bothers many people, many parents, is how do you sit down to discuss with an 8-year-old?

There is nothing wrong with being 8, but an 8-year-old usually thinks he should be 10 or 12, and maybe Debbie thought, when she was 12 and got into trouble, maybe she thought she should be talking and acting like she was 16 or 18.

This seems to be one of the tendencies or troubles in many cases. I just wondered what would happen when you all become parents. How you are going to talk to an 8- or 12- or 14-year-old person. I wonder if any of you ever thought about it?

Mr. HALL. I have a son.

Mr. WINN. Had you ever given any thought about how you are going to communicate with your children and not have them think you are talking down to them or not interested in them?

Mr. POLLOCK. Is it all right if I say something?

Mr. WINN. Sure.

Mr. POLLOCK. When I have my son—who knows when that will be—but——

Mr. WINN. It might not be a son, too.

Mr. POLLOCK. OK. I ain't going to be ashamed to tell them I was with the department of youth services and I had got in trouble, because I did learn by my mistakes. But in order that it might help my son at the same time, because I don't think the department is going to change that much more better than it is now. It ain't perfect now, you know, anyways.

I want to talk to my son, tell him I have been in trouble, tell him when I think he is doing wrong or doing right. And, you know, be more or less like a pal to him so he will listen to me at times.

Mr. WINN. I wasn't really talking about the troubles you have had. That is up to you, whether you want to tell your children.

Mr. POLLOCK. You said, how would you sit down with your son and talk to him——

Mr. WINN. Right, but——

Mr. POLLOCK [continuing]. When you are talking about crime.

Mr. WINN. I am talking about basic communications, because so many young people don't think they can communicate with their parents until it is too late.

Mr. POLLOCK. In a lot of cases, they are afraid the parents don't want to communicate with the son, either.

Mr. WINN. It is about 50–50. I am not going to get into statistics, but many times I ask the young people, "Have you ever tried? When did you ever try to communicate with your parents and on what subject and when do they turn you down?" And when you throw it to them like that, they really can't think of any one thing.

Maybe they developed an attitude, antiparent, or antiestablishment.

Another thing that really interests me, and I would like for any of you, if you feel you would like to, including Miss Keating, to tell me what, in the program, do they do, because I believe it was Debbie

who said that in some cases she couldn't do what she wanted to do. Well, I am sure that what individual young people want to do can vary quite a bit at the time maybe. But in the program, is there anything now that allows you to do what you want to do?

What do you want to do?

Miss RUTH. Yes. Like where I live, I can do just about anything I want as long as I can go to school. I can sign out any night I want. It is completely my liberty in this private placement.

Mr. WINN. Do they have any organized recreation? Whether young people actually realize it or not, they need, and most of them desire, recreation. If it is sports, or if it is dances, or if it is plays, if it is musicals. You can go on, and on, and on. What type of recreation do the individuals like?

Miss RUTH. They mostly are models and students. They live on a totally different level. They are always going out seeing their friends. It isn't a DYS placement. I guess I am the first DYS person that ever lived in that kind of dormitory.

Mr. WINN. You are meeting people from all different walks of life, all different interests?

Miss RUTH. Yes.

Mr. WINN. And in the past, in the institutions, you were meeting people from all walks of life with one basic interest, and that was the fact you had all been in trouble and you shared each other's problems?

Miss RUTH. Yes. But most of them were from like the same, like Jamaica Plains. Most of the people were from the same area. A lot of people knew each other on the outside. A lot of people like to go there because they meet a lot of friends they hadn't seen for a long time, Jamaica Plains, or the other places, just Boston.

Like the girls more or less come from the same type of background.

Mr. WINN. Going into the institutions again, do they have anything in the way of recreational programs for the girls?

Miss RUTH. Like Madonna Hall, they used to have movies on Sunday nights that you had to see. No one really wanted to see them.

Mr. WINN. You probably had seen them before?

Miss RUTH. No, they had good movies. They just didn't let you out and that is what the girls wanted to do, go out and take a walk. I was there like 14 months before they even let me out one time by myself to take a walk, except for going home on weekends.

Mr. WINN. Let's be practical about it. If they let you out to take a walk——

Miss RUTH. I would run away.

Mr. WINN. Yes. Some would run away. Some would get in more trouble.

Miss RUTH. When the girls got out, they ran away. Every time they went on a trip, they came back and said that so-and-so was missing. The girls did this all of the time. Until, like some girls found out if you broke the crank off the window and removed it, they had detention school, you couldn't—I think everybody tried.

Mr. WINN. In DYS you really don't have anything to run from, do you? You are not working behind somebody's back? You don't feel

you are working behind somebody's back, if you have the tendency to leave school, for instance?

Miss RUTH. Oh, yes. If I want to leave, I can leave. I couldn't run away if I wanted to.

Mr. WINN. But as I gather from your testimony, you have this feeling that you ought to continue to go to school, or else that you really want to go to school, or both?

Miss RUTH. I want to go to school.

Mr. WINN. What do you want to be?

Miss RUTH. I don't know.

Mr. WINN. What would you like to be? You said you always wanted to be older when you were younger. What would you like to be?

Miss RUTH. I don't know.

Mr. WINN. Would you like to be a model?

Miss RUTH. No.

Mr. WINN. No?

Miss RUTH. I am not about to go into that. I think they are pretty—the girls at my dorm, they are really different, the models.

Miss KEATING. Haven't you talked about wanting to work for the department of youth services?

Mr. WINN. Well, let's say some of them do, but to me, and I hope you don't take this the wrong way, you can't hire all of them in the department of youth services.

Miss KEATING. Oh, no.

Mr. WINN. So, let's say that Debbie or Tim, or whoever it might be, wants to go in the Marines. That's fine. I just wonder where they want to go. What their desire is now, what they want to be now.

I am trying to figure out if they really have an objective yet. I think they do, but I don't think they know how to express it.

Miss LABONTE. I want to be a counselor.

Mr. WINN. That is back with youth services, and that is very commendable. We certainly need that, but the society can't hire all of you to go back into youth services.

Miss KEATING. Nancy, tell Mr. Winn several of the different programs in the last couple of weeks you have mentioned you had interviews with for possible employment, and other training programs that you have been considering. Just the broad range on what you might do with those things in the future.

Miss LABONTE. Well, I thought about going to AIC College. I don't know, it is hard to really guess what you really want to do because I tried to volunteer over at Legal Aid and they didn't need anybody, it seems. I tried to get into a page program, which is for pregnant girls, and I couldn't because I didn't go to school on——

Mr. WINN. Do you feel in some programs that you might want to be in, you are blocked?

Miss LABONTE. No.

Mr. WINN. I mean that you are blocked because of your background. You don't think that is stopping you in any way?

Miss LABONTE. I don't think so.

Miss KEATING. Could you tell him a little bit about AIC?

Miss LABONTE. AIC is a 4-year college program that I was interested in, to get an education.

Mr. WINN. Your résumé says that you stated in some interview that you had a stable family life throughout your childhood and that you were not belligerent or unhappy with your family setup. At the age of 13, you started running away. I just wondered if that was because of something that happened at home. We don't like to get into personal problems as we could go on for months if we got into all of those. Was is just something that came upon you at the time, or was it because other young people that age were beginning to run away from home?

Miss LABONTE. No; I think it is more or less because I started hanging around with older people who could do more because they were older.

Mr. WINN. Had more independence?

Miss LABONTE. Yes.

Mr. WINN. At least, you felt they did?

Miss LABONTE. I guess so. I sort of followed them, doing dope and running away.

Mr. WINN. Do you think a lot of young people get into trouble because of their peers; because of the groups they run around with?

Miss LABONTE. Not necessarily.

Mr. WINN. We had testimony last week about a group that ran around together. The oldest one was 18 or 19, and there was one at 15. The other one at 15—the older ones had all been arrested many times—had never been arrested. We felt very shortly that the 15-year-old was going to be in trouble somewhere. The odds are, because of the group he is running around with, he is going to get in trouble. This happens in a lot of cases.

You all talked about the DYS program. Do you think other States ought to adopt this program? Would you be willing to help and go into other States to help testify and to talk to other people, young people that have been in trouble, if other States would adopt a program of this type?

Miss LABONTE. Yes; I think it would be really important that we had something like that and that they did close down institutions.

Mr. WINN. Do you think you can communicate with other people your age that have been in trouble?

Miss LABONTE. Yes. I have been. Sue and I more or less work with kids at the house.

Mr. WINN. I have no further questions, Mr. Chairman.

Chairman PEPPER. I would like to know how many of you attribute your having gotten in trouble to your home life, home conditions, family conditions?

Mr. HALL. I have.

Chairman PEPPER. Let's start over here with Miss LaBonte. Your family didn't have anything to do with your getting in trouble?

Miss LABONTE. They had a little bit to do with it, but not that much.

Chairman PEPPER. What about you?

Miss RUTH. I don't know. I got in trouble myself. I was the one. It was my fault. No one pushed me into it.

Chairman PEPPER. Miss Bergeron, what about you?

Miss BERGERON. You are asking about my family life?

Chairman PEPPER. Did your family life or conditions at home have anything to do with your getting in trouble?

Miss BERGERON. No.

Chairman PEPPER. What about you, Mr. Hall?

Mr. HALL. I think my family life did. Because, like, OK. Like they say, one might be bad out of the family. Like my sister, you know, like she gets into trouble, and my brother is doing time in Norfolk now. So, like the majority of my family found it hard to get along with my mother because my mother and father were separated when I was real young.

Chairman PEPPER. Yours was a broken home.

Mr. HALL. Yes.

Chairman PEPPER. Were your mother and father living together?

Miss LABONTE. Yes.

Chairman PEPPER. Yours?

Miss RUTH. My mother is a widow. My father died.

Chairman PEPPER. Are your mother and father living together?

Miss BERGERON. No.

Chairman PEPPER. And your mother and father were separated. What about you, Mr. Pollock?

Mr. POLLOCK. My family had a lot to do with my getting in trouble. My mother was deceased and this was one of the main causes of it. I would say.

Chairman PEPPER. The next question I want to ask each one of you is, did your getting in trouble have anything to do with drugs, or was it related to drugs?

Miss LABONTE. A little bit of it did.

Chairman PEPPER. It was?

Miss LABONTE. A little bit.

Chairman PEPPER. Miss Ruth?

Miss RUTH. I never did dope until I was in the DYS placement. I was with DYS almost a year before I ever touched dope.

Chairman PEPPER. What about you, Miss Bergeron?

Miss BERGERON. No.

Chairman PEPPER. Mr. Hall, you did?

Mr. HALL. Yes.

Chairman PEPPER. What about you, Mr. Pollock?

Mr. POLLOCK. No.

Chairman PEPPER. You did not?

The next question concerns your education. You are going to be a counselor, Miss LaBonte. Do you intend to try to get a high school diploma to pursue your education?

Miss LABONTE. Yes.

Chairman PEPPER. Now, you are already going to Newman Prep. You will stay on to finish school; you realize now the value of an education.

Miss Bergeron, I notice you are going to work for the Monarch Life Insurance Co. How far did you get in school?

Miss BERGERON. Eighth grade.

Chairman PEPPER. Don't you think it would be helpful to you if you would go back to school in some way, night or some other time, and get your high school diploma and maybe even take an advance course in business, business training, secretarial training, et cetera?

Miss BERGERON. I am taking key-punch training.

Chairman PEPPER. Don't you think it would be helpful to you?

Miss BERGERON. Yes: it would be helpful to me.

Chairman PEPPER. All of you are very attractive people, and I am afraid you are going to be handicapped if you don't. Some people overcome it. You have a very good personality and very charming manner, and all of that, but I think it would be helpful, if you would get an education. You can go further, live a much better life, if you could get a little better education.

A very small percent, 5 percent, of the people in the labor market, are unskilled. I mean, there is only room for 5 percent of the working force in unskilled occupations. That is what it means. So you have got to get a job in that 5 percent, most of you, if you don't have education enough, training enough, to get up into a better job.

Mr. Hall, what about your education? Do you want to go on and finish?

Mr. HALL. I plan to go back to school in September.

Chairman PEPPER. What about you, Mr. Pollock? I know you have a job, too.

Mr. POLLOCK. Yes. I am going back to school.

Chairman PEPPER. How far did you get in school?

Mr. POLLOCK. Tenth grade.

Chairman PEPPER. How far did you get, Mr. Hall?

Mr. HALL. Tenth grade.

Chairman PEPPER. Well, now, the next thing is, do you think this youth program, you have been a part of, is about the best way you know of for public desire to try to do something about young people who get into trouble? Have you any suggestions as to what would make it better? We will start off with you, Miss LaBonte.

Miss LABONTE. No, I don't have any suggestions right now.

Chairman PEPPER. Miss Ruth, do you have any better program to suggest?

Miss RUTH. No, sir. DYS, they are really running good. They are really short on money. They aren't financed well enough. They could do so much more, but it is mostly lack of money. They don't really have enough.

Chairman PEPPER. You mean, the youth services program could do a little more if they had more money?

Miss RUTH. More money.

Chairman PEPPER. What do you think, Miss Bergeron?

Miss BERGERON. I agree with that, definitely. They need more money.

Chairman PEPPER. Have you any suggestions as to how this program could be improved?

Miss BERGERON. No.

Chairman PEPPER. Mr. Hall?

Mr. HALL. I don't have no suggestions on how it can be improved because I really don't have that much contact with the department. I am working on my own. They wanted to put me back.

Chairman PEPPER. You are now working on your own?

Mr. HALL. Yes.

Chairman PEPPER. Isn't it fun to be your own man again?

Mr. HALL. Yes.

Chairman PEPPER. Be free of drugs?

Mr. HALL. It is. It really is.

Chairman PEPPER. What about you, Mr. Pollock? Do you have any suggestions as to how the program could be improved?

Mr. POLLOCK. Well, I ain't going to say it is the best, but there is a lot better that could be made out of this, but it is a lot better than what has been. So I just leave it at that.

Chairman PEPPER. It is obvious to me that one of the reasons this program has succeeded as well as it has is because it individualizes and personalizes what it does for you. It is dealing with you as an individual. There must be pretty wise counselors. These are the people that are in the counseling part of this program and they try to find what your trouble is, what kind of a person you are, and what you will best respond to, what would be best for you. Don't they try to do that? Don't they try to individualize the program?

Mr. HALL. Yes, they do that.

Miss BERGERON. They do.

Chairman PEPPER. Whereas, in the big institutions where there are hundreds of thousands of people you can't do that very well. So it has an obvious advantage over the other.

All I can say to you folks is this: This is a great country we live in. It is an interesting world. There are so many wonderful things to do, so much fun to be had, and the like, but you know you have to be able to make your way or fit into society some way or another. There are a lot of things about it that ought to be improved, ought to be changed.

I have great sympathy for some of the problems of younger people growing up today in a changing world, changing society, trying to realize some of their dreams, aspirations, having their individual personalities, feeling they want to live that kind of life, and nobody can say for sure just what is the best life. But anyway, it is wonderful you have been able to get into a program where you are finding yourselves, every one of you, by what you said here today.

Miss Keating, they all indicate they have a new attitude toward life, they enjoy life. I believe all of you are getting much more fun out of life, aren't you?

Mr. HALL. Yes, much more fun.

Chairman PEPPER. That is wonderful. Are you, Mr. Pollock, enjoying yourself? Mr. Pollock already said he is having fun. You can tell, he has a big smile on his face. You have a great future ahead of you.

We appreciate your coming.

Miss Keating, I want to commend you on what you are doing. I can see the rapport you have with these young people and how much you mean to them, and that means you are touching a beautiful life and making it better.

Thank you all very much for coming.

We will adjourn until 10 o'clock tomorrow morning.

[Whereupon, at 3:45 p.m., the committee adjourned, to reconvene at 10 a.m., on Tuesday, April 17, 1973.]

STREET CRIME IN AMERICA

(Corrections Approaches)

TUESDAY, APRIL 17, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:15 a.m., in room 311, Cannon House Office Building, the Honorable Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Mann, Rangel, Steiger, and Keating.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; James McDonald, assistant counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order. I am sorry that some of our members are a little late this morning, but we have many very important witnesses and I want to give full opportunity for those witnesses to testify.

I see there are certain newspapers in the local area that write, every day, long columns about crime, yet right here in this room we have some of the best authorities of this country present to talk about how to curb crime and how to deal with crime, but they don't seem to manifest any interest in that, unfortunately.

Yesterday, people disclosed to us an entirely new system of dealing with juvenile offenders. They are at the beginning of the pipeline that produces a group of criminals, who are the primary offenders against the law in the country. We had a Harvard professor, plus Dr. Miller, who initiated the Massachusetts program, and the gentleman who is the assistant director of it at the present time.

Then we had five young people who have participated in the old program and are now participating in the new program. And we found out, for the interest of the taxpayer, that the new program not only provides less repeaters, less recidivism, but it costs less to the taxpayer than the old program, which I would think would be a matter of great public interest.

But any way, all we can do is try to find out what is the best thinking. That is what these hearings are about, to find out the best thinking in our country in dealing with the subject of violent crime: what can be done to curb it: to reduce it to a tolerable level.

We have dealt with the aspect of the police. Last week we had 12 of the outstanding police departments of the country represented here to tell about the innovative and imaginative programs that they had

initiated in their areas which have led to the reduction of crime, which we hope will be emulated by other police departments in the country.

This week we are dealing with correctional institutions, primarily putting emphasis upon the younger people. Because, as they say, they are the beginning of the pipeline. In the latter part of the week we will have two outstanding men, one from the American Bar Association, the former Governor of New Jersey, Governor Hughes; and another man, Mr. Skoler, who is also a very outstanding authority on the subject of adult penal institutions.

This morning we have two very distinguished witnesses, very knowledgeable and outstanding in this field.

Mr. Lynch, would you proceed.

Mr. LYNCH. Thank you, Mr. Chairman.

Mr. Chairman, I am privileged to present to you, Mr. Kenneth Schoen, the Commissioner of Corrections for the State of Minnesota. Mr. Schoen is a native Minnesotan. He holds both a bachelor's and master's degree in sociology from the University of Minnesota. He began his career in corrections as a parole agent in 1957. After that, he became superintendent of a 60-bed facility which dealt with delinquent adolescent boys.

Subsequent to that, he served as superintendent of the Minnesota State girls' school, and after that, he was an assistant commissioner of corrections for the State of Minnesota. He was appointed in January of 1973 as the commissioner of corrections.

As you will recall, Mr. Chairman, he is the successor to Dr. David Fogel, who testified before this committee last year, in relation to prisons in turmoil.

Chairman PEPPER. He made a very excellent presentation.

Mr. LYNCH. Mr. Schoen, if you have a prepared statement would you please deliver it at this time?

Chairman PEPPER. Mr. Schoen, we are very pleased to welcome you here today. Thank you for coming.

STATEMENT OF KENNETH SCHOEN, COMMISSIONER, STATE DEPARTMENT OF CORRECTIONS, ST. PAUL, MINN.

Mr. SCHOEN. Thank you, Mr. Chairman, committee members, Mr. Lynch: I would like to tell you something about the scene in my State. We feel in Minnesota that we have done some things that are interesting and have been effective in the terms that you, Mr. Chairman, have mentioned. We feel we have been effective in controlling some of the behavior to which the community objects to, and at the same time showing some worthy cost figures. But by no means do we feel we have arrived at the solution there.

I would like to give you a brief history of how things developed: In 1947 we saw the beginning of a real effort to do something for juveniles by the formation of the youth conservation commission—YCC—patterned after the California plan, which brought together juvenile institutions and probation parole services in the State. What if also did, really, was introduce the medical model, in which we diagnose an individual's problems at a reception center, and then attempt to fit the treatment to the individual.

I might get ahead of my story and say we since junked that model, but I will get back to that in a moment.

In 1959, we formed the department of corrections and two things followed that are significant. One is that we pulled together the adult and juvenile programs under one department. I think that is significant in a State the size of Minnesota, which is about 10 times the size of Massachusetts, geographically. Geography tends to kill correctional programs because you can't get to the people or they can't get to the services. This step toward combining the administration of these programs at least, makes some sense and it is in this direction we have been going since 1959.

At the same time, legislation was introduced to provide a probation subsidy in all 87 counties of the State. What this did was begin a trend toward the development of community services at the local level. These probation services were administered by the local county, involving all counties in Minnesota. The three large Minnesota counties were excepted for some reason. I think the reason was that they had extensive services already. But the result was that every single juvenile who came into court would have a probation officer at the local level.

During the 1960's, we saw the rise and fall of institutional options. It was interesting in that the beginning of 1960 we opened the decade with one camp and two juvenile institutions. By the end we had three camps and three juvenile institutions. There was a great deal of interest in building a security facility for juveniles. Thank goodness that didn't come to pass; however, it came very near. The population was very high in the institutions in the beginning of the decade; toward the end they were down. Right now they are at an all-time low. Currently we have only one camp and there are plans in the legislature now to junk that facility also.

In the late 1960's, and early 1970's, we have seen the development of community alternatives beyond probation. Probation is certainly a community alternative, but beyond that there are halfway houses, group homes, and other types of facilities to extend the correctional-type programs into the community.

These were again largely operated by the localities as opposed to being operated by the State. This is in sharp contrast to other States around the country. It is our belief that we deliver a better service if it is operated locally and administered locally to respond to local needs. I will describe to you later a rather elaborate plan we have to implement that. In fact, I have to go back to testify on a bill today in the Minnesota Legislature. Hopefully, we will see that thing begin in the proper form.

The community alternatives were developed because there was a recognition of the chasm between the institution and probation. This chasm was just simply too great. It was no easy transition from an institution back to the community. We needed alternatives to the institution. And we were becoming quite aware, in the late 1960's that the institutional costs were quite high. Currently, they run as high as $14,000 and $16,000 per year, per bed; exceedingly expensive. About 75 percent of all our budget is consumed in institutions, which includes adult institutions.

Chairman PEPPER. What was the figure?

Mr. SCHOEN. About 75 percent. Our annual corrections budget at the State level is $22–$23 million; 75 percent goes into institutions, largely juvenile institutions. Those are the more expensive ones.

Another interesting thing is the great contrast between our juvenile institutions and the adult institutions. The adult institutions, I dare say, are just a disgrace.

Chairman PEPPER. Let me interrupt you just a minute. I visited Red Wing and no doubt you will mention that in your presentation. I was enormously impressed by what you are doing there and I hope that fine institution is going forward.

Mr. SCHOEN. Mr. Chairman, that institution is doing very well. That institution and the one at Sauk Center are particularly in contrast to the adult. In fact, we are finding at Red Wing that we are getting about 80 percent success of youngsters who have left the facility. Back in 1969, before the program that you witnessed began, it was about 50 percent. That is a dramatic change.

Chairman PEPPER. Who was the professor at the University of Minnesota that initiated that program?

Mr. SCHOEN. Two persons were involved there. Prof. Dick Clendenen and Harry Vorrath, who is now out in Michigan.

Chairman PEPPER. I met both of them.

Mr. SCHOEN. He is doing group work out there.

As I was saying, we saw an extension of options in the community in the late 1960's and they were largely group homes, regional detention—which is a thrust at some of the crummy jails we were keeping kids in—and community correctional programs got going.

The scene in Minnesota presently looks like this: We do have a few juveniles in security. We have not shut down our institutions like Massachusetts has, but what we have done is regionalize. Again, Minnesota is a large State. We have three juvenile institutions and we designated each of these to serve a different geographic area of the State. The idea here is to permit the staff and resources of the institution to relate to certain areas of the State, the people there, the law enforcement there, et cetera. This permits more of a relationship between what goes on in the institution and what goes on in the community. One of the institutions, in fact, even has cottages set aside for certain areas of the State.

We have seen populations go down in the institutions over the last 10 years, although we are finding currently they are leveling off, for what reasons we are not quite sure. We are also seeing whether a major change in the role of the parole agent can be implemented. When I started back in 1957 I had a large caseload. I would see my clients across the desk and spoke about their problems and hopefully there, I would say something eloquent that they would leave and go out and get better as a result of. I think we are finding that sort of thing not particularly useful. In fact, there was a survey done about a year and a half ago in Minnesota contrasting parole supervision and nonsupervision. We took a number of youngsters from the State training school at Red Wing and Sauk Center and put them out on parole. Some had agents and some didn't. It was an excellent, well-controlled study. The results showed that those who had parole agents did no better than those who did not have parole agents. In fact, if you didn't buy the statistics too critically, those who didn't have parole agents did a little

better. This would suggest that the activity the parole agent normally has carried on is really less than highly productive.

I would like to just describe briefly one program that I think has been particularly useful and has really been a model on which we are building a number of programs in Minnesota. It is a program called PORT in Rochester, and stands for "Probationed Offenders Rehabilitation and Training." It is a community-based, community-directed, community-supported, residential correctional facility for all ages. The age of the youngest in the program has been 12 and the oldest has been 47. It serves a three-county area including Olmsted County, in which Rochester is located, and two smaller counties. Its purpose is to provide an alternative to those individuals who would otherwise go off to both adult and juvenile correctional institutions.

PORT utilizes community resources to the fullest—public schools, vocational rehabilitation, mental health centers—many, many resources that exist in almost all communities in this country, as opposed to duplicating these in the institution in which such duplication becomes extremely expensive.

The program was really "hatched" by a couple of district court judges who felt that too often, when they were sentencing somebody, they really didn't have the option they wanted. They had probation which didn't work—which hasn't worked in the past, that is, in these cases we are speaking of—or they had institutionalization, which they felt was an overkill and frequently counterproductive. So this thing developed from that.

It was a program that is very much supported by the community. It is really, in effect, directed by the community. On the board of directors are the sheriff, the chief of police, and other elements of the criminal justice system. Of course, we are quite aware this system is anything but a system. In fact, they are generally warring factions who probably really have little in concert.

PORT is located in the community. It has served approximately 160 individuals, most of whom would have gone to a correctional institution if PORT hadn't existed. I think the really interesting thing is that since it began in October of 1969 it has taken in 160 people, the commitments to these State facilities from that three-county area. The nice part is that we can compare what it was before, after, and what the trends have been in the State. They have been down very sharply for adults, something like 78 percent. Just about the lowest commitment rate in the State.

Yet, the crime rate in the Rochester area is also down, whereas in St. Paul-Minneapolis, the recent FBI reports showed that it was up.

So it may be Minnesota's crime rates haven't been that bad. They were up in the Twin City area, but down in Rochester. This would suggest to these criminals in the community that otherwise be in State institutions are not increasing the crime rate. It is not necessarily cause and effect, but that is the situation nonetheless.

Also, the cost per day is substantially less than the adult institutions and remarkably less than the juvenile institutions. It rounds out a little less than $10 a day. The adult institutions are running about $16 a day and the juvenile institutions about $35 a day.

PORT has what we call cost-effectiveness operating. It has a very small staff. They use college students who live in and serve as

counselors, roommates—just people that really add to the quality of the environment of the operation.

The beautiful thing is that these people do not have to be uprooted from the community. They continue in school and they are taxpayers; if they are working they support their families, so even the estimates I quote are very conservative because they do not include dollars we end up paying into institutions as fringe costs.

This is a program on which we are modeling a number of others. There is one going in Brainerd, Minn., which is up in the lake and resort area. This area had a very high commitment to the State institutions. There is one going in St. Paul, one in Columbia, Mo., and one expected to get going in Minneapolis.

We are trying to take these concepts and institutionalize them, if you will, by a subsidy bill something on the order of the California plan. Exactly what we are doing is computing a subsidy to go out to a county, provided they give us a plan. We then have a full spectrum of services operating in the county or groups of counties, if several wish to join together.

We set a maximum amount of money they can get, and it is based upon their crime problem as well as financial situation. Counties differ greatly on these two factors in Minnesota.

It says that they must bring all of their correctional services under one administration. That is an oddity because it means the sheriff will no longer operate the "old English" custom of his jail. It also means judges may lose what traditionally has been their bailiwick. I say that and defer to Judge Arthur who is here, because the discussions on this matter are rather lively discussions. But we are interested in trying this out: we think the business of having as high as ever jurisdictions operating a correctional service in the same county is nonsense. We end up consuming great amounts of money and at the same time really delivering very poor service.

We also see to it that the county is eligible for a fairly hefty sum of money. If they want to use State institutions they will pay for that out of their subsidy at the going rate of $35 a day for juveniles and $16 for adults, except for adults whose offenses are by statute in excess of 5 years. The rationale behind that is that we don't want to come into the situation where we are charging counties to send their severe criminals to a State facility.

We find that in our institution at Stillwater, the State prison, about 35 percent of the population falls in the category we are talking about. They have statutory maximums of less than 5 years. At the State reformatory about 50 percent fall in this category. We feel we can substantially reduce our institutional population and thus free up money to develop a spectrum of services in the context of the community.

We hope to get the bill flying past the State senate this time. It is in the State house currently. There is some opposition. As I said, I would like to try it. The beautiful part about it is it is not brick and mortar; not something we have for the rest of our days as we do in institutions.

With that, I would like to conclude my testimony.

Mr. Lynch. Commissioner, you have, I believe, a centralized department of corrections in the State of Minnesota. Would you tell us what is your jurisdiction substantively as commissioner of corrections?

Mr. Schoen. Mr. Lynch, we have under the department, adult and juvenile corrections. Juvenile corrections includes a youth conservation commission, which is a paroling board, the juvenile institutions that fall within the department, which are the three large juvenile institutions, plus currently two camps. It also includes the field services, probation and parole services, operated by the State. There are local services, as I indicated earlier, which do not come directly under my jurisdiction.

Mr. Lynch. I am sorry; I am unclear. When you say they are operated by the State, do probation and parole fall under your jurisdiction as commissioner?

Mr. Schoen. Parole falls under my jurisdiction; that is correct. If the court puts offenders on probation they are then under the local service; sometimes probation officers are on contract for services from the State. But they really are responsible to the court for probation, except in the case of an adult. This is what we are making a thrust at; it is very confusing. When an adult is placed on probation by the court in the 84 smaller counties, then it comes under my jurisdiction. If it is in the three larger counties, it then comes under the local jurisdiction. Also, we have the adult institutions and adult parole under the department of corrections.

Mr. Lynch. In the interest of efficiency, and also in the interest of allowing you as commissioner of your department to track juveniles who are on probation, ought you have jurisdiction over juveniles on probation; in your judgment?

Mr. Schoen. Mr. Lynch, my feeling is no, we should not. However, we can track. I think that the department of corrections should be the funder to the local level, provide services there in accord with local needs, within guidelines, within enforced standards. Funds should be withdrawn if the quality of services at the local level drops.

Part of these standards includes tracking. I think the department has the responsibility, really of providing the technical services and computer service so we can track individually. Computers and the state of technology being what they are today, we can do a far better job than what we are currently doing. This is one of the major appeals I made before the State legislature.

Mr. Lynch. On any given day, could you advise the Governor or the public exactly how many juveniles are on probation in your State? Do you have that information?

Mr. Schoen. If I asked for that at 8 a.m. in the morning I could have it by the end of the day; yes, sir.

Mr. Lynch. Could you describe what you mean by subsidy? How does that subsidy work? Where do those funds come from?

Mr. Schoen. Currently we are spending at the State level about $23 million per year. What we have in mind is changing the ratio from 75 percent of that to institutions, and 25 percent to the community or for management. We would then take approximately $15 million from this budget, by the subsidy formula I briefly described a minute ago, and give this to the counties. This subsidy would match

up with the counties existing levels of expenditure. What we are setting up is a State subsidy to localities to operate programs. In other words, bring the money to the people, rather than the people to the money.

Mr. LYNCH. But those would be State funds?

Mr. SCHOEN. Yes, sir.

Mr. LYNCH. How does a juvenile in difficulty with the law get involved in the probationed offenders rehabilitation and training program, "PORT," as you call it?

Mr. SCHOEN. Mr. Lynch, it is optional on his part. Here is the way it generally works. He gets into difficulty and very quickly is on probation, although we have had some exceptions to that. The judge or his staff are looking for an alternative. Of course, this is a small area and therefore the people are very much aware of the program; so one of the options the judge may offer the youngster is the PORT program. Generally, the judge is at the point of saying you have exhausted your resources and traditional probation, your behavior has developed to a point at which we feel it is in your interest and the interest of the community to send you to an institution.

The PORT program would then be available and the choice open to the youngster. The same option is open to adults. A man goes up there and spends a couple of weeks looking it over—with the staff looking him over, too. If he chooses it, the judge sets it as a condition of his probation. He resides at the facility. The general length of stay averages 6 or 7 months—sometimes it is much less or much longer. Our experience is when it goes beyond a year it is not as effective.

As a short answer to your question: PORT is optional to the youngster and his family.

Mr. LYNCH. Commissioner, you indicated it cost $35 a day, which, if my arithmetic is correct, is approximately $12,500 a year to keep a juvenile incarcerated. Yesterday we heard the testimony indicated—that in some States, Rhode Island, for example—the cost may run as high as $22,000; in New York, it was between $18,000 and $21,000 per annum; in Illinois, $15,000; Massachusetts, between $10,000 and $15,000. How much does it cost to have the juvenile in a program like PORT?

Mr. SCHOEN. We are using annual figures, and I think you must bear in mind that if the length of stay were less than a year of course, it would be that fraction of the total of $12,500. Although the length of stay in PORT is approximately the same as it is in the juvenile institution, around 9 months, PORT runs less than $3,600 per year.

So it would be substantially less.

Mr. LYNCH. Approximately 25 percent of the cost of incarceration?

Mr. SCHOEN. That is correct.

Mr. LYNCH. Commissioner, how many juveniles do you have in your State who need to be incarcerated?

Mr. SCHOEN. That is always a very difficult question. And I think you really have to look at where programs are operated to give you some idea of how many.

If you go to an institution, particularly an adult institution, and ask what percent can make it in the street, the staff will say they don't know. This is because there is so much behavior that goes on in institutions that is merely a byproduct of living in the institution. As I

mentioned, some community programs have been developed that have reduced the load in institutions substantially.

The figure, I would guess, would be 10 percent. But again, I think that figure is so dependent on whether we have something more creative available to deal with the youngsters. Being dependent simply upon institutions alone, as a method of dealing with a residual youngster, is an old custom we have had. I think it is important that we address ourselves to some options. Then I would daresay it may go down to 5 percent or 1 percent if we really get some good programs.

Mr. LYNCH. For purposes of the record, at what age does the juvenile reach his maturity vis-a-vis the criminal justice system in Minnesota?

Mr. SCHOEN. Through the age of 17.

Mr. LYNCH. Through 17. The 18th birthday he is an adult?

Mr. SCHOEN. He is an adult. We have a youthful offender law in Minnesota, but in effect he is an adult at 18.

Mr. LYNCH. It goes up to what age?

Mr. SCHOEN. Age 21.

Mr. LYNCH. How many juveniles do you have currently institutionalized in Minnesota?

Mr. SCHOEN. We have two county institutions and we have three State institutions, plus an operating camp. I would say about 500 juveniles institutionalized, maybe 550, including the county institutions in Minnesota at the present time.

Mr. LYNCH. What kind of a juvenile gets committed to one of those institutions? What is the typical kind of offender that has been committed?

Mr. SCHOEN. For boys it is mostly for property offenses, car theft, burglary; although car thefts are going down principally because of the locking devices.

For the girls more than 50 percent we call status offenders. Their behavior is called delinquent simply because they are juveniles, that is.

Mr. LYNCH. Whereas it could not if they were adults?

Mr. SCHOEN. If they were beyond the age of 18 it could not.

Now, there is a bill before the legislature at the present time in Minnesota wiping out status offenses as a means of commitment to the State. Judges could still adjudicate them delinquent and deal with them at the local level. Others say that many youths could have been committed for criminal offenses but were merely charged with status offenses. I am not really sure of the accuracy of that.

Mr. LYNCH. What is a juvenile camp? Would you describe a camp for us?

Mr. SCHOEN. These got going in the late fifties. The notion was modeled somewhat after the CCC idea back in the thirties. They are generally smaller facilities, 40, 50, 60 residents. Initially they were forestry type located in the areas of the State where we had heavy timberland. The juveniles would clean up brush and this kind of thing. The notion was this was a good work experience and created a more intimate kind of relationship between staff and the boys. They evolved into vocational training facilities and all of them added schools.

The problem has been that as we have added such community facilities, the type of individuals who would be in these camps, with no

security to speak of, we have had a real problem keeping the populations up. I think this has been seen around the country.

As a result, the one residual camp we have now has had a population of only 10 and 35. When it gets down to 10, the legislature gets very upset because the cost is really quite high.

Mr. LYNCH. What kind of an offender goes to camp, as opposed to a regular kind of institution?

Mr. SCHOEN. Again, my experience does not indicate that the offense and type of behavior you can expect to see in an institution are highly related. The boy who goes there would be one who would not be a great behavior problem; who would probably not be a great security risk, and very likely would not commit some act that would be dangerous to the community, embarrassing to the department, that sort of thing.

Mr. LYNCH. How long does one get sentenced, if that is the appropriate word, to that kind of institution or a camp?

Mr. SCHOEN. The program in the one remaining camp we have, which is in the northern part of the State, around Hibbing, has a definite length of stay. I think currently it is 3 months. So the youngster knows when he goes there that it is going to be that long a period. The current program offered there is a type of outward-bound program. It is an outdoors endurance experience, in addition to a school program. Forestation has really become a minor part of the program.

Mr. LYNCH. As a correctional administrator, what is your view of programs like outward bound? Do they have a value?

Mr. SCHOEN. I think they do, yes sir; provided this isn't the whole program. What it does is offer them an opportunity to do the things that many kids have done by virtue of being a part of the mainstream. They begin to see themselves as competent individuals, particularly with physical skills. We have seen some good results of this program and I think it offers some real value. Massachusetts is doing it and a number of the Eastern States are using these programs. I think this is one we want to continue.

Mr. LYNCH. You have been involved with adult and juvenile corrections since 1957. I wonder if you could describe for us what your long-range plans are, especially regarding the juvenile correctional system in Minnesota?

Mr. SCHOEN. Mr. Chairman, Mr. Lynch, I hope we will see the day, particularly with respect to juveniles, although adults too, when we are spending our correctional dollars largely in the community to provide a full spectrum of services, and the opportunity for the individual to link up with services prior to being thrust deep into the correctional continuum.

For a moment, may I say that we tend to get in the correctional programs, the individuals who do not have access to power and resources. For the youngster who is reared in a home where this access is available, other diversions are developed by the parents—psychiatry, good lawyers, private schools, et cetera. And they generally work. So we don't see many of those people in the correctional system. This is not to suggest those kinds of kids don't commit delinquent offenses.

Mr. LYNCH. If I could interrupt, are those services generally publicly available to young people if the parents do not have the financial

wherewithal, are those kinds of things publicly available now in the State of Minnesota?

Mr. SCHOEN. Mr. Lynch, they are not readily available. To make them available requires money and persuasion. They are becoming increasingly available, but not nearly to the extent necessary. One of the things the PORT program does do is give options to the individual.

Mr. LYNCH. What kind of options? Could you explain that?

Mr. SCHOEN. It gives options. For example, the person needs a special educational program. There are two institutions that tend to break down most significantly with respect to the juvenile: The family institution and the school institution.

We need to build on these two, using the correctional dollar, with family counseling, psychiatry, mental health services, and special educational experiences. This is what we would like to see happen and this is where we would like to see our money directed.

The person who has money and access to power can provide these things; for example, private schools are not available to the poor. What happens is that the judge ends up just as desirous of providing the poor kid from the other side of the tracks with the same experience as the youngster who grows up in an affluent area. Thus he ends up committing the person to a State institution.

Mr. LYNCH. To what extent would the provision of those kinds of services cost more than the present treatment accorded under correctional institutions? Would it be more expensive in your judgment?

Mr. SCHOEN. In my judgment, it would not be. We project that we could provide all of the services that they need with our current level of spending. The only increases we would need would be due to inflation or population increases.

In our opinion, if we can pull together the fragmentation of the correctional services, or efficiencies, we can reverse the 75–25 ratio, directing our money toward the community. We could provide school programs that respond to alienated, dropping-out youngsters. There are some very excellent models for this. We could provide such programs without spending more money. Yet the productivity, the cost effectiveness would be exceedingly higher than it currently is.

Mr. LYNCH. Turn that budget around from 75 percent to institutions by doing what, by closing some local institutions and going to a regional correctional system?

Mr. SCHOEN. Mr. Lynch, largely by closing a number of the institutions at the State level. For example, we have a juvenile institution in the metropolitan area, serving Hennepin and Ramsey Counties—Minneapolis is in Hennepin County—St. Paul, in Ramsey County. They both operate juvenile institutions. Both of their institutions are half full. We operate a State institution serving approximately the same area, and ours is half full. Close them both up and immediately we would realize a saving of about $2.25 million.

Mr. LYNCH. Your testimony was the approximate operating budget in your department is about $23 million. How much money have you received within the past year from LEAA?

Mr. SCHOEN. Approximately $2 million. I have to put a heavy emphasis on the approximate there. The department gets some money directly and some from the State through programs we either subsidize or we are interested in supporting.

Mr. Lynch. What do you use the LEAA money for, sir?

Mr. Schoen. Primarily the development of new programs that we otherwise could not operate or develop, because of the need to continue what we are operating. That is a problem we have now. Just changing the reversal of the 75–25 ratio is very difficult. We have to operate parallel services. LEAA allows the beginning of new programs even though they are operating existing programs.

Once a program gets financed, and we get people into it, we can begin to shift funds. The PORT program and other models developed from an LEAA start. Once we get going we can begin to shift funds in those directions for good programs.

Furthermore, we have a chance to examine the programs and judge whether or not they are effective.

Mr. Lynch. Do you have a planning development and research staff in your department?

Mr. Schoen. Yes. We are making a major reorganization in the department and one of the major shifts is going in that direction.

Mr. Lynch. What is the state of the unit now?

Mr. Schoen. It exists, it does a fairly good job. But I would say it does only about 25 percent of the job it could do, with the talents we have, the knowledge we have, the technical capabilities we have in the State.

For example, we have a very sophisticated computer located in the State capitol. We do not have a terminal. I hope to have a terminal by the first of July, so we can really begin to determine such things.

There is a bill in the legislature saying it should be mandatory for a man to go to prison for 3 years if he uses a gun. We have somewhere in the community the knowledge of how many offenders used guns and their track record.

Mr. Lynch. Under the 1970 amendments to the Omnibus Crime Control and Safe Streets Act, there were the requirements for partial funding that the corrections component of the State system produce, in a sense, its own mini 5-year plan for correctional forecasts. Did your department do that in the State of Minnesota?

Mr. Schoen. We are doing it. It is currently being done and is coming to fruition at the present time. We did it through a private corporation, Bush Foundation grant, being done through the Minnesota Correctional Services. It is going to be an impressive piece of research.

Mr. Lynch. Can you tell us what forecasted plans are within that 5-year plan for juvenile corrections?

Mr. Schoen. Largely we plan to decentralize the juvenile institutions, as we have already done; to reduce their size and to move the resources to the community, setting up programs there.

Eventually, I'd say a 10-year plan is to go into what they call human resources programs in the community where they don't have departments of bad people, but human resources that respond to individual needs.

Mr. Lynch. Commissioner Schoen, yesterday witnesses describing the Massachusetts system indicated to this committee that it was their feeling that frequently private organizations could perform more effective and more accountable correctional services in the juvenile field; their feeling was that you do not get involved in bureaucratic tangles

and, in fact, you can serve a contractual relationship with an independent firm much more easily than you can change a bureaucratic system. Do you in Minnesota contract out private rehabilitation programs for juveniles? If you do, how does it work? And if you don't would you like to have that authority?

Mr. SCHOEN. Mr. Lynch, yes, we do contract out. I support their findings in Massachusetts. This is a good way to go. And it does one more thing, it also begins to develop a constituency, where someone has to support the correctional effort. Other programs tend not to have this constituency.

We have contracted out primarily with LEAA funds, which is a great aid in this. One of the problems with State funds in Minnesota is that we budget on a line item basis and there is no incentive to save money. In fact, it is the other way around. The incentive is to spend all, and to come back and say, "Look at all of the money we spent, we need more."

I think at this time we are going to make a change in that so residual moneys can be utilized to operate programs and even allow for contracting.

I would say that percentagewise very little money is spent in contracts. We have a number of contracts operating for direct service and training grants. We are going to be moving in this direction and as we move toward subsidy programs, I would encourage communities to do the same thing.

The PORT is a contract program. It is a nonprofit organization operating in the community on a contract, really to the State and county because the State and county fund the program.

Mr. LYNCH. To what extent do you utilize the services of the juvenile justice volunteers, individual citizens who work with or under the auspices of your department?

Mr. SCHOEN. It varies quite a bit.

A gentleman by the name of John Conrad, who used to be with LEAA, a researcher from California originally told me Minnesota has a very high percentage as you compare State to State.

I was not aware of this, that our comparison with other States was on the upper end by far.

Hennepin County has an elaborate program with volunteers. Throughout the State, we are seeing the development of a great deal of volunteer input into the system. And of course, what it does, again, is to extend our services in many respects. The PORT program is an example of one in which volunteers offer the major input into the program. And again, it provides a great deal to corrections to have volunteers intimately involved. I am not talking about them bringing cookies or flowers or the nice things like that. I am talking about really delivering correctional-type services.

Mr. LYNCH. I take it you tend to favor the use of volunteers?

Mr. SCHOEN. Very much.

Mr. LYNCH. Do you have a training program or guidelines for the selection and training of volunteers within your department?

Mr. SCHOEN. Within the department we do. It is a unit that got started under an LEAA grant. As of July 1, we will be picking up on our State budget.

The Hennepin County court services was one of the first departments to get involved in this area. They have a very elaborate training program.

Mr. LYNCH. What kind of juvenile recidivism rates have you experienced within the past several years, Commissioner Schoen?

Mr. SCHOEN. They have declined since 1967 because we have made substantial improvements in our juvenile institutions. The Red Wing facility, especially, experienced a decline from about a 50-percent return rate to about 18 percent in 1972.

The facility at Sauk Centre, the one the committee chairman visited a couple of years ago, has been dealing with younger boys and girls of all ages. The girls are reporting approximately the same rate of failure as success.

Interestingly, with the younger boys, we do much more poorly. That is exactly what we found in the PORT program, too. The younger boy, 13 to 15, is the one who is much harder to get a grip on.

Mr. LYNCH. Why is that?

Mr. SCHOEN. I think because they have a higher level of impulsivity and also much more dependence upon people than we are able to provide in our institutional-type programs.

I think parenting plays an important role in that. We are going to be trying some special programs for that person now. We are thinking initially of creating a linkup with school and group therapy programs. Then the youngster who does not have a home would have a small group living situation. Then, perhaps, we could make a thrust at this problem.

The success of the PORT program, as we get into the older ages, goes up. If you look at the institution we put the older person in, this suggests we have the very worst there. But statistics indicate our chances of being successful at the age of 18, are much greater than they are as we get down to the younger ages. And the same is borne out in juvenile institutions.

Mr. LYNCH. What kind of public response have you received to the PORT program?

Mr. SCHOEN. It has been remarkably excellent. The question is, how long will it last? This has been the case since 1969. At the annual meeting they had at Rochester at the nicest hotel in town, where the right people go, they had an attendance of 300 people this past fall. It is a program that is very much a part of the community. It has a board of directors that is an impressive group, paralleled only by the Mayo Clinic itself.

Mr. LYNCH. I have no further questions.

Chairman PEPPER. Mr. McDonald, do you have any questions?

Mr. MCDONALD. Thank you, Mr. Chairman.

Mr. Schoen, can you explain to us in more detail precisely what the PORT program entails and precisely what it does?

Mr. SCHOEN. First of all, it is a nonprofit corporation set up in 1969. It is an alternative to incarceration for the most part, and it is residential.

It uses two treatment technologies. One is group therapy, the type of thing used at the State training school in Red Wing. That was the first method used. Then they added a behavior modification scheme, a point system, where freedoms are earned by virtue of measurable be-

havior. This starts off with fairly tight controls on the individuals. It essentially says to a person, "We don't trust you, because you haven't given us reason to," rather than saying, "Everything is fine now, and all of your sins are past and forgotten, we are going to begin a fresh slate."

The group makes decisions on increased freedoms individuals living in a group will receive. Residents, and volunteers—college students—live in the same rooms together.

The individual may immediately participate in school or work. The experience has been that you can structure that well enough to insure the necessary control, bearing in mind that the primary goal in corrections is public safety and public protection. It must be cognizant of that. Otherwise the question Mr. Lynch asked earlier, "How is the public support?"—it is not going to last very long if the community is a hotbed of any kind.

As the individual shows the group that he can operate in several areas such as schools and finances, they give him increased freedoms. Eventually they receive the same freedoms in the program that individuals of that age would normally receive. A 15-year-old would have fewer freedoms than a 25-year-old for example.

Chairman Pepper. Where do they go to school? Do you have special schools or do they go to the public schools?

Mr. Schoen. They go to the public schools. And if they are in the community from whence they came, which most of them are, they go to their own school. That eliminates the transition from the facility back into the school.

Mr. McDonald. You mentioned before there is a mix at PORT adults, from the ages of 13 to 47 or 12 through 47. Does this work out? Is it good to associate young juveniles with older adult offenders?

Mr. Schoen. Your question, Mr. McDonald relates to problems experienced in adult institutions that bring in very young persons. Such facilities have experienced more problems than we do in Minnesota. The difference is here, PORT is a piece of the community.

If the value system, or the culture, or what is thought to be right and what is thought to be wrong, on the part of the individual who lives in the program, is normal and healthy, we have found that the younger residents even fare better. And the older guy does pretty well, too, because his behavior looks more ridiculous in the eyes of the youngster than it would with a bunch of guys living together like in an Army camp.

We found that with the young juvenile living in an institution, we tend to have sort of a perpetual boy scout jamboree, if you will. We then end up spending more time trying to control the youngster than we do getting down to the business of developing his strengths.

There have been no cases, where there has been what is clearly, explicitly, delinquent behavior as a result of that association. Generally, what happens, in fact, is that the older fellows and the younger kids associate with their own age group. Probably the biggest problem is that you do tend to see associations continue once the residents leave the program in the community. Sometimes these are not real favorable associations. Sometimes they are. But as far as the older guy having a negative influence, or vice versa, on the younger one, that has not been the experience.

Mr. McDonald. What is the competence of the college-age students to counsel the older offender? Are they especially trained? How does the older offender take being counseled by someone perhaps half his age?

Mr. Schoen. The counseling is not a professional type of counseling. They attempt to help them with their problems in the sense of a deep insight. We picked the college age students, which are pretty young guys. They come from a junior college and are only 18 and 19, this presents some problems.

We have to pick those who are functioning in at that own age. We did try some who were having some dropout problems themselves—questioning the establishment and all that sort of thing. We found, that those cases, that we really ended up with more problems than we wanted. But I think generally that we choose the students well.

Good students and older guys will do better. The relationship is one of companionship. If the college student is a functioning individual, it is a good relationship. Furthermore, this kind of individual has his feet on the ground and his value system pretty well set. He is not going to be influenced negatively by the offender, but the offender is going to see, living intimately with him, somebody who can really cut the mustard and be a model for him.

The students also perform supervision of the building. Offenders perform the same function, if they demonstrate that they can be trusted. They also clean up the building together. There is no hierarchy in that respect.

Mr. McDonald. No further questions, Mr. Chairman.

Chairman Pepper. Mr. Schoen, has it been your observation that crimes are committed by relatively few people?

Mr. Schoen. I guess it depends upon how we want to define "crime." I guess we all commit crime to some degree.

Chairman Pepper. I am thinking primarily about what we call serious and violent crime.

Mr. Schoen. One of the problems, of course, is that we know our statistics on crime is very poor. Most of it goes unreported and violent crime, the type where bodily harm is done, is confined to a relatively small number of people in a small area, generally within the towns and cities.

I would say that the individuals that are, in fact, dangerous people to our communities are confined to a relatively small number. That is correct.

Chairman Pepper. That gives us a point of focus for the problem. If we could do something about those people we would materially reduce the volume of serious or violent crimes, wouldn't we, Mr. Schoen?

Mr. Schoen. That is correct.

Chairman Pepper. What importance do you attach to the youth population, the teenagers, for example, in relation to the problem of crime?

Mr. Schoen. As I jokingly say, if we could eliminate everybody between the ages of—I am emphasizing, jokingly—13 and 25, we largely eliminate crime.

Certainly the youngster, the teenager, is the one who commits crimes most frequently. I can't say whether these are the most violent crimes. I think seldom, almost never, you see a person in our adult prison who we have not seen or been aware of as a delinquent youngster.

Chairman PEPPER. You mean who has not been delinquent in his youth?

Mr. SCHOEN. That is correct, Mr. Chairman.

Chairman PEPPER. In other words, as you say, the generation that is in the penal institutions, the so-called correctional institutions of the country, at some time before were a part of the juvenile system?

Mr. SCHOEN. Generally speaking that is correct.

Chairman PEPPER. That suggests the importance of programs attempting to do something about the problem of juvenile crime; doesn't that?

Mr. SCHOEN. That certainly does.

Chairman PEPPER. Therefore, the necessity for all possible emphasis of that part of our population.

Now, will you just take the case of a boy, let's say a boy of 16, 17 years old who is brought into the juvenile court, someone from your region in Minnesota, for the commission of a serious crime.

What happens to that boy? In the first place, is he sentenced by the court to a particular place, or is he put into the custody of your correctional system?

Mr. SCHOEN. Mr. Chairman, the judge has a number of options. Let's assume that it is a 16-year-old who has been in difficulty for some time. By the time he is 16 we have seen him for a while. And let's say he has been on probation to the court. At this point the judge just feels that he has exhausted the resources. We are, of course, as I said, seeing more options. But let's assume there are no other options, that he would commit him to the youth conservation commission, which is really a parole board for youngsters, and place him in one of the department of corrections institutions. He would then spend some months there.

Chairman PEPPER. Who would determine where he would go, and what sort of discipline he would be subjected to?

Mr. SCHOEN. If one of the local juvenile courts commits him to the State, the youth conservation commission would determine to which facility and which program he would participate in.

Chairman PEPPER. That would be after an interview with someone?

Mr. SCHOEN. He would go to our reception cottage at one of the institutions. There they would develop material for the commission. Then the commission comes there to hear the case, make a decision, and establish some information. This is a panel of two or three.

Chairman PEPPER. Let us just say this 16- or 17-year-old committed rape and murder. What would happen to him then?

Mr. SCHOEN. It depends. It again is up to the judge. He has two options on a very serious crime. He can commit him to the youth conservation system, as I indicated. He would then be sent to one of our open juvenile institutions. The judge would have to feel that he is not likely to commit the crime again, if he were to run away.

If the judge felt this individual was indeed very dangerous and felt it was questionable or irrelevant to try to rehabilitate him, he can

then bind him over to what we call Minnesota District Court, the adult felony court. He could then be tried as an adult and perhaps go to one of our maximum security facilities. Very likely he would go to the reformatory at St. Cloud.

Chairman PEPPER. Did you say under the law of Minnesota that people convicted of a serious crime must serve at least a 3-year minimum sentence in the State institution?

Mr. SCHOEN. Mr. Chairman, what I said is that there is a bill in the current session of the legislature which would require mandatory sentencing of 3 years for anyone who committed a number of serious crimes with a gun in their possession.

Chairman PEPPER. That would mean they would have to serve that time. They couldn't be paroled?

Mr. SCHOEN. That is correct. Neither the judge nor parole board could alter that.

Chairman PEPPER. It is a little beside a point of discussion, but would you care to express any opinion as to how desirable a long sentence is, even for a serious violent crime?

Does society gain by sending a man to prison for 40 or 30 years, or 20 years? I am asking whether or not it is possible that he may be rehabilitated under those circumstances.

Mr. SCHOEN. I suppose if you are saying 40 years, we could be sure he is not going to recidivate for a long time. However, nobody stays for that long a period. The average stay at Minnesota is 22 to 23 months, at the present time.

We do know that prisons are very counterproductive. There are some very good statistics, in fact there is an excellent study on this about juveniles just produced by a man named Lamar Empay of California.

Chairman PEPPER. What is the subject of the book?

Mr. SCHOEN. The book is entitled "The Provo Experiment." It is a long-term study done over a period of years. It compares, with the use of control groups, the youngsters who went to juvenvile institutions with those who didn't go. He used controlled groups where the judge allowed him to move in after making his decision to put some in the community and some in the institution.

The ones that went to the institution clearly, some years later, continued to commit crimes in numbers and serious crimes. This gets us back to the point of your question; That is, everybody suggests that institutions are indeed very counterproductive.

Mr. STEIGER. How about the controlled group?

Mr. SCHOEN. One group went to the insitution and the other was expected to go but didn't go. He then had the judge also put two groups on probation, one on regular probation and the other in an intensive group.

There were three groups in the community and one in the institution. The differences between the three community groups were there, as would be expected, but these were not too great. The clearest differences were shown by the group that went to the institution. The moral of the story is that no matter what you do in the community, the important thing is keep youngsters out of institutions.

Chairman PEPPER. You are trying to find a way to inspire these young people to get into a better course of life, trying to give them a

feeling that they would be happier. We had here five young people yesterday, and they all testified that they were enjoying life more, they were happy in this new program in which they were participating.

One boy had been on drugs, and was not on drugs now. He said he hoped to be in the Marine Corps soon. I guess you try to bring out the best.

I remember that remarkable institution of yours at Red Wing, the peer therapy principle it operates on, where they arouse in the boy the desire to help his fellow inmates. I heard one boy there tell a very interesting tale. Had been out for a while and then called back and asked if he could be permitted to come back for a week or two. He said he was getting, as he put it, scared of himself. He came back with this group, about a 10-person group, in that cottage. He said he wanted to be with his fellow associates again. And after he stayed there a week or two, he said, "All right, I am ready to go now, I think I am all right."

That brought out the desire within those boys to help one another. You appeal to that side of their nature, too, I suppose.

Mr. SCHOEN. Mr. Chairman, there are a couple of points you covered there. One is, when youngsters feel they have some control over their destiny and command over what is going to happen to them, this is extremely helpful where they have options. It is also important that they see the correctional program as being an aid to them rather than merely a punishing force.

The fact that the boy chose the institution would indicate that there is something in it for him.

I was down to Red Wing Friday of last week, and I can report to you that I had the same feeling. The kids look like there is something going on for them that is still there. I was very impressed with what I saw there.

Chairman PEPPER. Mr. Mann?

Mr. MANN. No questions.

Chairman PEPPER. Mr. Steiger?

Mr. STEIGER. No questions.

Chairman PEPPER. Mr. Rangel?

Mr. RANGEL. No questions.

Chairman PEPPER. Mr. Keating?

Mr. KEATING. No questions.

Chairman PEPPER. Yesterday, Dr. Miller, in testifying about the Massachusetts plan said there was difficulty, there was expense involved in transforming the system, and dealing with young people from the old institutional system to the new system that they were employing.

He thought it might be desirable for Federal funds to be made available to the States to make this transformation. He recited the fact it was a $2 million grant from LEAA funds that made possible the alteration of this program.

Do you think it would be necessary for other States and your State to address this program, for other States to inaugurate this program which you seem to suggest is unmistakably desirable. Would it be desirable, or would it be necessary, for Federal funds to be made available to the States?

Mr. SCHOEN. Mr. Chairman, I am asking the State legislature for $1.8 million to begin this transition. Minnesota has been willing to spend some money. I would say, however, that the direction we are going toward is largely a result of having Federal money. I guess the answer to your question is "Yes."

Some States have been very stingy in spending money for corrections. I think that where they have good correctional administrators with good desire, they often just don't have the funds. If you are locked in an old system, you simply can't get out of it unless you have some seed money, investment money, front-end load money, if you will, to make that change.

Chairman PEPPER. The last question is, what other States have adopted modernistic programs such as Massachusetts?

Mr. SCHOEN. Mr. Chairman, I think, Florida; some interesting things going on in Michigan, in Washington, certainly California has done a number of things out there, primarily because of the crunch of their population. They had to do something. Some very interesting things have come out of California.

We are seeing a proliferation around the country of some interesting programs. We are also seeing some of the old 1700 stuff still carrying on as though that were really productive.

Chairman PEPPER. Do you think, on a different scale, that we can apply the principles you employ in dealing with juveniles to the adult population in our institutions?

Mr. SCHOEN. I am convinced that we can do it with even greater ease. I think the juveniles are the ones who are much more difficult to rehabilitate. If I were betting money, or I had to say where my best investment was, I would always do it with adults because we have so many more things going for us with them than we have with the juvenile. The juvenile is dependent, impulsive, and much more difficult to get a grip on than the adult.

Chairman PEPPER. Do you think there is real hope if we employ the proper programs for the rehabilitation of many people in the adult penal institutions today?

Mr. SCHOEN. That is correct.

Chairman PEPPER. Mr. Nolde has some questions.

Mr. NOLDE. Mr. Schoen, regarding the LEAA funding to which you referred earlier, would it be wise to condition such funding upon a requirement that the State eliminate the old system if the money is going to be devoted to a new system, or a new approach such as the one you mentioned here?

Mr. SCHOEN. That is an interesting idea. I am responding, however, without a great deal of thought. One of the problems of LEAA money is that it started buying an awful lot of hardware. At the time college students were being obstreperous and I recall pith helmets and things being bought and sitting on shelves some place in buildings, and that sort of thing.

Yes, I think if we could say it is predicated on developing an expansion of services, with a minimum of brick and mortar, and provided that points of entry into the system could occur earlier. Also, it should provide that the elements of the criminal justice system, the police, courts, corrections, and prosecutors and defense, must sit down together and begin to develop a program for their community, rather than just

bad-mouthing one another, which I think is a very serious problem at the present time.

Mr. NOLDE. Would it be feasible to impose such condition, to eliminate a parallel situation that seems to be developing here?

Mr. SCHOEN. Politically, I guess you maybe know that one better than I do. I think it is very feasible. I certainly would, yes.

Mr. NOLDE. I have no further questions, Mr. Chairman. Thank you Mr. Schoen, for your fine testimony, and also for the excellent work you are doing. The State of Minnesota is fortunate to have such an outstanding Commissioner of Corrections.

Chairman PEPPER. Thank you very much, Mr. Schoen. We appreciate your being here. You helped us greatly.

We will take a 5-minute recess for the accommodation of the reporter and will resume with the next witness.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Judge Arthur, will you come up, please.

Our next witness is Judge Lindsay Arthur of the Minnesota Family Court. He is also president of the National Council of Juvenile Court Judges.

Judge Arthur will testify and comment on the juvenile corrections problem from his vantage point as a judge and officer of the National Council of Juvenile Court Judges.

Judge Arthur, you have been very helpful to our staff in preparing these hearings and we wish to thank you for that, as well as for your kindness in coming before us today.

Mr. Lynch, will you please begin.

Mr. LYNCH. Thank you, Mr. Chairman.

Mr. Chairman, Judge Arthur, as you know, is the president of the National Council of Juvenile Court Judges. Judge Arthur holds an A.B. degree from Princeton University and J.D. from the University of Minnesota. He is also a director of the Urban Coalition, the Boys' Club, Children's Health Club, and a number of other civic organizations. He practiced law in Minneapolis and became a judge of the Minnesota Municipal Court in 1954, and became a judge of the Juvenile Division District Court for the State of Minnesota in 1961.

Judge Arthur, if you have a prepared statement for the committee, would you please deliver it at this time.

STATEMENT OF HON. LINDSAY G. ARTHUR, JUDGE, DISTRICT COURT, JUVENILE DIVISION, MINNEAPOLIS, MINN., AND PRESIDENT, NATIONAL COUNCIL OF JUVENILE COURT JUDGES

Judge ARTHUR. Mr. Chairman, I heretofore submitted a statement in writing and, if I may, I would like to leave that with you and make an ad lib summary, if that would be permissible.

Chairman PEPPER. Without objection, your statement will appear in full in the record.

[Judge Arthur's prepared statement appears immediately following his testimony.]

Judge ARTHUR. Thank you, Mr. Chairman.

As was indicated, I come here kind of wearing two hats. Let me talk about them separately. Each of them is concerned with delinquency, in fact, each of them has almost exclusively juvenile delinquency as

its province, but each of them necessarily approaches it from a somewhat different point of view.

We have the National Council of Juvenile Court Judges. It is an organization about 35 years old. We maintain, and I think we can demonstrate, that it is the strongest organization of judges in the United States. Our membership represents some 1,500 judges, about half of the juvenile court judges in the United States, but these judges themselves come from jurisdictions comprising some 75 percent of the population of the United States. These are our active members. Fifteen years ago we had a budget of about $1,000 and now our budget is passing three-quarters of a million dollars, and we expect it to cross a million dollars next year.

Chairman PEPPER. Where do those funds come from, Judge?

Judge ARTHUR. As a guess, about 60 to 70 percent are private funds, basically, from the Fleischmann Foundation in Nevada, some from various other foundations, the rest is basically LEAA funds.

We have recently developed a staff of highly trained experts. I would hold them second to none in these skills for which we have secured them.

This National Council approaches the problem of juvenile delinquency from a different point of view than the individual court. We say the most important factor in reducing delinquency is to train the people dealing with the kids in the establishment. Basically to train the judges of the juvenile courts so they can understand what kids are about, acquainting them with the behavioral sciences, to training them as to juvenile law both before and after the *Gault* case. We also train them on available dispositions and treatment programs, what is being used effectively around the country, so the judges themselves can do a better job. There are very few places in the United States where you can go to school to be even a trial judge, much less to learn the very high specialty of the juvenile court. We have opened a college in Nevada with Fleischmann funds where we have already trained over 2,000 judges.

But I think we are just tapping the surface. I think we need to go into it much more voluminously than we have. Our ultimate goal is to make it possible that no judge would touch a juvenile case until he had a minimum of 2 weeks' highly intensive training and at least 3 or 4 days a year of refresher training. Juvenile court is a demanding specialty. It should require intensive training to get into it.

Similarly, our right arms, our probation officers, we think they should be trained. Many of them now have M.S.W. degrees, but we think they need to be trained in some of the practical aspects of the applications of the juvenile court approach. Our council is beginning to use our funds to train these key people to try to bring them into even a higher degree of skill than they now have.

But, as I say, we are only tapping the surface with our present budget; we are not anywhere near where we should be. But we will provide this training because it must be provided.

The second thrust of our organization is services to our members. We have a law digest we think is very good. It analyzes the appellate cases dealing with juveniles. We have a quarterly journal, usually used for articles of interest, as a forum, if you will, for discussion of ideas. Every now and then we take an issue and use it for a single

purpose. You have an example of both these publications, as they are included in the folders provided to the committee.

We would like to develop statistics as to juveniles. We have almost none now and we think they are almost not in existence. HEW has some very rudimentary figures, the FBI has arrest figures, sometimes rather misleading as to actual juvenile delinquency.

We would like to develop statistics on our own basis. The figures should be based, not on the reason for the arrest of the child, but on what he admits or is found guilty of. The police do make mistakes and often their cases don't come to our courts, and often the child is not guilty of anything or is guilty of a lesser included charge in some form or another.
